In 1941 I was transferred to the main offices of Carnegie Illinois Steel Corporation, a part of U. S. Steel Corporation, as metallurgical engineer, constructional alloy steels.

In 1946 I changed to my present position and have [1682] concentrated on the study of the history, application, development and the sale of the product and particularly distribution and analytical work.

Q. Are you or have you ever been employed by any of the defendants in this lawsuit?

A. No, sir.

Q. Are you a member of any technical committees?

A. I belong to the American Iron and Steel Institute and the American Society for Metals.

Q. Have you published any papers in the field of alloy steels?

A. In 1941 through 1945 I published about five different papers during the war on the subject of transient alloy steels, conservation of elements used in constructional alloy steels, the introduction of the national emergency steels, for which I received the Gary Medal of the Institute for the year; papers on harden-ability of the new steels so the

(Testimony of John Mitchell.)

consuming trade would have some comparison with the steels they used before.

In 1950 I published a paper on "Fifty Years of Progress in Constructional Alloy Steels."

Another one in 1952 that dealt with the conservation of alloying elements in steels for N.P.A., the National Production Authority, under the minerals and metals advisory board of the National Academy of Scientists for the Defense Department in case of another war, a classified document. [1683]

Q. Have you had any formal education as an engineer? A. No, sir.

Q. Have you made a study of the uses of vanadium and alloy steels?

A. Quite extensively.

Q. Was that study made for the purpose of this lawsuit? A. Oh, no.

Q. There has been some testimony in this case as to the use of vanadium in constructural alloy or engineering steels. What are constructional alloy or engineering steels?

A. I might explain constructional steels in this way: Normally, about ten percent of the total ingots made in the steel industry fall within the category of alloy steels, a general, broad term.

In that ten percent, about 60 percent of them are termed constructional alloy steels, and they are the steels that are used in the springs, the gears in your automobiles, aircraft crankshafts, connecting rods, oil well drill bits, and such things in similar industries.

(Testimony of John Mitchell.)

There is another group in that category called high strength low alloy steels, which would represent—the first, constructional alloy steel, would represent about 60 percent of the ten percent—high strength low alloy steels would represent about 13 percent.

High silicon sheet steel used for armatures, motors, [1684] and what-not, would be about 13 percent.

Stainless steels would represent about 13 percent.

And tool steels, the cutting tools, would represent about two percent of the ten percent.

Q. Your specialty, then, is constructional alloy steels, I take it?

A. In the 60 percent portion I have specified, yes.

Q. That 60 percent of ten percent?

A. Yes.

Q. I believe you have already described the principal applications of constructional alloy steels in the period 1938 to 1949.

A. Except for the end use applications in the war, such as armor-piercing shot, all the tank parts which are highly stressed members of the tank, armor plate, battleship armor plate, or tank armor plate, small 20—20 millimeter armor-piercing shot, and such similar applications that might be used in highly stressed members, oh, for actual destruction, other than high explosive shells.

Q. What are the reasons for using vanadium in making constructional alloy steels?

(Testimony of John Mitchell.)

A. This is confined to the 1938-1949?

Q. Confined to the period 1938-1949?

A. The principal reasons for using vanadium in special applications, one, was to control grain size. [1685] Small additions of vanadium to certain types of steel will influence and control its grain size. And I don't know whether this might be clear.

Q. Will you please explain what you mean by grain size?

A. I will think of a comparison that is simple.

When you harden an ingot and fracture a piece of steel and look at it visually, it denotes toughness when it is a slate color and has a velvety texture, and it is called crystalline and brittle when it has silvery crystals showing.

Now, the silvery crystals would represent the coarse grain steel, and the velvety side would represent the fine grain steel.

Or, to make a better comparison, if you had a glassful of white beans, white navy beans, and you had a glassful of granulated sugar, and you looked at the two microscopically, under the microscope, one would be the size of the navy beans, and the other one would be about the size of the granulated sugar as you see it to the naked eye. And that characteristic imparts a quality to steel that, in special cases is used. But that same condition can be produced with aluminum.

Q. Was vanadium used for any other purpose in constructional alloy steel other than for grain size control during this period?

(Testimony of John Mitchell.)

A. There were some applications that were permitted for use during the war that were uncalled for, but they were used nevertheless. [1686] There were certain applications in piston pin and aircraft engines during the war, there were certain applications that went into steels that were made for certain applications in Europe, to the Allies, that contained some vanadium, and the War Production Board, rather than to fight with those people over there, permitted its use to a certain extent. But by the time the war started there was very little vanadium used in constructional alloy steels, because it wasn't needed, and it served no useful purpose as compared with other elements which were available.

Q. From a technical standpoint, then, during this period, was vanadium used only to control grain size in constructional alloy steels?

A. No; it was used by composition in a few applications, as I mentioned. But the purpose for its use was not necessary.

Q. I see. What is meant by the term "grade mix"?

A. Well, in the constructional alloy steels there are certain basic compositions, and we will describe just a few to get the idea across.

You would have straight nickel steels as a basic composition.

Nickel chromium steels as a basic composition.

Chrome vanadium steels as a basic composition.

Nickel molybdenum steels as a basic composition.

(Testimony of John Mitchell.)

And so on. You can name about 26 of those basic compositions. [1687]

Now, the grade mix would be what percentage of each of those basic grades was of the whole. For instance, in the 60 percent that we talk about, roughly five million tons of ingots, what percentage——

The Court: How is this material, Mr. Archer?

Mr. Archer: I intend to use this witness, your Honor, to establish the point of the price at which ferro-vanadium was sold, and particularly as to its reduction to $2.25.

Mr. Alioto: If that is an offer of proof we will object to it, your Honor please, as not being material or relevant to any issue in this case.

Mr. Archer: I believe Mr. Burwell testified on direct examination that in his opinion if the price of ferro-vanadium had been reduced to $2.25 it would have increased its use, and that is the point I am leading up to, your Honor.

The Court: Very well. Let's get that as soon as we can.

Mr. Archer: Thank you, your Honor.

Q. (By Mr. Archer): Well, what was the situation in regard to the use of vanadium in this class of constructional alloy steels during the period 1938 to 1949—that is, to what extent was it used in constructional alloy steels during this period? [1688]

A. Out of the grade mix it was probably one percent.

(Testimony of John Mitchell.)

Q. Now, if, during the period 1939 to 1949 the price of ferro-vanadium had been decreased from $2.70 range to a $2.25 range, would the use of vanadium in constructional alloy steels have increased?

Mr. Alioto: We will object, if your Honor please, on the ground the question is speculative.

The Court: Overruled. I think this witness is competent to testify.

A. In my opinion, from the background and knowledge of metallurgy, of the effect of elements, it would have to have been much lower than that to induce people to use it. However, I might say during the same period they couldn't have used it because of the government controls on it.

Q. (By Mr. Archer): Then during the period that the government controls were on——

A. During the time they were in the war they couldn't have used it if they wanted to.

Q. (By the Court): What period, now, does that cover? Would that be '41 to '45?

A. That would be '41 to '45. Beyond that period they could have used it, after '45, to '49, but there would be no economical reason for using it.

Q. (By Mr. Archer): To what price would Ferro-vanadium have had to be reduced to increase its use during this period?

A. Compared with what vanadium price?

Q. Well, to what price from the $2.70 price range which we have talked about? A. I see.

(Testimony of John Mitchell.)

Q. To what price would it have to be reduced in order to increase its use?

Mr. Alioto: That is objected to, if your Honor please, on the ground that it is a speculative question, and also it opens up studies made by the corporation themselves which your Honor has excluded.

Mr. Archer: Not during this period.

The Court: Overruled. This is an expert witness.

The Witness: May I have that question again?

Q. (By Mr. Archer): To what price would ferro-vanadium have had to have been reduced in order to increase its use during this period?

A. I will have to answer that two ways: If it were being used for grain size control, it would have had to be reduced to about 60 cents per pound of contained vanadium; if it was used as a part of the composition of a chrome-vanadium steel, it would have had to have been about 80 to 90 cents a pound to compete with steels of equal characteristics. [1690]

However, for example, a comparison between a chrome vanadium steel and a chrome molybdenum steel, the price would have to have been about a third or less, around 80 cents, to make it competitive in price. But it would not do what the chrome-molybdenum steels would do.

Q. Is vanadium oxide used in the manufacture of constructional alloy steels?

A. In the open hearth furnace I can't recall of

(Testimony of John Mitchell.)

a pound that would be used, nor for any good reason.

In the electric furnace, the tool steel manufacture, not in constructional alloy steels, a small part of oxide is used. Because of the conditions of the slag they can reduce the oxide and get the benefits of the vanadium.

In the open hearth furnace, which produces the large volume of alloy steels, it would have no useful purpose whatever.

Q. And what kind of furnace is used for the manufacture of the constructional alloy steels?

A. They are mostly open hearth. There are some made in the electric furnace, but very few vanadium steels made in the electric furnace.

Mr. Archer: I have no further questions of Mr. Mitchell.

Cross-Examination

Q. (By Mr. Alioto): To what extent have any of the American companies used [1691] the oxides directly, not only in the vanadium field, but in the molybdenum field?

A. The field in which I specialize, I know of none,——

Q. Well,——

A. ——in the constructional steel alloy field.

Q. What about other steel fields that you have mentioned?

A. I can't speak for the tool steel people, or—I can speak for the constructional alloy steel por-

(Testimony of John Mitchell.)

tion of it, but no steel producer would attempt to, for this reason——

Q. How about the high speed tool steel category?

A. That's in the tool steel category.

Q. Do you know the extent to which oxides in various of these alloys have been used?

A. Well, if they were making a two or three percent vanadium steel, a small portion of that vanadium could be added as oxide.

Mr. Alioto: We have no further questions of this witness, except——

Q. (By Mr. Alioto): If the price of the United States Vanadium Corporation had been less than the price charged by the Vanadium Corporation of America, would your company buy the higher priced vanadium or the lower priced vanadium?

A. In the manufacture of steel, the most economical thing to do, to make constructional alloy steels, would be to use [1692] ferro-vanadium. And for another reason——

Q. My question is: At lower prices would you buy up the vanadium, at the lower prices, or the ferro-vanadium at the lower prices, or the ferro-vanadium at the higher price?

A. No, you wouldn't, because you would have to use so much more of the oxide in the open hearth to recover the same amount of vanadium.

Q. I don't think I am making my question clear.

If the United States Vanadium Corporation offered you ferro-vanadium at 10, 15 or 20 cents a

(Testimony of John Mitchell.)

pound below what you had been paying for it to the Vanadium Corporation of America, from which producer would you buy?

A. Well, in the type of business I am in, they wouldn't buy the oxide.

Q. I am not talking about oxide, sir; I am talking about ferro-vanadium.

A. Ferro-vanadium?

Q. Ferro-vanadium being sold by both parties, but one sells it at a lower price.

A. Well, I would buy the cheaper, of course.

Mr. Alioto: Surely. Thank you.

We have no further questions.

(Witness excused.)

Mr. Archer: Your Honor, as our next witness I call John Hill. [1693]

JOHN W. HILL

called as a witness on behalf of the defendants, being first duly sworn, testified as follows:

Q. (By the Clerk): Will you give us your full name? Give your full name to the Court and to the jury, and your occupation, and your address.

A. My name is John W. Hill; address is 1501 White Avenue, Grand Junction, Colorado. I am a mining engineer. I graduated Washington State College. Registered professional engineer in the State of Colorado. I belong to the several societies and institutes—American Institute of Mining and

(Testimony of John W. Hill.)

Metallurgical Engineers, Grand Junction Geological Society, and Colorado Mining Association.

Direct Examination

Q. (By Mr. Archer): During the period 1938 to 1939, Mr. Hill, were you employed—withdraw that question.

Who is your present employer?

A. At the present time I am managing partner of Worcester Mines.

Q. Is that a mine in Colorado?

A. Worcester Mines consists of a partnership of professional men in Grand Junction, Colorado, and we are operating a uranium mine near Uravan, Colorado.

Q. During any part of the period, or during the period [1694] 1939 to 1949, were you employed by the United States Vanadium Company?

A. From 1938 to the spring of 1942 I was an employee of the United States Vanadium Company, and in '42 to '44 I was an employee of the United States Vanadium Company, agency for Metals Reserve Company, and in that ensuing time I spent one year — approximately one year — with Union Mines, which was another government agency, and approximately another year with Dr. Vanderbilt and Dr. Parker of Denver, Colorado, assisting in the evaluation of the Ute Indian lands that were being evaluated by them for the Ute Indians. I was on leave at that time, this year with Dr. Parker

(Testimony of John W. Hill.)

and Dr. Vanderbilt, from the United States Vanadium Company.

Q. Prior to the time you worked for United States Vanadium Company, as agent for Metals Reserve Company, were you engaged in the purchasing of ore for United States Vanadium Company?

A. I went to work for United States Vanadium Company prior to 1938 as a junior engineer.

In '39—this '42 period when I went to work for Metals Reserve Company, the agency, I was assistant mine superintendent, and in that capacity did buy vanadium ores.

Q. (By the Court): You were acting then for an agency of the government at that time? [1695]

A. No, not prior to June of '42. I was an employee of the United States Vanadium Company.

Q. When did your employment start with the government?

A. As I recall, in June of 1942.

Q. How long did it continue?

A. Until February of 1944, or March of 1944.

Q. (By Mr. Archer): Well, then, part of that period, I believe you said, you worked for Union Mines. A. Yes.

Q. Do you recall what period of time you worked for Union Mines?

A. As I recall, I left the agency, the Metals Reserve agency, in the spring of 1944, and worked for Union Mines approximately a year.

Q. Union Mines was the company that had a

(Testimony of John W. Hill.)

contract with the Manhattan Project, is that correct A. That is correct.

Q. During the period of time that you were employed by the United States Vanadium Company, during the period 1938 to 1949, were you aware of any agreement by the United States Vanadium Company on the one hand, and the Vanadium Corporation of America on the other, as to the prices to be paid for ore?

A. You mean that they might have agreed on prices?

Q. Yes. [1696]

A. No, there wash no agreement that I know of.

Q. Mr. Burwell has testified that you may have been present at a meeting in June, 1942, at Dove Creek, among himself, Mr. Kett, and Mr. Bransome. Were you present at such a meeting?

A. No.

Q. Were you acquainted with the Morrison-Ackermann mill at Loma?

A. Yes, I knew where the mill was located, and I had been at the mill. I mean I had visited the mill.

Q. What was the occasion for your visiting the mill?

A. This was in June or July of that period, 1942, when we were working with—or working for the Metals Reserve Company, the agency in the procurement of ore, and I was approached by an attorney in Grand Junction as to whether or not Metals Reserve would be——

(Testimony of John W. Hill.)

Mr. Alioto: We object to that, if your Honor please, as to any conversation with some attorney in Grand Junction.

The Court: Don't tell what the conversation was.

The Witness: That isn't it.

A. (Continuing) The attorney approached me as to whether or not we would purchase ore that was stockpiled at the Loma Mill——

Mr. Alioto: I will object to that. [1697]

Q. (By Mr. Archer): The point is, you can't tell what this attorney told you. But I take it you were approached by an attorney in Grand Junction.

A. There was some stockpiled vanadium ore at the Loma Mill that was offered for sale.

Q. What did the attorney in Grand Junction have to do with the Loma Mill?

A. He was liquidating the assets of the mill.

Q. Was the mill operating at that time?

A. No.

Q. Were you working as agent for Metals Reserve at that time? A. Yes.

Q. What did you do then in regard to the Loma Mill?

A. We bought the ore that was stockpiled at the Loma Mill, and also examined the tailings from the mill with the possible purpose of buying the tailings for the recovery of uranium.

However, the tailings were not suitable for the recovery of vanadium, and we did not buy the tailings.

(Testimony of John W. Hill.)

Q. Did you examine the equipment in the Loma Mill?

A. I went through the mill, yes.

Q. In your opinion as an engineer was the Loma Mill an economical operation for processing vanadium oxide? [1698] A. It was not.

Mr. Alioto: That is objected to, if your Honor please, on the ground it is a speculative question. That question was not allowed at the time we asked it.

The Court: Overruled. Exception.

Q. (By Mr. Archer): What was your answer, Mr. Hill?

A. My answer was that it was not an economical operation.

Q. Why not?

A. The small plant used equipment, furnaces that had been tried in other locations I am familiar with, and they were not successful, they could not be operated successfully.

They were also trying to treat ores there that were highly refractory, and they couldn't recover a sufficient amount of vanadium.

Q. Where else had you observed the kind of process that they had at the Morrison-Ackermann mill?

A. There was a similar plant in Disappointment Valley near a small community called Cedar, or Slick Rock, actually. They are both in the same area. And this was an operation known as The Vanadium Company. They had a similar type of

(Testimony of John W. Hill.)

roaster at that plant. In fact, the roaster equipment was designed by a fellow named Frank Nisley. And this plant was operated there. And I observed that along with other engineers of the United States Vanadium Company. And that was not a successful operation. [1699]

Q. Mr. Burwell has testified that after the Loma Mill, which was operated by Morrison and Ackermann, commenced operating, that he started an ore-buying station in the area at Thompson's, Utah, at the Yellow Cap area. When was the ore-buying station at Tompson's, Utah, established?

A. Thompson's, Utah, as I recall, was the location of the first, or one of the first ore-buying stations set up by the Metals Reserve Company, the agency for the procurement of ores for the government, and I am sure it was after June, 1942—it must have been within that, that June, July or August period of 1942.

Q. Was the Loma Mill operating at that time?

A. No.

Q. Will you generally describe your activities while working for United States Vanadium as agent for Metals Reserve Company?

A. My title was supervising engineer, and I was—I was trying to think of the word—I was given the job by Mr. Burwell to set up an office in Grand Junction, Colorado, and to establish an organization to buy vanadium ores for the agency, and we would just buy all we could.

Q. Who was your superior in this position?

(Testimony of John W. Hill.)

A. Mr. Burwell was, but I didn't see him more than two or three times in the two years that I was there. We had a free hand. [1700]

Q. To whom did you report, then, in your operations for Metals Reserve?

A. Well, I reported to Mr. Burwell, but principally to Donald Emigh.

Q. How do you spell that last name?

A. E-m-i-g-h.

Q. Where was he located?

A. He was in the New York office of the United States Vanadium Company.

Q. Did you know a Mr. Whitaker?

A. Mr. Orville Whitaker is a prominent mining engineer in Denver, Colorado.

Q. Did he have any connection with the Metals Reserve Company?

A. Mr. Whitaker was an adviser, as I remember, for the Metals Reserve Company, and he also has a similar position with the Atomic Energy Commission at the present time.

Q. Did he work for the United States Vanadium Company? A. No, no.

Q. Were your activities working as agent for Metals Reserve Company authorized by the government officials?

Mr. Alioto: That is objected to, if your Honor please. That is a conclusion, as to whether or not all of his activities were authorized. Everything he did for a period of two years? That is a conclusion. [1701]

(Testimony of John W. Hill.)

The Court: Overruled.

You may answer, if you know.

A. We were operating under a contract that was written between the United States Vanadium Company and the Metals Reserve Company that sets forth in very considerable detail just how we would carry on this work for the government, and the maximum price which we could pay for vanadium ores that we were buying for the government.

Q. (By the Court): During this time were you devoting your entire time to that work?

A. Yes.

Q. (By Mr. Archer): Mr. Nisley has testified that it was his understanding that United States Vanadium was buying ore for the account of Metals Reserve, and the government was, as he said, picking up the tab, or paying a subsidy of ten cents per pound.

A. Is that the question?

Q. No. The question is, who paid for the ore that was purchased by the United States Vanadium as agent for the Metals Reserve Company?

A. The Metals Reserve Company, the government agency.

Q. Did it pay the whole price?

A. It paid the whole price, plus five cents a ton-mile transportation. [1702]

Q. Was any subsidy paid to the United States Vanadium for buying ore?

A. No, not as a subsidy. The United States Va-

(Testimony of John W. Hill.)

nadium did receive a very nominal fee for this work.

Q. My question is, was the United States Vanadium paying a subsidy for ore that it used, itself? A. No, not that I know of.

Q. Maybe that wasn't my question, but that is what I meant. I am sorry.

Mr. Nisley has testified that in October of 1942 he had a conversation with you and Mr. Burwell in regard to the negotiations for his toll agreement, and at that time you got angry with Mr. Nisley and told him that your salary was paid by United States Vanadium Corporation, not by the Metals Reserve Company.

Did you get angry with Mr. Nisley at this time?

A. I don't recall that I did. I do recall that we had a meeting.

Q. Did you ever tell him that your salary was paid by the United States Vanadium Corporation, and not by the Metals Reserve Company?

A. I wouldn't say that, because I was definitely being paid by the Metals Reserve Company.

Q. How was that done? [1703]

A. Paid by check. All of these, as I recall—all the personnel on the agency payroll working out of our office were paid from the office in Grand Junction. We had a revolving fund established for the purpose of buying ore and paying personnel.

Q. Who gave you this revolving fund?

A. That came from some Federal Reserve Bank in Kansas City, as I remember.

(Testimony of John W. Hill.)

Q. (By the Court): It came from the government?

A. It was government money, yes.

Mr. Archer: I am about to go to another subject, if your Honor wishes to adjourn.

The Court: I think we might just as well.

We will recess until 9:30 tomorrow.

(Whereupon an adjournment was taken until Wednesday, June 18, 1958, at 9:30 o'clock a.m.)

Wednesday, June 18, 1958—9:30 O'Clock A.M.

JOHN W. HILL

a witness on behalf of the defendants, on the stand at the time of adjournment, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Resumed)

Q. (By Mr. Archer): Mr. Hill, in reading the transcript of yesterday's testimony I noted on page 1699 that I asked a question:

"Where else had you observed the kind of process that they had at the Morrison-Ackermann mill?

"A. There was a similar plant in Disappointment Valley near a small community called Cedar, or Slick Rock, actually. They are both in the same area. And this was an operation known as the Vanadium Company."

A. The Mesa Vanadium Company.

Q. That is M-e-s-a? A. Yes.

(Testimony of John W. Hill.)

Q. When we adjourned yesterday I was asking you about a conversation with Mr. Nisley at or about the time that the toll agreement with the Metals Reserve Company was under discussion. Mr. Nisley testified further that in the following year, after the first month of its operations under the [1706] toll agreement he had a conversation with you in which you told him you were going to have to shut his plant down because he didn't have a 70 percent recovery, and that he replied that it was impossible to have a 70 percent recovery, because they had to fill the mill circuit. Do you recall such a discussion as that?

A. I was trying to place the date on that. Do you have the date on that?

Q. He commenced operations in about April, 1943.

A. Yes. And this would be——

Q. This would be after his first month, so it would be about in May, 1943.

A. Yes. We had several discussions about the operation of the plant. I was not concerned too much with the way the plant was run, because it was being operated under this toll agreement, and we didn't have, or I didn't have, direct responsibility as to just how they worked. We did have the responsibility, though, of seeing that the terms of the agency contract were carried out.

Q. (By the Court): What do you mean by a toll agreement?

A. The toll agreement in this case was, your

(Testimony of John W. Hill.)

Honor, that the agency, Metals Reserve, was accumulating ore in the vicinity of the plant, and Nisley & Wilson had made an agreement with the Metals Reserve Company that we were administering in [1707] which we furnished the Metals Reserve ore to the plant. They would process the ore, return the vanadium oxide to the agency, and they would pay for the work that they did in changing ore to concentrates.

Q. By "agency," do you mean a representative of the United States Government?

A. That is correct. And in doing that work they had originally agreed that they would return 70 percent of the oxide, V_2O_5, contained in the ore as concentrates after the milling process.

Q. They would return that to the government?

A. To the government, yes, sir.

Q. This conversation counsel asked you about, do you recall that conversation?

A. I don't say that I recall the specific conversation, but we did have conversations, because as a result of those conversations we recommended that the terms of the following extension of that agreement be changed from 70 percent to 65 percent recovery.

Q. (By Mr. Archer): What was the reason that you recommended that the toll agreement be amended to provide for 65 percent recovery instead of 70 percent recovery?

A. The plant was not able to make the 70 percent recovery.

(Testimony of John W. Hill.)

Q. In November, 1943, did you make a report on the [1708] operations of the Nisley & Wilson mill and the Durango plant of the Metals Reserve Company?

This has previously been identified as Defendants' Exhibit U-R. I ask you if that is the report that you made?

A. Yes. I prepared a report such as this each month. We call these progress reports.

Q. Does that report show the cost of operating or the cost of producing vanadium oxide at the Durango plant and at the Nisley & Wilson mill?

A. Yes, they do.

Q. What was the total cost of producing vanadium oxide at the Durango mill up to the date of that report?

A. Under the item of "Total Cost per Pound," V_2O_5 sacked, for the month of November the cost was $1.5839, and treated to date the cost was $1.523.

Q. Does that refer to the fused black oxide, the commercial product to which we referred here?

A. That is correct. That is the Durango plant. Did you ask about the Nisley & Wilson?

Q. How about Nisley & Wilson?

A. The processing costs for the Nisley & Wilson were furnished to us by Nilsey & Wilson and were incorporated in this report as Item 19, under the heading of "Nisley & Wilson Processing Cost, Total Cost per Pound V_2O_5 sacked," for the tons treated to date, was $1.652 per pound. [1709]

(Testimony of John W. Hill.)

Q. And that, again, refers to the fused black oxide? A. That is correct.

Q. (By the Court): What is the amount?

A. $1.65—well, $1.652.

Q. $1.65? A. $1.65, and 2-plus.

Q. All these matters, now, that you had with Nisley & Wilson you had as an agent of the United States Government? A. Yes, sir.

Q. (By Mr. Archer): Prior to undertaking your work for the Metals Reserve Company, the agency of the United States Government, were you familiar with the mining of the Calamity and the Outlaw claims near Gateway, Colorado, by United States Vanadium Company in the years 1940 to 1941?

A. Yes. I was the assistant mining superintendent, particularly in the latter part of 1940 and 1941, and I worked under a fellow named Joe Weston.

Q. Were those mines mined according to sound engineering practice?

A. Yes, it was under the terms—there was a lease agreement involved in this operation, and it was carried out. The terms of the lease were carried out, and we always mined in accordance with the lease. [1710]

Q. Was the Gateway mill operating at the time you did this mining?

A. The Gateway mill—there were actually two operations at the Gateway mill. One was an operation that was under the group known as Gateway

(Testimony of John W. Hill.)

Alloys, Brown and Bowen, and a fellow by the name of Harry Brown did the work, and that mill I do not believe was operating at the time. They were bankrupt at the time. And I think the Nisley & Wilson plant was not in operation at that time. I am not sure.

Q. After you finished mining the Calamity and the Outlaw claims near Gateway was there any ore remaining in those claims?

A. The Gateway area — I mean, the Calamity area is one of the best mineralized areas in the northern part of the Plateau in the carnotite type of ores, and they had just been scratched. This area had actually been mined during the period from 1916 to 1922, and then later on they started mining again in this new vanadium period that we are talking about. Now, they have since, subsequently, been mined, and they are still being mined, this same area.

Q. Was ore from those same claims used by the Metals Reserve Company for the operation of the Nisley & Wilson mill?

A. That is right. That is where they got the ore.

Q. Do you recall when your first meeting with Mr. Nisley was in regard to his operating under a toll agreement for the [1711] Metals Reserve Company?

A. That was, as I recall, in 1942.

Q. I show you a letter dated October 22, 1942, from yourself to Mr. Ennis Cole, and ask you whether you can identify that letter?

(Testimony of John W. Hill.)

A. That is my signature. Yes, I know the letter.

Mr. Archer: I offer this as defendants' exhibit next in order.

Q. (By the Court): Who is Ennis Cole?

A. Ennis Cole was a miner—or, rather, a mining contractor who had been mining in the Calamity area for Gateway Alloys, the people that had the first plant at Gateway, and he had mined ore for the Gateway Alloys plant. Now, that is not the Nisley & Wilson plant. The Gateway Alloys plant, which was prior, but in exactly the same—well, the same buildings as the Nisley & Wilson plant—he mined ore for them, and he was familiar with all the claims and mines on Calamity Mesa.

Mr. Alioto: May I just ask one question on voir dire?

Q. (By Mr. Alioto): Mr. Ennis Cole was not connected with the Nisley & Wilson partnership, was he?

A. I don't believe he was. [1712]

Q. And was this letter ever sent to anybody in Nisley & Wilson?

A. Well, I don't believe the letter was, but I know that everyone was familiar with this whole thing.

Mr. Alioto: We do not think a letter to a third party is admissible, if your Honor please, but if counsel wants to put it in we have no objection.

Q. (By Mr. Archer): Who was Sylvan Smith, Attorney, Grand Junction, Colorado? Do you know whom he represented?

(Testimony of John W. Hill.)

A. I believe he represented the Gateway Alloys group.

Mr. Archer: The only purpose, your Honor, of this, is to show the date that the United States Vanadium Corporation, as agent for Metals Reserve, commenced getting ore from the Nisley & Wilson mill.

The Court: I question whether or not the letter would be competent, over objection.

Mr. Alioto: We are not objecting, Judge.

Mr. Archer: I will withdraw it.

The Court: He might use it to refresh his memory as to date.

Mr. Alioto: Does the Court understand that I have no objection to its admissibility? He can put it in. I think he can do it more quickly this way.

Q. (By Mr. Archer): Does this refresh your recollection as to when you began to make arrangements to purchase ore for the Nisley & Wilson mill operations under the toll agreement?

A. Yes; it was actually prior to that date that we started the work at Gateway.

Q. And this date is October, 1942?

A. Yes. That was a very complex arrangement. The whole thing was in bankruptcy, and we had to go through a lot of work to get it straightened out.

Q. How much ore has been produced from the Calamity and Outlaw claims near Gateway about which we have been talking, since United States Vanadium Company quit mining them in 1941?

A. At least 200,000 tons.

(Testimony of John W. Hill.)

Q. I believe Mr. Nisley testified his mill was a 20-ton-a-day mill.

A. Actually, during the toll agreement period he did not operate at 20 tons. It was more like 12 tons a day.

Q. Was he restricted in his operations by the lack of availability of ore?

A. No, he was not. We had a stockpile of ore there available at all times. [1714]

Q. After the expiration of the toll agreement at the Nisley-Wilson mill were the Calamity and Outlaw claims near Gateway, which Metals Reserve had been operating, in better or in poorer condition for mining than they had been prior to the Metals Reserve?

A. They were in very much better condition. There was ore available. This Calamity area was actually not just one mine; this was an area that contained at least 10 mines, all of which were capable of producing more ore than the mill at Gateway could use out of one, and the mines were in good shape.

I say that because they were in continuous production, and we arranged with—we had the Bureau of Mines, through the Metals Reserve agency that we were with, to come up there and diamond drill a lot of those claims and a lot of ore was found.

Q. What is the purpose of diamond drilling?

A. It is an exploration, an exploration operation, in which ore is found through taking a core

(Testimony of John W. Hill.)

out of the earth and examining it, assaying it and determining the ore value.

As I said, this was a very well mineralized area and the diamond drilling was a procedure of finding the ore ahead of the underground mine working, so you know which way to direct your underground mine working, and the program was very successful, that is, they found a lot of ore. [1715]

Q. During the period from 1939 to 1949, were there mining claims available sufficient to support an economical vanadium oxide mill other than the claims owned by the United States Vanadium Company and Vanadium Corporation of America on the Colorado Plateau?

A. Thousands of claims.

The Court: What is your answer?

A. There were thousands of claims and thousands of acres of mineralized area available for location by anyone.

As a matter of fact, Mr. Burwell, who was a party here himself, and his group, located hundreds of claims in the Colorado Plateau, and many claims right in this area we're talking about, on Calamity Mesa, in 1948.

Q. (By Mr. Archer): This was after he left United States Vanadium Company? A. Yes.

Q. During the period 1939 to 1949 in your opinion how much money would have been required to acquire sufficient claims and to construct a mill to produce vanadium oxide on the Colorado Plateau?

A. Why, it would have taken about a million

(Testimony of John W. Hill.)

dollars to build a 100-ton plant and possibly $500,000 to get mines into production. It would be a problem whether you're trying to locate your own ground and find ore, or whether you would go out and buy mines—and they were available. [1716]

Q. Mr. Burwell testified that both United States Vanadium Company and United States Vanadium Company operating as agents for Metals Reserve, that is, the government agency, purchased certain ore from the North Continent Mines. Were you familiar with those purchases? A. Yes.

Q. What kind of ore was it that they sold?

A. The North Continent Mines is located at Slick Rock, San Miguel County, Colorado, and they again were in an area that was very highly mineralized, and they had a small plant—North Continent had a small plant at Slick Rock, and they treated approximately 20 tons of ore a day, and in treating—in running this plant, they tried to maintain their mill heads of about three percent V_2O_5

Q. What do you mean by the mill heads?

A. That is the grade of the material that goes into the mill. And in mining three per cent ore at the mines, they would get about four or five tons of material that contained less V_2O_5 than the mill heads, so they had about five tons of ore to sell or dispose of that they didn't use in their own plant, and this ore they sold V.C.A., and they sold also to U.S.V.

Mr. Archer: I have no further questions of Mr. Hill. [1717]

(Testimony of John W. Hill.)

Cross-Examination

Q. (By Mr. Alioto): Mr. Hill, you say it cost a million dollars to get a 100-ton plant or mill to produce vanadium oxide in the area?

A. I base that on my remembrance of the costs —or costs of the mill at Monticello. I think that was a million dollars.

Now, I know that the 200-ton plant at Rifle, Colorado, was only 400,000 because it was built on a prepared site with the foundations—the foundations were all in. And the plant at Durango, Colorado, of the Metals Reserve Company cost $100,000, but there, again, part of the equipment was already there.

Q. How much did it cost your company to buy that plant at Durango?

A. I don't know anything about that.

Q. About $75,000, wasn't it?

A. I don't know anything about it, sir.

Q. You have no information at all as to what it cost your company?

A. I was in ore procurement.

No, I really don't know.

Q. Well, you were right there, you worked about that area, didn't you?

The Court: He says he doesn't know. [1718]

Mr. Alioto: I would like to cross-examine on that, if your Honor please.

The Court: All right, go ahead.

Mr. Alioto: I find it a little difficult to believe

(Testimony of John W. Hill.)

that a man who is there on the spot and who professes to give an opinion on the million dollars, doesn't know what the market value of a plant was in 1944.

The Court: He has answered your question. Go ahead with your cross-examination.

Q. (By Mr. Alioto): Let me ask the question this way:

Do you know what the sales price of the Durango mill was?

A. I don't know.

Q. So when you gave your expert opinion that it would cost a million dollars to get a mill in that area, in that period of time, you didn't have knowledge of the actual market price of that plant?

Mr. Archer: I object. He didn't specify what it would cost to get it. He said he talked——

The Court: The question is argumentative. If you will ask him questions instead of making an argument——

The Witness: Why, I told you that I know what the plant cost to build because at that time I was —that was part of my duties, and I had—as that November report will show, I had some — those items were compiled in the progress report.

Q. (By Mr. Alioto): Well, did Mr. Burwell ever tell you that they got the Durango plant for less than $75,000? A. I don't know.

Q. You don't know whether he even told you that?

(Testimony of John W. Hill.)

A. I am sure—I don't know whether he told me or not. I would say he didn't tell me.

Q. All right.

A. As a matter of fact, I left the Metals Reserve Company in the spring of 1944, and I think the plant was disposed of at some time later than that.

Q. Okay. You testified that there was no price agreement that you knew of between the Vanadium Corporation of America and your company in connection with ore prices, I believe.

A. That is right.

Q. Is that right? A. Yes.

Q. Now, as a matter of fact, Mr. Hill, you didn't have anything to do with setting the price for your company, did you?

A. I was working with Mr. Weston, who was a mine superintendent.

Q. Yes. A. I was his assistant.

Q. Yes.

A. We discussed ore prices but actually I did not meet [1720] with Mr. Burwell and Mr. Weston to make the ore prices.

Q. That's right. As a matter of fact it was Mr. Burwell who was one of the chief officers of the company, or the chief agent of the company in connection with the making of prices?

A. Mr. Burwell—the price of ore was determined from the actual cost, the company cost, of mining ore. I mean, there wasn't—they wouldn't

(Testimony of John W. Hill.)

pay more for the ore from outsiders than it cost them to mine it themselves.

Q. And was your cost 21 cents for two per cent ore, 21 cents a pound?

A. At what time, sir?

Q. In 1939.

A. We had ore costs that were less than that. We had some that were more at the mines.

Q. Was 21 cents supposed to be some kind of an average?

A. The 21 cents—that would be $4.00 a ton—and we had mining costs that were $4.00 a ton.

Q. Approximately $4.00 a ton, that is your cost?

A. Mining cost, yes. So that established the price of ore at that time.

Q. Now, then, Mr. Van Fleet and Mr. Burwell were the men that actually had the power to set the price for your company, that is correct, is it not, Mr. Hill?

A. They were based on recommendations from Joe Weston [1721] and his associates, one of which I was.

Q. But in any event you didn't have——

A. No, not——

Q. (Continuing) ——the power to set the company's.

A. I did not.

Q. And you don't know whether Mr. Burwell and Mr. Van Fleet had a meeting with Mr. Bransome at the Union League Club in New York at

(Testimony of John W. Hill.)

which they discussed the matter of ore prices, do you? A. I wouldn't know.

Q. In other words, you were never informed of the fact that there was a meeting at the Union League Club by Mr. Burwell——

Mr. Holland: Where does this Union League Club come in? I don't remember any testimony.

A. I wasn't present.

Mr. Holland: I don't think it makes any difference, but there wasn't any testimony on it.

Q. (By Mr. Alioto): Now, then, in connection with the Metals Reserve Company pricing, you were shown a letter by counsel—he offered it and didn't put it into evidence—in which you set up a price of 30 cents per pound for two per cent ore. Then you stated: "This is subject to approval in Washington." Do you recall that situation, Mr. Hill?

A. Yes.

Q. Now, then, as a matter of actual mechanics, how did this work? [1722] Did Washington tell you to go out there and charge or to pay 30 cents per pound, or did you folks first make the recommendation as to the amount of money that should be paid and get the authorization of Washington to pay that much money?

A. We had in the agency agreement the authority to pay not more than 50 cents a pound.

Q. Yes?

A. We were obligated to get the ore as cheap as we could. We had the authorization to pay this price. This was a special arrangement, because we

(Testimony of John W. Hill.)

were trying to get ore for the Gateway plant, and the mines in this case at Calamity—there was the question of title and we had to work out a special arrangement. I think that (letter) also shows that in addition to the 30 cents we paid an 8 cents a pound that went to the trustee, the owners of those claims that were in litigation.

Q. Now then, Mr. Hill, would it be correct to say that up to 50 cents a pound, that you folks had the discretion of fixing the price of ore that you would pay to the miners, is that correct?

A. In the Metals Reserve agency.

Q. I am talking about the Metals Reserve agency. Now, only that. A. Yes. [1723]

Q. That is correct, is it not? A. Yes.

Q. And that price was not fixed, except for the 50 cents ceiling, was not fixed by any government representative other than yourself or insofar as you were a government representative?

A. I was a government representative.

Q. And that's correct, is it not, that you folks fixed that price?

A. The Metals Reserve, yes, we—that's right.

Q. Well, now, you say "Metals Reserve." I am trying to get to people. Who were the people?

A. I did.

Q. You did, Mr. Hill. Thank you.

Now then, in connection with the fixing of that price, did you ever confer with Mr. Bransome of Vanadium Corporation of America?

(Testimony of John W. Hill.)

A. We bought ore from the Vanadium Corporation of America.

Q. Well, quite aside from buying ore, did you ever confer with Mr. Bransome as to how much money should be paid for ore?

A. I didn't actually do that. We had another man in this organization named Paige Edwards.

Q. Yes. And who is Paige Edwards?

A. Paige Edwards was working as a liaison man between the Metals Reserve advisor, Mr. Orville Whitaker of Denver, Colorado, and at my office, myself, and when the Vanadium Corporation offered [1724] ores for sale, Mr. Edwards investigated the matter of what price should be paid for those ores, and I would approve them along with Mr. Whitaker. I did not discuss ore prices with Mr. Bransome.

Q. Did you ever suggest that ore prices be discussed with Mr. Bransome? A. I may have.

Q. Was it done?

A. I am sure that Mr. Edwards did.

Q. And did you direct Mr. Edwards ever to go to Mr. Bransome and discuss with him the prices that should be paid for ore?

A. Oh, we were after all the ore we could get in Metals Reserve and they had ore available. I would say that I might have done that.

Q. Did you ever get Mr. Bransome's views as to what price would be charged or what price should be paid for ore?

A. Not from Mr. Bransome.

(Testimony of John W. Hill.)

Q. Did you get them from Mr. Bransome through Mr. Edwards?

A. I got them from Mr. Edwards.

Q. Mr. Edwards, he is a Vanadium Corporation of America employee?

A. At this time he is, yes, but he left the agency and went—I think he went in the Navy and then he went into the contracting business and then came back to V.C.A. [1725]

Q. I show you a letter of yours——

Well, first of all, let me show you a document, a handwritten document, dated 9-17-1943. (Handing witness.)

Would you be good enough to look at that, Mr. Hill, and then state whether or not that is your handwriting?

A. (Examining) That is my writing.

Mr. Alioto: We will offer this into evidence, if your Honor please, in connection with the cross-examination of this witness.

A. I would like to see that again or——

Mr. Alioto: Yes, sir.

The Witness: Or, Mr. Archer, will you tell me the date on that?

Mr. Archer: September 17, 1943.

The Witness: Yes, thank you.

Mr. Archer: No objection.

Mr. Alioto: Do you want to see the letter again?

The Witness, no, fine, thank you.

Mr. Alioto: The date is September 17, 1943. Do you have that in mind?

(Testimony of John W. Hill.)

The Witness: Yes, thank you.

(Handwritten letter, Hill to Edwards, dated September 17, 1943, received in evidence and marked Plaintiff's Exhibit No. 147.)

Q. (By Mr. Alioto): Now, this is addressed to [1726] "Dear Paige," in your handwriting. "Paige" I take it is Paige Edwards?

A. That's correct.

Q. Whom you have identified.

A. Paige Edwards was in charge of the laboratory and sampling works at Monticello, and the Vanadium Corporation was operating the plant at Monticello, Utah, for the Metals Reserve Company.

Q. Who was the man named Denny?

A. That is Mr. Biles.

Q. Denny Biles? A. Yes.

Q. He was the head man there so far as mining was concerned and the running of the plant, wasn't he? A. That's correct.

Mr. Alioto: This letter reads, in part:

"I have been trying to call Denny about the ore prices. No connection. I wonder if anything could be gained by meeting with Denny and Mr. Bransome about the ore prices. I will try and get the Chandler Chumway deal out to you tomorrow. Regards, John."

Q. Did you ever have this meeting with Mr. Bransome?

A. No, I didn't have the meeting with Mr. Bransome or Mr. Biles. That was Paige's job and he would be the one. [1727]

(Testimony of John W. Hill.)

Now, I would say he did have the meeting, but I didn't have the meeting.

Q. Well, you say you would "try to get in touch with Denny about ore prices."

A. We are talking about the purchase of ores from the Vanadium Corporation of America for the Metals Reserve Company.

Q. Mr. Bransome wasn't an agent of the Metals Reserve Company?

A. He was an officer of the Vanadium Corporation.

Q. Yes, but he was no agent of the Metals Reserve Company, was he? A. No.

Q. And neither was Denny, Mr. Biles?

A. Mr. Biles had ore available that he would sell to the agency. As a matter of fact, they did mine and sell ore to the agency.

Q. Was Mr. Bransome some kind of an advisor to your folks, to you and Mr. Edwards, during this period of time? A. Absolutely not.

Q. He didn't have anything to do with Metals Reserve, did he?

A. I don't know whether he did or not. He didn't have anything to do with my work.

Q. Did it ever come to your attention that he was intervening in your work in any way? [1728]

... I don't think—I don't know that he did.

Q. In connection with Wade and Curran, for example. A. I know Wade and Curran.

Q. Who were Wade and Curran?

A. They were mining ore—they were located at

(Testimony of John W. Hill.)

Farmington, New Mexico, and they were mining ore on the Navajo Reservation, ore purchased for the Metals Reserve Company.

Q. And did Mr. Bransome have anything to do with any relationship between Metals Reserve Company and Wade and Curran?

A. Not that I know of.

Q. You recall receiving a copy of this letter, which I am handing you, February 4, 1944 (handing witness)?

A. (Witness examining.) This is dated February the 4th, 1944. That was a letter written by Paige to me. [1729]

Q. And you received it, sir? A. Yes.

Q. And "Page," again, is Page Edwards?

A. That is correct.

Mr. Alioto: We will offer this in evidence, if your Honor please. I ask that it be marked as plaintiffs' exhibit next in order. Counsel already have examined it.

(The inter-company memo referred to was thereupon marked Plaintiffs' Exhibit No. 148 in evidence.)

Mr. Alioto: Under date of February 4, 1944. It is on the inter-company correspondence, to Mr. John W. Hill, Grand Junction, Colorado, from Page Edwards, marked "Personal" (reading):

"Dear John:

"M. L. Nielson was in today and said that he had not received a contract cancellation. He appeared to feel slighted in the matter. I told him

(Testimony of John W. Hill.)

his contract would apply to the notice on the bulletin board. However, it might be well to send him a formal cancellation as we have with the rest of the producers in the country.

"Wade and Curran were in today, not to see me, but to see Mr. Bransome and Denny. They were quite put out regarding the whole matter and said they did not feel that their contract was subject to cancellation. [1730] Mr. Bransome is familiar with our general form, and if their contract is on one of our OPA forms, Mr. Bransome felt that there was no question that the contract is automatically cancelled when we stop receiving ore. Evidently their next move is to see Dan Melinskie in Cortez.

"All of this to merely keep you posted as to your friends' activities."

Q. (By Mr. Alioto): Now, what is the reference there to "your friends' activities"? Who were "your friends," sir?

A. I think he was referring to Wade and Curran.

Q. Did Mr. Bransome, in February, 1944, occupy some position with Metals Reserve Company?

A. No.

Q. Did you deputize him to handle the Wade and Curran matter? A. No.

Q. As a matter of fact, there was a charge at or about the time that you were paying higher prices to V.C.A. than anybody else, wasn't there? Didn't that charge come to your attention?

(Testimony of John W. Hill.)

A. I don't remember that. My recollection is that Wade and Curran received the highest prices.

Q. Do you recall that there was a charge that you paid V.C.A. higher prices?

A. By whom? I don't remember.

Q. Under the Metals Reserve contract, that in your discretion to pay up to 50 cents——

A. Right.

Q. The average price was 31 cents, wasn't it?

A. That was the base price when we started the program.

Q. 31 cents with two percent off?

A. In 1942.

Q. Do you recall that there was a charge made that V.C.A. was getting higher prices?

A. I don't recall any specific charge. There were so many ore prices there that I think we paid Wade and Curran more than we paid V.C.A., and Sitton, and North Continent, and those mines, were essentially in the same category, and the mines around Gateway were approaching that same price level.

Q. Who was it in your organization that actually fixed the price to be paid during the Metals Reserve period? I mean what person?

A. I had that authority.

Q. Did you consult with Mr. Burwell on it?

A. I didn't see Mr. Burwell very often. I don't think I did in a lot of these cases. Pardon me.

Q. Go ahead. I'm sorry.

A. I was merely going to say in the case of

(Testimony of John W. Hill.)

[1732] the Vanadium Corporation of America ores we cleared with Mr. Whitaker in Denver.

Q. Yes. And now Mr. Burwell, did you discuss it with him, ever, as to what the basic ore prices should be, or whether the basic price should be 31 cents or 49 cents for two percent ore?

A. When we set up the agency office in Grand Junction Mr. Burwell told me to go out and acquire all the ore that we could get. The base price at that time was 31 cents. And we proceeded to purchase the ore, and the prices gradually went up with the cost of everything else at the time.

Q. The simple point I am trying to get at is, did Mr. Burwell fix that base price of 31 cents as far as you were concerned? Isn't that a fact?

A. I can't say that—well, I suppose he did, but that was the base price being paid in the industry at the time that went in to Metals Reserve.

Q. When you say in the industry, that meant predominantly your company and V.C.A., isn't that the fact?

A. Well, they were the large producers at that time.

Q. That 31-cent price was not determined or fixed by you, was it, Mr. Hill? It was fixed by Mr. Burwell and Mr. Van Fleet?

A. I don't know that.

Q. Well, you were buying, weren't you, for the United States Vanadium Company?

A. I was told by Mr. Burwell that the base price was 31 cents.

(Testimony of John W. Hill.)

Q. All right.

A. I don't know whether he fixed the price or not.

Q. In any event, it was Mr. Burwell who told you what price to pay?

A. That is correct.

Q. And specifically, a 31-cent price?

A. That is correct.

Q. Do you know whether before telling you that he had a conference with Mr. Bransome in Dove Creek, Colorado, at which that price was discussed, the question of putting the price at 31 cents instead of 21 cents?

A. I don't know about that.

Q. Yesterday Mr. Priestley said that this sale of oxide by your company of 130,000 pounds at 80 cents to your competitor, the Vanadium Corporation of America, was—I think his language was—an isolated transaction.

A. I am not familiar with the sales, of course.

Q. Didn't you know that this amount of oxide was being sold to the Vanadium Corporation of America at 80 cents?

A. I wouldn't have any way of knowing at all.

Q. You did not know, either.

A. I would say that 80 cents would—you could [1734] make money at 80 cents at that time.

Q. How much money?

A. I don't know how much offhand, no.

Q. The cost was about 40 cents, wasn't it?

A. I would say it was more than 40 cents.

(Testimony of John W. Hill.)

Q. How much more than 40 cents?

A. Probably around 50 cents.

Q. So you figured you were making 30 cents a pound at that time?

A. In that particular case, in 1938, it would be well to know what ore was involved there.

Q. Don't you know? You were out there.

Q. (By the Court): Did you have anything to do with the transaction?

A. No, I had nothing to do with the sales.

Q. (By Mr. Alioto): Did you know what oxide was being sold to Vanadium Corporation of America by your company at 80 cents?

A. No. If I knew, it would be hearsay. I don't know.

Q. Did you know what your company was selling vanadium oxide for to everybody else at this same time? A. No, I do not.

Q. Wasn't it $1.10? A. I don't know.

Q. You don't know that. You know something about Maggie C., don't you? [1735]

A. I know where it is and who owns it.

Q. And besides where it is and who owns it, didn't you have anything to do with supervising the mining activities of the Maggie C.?

A. What date are we talking about, sir?

Q. From 1939 through 1942.

A. Yes; yes, the latter part of that period.

Q. I think it might be well, since you suggest the location—— A. I know where it is.

Q. Would you be good enough to point out for

(Testimony of John W. Hill.)

the members of the jury, please, Mr. Hill, where the Maggie C. claims of the Vanadium Corporation of America which you mined were located?

A. We are just talking about one claim.

Q. Let us talk about Maggie C.

A. Maggie C., and it is only one claim.

Q. Yes.

A. 300 by 1,500; not the standard-size claim.

Q. Yes. Will you be good enough to point out to the members of the jury where that is located? If you would tilt the map this way so the members of the jury sitting back here can see it, it would be helpful.

A. I will have to get my bifocals. [1736]

Q. May I assist you in holding that, Mr. Hill?

A. You have a map here that does not show the town of Uravan. There is Naturita, and this is the Uravan area.

Q. It is the Uravan area?

A. Uravan would be there, and the Maggie C. would be—well, about where this "A" is. It is south of Uravan.

Q. When you say about where this "A" is, you are talking about the "A" in Uravan designated as a mining district? A. Yes.

Q. On Plaintiffs' 26 for identification?

A. Yes. In other words, it is approximately ten miles south of Uravan.

Q. It was close to your Uravan plant, is that right? A. Yes.

Q. You were aware, were you not, in 1939, 1940,

(Testimony of John W. Hill.)

and 1941, that your company was mining on this Maggie C. claim? A. Yes.

Q. And you were also aware, were you not, that you also mined a claim called the Donald L., which was in the vicinity? A. Yes.

Q. What other claim did you mine at that time that belonged to the Vanadium Corporation of America, your competitor?

A. Those are the only ones, right there in the Uravan area, that I am familiar with. [1737]

Q. Are those the only ones you are familiar with that your company ever mined?

A. No.

Q. That is, under those circumstances, where the mine was owned by the Vanadium Corporation of America.

A. I think there was some mining over in Dry Valley.

Q. Yes. And that Dry Valley mine, as a matter of fact, was connected with this whole Maggie C. situation, wasn't it? A. That is correct.

Q. Let me show you a document.

I will ask that this be marked. It is called "Maggie C. 1939-1941."

(Whereupon the file of documents referred to was marked Plaintiffs' Exhibit No. 149 for identification.)

Q. (By Mr. Alioto): Yesterday I showed this document to Mr. Remmers, and we had a little trouble finding out whether the pounds were pounds of ore or pounds of oxide. I would like you to help

(Testimony of John W. Hill.)

us on that, Mr. Hill. You will notice in this Maggie C. file, first of all, there is the signature of A. H. Coleman. I take it you knew Mr. Coleman?

A. Yes, I did.

Q. And I take it you know his signature?

A. Well, I know Mr. Coleman. I am sure that is his signature. [1738]

Q. He was the superintendent of mining at the time?

A. I think he was superintendent of the Uravan plant at the time.

Q. The plant at Uravan? A. Yes.

Q. This document shows at the bottom of it:

"Shipped to October 1, 1941, 717,848 pounds."

Will you be good enough to tell us whether that is pounds of ore or pounds of oxide? We had a little difficulty on that.

A. This states—the letter of October 1, 1941:

"Mining and milling Maggie C. ores,——"

and you have tons, tons hauled, and the date. In other words, that is production from the mine from the 4th of September to the 30th, 96-plus dry tons. And then the analysis shows, in the first column is tons of ore, grade of ore, pounds of V_2O_5, the extraction, 75 percent. That would indicate that this ore was milled, and Mr. Coleman had to account for the recovery of the vanadium from the ore. This, then, would be pounds of vanadium that was extracted from ores prior to that time.

Q. Pounds of vanadium ore? A. V_2O_5.

Q. Vanadium oxide?

(Testimony of John W. Hill.)

A. Yes. And this would be the total amount that had been mined by U.S.V. from the Maggie C., and treated by U.S.V. from [1739] the Maggie C. and delivered to the V.C.A.

Q. Specifically, that total amount, which is 717,000 as of October 8, 1941, 717,848 pounds are pounds of vanadium oxide, isn't that correct, and not pounds of ore?

A. This is pounds of oxide.

Q. Vanadium oxide. Thank you.

We will offer this in evidence, if your Honor please. This is report of U.S.V. and V.C.A. on the amount of oxide that was delivered.

Mr. Holland: That makes a lot more records in evidence. That evidence is already in.

Mr. Alioto: I submit the evidence is not in, those reports showing how much they gave them month-by-month during the period of time.

Mr. Holland: I have no objection.

Mr. Alioto: If there is no objection we offer it, if your Honor please.

Mr. Holland: I will withdraw the objection.

The Witness: That was mined on a toll agreement basis, as I recall it.

The Court: It will be admitted.

(The file of documents formerly marked Plaintiffs' Exhibit No. 149 for identification was now received in evidence and so marked.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): Now then, you specifically

(Testimony of John W. Hill.)

had something to do with this Maggie C. situation, didn't you?

A. Oh, yes. In this case you merely asked me to identify what was on the letter there.

Q. That is correct.

A. I don't know anything about the mechanics or the agreements, or anything else that might have been involved in this.

Q. I understand that. Did you have anything to do, I am asking, with this Maggie C. operation by your company on the V.C.A. claims?

A. Just the physical work of extracting the ore.

Q. And you directed that physical work, didn't you?

A. No, Mr. Weston directed that work.

Q. And you were an assistant to Mr. Weston?

A. That is correct.

Q. And you knew at the time you were directing it that you were mining this off of V.C.A. claims?

A. Yes, that is correct. I will say now why it was being mined.

Q. To turn over the oxide to V.C.A.

A. On a toll agreement basis.

Q. Yes. Now, you say a toll agreement basis, Mr. Hill. That implies that you took their ores, processed them, and took that product of vanadium oxide and turned it over to [1741] V.C.A., doesn't it? Isn't that what "toll" means?

A. Yes. Well, I would like to give my position on this thing.

Q. Yes, will you state it, sir?

(Testimony of John W. Hill.)

A. And that is, as the man in charge of the extraction of the ore, I don't really know what these—what the agreements were in this case. I know that the ore was being mined, was being processed, as this letter from Mr. Coleman would indicate, but I knew that that was going on.

Q. In that connection—you called it a toll agreement.

A. I don't say it was a toll agreement. I am identifying such an arrangement that might be called a toll agreement.

Q. Didn't the Vanadium Corporation of America kind of overdraw its account in connection with Maggie C.? A. I heard that they did.

Q. Who did you hear it from?

A. Again, that was in the mining department.

Q. You heard it within your own organization?

A. Yes.

Q. You called it a toll agreement, but that means if they overdrew their account, that you supplied them with oxide over and above oxide that you secured from the claim, doesn't it?

A. If I follow you correctly, we supplied more oxide than we mined.

Q. Yes. [1742]

A. In Maggie C. that might have been the case, but then, again, I was not familiar with this operation beyond the extent of just being, say, a miner.

Q. That means, necessarily, does it not, Mr. Hill, that you supplied them oxide from your own sources, isn't that correct?

(Testimony of John W. Hill.)

A. I know that there was some other oxide ore produced in Dry Valley.

Q. I am talking about the Maggie C. overdraft, as I will call it.

A. I really can't say that, because I don't know. I had nothing to do with the weights, the analyses, or putting those together.

Q. Tell me, who knows anything about Maggie C.?

Q. (By the Court): Do you know of your own knowledge about an overdraft?

A. Yes, I know that there was an overdraft, but I don't know anything about the—I was actually in the mining department.

Q. Yes, I understand.

Q. (By Mr. Alioto): Was this lady, "Maggie C.," introduced to anybody in that organization? Who knows about Maggie C.?

A. Everyone in the area knows about the Maggie C. claim.

Q. Mr. Priestley did not know about it. [1743]

A. He wouldn't know about it.

Q. Who would know about it?

A. Mr. Weston and Mr. Burwell.

Q. Mr. Burwell was the man who knew more about it than anyone else, wasn't he?

A. Well, yes; he was the manager at the time. He should know.

Q. In connection with this overdraft, it was Mr. Burwell who told you, wasn't it, that they had

(Testimony of John W. Hill.)

Q. And I believe you testified that M.R.C. bought considerable ore from the Vanadium Corporation of America, is that correct?

A. That is correct.

Q. And that those sales were handled by Paige Edwards? A. That is correct.

Q. Now, as a matter of fact, all of those purchases from V.C.A. were passed on by Mr. Whitaker in Denver, were they not? A. Yes.

Q. And was he——

A. Mr. Whitaker actually made trips out into this area to examine the mines.

Q. Mr. Alioto introduced in evidence a letter you wrote [1754] Paige Edwards on September 17, 1943, in which you said:

"I have been trying to call Denny about the ore prices. No connections."

Now, what ore prices were you talking about there?

A. Talking about prices for ore that Metals Reserve Company——

Q. Would pay who?

A. Would pay the Vanadium Corporation of America.

Q. This is ore that they bought from Vanadium Corporation of America, is that correct, or that they were going to buy?

A. Either were going to buy—. Were going to buy.

Q. Did this have anything whatever to do with

(Testimony of John W. Hill.)

the prices paid miners for ores by either Vanadium Corporation or U. S. Vanadium at the time?

A. Absolutely not.

Q. And when you say "I wonder if anything can be gained by meeting with Denny and Mr. Bransome about the ore prices," you were talking, were you not, about the prices that M.R.C. would pay V.C.A. for ore from its own mines—some of its own mines, is that correct? A. That is correct.

Q. Which prices were, in the final analysis, passed on by Mr. Whitaker in Denver.

A. That is correct. We bought ore from V.C.A.

Q. Now, when this other letter that he introduced about [1755] "Wade and Curran were in today, but not to see me, but to see Mr. Bransome and Denny—" now, actually Vanadium Corporation of America was operating the Monticello plant for Metals Reserve, were they not?

A. That is correct.

Q. And "Wade and Curran" that he refers to here had a mine that was tributary—that is, its ore was being purchased by M.R.C. for the Monticello plant, is that correct?

A. I think most of it went to the Durango, actually.

Q. But some of it went to the Monticello plant?

A. Yes. Both of them were agency plants.

Q. Mr. Alioto was trying to make the point that——

Mr. Alioto: I will object to that—as to what I was trying to make, as argumentative.

(Testimony of John W. Hill.)

overdrawn their account, so to speak, from Maggie C.?

A. I can't say that he told me. I don't know. I knew because I had heard in the course of milling around the office and so forth that there was more.

Q. My question was, necessarily the overdraft of oxide that they took from you came from your own production, didn't it?

A. I believe that is right.

Q. And you sold it, or transferred it, to the Vanadium Corporation of America at 65 cents, didn't you? A. I don't know.

Q. What was the toll arrangement under Maggie C.? You do not know that it was 65 cents?

A. I don't know what the price was. No, I don't know the price. They mined the ore. The company had excess mill capacity at that time, because we were not selling vanadium. [1744] I know that. We were working our mines half-time — the U.S.V. mines half-time.

Q. In 1941? A. In 1939.

Q. The Maggie C. agreement went right through to 1941.

A. But this was particularly the 1941—or 1939 period, as I remember it, and the ore — V.C.A. didn't have a plant at that time at Naturita, and this ore was mined under a contract or toll agreement for V.C.A.

Q. Don't you know now, Mr. Hill, that that toll agreement was 65 cents for 1939 and 75 cents for 1940? A. I don't know for a fact.

(Testimony of John W. Hill.)

Q. And this is the first time you heard those figures mentioned, 65 cents and 75 cents?

A. I would say that that is right.

Q. Now then, there came a time when this overdraft of oxide by the Vanadium Corporation of America, the overdraft from the Maggie C. arrangement, was worked out under a deal where you mined—U.S.V. mined—another claim of the Vanadium Corporation of America, was it not?

A. Yes, in Dry Valley.

Q. Would you be good enough to show the location of the Dry Valley claims of V.C.A., and if you will be good enough to tilt that map so the members of the jury sitting back here can see it—— [1745]

A. Well, it was north of Monticello about 17 miles, say in this area, here.

Q. That would be roughly in the vicinity of the Metals Reserve plant, or the Defense Corporation plant that was operated by V.C.A.?

A. When was this ore mined in Dry Valley, may I ask you, please?

Q. Let me show you your own documents on that so there will be no speculation about it.

A. This is not my signature, of course.

Q. How is that?

A. This is not any of my correspondence.

Q. Oh. You know Mr. Haldane, though?

A. Yes.

Q. He was a very prominent man in the organization, was he not?

A. Yes; he was superintendent.

(Testimony of John W. Hill.)

Q. You will take his signature as to dates, won't you?

A. Well, the date is October 9, 1941. Just a second.

Q. If you will flip the pages I think you will see the extent. You will notice the final statement on Dry Valley. Will you be good enough to fix that date for us, sir?

A. This letter is dated April 7, 1942.

Q. O.K. So far as the general location is concerned—that is, the location in the area where Vanadium Corporation [1746] of America operated the Monticello.

A. There was no plant there at that time.

Q. I understand that. A. Yes.

Q. But that is the area in which they operated the plant? A. Later on.

Q. Yes. A. Yes.

Q. Now then, did you supervise or assist in the mining of this Vanadium Corporation of America claim?

A. Do you know which one it was?

Q. The Dry Valley claims.

A. There are lots of claims. It is immaterial. I visited the Dry Valley claims, yes, with Mr. Weston.

Q. You were right there. You were assisting in this mining.

A. I have been there, yes.

Q. So you know which claims I am talking about, don't you?

(Testimony of John W. Hill.)

A. Well, we just talk about the area.

Q. In connection with these Dry Valley claims, that property actually belong to you, didn't it? Didn't those claims belong to you at one point?

A. I believe the company——

Mr. Holland: If the Court please, I assume Mr. Alioto is making Mr. Hill his own witness.

Mr. Alioto: No, your Honor.

Mr. Holland: None of this subject matter was gone into on direct.

Mr. Alioto: I certainly do not think that is true. There was a very broad examination about agreements.

Mr. Holland: We are perfectly prepared to explain——

The Court: I say now, as I have said before, that much of this evidence you are introducing now is absolutely immaterial to the issues in this case. We are just taking up time.

Mr. Holland: Of course, we have to answer it. We shall have to put on witnesses who know and who can explain this situation.

Mr. Alioto: Does your Honor mean that the exchange of oxide between those two companies at 80 cents and 65 cents, when both of them refused to supply the plaintiff's company, is not material in this case?

The Court: Certainly. It is just pure speculation all the way through.

Mr. Alioto: We would just like to make our record on it, because we, respectfully and defer-

(Testimony of John W. Hill.)

entially, do not agree with your Honor as to how competitive these two organizations were in the light of this evidence. I do not know a [1748] better way of establishing collaboration, if your Honor please, than the fact that one competitor supplies the other one with the raw materials.

Mr. Holland: We have people who know all about this.

Mr. Alioto: You can call them as witnesses.

Mr. Holland: He is cross-examining a man who was asked nothing about that subject on direct.

Mr. Alioto: Here is a man who said he knew nothing about agreements. That was a pretty broad question.

Q. (By Mr. Alioto): Mr. Hill, the Dry Valley claims were actually owned by your company and transferred by your company to the Vanadium Corporation of America, isn't that a fact?

The Court: If you know.

A. I don't believe they owned the claims. They may have had a lease agreement or contract.

Q. (By Mr. Alioto): They had a property right in those claims, in any event, and they transferred their property right to the Vanadium Corporation of America, did they not?

A. I know the Vanadium Corporation wound up with the claims. How they went about it I don't know. The claims actually belonged to the Molybdenum Corporation of America.

Q. Yes, but you had some kind of property right to mine [1749] them, didn't you?

(Testimony of John W. Hill.)

A. They acquired the property rights from a man named Leverett Davis and a man named Bosley in the vanadium.

Q. When you say they acquired——

A. U.S.V.

Q. And your company transferred that right to the Vanadium Corporation of America?

A. After they mined out practically all the ore that was there.

Q. And then you worked out this arrangement of mining their ore to compensate for the overdraft on the Maggie C.?

A. I can't tell you about that agreement.

Mr. Alioto: We offer this document in evidence to show the actual amount of business between these two firms, and that completes the whole Maggie C. transaction. It will be the last document we offer on this matter.

The Court: If that is the last one, we will let it go in.

Mr. Holland: This is already in evidence in a one-page document.

Mr. Alioto: The volume is not in evidence, Mr. Holland—the month-by-month volume.

Mr. Holland: Oh, no, not the month-by-month, but the total is. [1750]

(The computation referred to was thereupon marked Plaintiffs' Exhibit No. 150 in evidence.)

[See Book of Exhibits.]

Mr. Archer: If your Honor please, it is in Plaintiffs' Exhibit 8, put in three weeks ago.

(Testimony of John W. Hill.)

Mr. Alioto: Tell me how much they transferred, then, in December, 1941, if it is there already.

The Court: Cut out your arguing and go ahead with your examination.

Mr. Alioto: I would just like to call the jury's attention to the final settlement sheet on this transaction.

This is a letter from Mr. Blair Burwell, the general superintendent, to the Vanadium Corporation of America, dated April 7, 1942:

"Please find attached the final statement covering the Maggie C. Dry Valley production. This statement shows that the production of ore in Dry Valley and Maggie C. has been completed and the account has been closed and settled.

"Very truly yours,

"Blair Burwell."

And that account, in March of 1942, shows total pounds extracted to March 1, 1942, as full reports for February, the preceding month, as 733,551.13 pounds.

Q. (By Mr. Alioto): Now, again, that is vanadium oxide, isn't it, Mr. [1751] Hill?

A. I believe it is in that letter.

Mr. Alioto: Less correction of the total pounds extracted in accordance with the agreement between Mr. Blair Burwell and Mr. Frederick Kett, 15,703 pounds.

Q. (By Mr. Alioto): Mr. Kett was some kind of a mining superintendent for the Vanadium Corporation of America, was he not?

(Testimony of John W. Hill.)

A. Yes, he was in charge.

Q. But Mr. Burwell was, of course, your general superintendent? A. That is correct.

Mr. Alioto (reading): "Corrected pounds, 717,848. Shipped to March 1, 1942, 717,848 pounds of vanadium oxide."

Q. (By Mr. Alioto): That was in March of 1942. But no government agency forced you to do any of these things, did it? The government had nothing to do with this?

A. That was before the Metals Reserve.

Q. This was purely a private transaction between you and the Vanadium Corporation of America, wasn't it? A. It appears to be that.

Mr. Alioto: We have no further questions.

Cross-Examination

Q. (By Mr. Holland): Mr. Hill, I believe you testified that you had authority to set prices paid under the M.R.C. program for ore?

A. Yes. [1753]

Q. And what factors did you take into consideration in determining what the price would be?

A. All the factors of condition of mine—that is, the amount of ore available in the mine, that is, developed ore, and amount of exploration work to be required, the matter of roads—and everything involved in the operation of the mine.

Q. And the location of the mine? A. Yes.

Q. The inaccessibility? A. Yes.

Q. All that sort of thing? A. Yes.

(Testimony of John W. Hill.)

The Court: Yes, it is.

Mr. Holland: Okay.

Mr. Alioto: We will make the points in final argument.

Mr. Holland: I will change the question.

Q. Actually, it was Vanadium Corporation's business, as agents for M.R.C., in the operation of the Monticello plant, to deal with Wade and Curran, wasn't it—have dealings with Wade and Curran?

A. Well, they were selling us the ore.

This letter—that is dated in 1944, is that correct?

Q. February 4, 1944.

A. What they are referring, Wade and Curran, referring there to the fact that their ore purchase agreement, which is the O.P.A., has been cancelled by M.R.C.

Q. That's right.

A. And I suggested that they are looking for an outlet for their ore after the agency program is completed.

Q. And they are complaining about the contract being canceled, are they not?

A. We were directed by M.R.C. to cancel all the contracts, including theirs.

Q. Mr. Bransome had nothing to do with that, did he? A. No.

Q. That cancellation was made by M.R.C.?

A. Yes.

Q. And Mr. Bransome's only connection with the matter would be the president of the company

(Testimony of John W. Hill.)

which had operated the mill which had been milling their ore, is that correct? A. That is correct.

Q. And he wasn't trying to interfere in your duties with M.R.C. in this——

A. He was not.

Q. ——in this interview, is that correct?

A. He was not.

Q. Do you know when M.R.C. starting purchasing ore, do [1757] you know the date?

A. I don't know the exact date. It was shortly after June of 1942, because we set up the agency in June of 1942 and went into production just as soon as we could after that. It probably was 30 or 60 days later.

Mr. Holland: Thank you.

Redirect Examination

Q. (By Mr. Archer): Mr. Hill, did Continental Ore Company ever request United States Vanadium to mine any ore claims for him and deliver oxide to him, to your knowledge?

A. Not to my knowledge.

Q. Did you ever hear of the Continental Ore Company owning any claims on the Colorado Plateau?

A. I knew a lot of companies, but I don't remember them.

Q. In regard to the ore purchases by the Metals Reserve Company from Vanadium Corporation of America for delivery to the Monticello plant, were

(Testimony of John W. Hill.)

you authorized to do this by the Metals Reserve Company? A. Yes.

Q. Is this your authorization (showing witness)? I show you what has been marked Defendant Union's Exhibit E, dated November 2, 1942, being a letter agreement signed by G. Temple Bridgman and J. R. Van Fleet.

A. (Witness examining.) [1758]

Q. I think if you will look on the second page you will see. This is the amendment.

A. Yes.

Q. G. Temple Bridgman, who was he?

A. He was executive officer of the Metals Reserve Company.

Q. Was he ever employed by the United States Vanadium Company?

A. Well, not to my knowledge.

Q. I just would like to read this last portion here on this question of whether or not Metals Reserve Company buy ore from Vanadium Corporation.

This is an amendment to the original agreement and this is dated November 2, 1942:

"Pursuant to said agreement dated as of May 9, 1942, as so amended, we hereby designate the above mentioned plant in Monticello, Utah, as one of the plants to be supplied with vanadium purchased by us as our agent under said agreement, and, accordingly, we request you as promptly as possible to make the necessary arrangements to supply Vanadium Corporation of America with ore so pur-

(Testimony of John W. Hill.)

chased. A substantial part of the ore to be supplied by you for the operation of the Monticello plant is to be purchased by you from that corporation. That includes both productions from the mines as well as ore presently stockpiled [1759] at the Monticello plant. You are to purchase ore currently produced by Vanadium Corporation of America in accordance with said agreement dated as of May 1942 as amended. Instructions governing the purchase of ore stockpiled at the Monticello plant will be given to you."

This is an original letter from Metals Reserve Company, Washington, D. C., to Mr. J. R. Van Fleet, our vice-president, who is now dead, signed by G. Temple Bridgman, the executive vice-president, the man I mentioned who died a few years ago over in Marin County.

I have no further questions of Mr. Hill.

Recross Examination

Q. (By Mr. Alioto): Now, you didn't mean to tell Mr. Holland, did you, that Mr. Bransome had anything at all to do with the question of canceling the Wade and Curran contract?

A. He didn't have anything to do.

Q. Of course, he didn't. Do you know why then he intervened in this fashion?

A. Well, he was an official of the Vanadium Corporation at the plant that was treating the ore.

Q. Let me read this again:

"Wade and Curran were in today, not to see me

(Testimony of John W. Hill.)

but to see Mr. Bransome and Denny. They were quite [1760] put out regarding the whole matter and said they did not feel that their contract was subject to cancellation. Mr. Bransome is familiar with our general form and if their contract is on one of our O.P.A. forms, Mr. Bransome felt that there was no question that the contract is automatically cancelled when we stopped receiving ore. Evidently their next move is to see Dan Milenski in Cortez."

Now, on that specific subject matter of the cancellation of the Wade and Curran contract, Mr. Bransome was not authorized by Minerals Reserve (sic) or by you to do anything at all, was he?

A. I think the intent there was that Mr. Bransome was advising Wade and Curran, not us.

Q. Did Minerals Reserve (sic) authorize Mr. Bransome to advise Wade and Curran?

A. It's entirely his own affair.

Q. But you didn't authorize him to do it?

A. No. He wasn't working for us as the agents in ore procurement.

Q. And, specifically, you don't claim that he was authorized to enter into this conversation with Wade and Curran on behalf of the Minerals Reserve (sic), do you?

A. That was just a conversation between Wade and Curran and Mr. Bransome. [1761]

Q. And specifically, you didn't authorize Mr. Bransome, as the Minerals Reserve (sic) agent to enter into this conversation with Wade and Curran, did you?

(Testimony of John W. Hill.)

A. I don't get—I don't get the point. I mean, it's just——

Q. Regardless of whether you get the point, just tell us——

The Court: Did you authorize Mr. Bransome to do anything for your company?

A. No. He didn't work for us at all.

Mr. Alioto: Okay.

Q. Incidentally, who paid Mr. Burwell's salary and Mr. Van Fleet's salary, Mineral Reserve (sic)?

A. I don't know.

Q. Was it paid by the company?

A. I don't know.

Q. Well, you were the chief officer out there for Metals Reserve Company (sic), Mr. Hill?

A. I didn't pay him. I can say that.

Q. Well, don't you know that U.S.V. paid him and not the government?

A. I don't know. I really don't know.

Q. Who handled the payroll checks out there in Colorado?

A. I did in the agency agreement, but Mr. Burwell was just in and out of there. I don't believe I saw him even three times in a couple of years.

Q. I am asking you——

The Court: He has answered your question.

Mr. Alioto: I don't think he has, if your Honor please. This man made out the payroll.

The Court: He has answered your question. That is all there is to it. He said he didn't know.

(Testimony of John W. Hill.)

Mr. Alioto: A man who makes out the payroll checks doesn't know, if your Honor please? We ought not to accept that from an adverse witness. I don't want to argue with the Court, but I submit that I ought to be——

Would the Court ask this last question, then: Did the payroll accounts which he supervised include the name of Burwell, Van Fleet, or any other officer of——

The Court: Do you know — do you know who paid Burwell's salary?

A. I don't know. I can say that he wasn't on the payroll that I had.

Mr. Alioto: All right. That's all we want. He wasn't on your payroll.

Q. Finally, why was this letter from Mr. Edwards to you on this Bransome matter marked "Personal"? What was personal about it?

A. I don't know.

Q. This was government business, was it?

A. I imagine so, I don't know why it was marked "Personal." [1763]

Q. At the time you received the letter, did you comment about the fact that it was marked personal?

A. No. I imagine he wanted to have it come direc. to me and not go through other channels.

Q. Okay. Just one last question. Under your Minerals Reserve (sic) program, were you instructed to buy from miners who were already seling to independent mills?

(Testimony of John W. Hill.)

A. We would buy ore that was available—well, we bought ore wherever we could get it.

Q. My question is, sir——

A. And we bought ore that was available to us.

Q. Let me ask this——

A. We didn't—we tried not to interfere with the production of any of the plants.

Q. In other words, your instructions were not to interfere with production at the plants, were they not?

A. We tried to see that the plants were kept running.

Q. My question is: Your instructions were to that effect, were they not?

A. I believe they were, yes.

Q. And who gave you those instructions?

A. I think Mr. Burwell.

Q. All right. But the fact is that you did take miners away from the Nisley and Wilson plant, isn't it?

A. No, I wouldn't say that. [1764]

The Court: We will recess at this time.

(Short recess taken.)

Mr. Alioto: If your Honor please, at the close of last night's session — I might say preliminarily I have nothing further of Mr. Hill.

At the close of last night's session I asked Mr. Remmers if he was going to be around any longer. I had in mind putting in evidence a letter written by him October 13th, 1943, with respect to the condition of supply at the time.

(Testimony of John W. Hill.)

Except for offering this letter, we have nothing further of Mr. Remmers. I wanted to make that statement so he would not stay here on account of any questions I might have.

The Court: Is there any question about that?

Mr. Archer: Your Honor, I think it should go in through Mr. Remmers. I will see if I can get in touch with Mr. Remmers at noontime, and if I can, I will bring him back this afternoon.

Mr. Alioto: All I care to do is to ask him if he wrote this letter and put it in. If Mr. Archer can stipulate that he wrote it, I will put it in now and save him the trouble of returning.

Mr. Archer: I would like to read it first, your Honor.

The Court: Very well. [1765]

Mr. Archer: I believe counsel has indicated he has no further questions of Mr. Hill, your Honor, so I will call my next witness, Mr. Holmes.

CHARLES M. HOLMES

called as a witness by and on behalf of the defendant, being first duly sworn, testified as follows:

The Clerk: Will you give us your full name, please, and your residence address?

The Witness: Charles M. Holmes, Rassel Building, Grand Junction, Colorado.

Direct Examination

Q. (By Mr. Archer): What is your occupation, Mr. Holmes? A. I am an attorney at law.

(Testimony of Charles M. Holmes.)

Q. Were you acquainted with the Mesa Vanadium Company? A. I was.

Q. Is that map still up there? Can you point out where that was.

A. That was in the Slick Rock area, close to Cedar, on Disappointment Creek, right where Disappointment Creek runs into the Dolores River.

Q. Were you one of the original investors in that company? A. I was.

Q. What happened to that company?

A. We lost our money and the company went defunct. [1766]

Q. Why did it go defunct?

A. Well, to get back to the beginning, Frank Nisley approached a group of us in August of 1939 and said that he had developed a new process for roasting vanadium ores, and a party by the name of Coe Van Deren, Buttolph and myself, met with Mr. Nisley and he stated if he could raise $4,000, that he could put up a mill using his process that would make vanadic acid.

So we put up the money and incorporated the Mesa Vanadium Company, and we located a mill that was partially built near Cedar which we purchased for $2,000, plus the back taxes against it, and Mr. Nisley had had——

Mr. Alioto: If your Honor please, may we proceed on the basis of question and answer so that we can save a record on this matter, rather than a narrative story by an attorney?

(Testimony of Charles M. Holmes.)

The Court: Well, he said his company failed and he was just giving the history.

Mr. Alioto: I was wondering if we can't proceed on the basis of questions and answers.

The Court: Let him go ahead. It is in the record. Go ahead and finish your story.

The Witness: Mr. Nisley had had a small pilot plant. We built a little larger roaster. It is what is called a batch roaster. It has possibly been explained in the [1767] evidence here.

And we installed a couple of those and experimented with them, and by February 1940 we had put in an additional $10,000, and still the process was not satisfactory.

Mr. Nisley then resigned as director and we got a couple of mining engineers named Claybaugh and Simpson to come in, and they agreed they would try to make the process satisfactory, and they operated a mill for about ten days.

At the end of the ten days they sold the vanadic acid or the red cake—it was red cake—to the U.S.V. and they found that the recovery was a little less than 40 per cent, and they dropped it like a hot potato and that was the end of our vanadium venture.

The mill was not economically practical.

Mr. Alioto: I make a motion to strike that, if your Honor please. This illustrates the vice of letting a narrative statement go on where we cannot make any kind of record.

(Testimony of Charles M. Holmes.)

The Court: Overruled. Overruled. Exception allowed. Let him go ahead and make his statement.

Mr. Alioto: I submit, if your Honor please——

The Court: He would know about this.

Mr. Alioto: An attorney who has not been qualified as a mill man is not competent, I submit, to give an opinion as to whether a thing was economically satisfactory. [1768]

The Court: That is all right. He has answered the question. The objection is sustained—overruled, and exception is allowed.

Go ahead with your statement.

A. The next, we didn't have any further finances, so we contacted the United States Vanadium Corporation and made a deal with them whereby they used our mill for stockpiling. They agreed to give us two and a half cents a pound overriding royalty on the ore that was stockpiled there, and we gave them a 60-day option to experiment with this process, and they did some experimenting with it.

At the end of two or three months they turned the plant back to us and it was junked, so to speak. I did sell one crusher for $500 and the rest of the plant we turned back to the county. The taxes in the meantime had not been paid and we did not feel disposed to sell the equipment with the back taxes, so we liquidated the company.

Q. (By Mr. Archer): Did Mr. Burwell, or did the United States Vanadium Company buy the mill or the land surrounding it?

(Testimony of Charles M. Holmes.)

A. No, no part of it.

Q. They didn't buy the mill? A. No, sir.

Q. Did Mr. Burwell or the United States Vanadium Company put you out of business?

A. Certainly—— [1769]

Mr. Alioto: That is objected to, if your Honor please.

The Witness: Certainly not.

Mr. Alioto: I think that calls for the conclusion of the witness. The Jury has heard Mr. Burwell's testimony, and they can compare it to that of a man who was an attorney and apparently not active in the operation.

The Court: Sometimes an attorney knows something about which he is talking. I don't know of any reason why he can't answer the question. I think he is thoroughly competent to answer the question.

Mr. Alioto: May I have the question read?

(The reporter read as follows: "Q. Did Mr. Burwell or the United States Vanadium Company put you out of business?")

Mr. Alioto: Your Honor holds that that is a proper question to put to this witness?

The Court: You might ask him what they did.

Mr. Alioto: Yes, I would think so.

Q. (By the Court): What did they do that caused you to go out of business?

A. They did nothing whatever in fact. They took over some leases that we had on the McKee Claims, and they paid us a royalty on that ore, and we recouped something like $10 or $12 thousand in

(Testimony of Charles M. Holmes.)

four or five months from the U.S.V. [1770] and had the mill left. But we couldn't get finances to operate it. The fact is we did hire a good consulting engineer on vanadium, a man by the name of Alf Tellman, to try to check the process, and we just couldn't make it up.

Q. Did any other company do anything to your knowledge that interfered with the success of your operation? A. Nothing whatever.

Q. (By Mr. Archer): Did you have enough ore to run your mill while it was running?

A. Yes, we had plenty of ore. We had, of course, a lease on the McKee claims and then we bought a little commercial ore from miners around there, but, of course, we didn't require very much.

Mr. Archer: I have no further questions of Mr. Holmes.

Cross Examination

Q. (By Mr. Alioto): Mr. Holmes, did you personally negotiate with the U.S.V. in connection with the take-over of your mill?

A. Yes, sir. Mr. Burwell met up in my office and we entered into that contract. It was just an option.

Q. When did that meeting take place, sir?

A. When?

Q. Yes.

A. In about May in 1940, to the best of my recollection. [1771]

Q. And who was present?

A. Mr. Simpson, Mr. Claybaugh, Mr. Burwell, and myself, is all that I recall.

(Testimony of Charles M. Holmes.)

Q. Do you have a copy of the option you negotiated with them?

A. I don't have it with me.

Q. Where is it?

A. I have it in my files.

Q. Where? A. At the hotel.

Q. Will you be good enough to get that during the noon hour and bring it back so we might look at it? A. I can.

Mr. Alioto: May we defer cross examination until that time, if your Honor please?

The Court: Go ahead.

Q. (By Mr. Alioto): Let me ask you further: What other documents do you have in your hotel room that you did not bring into the courtroom?

A. Oh, I have several. [1772]

Q. What are they? What is their nature?

A. I have the preliminary agreement with Frank Nisley whereby he got 60 percent of the stock for assigning the patent to the process over to the company to be organized.

Q. Well, do you have generally the papers—. You brought to San Francisco, I take it, the papers that you thought related to this discussion about which you have testified?

A. That is correct.

Q. Would you be good enough to bring them all to the courtroom this afternoon?

A. I can. I would like to leave on that—I have got reservations on the plane at one o'clock, now.

(Testimony of Charles M. Holmes.)

Q. I would like very much to see these documents.

I think they are germane, if your Honor please, and I think——

The Court: I can't see that they have anything to do with this lawsuit.

Mr. Alioto: An option with the United States Vanadium Corporation might have a lot to do with this lawsuit.

The Court: Not a thing to do with this lawsuit. Didn't he have a right to deal with them the same as any other company?

Mr. Alioto: In view of Mr. Burwell's testimony that his purpose in doing what he did was to eliminate this [1773] production from the American market, I think it is unrealistic for your Honor to say it has nothing to do with this lawsuit, and I say that respectfully, if your Honor please.

The Court: Very well. And I just as respectfully say that much of this evidence has nothing to do with the lawsuit. It is purely speculative.

Mr. Alioto: All right.

The Court: And there is no basis for it. I think we ought to get down to something that has something to do with this lawsuit.

Mr. Alioto: The witness indicates he is willing to get these documents for me. Would your Honor request him to bring them into court?

The Court: You can bring the papers over and we will excuse you right now. You can go and get your papers.

(Testimony of Charles M. Holmes.)

Mr Alioto: Thank you very much, sir.

Mr. Archer: I think you ought to go get them, if you want to try to make the one o'clock plane.

The Witness: I will go right now.

Mr. Archer: O. K.

Mr. Alioto: Thank you very much.

(Witness excused.)

The Court: You can call another witness.

Mr. Archer: Thank you, your Honor.

As my next witness I call Dr. Emigh. [1774]

G. DONALD EMIGH

called as a witness on behalf of the defendants, having been previously duly sworn, testified as follows:

Direct Examination

Q. (By Mr. Archer): Will you state your name and address, Dr. Emigh?

A. My name is G. Donald Emigh; my home address is 554 West Big Bend, Webster Groves 19, Missouri.

Q. By whom are you presently employed, Dr. Emigh?

A. I am employed by the Monsanto Chemical Company.

Q. What was your training as an engineer?

A. I have several degrees from universities; I have a bachelor of science in mining engineering, a master of science in metallurgy, and a doctorate in geology. These are from the University of Idaho and the University of Arizona.

(Testimony of G. Donald Emigh.)

Q. Your name has been mentioned in connection with the United States Vanadium Company as agents for the Metals Reserve program during the war. What was your function in that regard?

A. First, I was called by Mr. Van Fleet, the head of my company, the United States Vanadium Corporation, from the position I then held at Bishop, California, assistant manager of the Pine View tungsten mine—I was called by Mr. Van Fleet to take care of the lead vanadate agency for Metals Reserve, which our company had entered into. [1775]

And I spent the period, then, of May, 1942, until October, 1942, in charge of this operation, with headquarters in Tucson, Arizona.

We recommended this program be stopped because it was not economical. We were at war, and we could not see the advantage of wasting money at that time, which represented men and material. We recommended this be stopped, and Metals Reserve did terminate the program in October of '42.

At that time Mr. Van Fleet called me to New York City and asked me to take over the administration of our two other Metals Reserve agencies, one to produce vanadium from the Colorado Plateau sandstones, and the other to produce tungsten.

Q. And whom did you report to in regard to the vanadium agency?

A. Mr. Hill, Mr. John Hill, for the most part, and Mr. Tom Brock.

John Hill was in charge of the ore procurement;

(Testimony of G. Donald Emigh.)

John Brock was in charge of operation of the Durango plant.

Q. And John Hill was one of the witnesses who testified this morning here? A. Yes, sir.

Q. Did you make reports of your operations to the Metals Reserve Company officials in Washington?

A. Yes, sir, I reported regularly to Metals Reserve in Washington, D. C. [1776]

Q. And to what officials did you report?

A. Largely to Mr. Bridgman, who was the executive vice-president, and also to Mr. H. DeWitt Smith, who, I believe, was the vice-president of Metals Reserve.

Q. Were your operations conducted according to sound engineering practice? A. Absolutely.

Q. Did you have any conversations with Continental Ore Company, the plaintiff in this action, regarding production from the Nisley & Wilson mill?

A. Yes, sir, I did.

Q. Do you recall when those occurred?

A. They occurred in the late spring of 1943.

Q. Do you recall with whom you spoke? First, were these conversations in person, or by telephone?

A. They were both. I was in New York most of the time throughout this period, and I had both telephone contacts, letter contacts, and, as I recall, a personal contact or two with Continental Ore. I believe the party was Mr. Wolf.

Q. What was the substance of your conversations at this time?

(Testimony of G. Donald Emigh.)

A. It had to do with rather a substantial order for fused vanadium oxide that Continental Ore had obtained from Metals Reserve from the production from the Nisley & Wilson operation at Gateway.

Mr. Alioto: Excuse me, if your Honor please.

Will you fix the persons present at this conversation?

Q. (By Mr. Archer): Can you separate—well, can you do that, Dr. Emigh?

A. What is the question, again?

Q. (By The Court): Who were present at this conversation with Mr. Wolf?

A. I can't even be sure it was Mr. Wolf. I believe it was Mr. Wolf.

I don't recall if anybody else was there or not, but I do recall several telephone conversations, and I believe they were with Mr. Wolf.

Coming back to your question, the subject of these contacts at that time had to do with a rather substantial order for fused vanadium oxide that Continental Ore had obtained from Metals Reserve from the production of the Nisley-Wilson plant. Continental Ore——

Q. (By Mr. Archer): Well,——

A. Pardon me.

Q. ——I will just ask you, did Continental Ore accept the order from the Nisley-Wilson plant?

A. No, sir, they did not. And that surprised me.

Q. Well,——

Mr. Alioto: I make a motion, your Honor, to strike [1778] "that surprised me," by an interested

(Testimony of G. Donald Emigh.)

witness, if your Honor please. I will make a motion to strike.

The Court: Well, you might be surprised, but we will strike it from the record.

Q. (By Mr. Archer): I will show you a letter dated July 26, 1943, from J. K. Gustafson, a copy of a letter to yourself.

A. Yes. I don't recall the letter particularly, but it is sent to me, so I must have had received it. It is from Metals Reserve.

Mr. Archer: Offer this as defendants' next exhibit in order.

Mr. Alioto: Object to it, if your Honor please. It is the worst kind of hearsay—a letter by a Mr. Gustafson who isn't here to this witness.

May I have a voir dire on this?

Q. (By Mr. Alioto): Was a copy of this letter ever shown or ever given to the plaintiffs in this case? A. I don't know, sir.

Mr. Alioto: Well, I object to it on the ground it is the worst kind of hearsay.

Mr. Archer: Your Honor, I offer it to show the directions this man received. I think the Metals Reserve Company has certainly been injected into this action, and his [1779] instructions — and I think the allegation has been made here that the Metals Reserve Company was not operating under the authority of the officials in Washington. And I am offering this to show the information that this witness received as agent for the Metals Reserve Company from the officials in Washington.

(Testimony of G. Donald Emigh.)

Mr. Alioto: That is the very point; he is offering a hearsay statement that we can't cross examine.

The Court: Objection is overruled. We have gone into this now day after day.

Proceed.

Let it be admitted.

(The letter referred to was thereupon marked Defendant U Exhibit 5-R in evidence.)

Q. (By Mr. Archer): Who is Mr. Gustafson?

A. Mr. Gustafson was a consultant employed by the Metals Reserve in Washington, D. C., and was there helping to handle their agency agreements.

Mr. Archer: This is a letter dated July 26, 1943, from Metals Reserve Company, Washington, D. C. —copy of a letter—to Mr. G. Donald Emigh, United States Vanadium Corporation, agent for Metals Reserve Company, 30 East 42nd Street, New York, New York:

"Re: Nisley-Wilson Vanadium Production.

"Dear Mr. Emigh:

"The contract dated April 20, 1943, covering the sale to Continental Ore Company by Metals Reserve Company of 17,834 pounds of vanadium pentoxide produced at the plant of Nisley & Wilson at Gateway, Colorado, was cancelled July 15, 1943.

"Until such time as the War Production Board allocates this material, will you kindly continue to stockpile it as heretofore?"

Mr. Alioto: Now, if your Honor please, now that the Court has heard the letter, and we have objected to anybody hearing it, I suggest that there is no

(Testimony of G. Donald Emigh.)

opportunity for this plaintiff to cross examine Mr. Gustafson as to the background of that cancellation, and we are left——

The Court: You introduced a great, long address delivered by Mr. Gustafson. You are the one that has introduced Mr. Gustafson.

Mr. Alioto: I think your Honor is perhaps—I say respectfully—not aware of the fact that Mr. Gustafson's address was in connection with the atomic energy program in 1947, and not in connection with Metals Reserve at all.

The Court: The objection is overruled. Let's get along.

Q. (By Mr. Archer): Dr. Emigh, did the Continental Ore Company ever accept [1781] any of the production of Nisley & Wilson while they were operating under the toll agreement?

A. I don't believe so, no, sir.

Q. (By the Court): Do you know of your own knowledge why the Continental Ore Company didn't take this ore?

A. I know the reasons, your Honor, that they told me why they didn't take it.

Q. Who told you?

A. Well, it was—these people—I was—I think Mr. Wolf was the man.

Q. Will you state what they said about it?

Mr. Alioto: Will you fix the time, place, and circumstances, if your Honor please?

A. Well, it's going to come back to my question

(Testimony of G. Donald Emigh.)

—or my statement that I was surprised. I will have to bring that in again, I am afraid.

Continental Ore evidently arranged this order directly with Metals Reserve. We had nothing to do with it as agents for Metals Reserve.

Mr. Alioto: That is obviously hearsay, if your Honor please. I make a motion to strike.

The Court: No, I think it is entirely competent.

Mr. Alioto: He says "evidently" they arranged it. How can he know except by hearsay, if your Honor please? [1782]

The Court: Objection is overruled.

Mr. Alioto: Yes.

A. (continuing) The first we knew about it as agents for Metals Reserve, we received instructions from Metals Reserve to deliver this quantity to Continental Ore.

Q. (By The Court): That's the first you knew about it?

A. That's the first we knew about it.

Q. Go ahead.

A. Then Continental Ore, as I recall, got in touch with me as to the size of the product, and I told them that it was minus one-half inch.

Continental Ore said they couldn't use this material of this size and wanted to know whether we couldn't arrange to have Nisley & Wilson, at their plant at Gateway, Colorado, make a smaller product.

We looked into that and determined that the Nisley-Wilson plant was not set up to do so.

(Testimony of G. Donald Emigh.)

But what surprised me was the fact——

Mr. Alioto: I make a motion to strike his surprise, if your Honor please. Even your Honor can't contend that that is competent evidence.

The Court: Objection overruled.

A. ——was that Continental Ore had already taken similar material as this from our Durango operation, exactly the same [1783] kind of product, the same size.

Mr. Archer: Well, your Honor, at this time I would like—this exhibit is already in evidence, but I would like to read it, because it refers to this transaction, at this time.

This is a letter dated December 31, 1942, from Henry J. Leir to the United States Vanadium Corporation, Agent, Metals Reserve Company, Durango, Colorado, Attention Mr. T. W. Brock, Superintendent:

"Gentlemen:

"Re: Vanadium Concentrates."

Q. (By Mr. Archer): Now, this T. W. Brock was one of the men you stated worked for you?

A. He was Tom Brock, the superintendent of the plant.

Mr. Archer (continuing reading): "We wish to refer to your shipments to us of the above material and should like to draw your attention to the weights of these shipments.

"We found in the two shipments the following shortages: First shipment of 27 sacks, shortage 19 pounds; second shipment, 48 sacks, shortage 88.40

(Testimony of G. Donald Emigh.)

pounds. So that the total shortage on these two shipments is 107.40 pounds.

"We should very much appreciate your checking the [1784] weights on future shipments carefully in order to avoid such shortages.

"Thank you for your cooperation."

Q. (By Mr. Archer): Now, were these the prior shipments to which you referred in your testimony?

A. Yes, sir.

Q. And was the Durango product the same, substantially the same product, as that produced by Nisley & Wilson? A. Yes, sir.

Q. Who was C. J. Moynihan, Jr.?

A. It was Jack Moynihan. He was an accountant for us on the Metals Reserve agency program in Colorado.

Mr. Archer: To finish this Durango transaction I offer, your Honor, as one exhibit, as defendants' exhibit next in order, a letter from Mr. Moynihan to the Continental Ore Company dated January 11, 1943, and Mr. Leir's reply dated January 14, 1943.

Mr. Alioto: This had nothing to do with this witness, but we have no objection.

The Court: Very well.

(The letters referred to were thereupon marked Defendant U Exhibit 5-S in evidence.)

Mr. Archer: This is from the United States Vanadium Corporation, Agent for Metals Reserve Company, [1785] Durango, Colorado,——

Q. (By Mr. Archer): That is where the big Metals Reserve plant was, was it not?

(Testimony of G. Donald Emigh.)

A. Yes, sir.

Mr. Archer: Dated January 11, 1943. It is a reply to the previous letter which I read:

"This will acknowledge receipt of your letter of December 31, 1942, to Mr. T. W. Brock.

"As we just recently installed new scales for weighing concentrates and have then set up and checked by a factory representative, we are unable to understand the weight discrepancies on our first two shipments as shown by you.

"We shall greatly appreciate receiving from you a description of the condition of the bags upon their arrival at destination, as it would appear from the difference in weight involved some of the bags may have been torn in handling, thus allowing a considerable amount of leakage."

And Mr. Leir replied, on January 14, 1943:

"Gentlemen:

"We received your letter of January 11th and took note of your comments.

"It may be that at least part of the shortage was [1786] caused by leaking bags, because both shipments contained a few each which were not in good condition.

"We will watch this matter, particularly when your next lot arrives, and we will write you further."

Mr. Archer: I have no further questions of Dr. Emigh, your Honor.

(Testimony of G. Donald Emigh.)

Cross Examination

Q. (By Mr. Alioto): Dr. Emigh, do you know Mr. Van Fleet? A. Very well, sir.

Q. Do you know approximately the time he died? A. Yes, sir.

Q. Did you go to his apartment after he died?

A. I did.

Q. Where did he die?

A. He died in Tucson, Arizona.

Q. And how long after his death did you go to his apartment?

A. I don't recall. I'm not sure it was after his death. I went to his apartment at the request of Mrs. Van Fleet.

Q. Well, how long was it before or after his death?

A. It was—I'm not sure it was even after his death. It could have been, and I believe it was shortly before his death—it was obvious to Mr. Van Fleet that he was not going to live. [1787]

Q. And did there come a time when Mr. Remmers reprimanded you for going to the apartment?

A. I don't recall that particularly. I believe that I told Mr. Remmers I had gone there, and I think that he felt as a matter of principle perhaps I shouldn't. However,——

Q. Did he mention the principle—excuse me, sir. Where did this conversation between you and Mr. Remmers take place?

A. Mr. Remmers' office, I am sure.

(Testimony of G. Donald Emigh.)

Q. And approximately when was it?

A. Well, it would have been approximately the latter part of October, 1947.

Q. And was Mr. Van Fleet dead at the time of your conversation with Mr. Remmers?

A. I do not know. It was just about that time. It may have been a week or two either way.

Q. What did Mr. Remmers say about why it was wrong for you to go to the apartment?

A. He didn't say anything particularly, sir. He rather felt as a matter of principle that perhaps it wasn't right for an outsider to go into this man's apartment. However, he did not understand the relationship between Mr. Van Fleet and myself, nor did he understand the relationship I had with the family, nor did he understand that Mr. Van Fleet had asked me to go to the apartment.

Q. Did you go to the apartment to find certain private [1788] papers of Mr. Van Fleet that he had in there? A. No, sir.

Q. Did you ask about those papers?

A. No, sir.

Q. When you went to the apartment did you try to get into it?

A. I got into the apartment.

Q. Who let you in? A. Mrs. Orr.

Q. A woman named Mrs. Helen Orr?

A. Mrs. Helen Orr.

Q. She lived in the apartment down below, did she? A. Yes, sir.

(Testimony of G. Donald Emigh.)

Q. And you got the key from Mrs. Orr to get into the apartment? A. That is right.

Q. At the time you got into the apartment did you walk over to an area where a working desk was located?

A. I didn't, throughout my examination of the apartment as a whole, did not go there to look at his desk, or any particular thing.

Q. Did you ask Mrs. Orr what happened to the private papers that Mr. Van Fleet had in the apartment?

A. I did in a subsequent meeting; not at that meeting.

Q. Well, did you ask her anything about papers at that [1789] first meeting? A. No, sir.

Q. You just asked her to let you in?

A. That is correct.

Q. Then you looked around the apartment?

A. Yes, sir.

Q. At the time you looked around the apartment had you been told, either by Mr. Van Fleet, by Mrs. Van Fleet, or by Mr. Burwell, that Mr. Van Fleet had taken certain papers from the files of the United States Vanadium Company?

A. No, sir.

Q. Did you know at that time that he had some papers from the files of the United States Vanadium Company? A. No, sir.

Q. You had meetings with Mr. Van Fleet in that apartment, had you not? A. I had, yes.

(Testimony of G. Donald Emigh.)

Q. Where was that apartment located, Mr. Emigh?

A. It was 35—let's see—20 East 35th Street, New York City, as I recall.

Q. And long before his death were you in that apartment with Mr. Van Fleet?

A. I can't tell you exactly, because Mr. Van Fleet lingered some time in Tucson before he passed away. I don't recall how long that was. That might have been two or three [1790] weeks, or a month. He was a week or two in the hospital in New York before he was shipped to Tucson.

I might say, then—so there could have been six weeks or—so it was six weeks or two months before he died that I was in the apartment with him.

Q. Had you been in that apartment with him on many occasions when Mr. Burwell was present?

A. Yes, sir.

Q. And didn't you hear both Mr. Van Fleet and Mr. Burwell complain, in your presence, about the fact that United States Vanadium Corporation had certain agreements with the Vanadium Corporation of America restricting sales?

A. Quite the opposite, sir.

Q. You never heard these two men say that to you?

A. They could not have said that to me.

Q. I am asking you whether you ever heard them, not whether they could or whether they did.

A. They did not say that to me.

Q. They did not? A. No, sir.

(Testimony of G. Donald Emigh.)

Q. Now then, on the occasion of your first visit, did you look for papers?

A. I looked for everything in the apartment to get some idea as to what was there and what I would have to pack up and ship to Mrs. Van Fleet.

Q. Where was Mrs. Van Fleet at the time?

A. At Tucson, Arizona.

Q. Did she give you instructions to go into the apartment? A. Yes, sir.

Q. She did? A. She did.

Q. In writing?

A. I don't recall. I was in telephone contact with her. I do believe that she wrote me. But that was a long time ago.

Q. Do you have the letter?

A. Well, I don't have any such letter now, no, sir.

Q. Have you looked for the letter?

A. No, sir, I have not.

Q. You knew before you came to the stand, I take it, that these questions were going to be asked?

A. I did not. I did not know what you might ask me.

Q. Weren't you told that this might be one of the subject matters I would inquire about?

A. No, sir.

Q. Didn't you discuss this with your attorney before you came here? A. No, sir.

Q. All right, then. You did have a conversation with Mrs. Helen Orr at some time in which you inquired about certain [1792] papers, did you?

(Testimony of G. Donald Emigh.)

A. I did, the next day after I made the first trip and saw the papers, because I went down the next morning to get those papers——

Q. Yes. And what did you say to Mrs. Orr?

A. They weren't present. And I asked her where they were.

Q. Yes?

A. She told me that she had sent them to Mr. Burwell the night before.

Q. Now then, you went and told Mr. Remmers about this visit, did you?

A. No, sir, I never told Mr. Remmers about this. I told Mr. John Horn, who was——

Q. Who was he?

A. The vice-president of United States Vanadium Corporation at that time, as I recall.

Q. What did you tell Mr. Horn about these papers that were sent out to Blair Burwell?

A. I simply told Mr. Horn the papers were gone; that I was told that they were sent to Mr. Burwell.

Q. Why did you tell Mr. Horn that? What business was that of his?

A. Because I reported to Mr. Horn. He was my immediate superior.

Q. Were you carrying on this function, then, for the [1793] United States Vanadium Corporation, or for Mrs. Van Fleet?

A. Which function do you mean?

Q. The function of going looking for papers.

A. Well,——

(Testimony of G. Donald Emigh.)

Mr. Archer: I don't believe he stated that was his function, your Honor. I think he said that the deceased man's widow asked him to go to the apartment.

Mr. Alioto: And I want to know why he reports the results of that to a vice-president of the United States Vanadium Corporation, unless he ties it up with the business purpose. That is what I am inquiring about.

The Court: It seems that would be immaterial.

The Witness: Of course, I think that I had noticed at the beginning, when I first saw these papers, that they were company correspondence. I didn't even go through them.

Q. (By Mr. Alioto): Then you——

A. So naturally I mentioned to Mr. Horn that I had seen some correspondence there. Neither of us were surprised at that, because all executives take correspondence home and have it there. I do, myself. You take it home to read it or study it and you bring it back to the office from time to time.

Neither of us gave any thought to it. [1794]

Q. Well, did you see Mr. Horn between your two visits, or after your second visit?

A. I saw Mr. Horn after my first visit.

Q. Yes. Then he told you to go back and get the papers, didn't he?

A. He told me—yes, he said, "If those are company papers they should be in our files here," and

(Testimony of G. Donald Emigh.)

asked me to get them. But I went back the next morning and they were gone at that time.

Q. So the specific purpose of your second visit was to get those papers, wasn't it? A. Yes, sir.

Q. When Mrs. Orr told you that she had mailed them to Blair Burwell the night before, what, if anything, was said between you and Mr. Horn about getting those papers?

A. I don't believe anything was said. As a matter of fact, neither one of us thought much of it. Mr. Burwell wasn't an official of the United States Vanadium, certainly in good standing.

Q. Well, didn't you ask him to give you Van Fleet's papers? A. Mr. Burwell?

Q. Yes.

A. Mr. Burwell was in Colorado, as I recall.

Q. Yes.

A. I didn't contact him about it. [1795]

Q. How did Remmers get into this act—Mr. Remmers; I am sorry. A. I don't know.

Q. How did Mr. Remmers get into that act?

A. I don't know. Perhaps I told them I was going down to the apartment to help take care of things for Van Fleet. I must have done that.

Q. The only one you talked to was Horne, wasn't it?

A. No, no, I talked to Horne about the papers. I didn't talk to Mr. Remmers about the papers.

Q. Did Mr. Remmers reprimand you or say that there was something wrong in principle before you went back?

(Testimony of G. Donald Emigh.)

A. I don't recall whether it was before I went back or not. I just don't recall. This was 15 years ago.

Q. Was the MacQuigg report among those papers?

A. I have never heard of the MacQuigg report until this trial.

Q. You helped prepare it, didn't you?

A. I certainly did not.

Mr. Alioto: May I have Exhibit 47, please.

Will your Honor indulge me a moment?

Q. Did you know a Mr. Critchett in your organization? A. Yes.

Mr. Archer: I object to this, your Honor. They asked if this man prepared the report, which is a report which [1796] has been excluded. It is far beyond the scope of the direct examination, and I object to any further questions.

Mr. Alioto: I want to find out if this was one of the papers he was after on that day.

Mr. Archer: That is beyond the scope of the direct examination.

The Court: He has told you that he did not know what the papers were. He didn't examine them.

The Witness: May I ask you when the MacQuigg report was prepared?

Q. (By Mr. Alioto): June, 1935.

A. I joined the company in May of 1937.

Q. Well, now, sir, the MacQuigg report was a matter that was discussed very much in that organization right down to 1947, wasn't it?

(Testimony of G. Donald Emigh.)

A. No, sir.

Q. You never heard of a discussion of the MacQuigg report?

A. I never heard of it. I never did.

Q. In any event, is it your statement you do not know whether the MacQuigg was one of the papers in that apartment house?

A. I don't know what the papers were in the apartment house. I didn't concern myself to examine it.

Q. Were they in a folder of some type? [1797]

A. They were in some kind of a folder, an open manila folder of some sort, sir.

Q. And you knew that they related to the vanadium situation, didn't you?

A. Yes, because I could see the company letterhead was used.

Q. Which company letterhead?

A. U. S. Vanadium Corporation.

Q. Didn't you examine those documents and see whether they specifically related to the vanadium situation? A. No, sir. I did not.

Q. Or whether they related to agreements between U.S.V. and V.C.A.

A. Absolutely not.

Q. At the time you were in this apartment, your company was under indictment for monopoly charges, was it not, in the vanadium business?

A. Yes, sir.

Q. And wasn't it your purpose to get those doc-

(Testimony of G. Donald Emigh.)

uments so that they could be destroyed and not brought out at that trial?

A. No, sir, I told you the purpose of my visit.

Mr. Alioto: We have no further questions.

The Court: Anything further?

Mr. Archer: No further questions, your Honor.

Doctor Emigh, you are excused. Thank you very much.

(Witness excused.) [1798]

I notice that Mr. Holmes has returned to the courtroom with his letters. As he wants to catch a 1:00 o'clock plane, I suggest that he be recalled.

The Court: Very well.

CHARLES M. HOLMES

recalled as a witness by and on behalf of the defendants, having been previously duly sworn, testified further as follows:

Cross Examination—(Continued)

Q. (By Mr. Alioto): Sir, do you have with you all the letters——

The Court: Just a moment. Do you want to submit these to them for examination, or do you want to cross-examine him now?

Mr. Alioto: I want to have the documents, if your Honor please, before I talk to him about them.

The Court: I don't know what the documents are. I don't know whether they are material or not.

(Testimony of Charles M. Holmes.)

Mr. Alioto: He has stated they relate to this Mesa transaction.

The Court: You may ask him about them and then we will come to it.

Q. (By Mr. Alioto): Mr. Holmes, the documents you have with you relate to the Mesa Vanadium Company, do they not? A. Yes, sir.

Q. And they relate to certain transactions you had with [1799] United States Vanadium Company, is that correct? A. Some of them do, yes.

Q. Do you have those documents, for example?

A. You asked me first about the deal with the Nisleys, or I mentioned that, the origin of Mesa, and this is the original agreement made August 4, 1939 between the Nisleys, Charles H. Buttolph, Coe Van Deren, and Charles Holmes.

Q. Yes. May I see that, sir?

Do you also have other documents relating to the negotiations with United States Vanadium Corporation, specifically with Mr. Burwell?

A. I have an agreement dated May 7th, 1940, where they took the 60-day option on the mill. That was with the United States Vanadium Corporation.

Q. May I see that, sir?

Do you have any other documents relating to your negotiations either with Mr. Nisley or Mr. Burwell?

A. I have a subsequent agreement with Mr. Nisley with reference to his interest in the Mesa Vanadium, where it was reduced.

(Testimony of Charles M. Holmes.)

Q. All right. And do you have any further documents that relate to any transactions with the United States Vanadium Corporation?

A. I don't think so. I have various correspondence along in 1942 and 1943 where we were disposing of the remaining [1800] assets of Mesa Vanadium Company.

Q. With the United States Vanadium Corporation?

A. No, with other parties. In other words, they had never taken it over.

Q. You had no further correspondence then with the United States Vanadium Corporation or with Mr. Burwell, is that correct?

A. It is possible that I had some correspondence in connection with this contract.

Q. Yes?

A. I did notice possibly a letter to Mr. Haldane.

Q. May I have those Haldane letters, please? You have them there with you, I take it.

A. If I can find them.

Q. Do you have there any memoranda of conversations with United States Vanadium employees, sales letters? A. Let me look.

Q. Incidentally, I want to be sure the record is clear on this subject. You are not an attorney for the United States Vanadium Company, are you? A. No.

Q. I am not trying to ask for privileged communications?

A. No, I am not and have never been.

(Testimony of Charles M. Holmes.)

Q. You did not act as attorney for the United States Vanadium Company or any of its affiliated companies at that [1801] time?

A. That is right.

Q. You were acting for the other folks?

A. That is right.

Q. And you were one of the owners. I want to make it clear, sir; I am not asking you for any privileged communications.

The Court: Are there any privileged communications in this matter?

Mr. Alioto: There appear to be some privileged questions. I don't know about communications.

The Court: It seems to me we have gone into all the private papers and correspondence that is available.

Mr. Alioto: That is, all after January 1st, 1938, your Honor. I notice here three letters with reference to payments under the McKee contract.

Q. And doesn't all of that correspondence relate to the operation of that Mesa Vanadium Company? A. Not all of it, no.

Q. Does it relate to some other matter that is not connected in any way with the Mesa Vanadium Company?

A. Of course, it is primarily with reference to the operation of the company. We had some mining claims that were owned, that was owned, I think, by Mesa Mining Company, we called it, that had no connection with this transaction. [1802]

Q. Isn't that a letter from Mr. Haldane there

(Testimony of Charles M. Holmes.)

at the top that you are looking at, right where your thumb is? Isn't that a letter from Mr. Haldane? No, just at the point where you were. He has a rather unique signature. A. Yes.

Q. May we have that?

A. That pertains to the McKee contract on the ore.

Q. He makes a reference to a Burwell memorandum here. I take it you have that there, Mr. Holmes, Mr. Burwell's memorandum.

A. I think I did see that some place here. No, I can't put my fingers on it right now.

Q. Didn't you read that memorandum of Mr. Burwell before coming here, sir?

A. Here it is.

Q. Thank you. Is that signed by Mr. Burwell?

A. No. All I know, it is a copy of Burwell's memorandum and that is in pencil up there.

Q. Whose handwriting is that in pencil?

A. Well, sir, I don't know. It isn't mine. That pertained to the 60-day option on the Mesa Vanadium Mill. [1803]

Q. This appears to be incomplete, sir. If you will notice, the second page starts a certain numbering of paragraphs with "1" and then it stops at the end. Don't you have a complete memorandum?

A. That is all I have.

Q. Don't you have any production records in that folder relating to what you produced at that company, sir? A. What we did, what?

Q. Any production records or experimental rec-

(Testimony of Charles M. Holmes.)

ords with respect to the amount of red cake you produced there. A. No.

Q. In other words——

A. That wasn't in my field and I wasn't interested in that.

Q. Would it be correct to say, Mr. Holmes, that there is nothing else in the folder that you have on your lap that relates in any way to the Mesa Vanadium Company?

A. Oh, I wouldn't go that far. Now, there's——

Q. What else is there?

A. There's a lot of correspondence that covers four years. See, we had the agreement with the U. S. V. relative to the McKee claim. We, as I recall, made some kind of a deal, assigned our lease, and got an over-riding royalty.

Q. That was a deal under which you got all your money back, wasn't it, Mr. Holmes? [1804]

A. Well, a part of the money, on that deal, but then they stockpiled the ore at the mill. See, we had a scale there, we had houses——

Q. Would you mind giving me that correspondence also?

A. Well, I would have to go through this. That's going to take a little time.

The Court: How is that material?

Mr. Alioto: Well, we think it is material, if your Honor please.

If your Honor wants a statement on it, we think that the United States Vanadium Company at this time—and your Honor recalls the testimony of Mr.

(Testimony of Charles M. Holmes.)

Burwell about this Mesa Vanadium Company—simply made a deal with some of the businessmen involved to give them back their money through the indirect form of an over-riding ore royalty, and thereafter succeeded in keeping the place closed down.

The Court: Here's the witness, who was one of the owners of that, he has given you the history of that and told you the facts.

Mr. Alioto: Well, he hasn't told us all of the facts. I would like to cross-examine him on the facts, on the basis of the correspondence, if your Honor please.

The Court: Go ahead and cross-examine him.

Mr. Alioto: Your Honor recalls that just yesterday we had a witness from Apex that told your Honor, [1805] in direct response to your Honor's question, that in December of 1941 he had raw materials coming out of his ears and——

Mr. Archer: What's that got to do with this witness?

Mr. Alioto: Yet he got a letter in his suitcase which proved that he told the government he lacked them. That is why I want to cross-examine these witnesses of the defendants.

The Court: Just a minute now——

Mr. Holland: He didn't tell the government that, anyway, in that letter. You misread the letter.

Mr. Alioto: You read the letter.

The Court: Anybody can tell us that his ears

(Testimony of Charles M. Holmes.)

weren't big enough to hold a great deal of ore, and so that didn't amount to anything.

Mr. Alioto: Well, may we have the correspondence on this over-riding royalty?

The Court: If you have any correspondence now—not your private correspondence——

Mr. Alioto: I don't want your private correspondence.

The Court: Don't get your grocery bills in.

Mr. Alioto: We don't want that. All we like are some over-riding ore payments made to you by U. S. Vanadium Company and any figures on production or red cake. Do you [1806] have the McKee contract providing for these over-riding royalties?

A. Let's see, let's see—let me see that agreement I gave you—see if this is a duplicate of it?

Q. Which one is that?

A. What is the date of that?

Q. What?

A. What is the date of your agreement there?

Q. This appears to be a duplicate. Is it signed, sir? A. Not signed by the U.S.V.

Q. Well, it is signed by you folks, isn't it?

A. Yes. That's a copy of that.

Q. All right.

Now, as part of your arrangement with the United States Vanadium Corporation, did you folks agree to go out of this business? A. Certainly not.

Q. Well—— A. They never asked us to.

(Testimony of Charles M. Holmes.)

Q. Do you have the McKee agreement with you? May I have that, sir?

A. That's with the over-riding royalty on the ore?

Q. The one where you got an over-riding royalty that paid you back your investment in this company, as I understand it.

A. Well, there was nothing mentioned about paying back [1807] the investment.

Q. That was the idea?

A. That was the ultimate result. We didn't know whether we were going to get a hundred dollars out of that deal or ten thousand, you know.

Q. Wasn't it the idea that you were going to get your investment money back by this means, sir?

A. No, sir, certainly not. We were of course hoping to salvage everything we could.

Mr. Alioto: Perhaps the witness can go through this file over the noon hour, if your Honor please.

The Court: His plane leaves at 1:00 o'clock, doesn't it?

A. Leaves at 1:00 o'clock.

Are you sure that contract doesn't mention the McKee claim (referring to document in counsel's hand)? Look it over. It seems like——

Q. (By Mr. Alioto): Well, Mr. Holmes, you brought this contract to San Francisco, this bundle of documents to San Francisco, for a reason, I take it?

A. No, sir. I left in a hurry and I stuck it in—

(Testimony of Charles M. Holmes.)

I stuck the file in here so as to refresh my memory as to what the transaction was.

Q. You got to read that whole file, didn't you, in connection with your examination this morning?

A. I read it a couple of days ago, yes.

Q. Would you have any objection to our seeing the file, sir.

A. Well, I don't think that, until I go over it and see for sure what is in here, that I would want to turn over my personal file.

Q. Well, do you want to have an opportunity to go over it then more leisurely?

The Court: Well, it looks like you will not be able to get away then at 1:00 o'clock, Mr. Holmes.

We will recess at this time until 2:00 o'clock. And in the meantime you can look over these papers. If you find any papers in there now that have anything to do with this transaction, you can bring them out. Your private correspondence is not competent.

(Whereupon an adjournment was had until 2:00 o'clock P.M. this day.) [1809]

June 18, 1958—2:00 O'Clock P.M.

CHARLES M. HOLMES

resumed the stand, and having been previously duly sworn, testified further as follows:

Cross Examination—(Continued)

Q. (By Mr. Alioto): Mr. Holmes, you had an opportunity during the noon hour to review your

(Testimony of Charles M. Holmes.)

file and you have handed us certain documents that relate to the Mesa Vanadium Company, is that correct? A. That is correct.

Q. Had you now handed us all the documents of which you know from your inspection that relate to the Mesa Vanadium Company and the transactions on the McKee claims?

A. Those are all. There were a few duplicates, and so forth, but I think you have copies of everything.

Q. So far as you know, then, we have everything from your files that relate to these two things, the Mesa Vanadium Company and the McKee claims? A. I think so.

Q. And all your dealings with the United States Vanadium Company?

A. So far as I know, yes.

Q. Before we get to the documents, let us see if we can't get a clear understanding of what this situation was. [1810] The Mesa Vanadium Corporation operated the mill at Mesa: that is correct, isn't it?

A. At Disappointment Valley or Cedar, yes.

Q. Disappointment Valley, or Cedar, all right.

A. Yes.

Q. How do the McKee claims figure in this picture? Just give us a little of the history of that, Mr. Holmes.

A. Well, at the time we started a mill, we got a lease on what is known as the McKee claims.

(Testimony of Charles M. Holmes.)

Q. Were those claims that were tributary to the mill at Disappointment Valley? A. Yes.

Q. Who was it who got the lease on the McKee claims? Was it the Mesa Vanadium Corporation?

A. Mesa Vanadium, or it might have been—it could possibly have been in the name of one of the incorporators, I don't recall, but it was for the benefit of the Mesa Vanadium Company.

Q. In other words, the Mesa Vanadium Company was the actual party in interest so far as those McKee claims were concerned?

A. That is right.

Q. Basically that was the transaction under which you were given the right by McKee, who was the owner of the claims, to mine those claims?

A. Yes.

Q. In consideration for paying some kind of a royalty to McKee? A. Yes.

Q. Is that the situation?

Now, there came a time when you had a certain negotiation with Blair Burwell of the United States Vanadium Company, is that correct?

A. That is right.

Q. And as a result of this negotiation you made a contract under the terms of which the United States Vanadium Company was permitted to take over the mill itself, is that right?

A. They got a 60-day option, yes, to experiment with the process.

Q. Now, then, they were in there for approximately 60 days, were they?

(Testimony of Charles M. Holmes.)

A. Something like that, yes.

Q. Did they ever operate the plant itself?

A. No.

Q. At the time of your negotiations with Mr. Blair Burwell, did he tell you that they would go in and make this plant work? A. No.

Q. What did he tell you he would do?

A. They said they wanted to experiment with a plant to see whether or not that process was practical and feasible. [1812]

Q. In any event, there came a time when you made an arrangement with United States Vanadium Company that they would pay the stockholders of the Mesa Vanadium Company an amount of money in connection with the McKee claims, is that correct? A. That is correct.

Q. Now, just tell us in your own words what that situation was about, how it developed and how much money you got out of it.

The Court: How did it begin?

A. It began when we went busted on the Mesa Vanadium mill. We had lost all our money. Simpson and Claybaugh had gone in there on an agreement, of which we have a copy——

Q. (By Mr. Alioto): Yes?

A. Whereby they agreed in exchange for $8,000 worth of stock, to increase the capacity of the mill about 16 tons a day.

Q. What was it before the agreement?

A. Well, it wasn't anything. We hadn't gotten

(Testimony of Charles M. Holmes.)

in production except in an experimental way. We had not sold any red cake.

Q. Yes?

A. Well, they operated that, I don't recall, possibly ten days or two weeks, at the end of which time they decided to sell their red cake and the U.S.V. was willing to buy it. [1813] And they sold that red cake, and as a net result of that sale in their operations they were losing around $500 a day.

Q. Yes.

A. So they refused to proceed with the mill. They threw the thing up.

Q. Yes?

A. So we were all sitting there with a number of debts and not able to operate the mill, and we contacted the U.S.V. to see whether or not we could work anything out on our lease.

Q. Yes?

A. And this resulted in that deal whereby they took over the option to see what they could do with this process. It would have a value with small outlying claims. Theoretically, you could build one of these little roasters for around four or five hundred dollars, and for claims that were in the outlying districts, assuming that it was practical, it would be worthwhile on a small scale operation. That, I understand, is why they were interested, and in part of this deal——

The Court: Did you contact them or did they contact you in the beginning?

(Testimony of Charles M. Holmes.)

The Witness: Well, we contacted them. And as part of the deal, when we got to negotiating, they were interested in, of course, stockpiling some more. We had a central location and we did have a few miners that we had worked out deals [1814] with. We had a scale, we had housing, we had water, and so they made a deal whereby they used our mill as a place to stockpile ore.

Q. (By Mr. Alioto): Was this after the 60-day period?

A. It was worked out about the same time. I think that extended possibly over four months or maybe five.

Q. Was that deal the subject of a contract between you, setting you up as a kind of ore station?

A. I think that is incorporated in some of those agreements that you have there.

Q. What about the McKee deal?

A. Then on the McKee claims, they gave us two and a half per cent over-riding royalty on the ore that would be mined from the McKee claims. I believe that was it.

Q. Was it two and a half cents, or five cents a pound? A. It could have been five cents.

Q. (By The Court): Then whatever income you got, did it come from the royalties on this McKee lease?

A. It came from the royalties on the McKee lease and from the right to stockpile. That was the only income that we got. There was no income from the mill at all.

(Testimony of Charles M. Holmes.)

Q. (By Mr. Alioto): And how much was that income?

A. Well, sir, that was 19 years ago, and I would just have to guess that it might have been around ten to fifteen thousand dollars. [1815]

Q. In any event, it was just about the amount of money that you folks put into the venture, into the Mesa venture, wasn't it?

A. Well, we put in somewhat more than that, but it helped.

Q. It covered it almost a hundred per cent, didn't it?

A. I just don't recall. I kind of believe we put in $22,000 in the venture, if I am not mistaken.

Q. Let us see if we can't get this McKee deal understood.

McKee originally owned the claims, didn't he?

Mr. Holland: Mr. Alioto, would you mind using the other side of the blackboard and leaving those figures on?

Mr. Alioto: No, not at all. The figures we had on were these (writing).

Q. McKee was the man who owned the claims and leased them to your group, is that correct?

A. That is correct.

Q. Now, you agreed to mine them?

A. No, no, we didn't mine them. I don't recall whether McKee did the mining or the U.S.V., right now.

Q. Well, originally, before the U.S.V. got into

(Testimony of Charles M. Holmes.)

the picture, is what I am talking about at the moment. A. I am not——

Q. (By the Court): Well, you got your lease from McKee, didn't you?

A. McKee, yes. I don't know who was to mine those, [1816] whether it was McKee — we didn't mine them.

Q. (By Mr. Alioto): How was McKee being paid or compensated for the fact that he gave you a lease? What was his deal?

A. He was getting so much per ton.

Q. How much was it, do you recall?

A. No, sir, I do not. It was on a sliding scale, depending on the V_2O_5 content.

Q. He was getting so much per ton for the ore that was mined on the property? A. Yes.

Q. Originally that ore was to be processed in the mill; that was the idea of it, wasn't it?

A. That was the idea, yes.

Q. When you finally started negotiating with Mr. Burwell, Mr. Burwell agreed to pay you five cents per pound of V_2O_5 over and above any payments to McKee?

A. That is right. It is either two and a half or five, I don't recall.

Q. We are talking about cents. It is either five cents or two and a half cents, is that what you are saying? A. Per pound, yes.

Q. I think the contract shows that exactly, and I think it will come out to that five cents. The price

(Testimony of Charles M. Holmes.)

of ore at that time was 21 cents per pound of V_2O_5 for two per cent ore, [1817] wasn't it?

A. I don't remember, something like that.

Q. So that U.S.V. agreed to pay you approximately 25 per cent over that price in connection with these McKee claims?

Mr. Archer: Is that five cents a pound or five cents a ton?

Q. (By Mr. Alioto): What do you recall it as, five cents a pound or five cents a ton?

A. Five cents a pound.

Q. Five cents a pound, sure.

Did you negotiate this transaction with Mr. Burwell?

A. Well, I was a party to it, yes.

Q. Were you the principal negotiator?

A. I wouldn't say that. We had a board of directors.

Q. In any event, this five cents a pound went to the Mesa Vanadium Company, is that correct, the corporation itself? A. That is correct.

Q. And the corporation reimbursed those stockholders who put up the money?

A. Well, we paid some debts that we had.

Q. Was there any discussion as to why the United States Vanadium Corporation was prepared to pay five cents per pound more than the market price to you folks for ore? Was there a shortage of ore at that time?

A. Well, that was a very favorable lease and

(Testimony of Charles M. Holmes.)

had fairly [1818] high-grade vanadium, as I recall, and they apparently wanted the ore. I don't know.

Q. Was there a shortage of ore in 1940, a shortage of oxide?

A. I don't know. I don't know.

Q. Do you know the market condition as of 1940? A. No, I do not.

Q. Well, I think we have had enough evidence on the market condition as of that year. Let us see if we can't identify some of these documents you handed me, so we will have a documentary record of this transaction.

First of all, I see you have some accounting records. Will you tell us what these accounting records are? Is that the ore you purchased independently while you were running the mill yourself?

A. No, I think that is probably the ore that the U.S.V. bought and stockpiled at the mill, probably. I am a little hazy about it.

Q. Let us look at it. It talks about—the months are June, July, August, September, at the Mesa mill for 1940, and lists a group of miners from whom the ore was purchased. A. Yes.

Q. Is it your best recollection that those are the amounts of ore that were purchased and stockpiled at the mill? [1819]

A. Probably. I don't recall.

Q. Do you remember how much money you received under the stockpiling arrangement from the United States Vanadium Company?

(Testimony of Charles M. Holmes.)

A. No, sir, it is so long ago that I just have a very unclear recollection.

Q. Was it a flat sum per month, or was it contingent upon how much ore was purchased?

A. It was contingent on the amount of ore.

Q. The first paper we have been looking at is an accounting record entitled "Mesa Mill 1940." On top of that you have the McKee claims, Mesa Mill contract, 1940, the month, the tons, the weight, the amount paid, and the hauling allowance for Uravan delivery. Will you be good enough to tell us what that document refers to, so far as the McKee claims are concerned?

A. Well, that is apparently the amount of ore mined under the McKee contract.

Q. And that is the arrangement under which you folks received the five cents per pound?

A. I think so.

Mr. Alioto: We will offer these documents into evidence, if your Honor please.

Mr. Archer: No objection, your Honor.

Mr. Holland: It is not being offered the Vanadium Corporation of America, is it? [1820]

Mr. Alioto: Not at this moment.

The Court: I do not see the materiality of it, but if you do not object, let it go in.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit 151.)

Mr. Archer: Mr. Holmes, do you want these back, these records back?

(Testimony of Charles M. Holmes.)

The Witness: Well, I would kind of like to keep them.

Mr. Alioto: We will be very happy to have copies, photostatic copies, made, Mr. Archer, if you would arrange for that, and then we will give them to you.

Q. I show you a copy of a contract, Mr. Holmes, which purports to be between the United States Vanadium Corporation by Mr. Haldane and by the Mesa Vanadium Company by Mr. Van Deren. Would you be good enough to examine that document and then state for the record what it is?

A. That is an agreement between the Mesa Vanadium Company and the United States Vanadium Company dated May 7, 1940, with reference to the option on Mesa Vanadium Mill and the stockpiling of the ore, I believe.

Q. Now then, on the same day, you made your deal with respect to the McKee claim, didn't you, do you recall that? A. Well, I don't recall.

Q. Let me show you this contract now (handing witness). [1821] State whether that refreshes your memory that the deal on the McKee claim for the five-cent over-ride was made at the same time.

A. (Examining): It is possible. I don't have an executed copy of the contract, so I don't know.

Q. At least, the negotiation was at the same time, wasn't it?

A. Apparently there was some negotiations at the same time.

Q. You did finally make the five-cent deal?

(Testimony of Charles M. Holmes.)

A. Yes.

Mr. Alioto: We will offer these contracts, if your Honor please, as the plaintiffs' exhibit next in order.

The Court: How are they material?

Mr. Alioto: They show the relationship, if your Honor please, between the defendant U. S. Vanadium and this company, which, when taken in conjunction with the Burwell testimony that this mill was acquired for the purpose of keeping its production off the market——

The Court: There isn't any proof on that point. You haven't offered any evidence.

Mr. Alioto: Yes. Mr. Burwell testified——

The Court: Yes, he testified, but you have this testimony now, of the man who owned the mill, and he sold this ore — he sold this lease because he thought it was a good deal. [1822]

Mr. Alioto: Yes, but Mr. Burwell bought it because he wanted to keep it off the market.

The Court: Well, I don't know——

Mr. Alioto: He is the man we are concerned with, not this man.

And then when you take Mr. Burwell's testimony with the fact that they got five cents over the market price at a period of time when there was no shortage——

The Court: Did you have an opportunity to sell this to anybody else?

A. Not as far as I know.

(Testimony of Charles M. Holmes.)

The Court: Did you regard it as a good deal, from your standpoint?

A. I thought it was a good deal, yes, good business deal.

The Court: That is why you made the deal?

A. Yes.

Mr. Alioto: It was a good deal, from their standpoint. It was five cents over the market price. But when taken in conjunction with Mr. Burwell's testimony, that he did this to keep this off the independent market, I think the relevancy is very clear.

The Court: No, there is no connection there at all. Mr. Burwell's statement was his conclusion. He stated the policy——

Mr. Alioto: The officer charged with carrying out [1823] that policy, if your Honor please, I submit, is something more than a conclusion——

The Court: No.

Let it be admitted.

Mr. Alioto: We are offering the contracts on that basis.

(Contracts May 7, 1940, Mesa Vanadium and U.S.V. and re McKee claim, received in evidence and marked Plaintiffs' Exhibit No. 152.)

The Court: Was there anything said at the time that you and Mr. Burwell had your conversation, your negotiations, anything said by Burwell as to why he wanted to buy this?

A. Not that I recall, your Honor.

The Court: Was it a valuable lease, the McKee lease?

(Testimony of Charles M. Holmes.)

A. Yes, it was, it was a very good lease.

The Court: Had they operated at a profit, as far as you know?

A. As far as I know, they did, yes.

Q. (By Mr. Alioto): Well, you defaulted——

The Court: Do you know of anyone else that was interested in buying this lease or this mill?

A. We knew of no one else. We did subsequently try to put the mill back in operation, but we couldn't get it financed.

Q. (By Mr. Alioto): How long was "subsequently," how [1824] long after?

A. I don't recall. In 1942 I know that there was some correspondence where we were trying to get the mill put back in operation.

Q. Now, in connection with this valuable lease, you folks defaulted on it, didn't you, and didn't McKee file a notice of default?

A. That's correct. I think we—I think that that was worked out and we finally gave it up because we couldn't use the ore.

Q. Well, if this lease was so valuable, why did you default on it?

A. Because we couldn't sell the ore.

Q. Was there a market for the lease other than to Mr. Burwell at five cents above everything?

A. At what period of time?

Q. At the time you gave—at the time Mr. Burwell offered you the five cents, in May of 1940.

A. Well, we didn't — we didn't try to find any other market. Of course there was a limited market.

(Testimony of Charles M. Holmes.)

Q. Limited to whom?

A. Well, there were not too many vanadium mills operating at that time.

Q. Now, then, you have produced some other documents that relate to a period May of '41 and set forth a series of [1825] purchases. Did this five-cent arrangement continue through 1941? (Handing witness.)

A. (Witness examining): I think there were some limited purchases through the early part of '41.

Q. How long did you continue to get this five-cent deal on the ore, do you recall?

A. I don't recall exactly. As I recall, it was broken off some time in the early part of '41.

Q. Here's a letter you handed us a moment ago, to the United States Vanadium Corporation, it is October of '41 (handing witness).

Does that refresh your memory that it was as late as October of '41 you were getting this five-cent deal?

A. (Witness examining): Well, I write to them in regard to some back payments. Now, we had—as I recall, there were some delinquent payments, and a settlement that we had to work out with them.

Q. Did you write the letter you have in your hand now? A. I wrote that.

Mr. Alioto: We will offer it in evidence. If your Honor please, it is a very short letter, it indicates——

The Court: Let it be admitted.

(Testimony of Charles M. Holmes.)

Mr. Alioto: (Continuing) ——that this deal was in existence at least at this time.

(Letter October 14, 1941, Holmes to Burwell, received in evidence and marked Plaintiffs' Exhibit 153.) [1826]

Mr. Holland: This testimony is all offered against Union Carbide only, I suppose?

Mr. Alioto: Up to this point, yes, sir.

This letter, dated October 14, 1941——

Q. Now, the prior contracts were dated in May of 1940.

On October 14th of 1941 the writer writes to the attention of Mr. Burwell, United States Vanadium Company:

"Gentlemen:

"The Mesa Vanadium Company has asked us to write you in regard to the payments on the McKee contract. No payments have been made for several months, although Mr. Haldane has on numerous occasions promised that he would take care of them within a few days. We understand that Mr. Haldane is now absent, but we trust that you will take care of these payments, without waiting for his return. It was our understanding that the payments would be made monthly."

Do you recall the months that you were asking for payment in October of '41? Do you know what months you were referring to?

A. No, I don't. That's too long ago.

Q. I think you may have another letter that makes that clear.

(Testimony of Charles M. Holmes.)

A. I think you will find all of the statements in the file there. [1827]

Q. Doesn't this letter indicate—I show you a letter dated October 11, 1941—doesn't this letter indicate that at least up to August of 1941 you were receiving this five-cent deal? A. That's true.

Q. In other words, you were receiving payments at least until August of '41? A. Yes.

Q. Now, there is a letter of April 10, 1941, Mr. Holmes (handing witness). Did you write this letter? If you did, will you be good enough to look at it and tell us what new agreements you were talking about in '41 with the United States Vanadium Company?

A. (Examining): I don't have any recollection.

Q. What is the date of that letter?

A. April 10, 1941.

Q. Now, here's a response to that from Mr. Haldane of the United States Vanadium Company (handing witness).

Would you be good enough to look at that and see if that brings back to your memory what kind of a contract you were offering them in April of 1941—that's a year after your first agreement.

A. (Examining): I don't have any recollection of what developed, whether we got together on some deal or the McKee contract was canceled out, I don't—I just don't remember. [1828]

Q. Well, after the McKee contract——

A. Unless there was a contract in the files there after this date.

(Testimony of Charles M. Holmes.)

Q. After the McKee contract, you had some kind of royalty deals on other properties, didn't you? Who were Wallace and Bailey, Duckett and Lloyd, Larson and Gregory? Just take a look at this document marked "Royalty payments for 1941" (handing witness).

A. (Examining.)

Q. Can you tell us what these royalty payments were and can you tell us whether they were in addition to this five-cents over-ride you had on the McKee deal?

A. (Examining): This, as I said before, was apparently ore that was stockpiled at the mill.

Q. And for which you were receiving a royalty payment?

A. For which we were receiving a royalty payment.

Q. Does that record set forth the names of the persons, the names of the claims involved, from which you were receiving a royalty payment?

A. It sets forth the names.

Q. Can you work out from the names and the amounts set out there the amount of what the royalty payment was or the rate of payments?

A. Yes, that could be done.

Q. Well, don't do it now—— [1829]

The Court: Did you get the ore from these various persons that counsel has named? Or were they persons from whom the corporation got the ore that they stockpiled with you?

(Testimony of Charles M. Holmes.)

A. The United States Vanadium got this ore and stockpiled it at our mill.

The Court: You don't know where they got it?

A. I don't know where they got it.

Mr. Alioto: Now, along that line of questioning raised by the Court, you didn't have anything to do with the purchase of this ore, did you?

A. No.

Q. In other words, that was all done by personalities of the United States Vanadium Company?

A. That's right.

Q. And then you received the royalties, however, as indicated on that list, didn't you?

The Court: No. Now, that isn't his testimony. His testimony is that they received a certain amount for permitting them to stockpile it on their property.

Mr. Alioto: I am asking him, if your Honor please——

The Court: Yes, I know you are.

Mr. Alioto: I want to develop it. Some of this went to Uravan. That is what I am getting at here.

The Court: Let him do the testifying. [1830]

Mr. Alioto: I am asking leading questions, because I perceive on cross-examination——

The Court: Go ahead and ask your questions.

Q. Do you know where this came from, of your own knowledge? A. No, I don't.

Q. And was that all ore that was purchased there by the vanadium company for the purpose of stockpiling on your property?

(Testimony of Charles M. Holmes.)

A. That's right. They paid us five cents a pound for stockpiling it, using our facilities at the mill.

Q. (By Mr. Alioto): That was five cents a pound? A. That's right.

Q. And that ore was worth 21 cents—being purchased at 21 cents, wasn't it?

A. I don't know.

Q. Don't you know that 21 cents was the market price for ore in 1940?

A. Oh, it varied between '39 and '44, it fluctuated, so I don't know at any particular time.

Q. Was the McKee ore stored at this plant?

A. I don't know.

Q. Well, let me show you a document which is—— A. I don't know.

Q. (Continuing) ——No. 151 in evidence.

This is the line I was pursuing, if your Honor please. [1831]

Doesn't that indicate that the McKee ore was taken to Uravan and not stored at your plant?

(Handing witness.)

A. (Examining) That's possible. I never said it was.

Q. Well, the Court indicated that it might be. But you look at that and you say it is possible.

From that record isn't it perfectly clear that that is what happened? Doesn't it say "Hauling to Uravan"?

A. It probably was hauled to Uravan.

Q. All right. Now then, how far was Uravan from the Mesa plant? A. Well, let's see.

(Testimony of Charles M. Holmes.)

Q. Where was the Mesa plant? Point that out.

A. It's here by Cedar.

Q. In the Slick Rock area? A. Yes.

Q. In other words, it had to go through Bowl Canyon area up to Uravan, is that right?

A. Oh, I would guess that is 30, 35 miles or so.

Q. What kind of roads were there in 1940?

A. Pretty good roads.

Mr. Alioto: We will offer these other royalty payments made in 1941, if your Honor please.

The Court: I would like to have cleared up: Now, they took this ore from McKee's lease to a mill, did they?

A. Well, I don't know, personally. [1832]

Q. (By The Court): If they took it to a mill was there any other mill near there, closer than their mill?

A. Yes, the V.C.A. mill would have been closer.

Q. What?

A. The Vanadium Corporation of America mill would have been closer.

Q. But the ore that they stored or stockpiled on your premises there, you don't know where they got it?

A. I don't know where they got it.

Q. (By Mr. Alioto): These records that you had indicate where they got some of it, don't they?

A. Well, this is just a bunch of names. I don't know these people, where their claims are, or anything else.

(Testimony of Charles M. Holmes.)

Q. But those are the persons from whom U.S.V. secured the ore, some of which was stored at Mesa, is that the fact?

A. I have no personal knowledge except that this was in the file. That is all I know about it.

Mr. Alioto: We will offer this in evidence, if your Honor please.

Mr. Archer: I do not see that it is material, but I have no objection if counsel wants to put it in.

The Court: It is not material at all. It just clutters up the record. It doesn't amount to anything. It [1833] doesn't prove anything.

Mr. Alioto: I think when taken in conjunction with Mr. Burwell's testimony it proves a good deal, and we would like to have the opportunity to argue that to the jury at the appropriate time.

The Court: Yes, I will give you the opportunity.

Q. (By Mr. Alioto): Finally, on this McKee lease, you received a notice of default, or forfeiture, in December of 1940, didn't you? I will show you that notice of forfeiture. A. That is correct.

Q. In other words, you defaulted on that lease in December, 1940, approximately five or six months after you made the contract with the United States Vanadium Company, under the terms of which they were to pay you a five-cent override?

A. Well, we received this notice. As I recall, we worked out something with McKee.

Mr. Alioto: We will offer this notice of default, if your Honor please.

Q. (By the Court): Did you forfeit the lease?

(Testimony of Charles M. Holmes.)

A. No; we renegotiated. To the best of my recollection it was renegotiated. But I don't remember the details. It is too long ago. [1834]

Mr. Alioto: We are offering this notice of default, if your Honor please, in December, 1940, particularly in view of this five-cent payment.

The Court: Very well. If there is no objection it can go in with the rest.

Mr. Archer: I have no objection.

(The notice referred to was thereupon marked Plaintiffs' Exhibit No. 154 in evidence.)

Q. (By Mr. Alioto): There is just one other subject matter, Mr. Holmes. I have not had a chance to handle all these documents since I received them at two o'clock. If there is any document that you have in mind that should be in this record covering the matters I have covered, just mention it and we will put it in.

You mentioned on your direct examination when Mr. Archer was interrogating you that you contacted a man named Tellum in Denver, Colorado.

A. That is right.

Q. Tellum was an engineer that had previously worked for the Vanadium Corporation of America, or at least had been employed by the Vanadium Corporation of America in connection with the Peruvian deposits of that company?

A. That is correct.

Q. He was a well known mining engineer, wasn't he? A. Yes. [1835]

(Testimony of Charles M. Holmes.)

Q. He told you the process of Nisley would work, didn't he? A. That is correct.

Mr. Alioto: We have no further questions.

Redirect Examination

Q. (By Mr. Archer): Mr. Tellum made his report before Claybough and Simpson took over, did he not? A. That is right, yes.

Q. And Claybough-Simpson found out it didn't work, didn't they? A. That is right.

Q. Just so that it is clear, after Claybough-Simpson ceased operating the mill, Mr. Burwell got an option to purchase the mill which he did not exercise, isn't that correct?

A. How is that?

Q. He got an option—United States Vanadium got an option to purchase the mill, the actual physical mill facilities?

A. That is correct. It is really an option to operate it and to pay us so much per pound royalty.

Q. And they never exercised the option?

A. They never exercised that.

Q. But after that they paid you royalties, one for ore delivered under the McKee contract, and the other for ore which they stockpiled and weighed at the remaining facilities [1836] in that location?

A. Yes.

Q. When we refer here to a five-cent per pound price, we really mean—this gets quite complicated—five cents a pound for 75 percent of the vanadium

(Testimony of Charles M. Holmes.)

pentoxide, which may be three percent of the ore delivered, is that correct?

A. Yes. It would be a little more than three percent, but they figured 75 percent—it would be 75 percent, I guess, of five percent.

Q. Then the ore is running about two or three percent. In other words, there is two or three percent vanadium oxide in the ore?

A. That is right. Three percent is a pretty good grade of vanadium ore.

Q. That would be high?

A. So that would be a very small amount per ton.

Q. (By the Court): What finally became of the mill?

A. The mill—we sold the crusher for $500, and the correspondence will show that I wrote up to the County Treasurer and told him that we didn't want to pay the delinquent taxes, and it was just abandoned.

Q. You got nothing out of it?

A. We got nothing out of it except $500, but that was in 1943. [1837]

Q. (By Mr. Archer): I believe that the ore purchase station there was established by U.S.V. in the spring of 1940? A. Yes.

Q. And that was just about the time that Vanadium Corporation of America commenced their mill at Naturita, is it not, do you recall?

A. I just don't recall.

Q. You do not recall that date?

(Testimony of Charles M. Holmes.)

A. No, I do not.

Q. But this ore purchase station of U.S.V. was between the U.S.V. plant at Uravan and the Vanadium Corporation of America plant at Naturita?

A. That is right.

Mr. Archer: I have no further questions.

Recross Examination

Q. (By Mr. Alioto): Just with respect to the amount, you were to get five cents a pound on about 45 pounds of V_2O_5 per ton, isn't that the way it worked out?

A. That is right. It contained two percent vanadium. That would be 40 pounds in a ton. And 75 percent of that would be how much? 30. And we would get five cents of that thirty.

Q. Between $1.15 and $2.00 a ton. [1838]

Now then, actually, on February 6, 1941, you made an offer to Mr. McKee's attorney to enter into a new contract with a royalty of $3.00 a ton, or two percent on—two percent or better, and $1.50 or better on all ore under two percent. That is correct, is it not? A. That is probably correct, yes.

Q. (By the Court): In other words, you were getting on your five-cent deal almost the same amount of money you were offering McKee in 1941, weren't you?

A. Well, that just speaks for itself there, yes.

Mr. Alioto: O. K. No further questions.

The Court: Stand aside.

(Witness excused.)

Mr. Alioto: If your Honor please, we had other correspondence which we just haven't had a chance to look at, and we would like an opportunity to hold onto it until we can look at it, particularly some that apparently comes from the United States Vanadium Company itself, and we would like a chance to do that. We are not asking that Mr. Holmes be kept here for any purpose; simply a chance to see the other correspondence he has handed us. We don't want to hold him here unnecessarily.

The Court: The question is whether or not you can take a private file that way and see whether or not you want [1839] to use it independent of the witness.

Mr. Alioto: Let us put it this way: If it is necessary to recall the witness, we will be glad to pay the expense of recalling him. We do not think it will be necessary. But at the same time, that is correspondence——

The Court: That is his private property, and I wouldn't want anything to happen to it.

Mr. Alioto: May we put it in the custody of the clerk, then, and have the clerk make photostats at our expense? For example, there is a letter from the United States——

The Court: You can examine it, and if you want anything like that done——

Mr. Alioto: Thank you, your Honor.

The Court: Proceed.

Mr. Alioto: We will do that.

You go ahead, Mr. Archer.

Mr. Archer: When do you plan to finish?

Mr. Alioto: We are doing it right now. Can we do it any faster?

Mr. Archer: I am asking you when. We are not asking you to hurry.

Mr. Alioto: We are doing it right now.

Mr. Archer: As my next witness I will call Mr. Du Tot. [1840]

STUART C. DU TOT

called as a witness on behalf of the defendants, and having been previously duly sworn, testified as follows:

Direct Examination

Q. (By Mr. Archer): Will you state your name and your address for the record?

A. My name is Stuart C. Du Tot. I live at 109 Holly Court, Maitland, Florida.

Q. By whom are you employed, Mr. Du Tot?

A. I am retired.

Q. Who was your last employer?

A. My last employer was the Pittsburgh Metallurgical Company.

Q. My questions—you probably heard my questions of other witnesses, and my questions will be limited to the period 1938 through 1949, if I forget to state that.

Were you employed by the Electro Metallurgical Sales Company during the period 1938 to 1949?

A. I was.

Q. What position did you hold in 1940?

A. I was district manager, or division manager

(Testimony of Stuart C. Du Tot.)

of the Electro Metallurgical Sales, located at Pittsburgh.

Q. Mr. Burwell has testified that in 1940, after meeting with some people at the Vitro Manufacturing Company, he had a [1841] meeting with you in Pittsburgh. Do you recall such a meeting?

A. Yes, I do.

Q. What was discussed at that meeting?

A. Well, we naturally discussed the matter of vanadium, and I presume discussed the things he may have said at Vitro. I don't recall specifically what was discussed.

Q. Mr. Burwell has testified that he took you to task at that time for not selling vanadium that you said Vanadium Corporation of America was selling to Vitro, and that you were not calling on Vanadium Corporation of America customers. Did you make either of those statements to Mr. Burwell at that time? A. I did not.

Q. Had you called on the Vitro Manufacturing Company prior to that time? A. Yes, I had.

Q. And had your associates, the people working with you, called on Vitro prior to that time?

A. They had called there, also, yes, sir.

Q. Mr. Burwell also testified that a man by the name of Ford was present at this meeting. Did you know a man named Ford in the Electro Metallurgical Company? A. Yes, sir.

Q. What was his full name?

A. Thomas C. Ford. [1842]

Q. Was he in Pittsburgh in 1940?

(Testimony of Stuart C. Du Tot.)

A. No, sir, he was not.

Q. Where was he at that time, do you know?

A. He was in Chicago.

Q. Mr. Burwell has also testified to a meeting among yourselves, Mr. Ford, and Mr. Sullivan in Pittsburgh in July of 1946. Do you recall that meeting? A. Yes, sir, I do.

Q. Where did it take place?

A. It took place in my office in the Oliver Building. Later on we went to the Duquesne Club for luncheon.

Q. Do you recall what was discussed at that meeting?

A. We discussed the matter of vanadium and tungsten.

Q. I believe Mr. Burwell testified that you also discussed drill rods. A. That is right.

Q. At that time did you arrange a meeting for Mr. Burwell with the president of the Crucible Steel Company? A. I did not, sir.

Q. Did you arrange a meeting for him with anybody in the Crucible Steel Company?

A. I arranged a meeting for him with Mr. A. W. Taylor, who was then director of purchases, and Mr. Taylor, in turn, referred us to Mr. John Billingsley, who had charge of one of Crucible Steel's divisions. [1843]

Q. Are either Mr. Taylor or Mr. Billingsley now alive?

A. Mr. Taylor is deceased. Mr. Billingsley is still living, or was the last I knew.

VOLUME V

TRANSCRIPT OF RECORD

Supreme Court of the United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, ET AL.,
PETITIONERS,

vs.

UNION CARBIDE AND CARBON
CORPORATION, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

PETITION FOR CERTIORARI FILED AUGUST 11, 1961
CERTIORARI GRANTED OCTOBER 23, 1961

No. 16149

United States
Court of Appeals
for the Ninth Circuit

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as partners under the trade name and style of CONTINENTAL ORE COMPANY,

Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL COMPANY; ELECTRA METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA,

Appellees.

VOLUME V.

(Pages 1665 to 2068, inclusive)

Appeal from the United States District Court
for the Northern District of California,
Southern Division

(Testimony of Stuart C. Du Tot.)

Q. At that time did you tell Mr. Burwell not to mention vanadium to Crucible Steel as a favor to you? A. I did not.

Q. At that time, or at any other time, did you state to Mr. Burwell that Crucible had been getting their vanadium from Vanadium Corporation of America, and that you had been instructed by Mr. Remmers and Mr. Priestley not to approach customers of the Vanadium Corporation of America? A. I made no such statement.

Q. Did you and Mr. Burwell subsequently go to the Crucible Steel Company? A. Yes, we did.

Q. What occurred there?

A. I took those fellows down to see Mr. Taylor, who was the director of purchases, and prior to going down there Mr. Burwell had stated that he was interested in buying some drill rods for his mining operations, and he would like to go down and talk to Crucible Company about this, with the idea, of course, of helping our situation on sales of ferro-vanadium and ferro-tungsten.

Mr. Taylor referred us to Mr. Billingsley, and in Mr. Billingsley's office it developed that Mr. Burwell was buying [1844] this drill rod for some jobbing outfit in Denver. And Mr. Billingsley said that was perfectly all right as they were supplying this jobber, so indirectly Crucible Steel Company was getting the drill rod business. And that about ended it as far as the drill rod went. Everybody was satisfied.

(Testimony of Stuart C. Du Tot.)

Q. Did you discuss vanadium at the Crucible Steel Company at that time?

A. We touched on it, yes.

Q. Were you instructed during the period of time that is involved here by either Mr. Remmers or Mr. Priestley, or any of them, not to solicit Crucible Steel Company, or any other customer of Vanadium Corporation of America?

A. I never had such instructions, no, sir.

Q. Did you ever attempt to sell vanadium to Crucible Steel Company? A. I certainly did.

Q. Did the other people in your office under you attempt to sell them?

A. They certainly did.

Q. Were you successful?

A. We were not successful.

Mr. Archer: I have no further questions of Mr. Du Tot.

Cross-Examination

Q. (By Mr. Alioto): Do you know whether the Crucible Company had a [1845] requirements contract with Vanadium Corporation of America?

A. I don't know, sir.

Q. Or any other contract with the Vanadium Corporation of America?

A. I don't know, sir.

Q. Who was the director of purchases for Crucible? A. Mr. A. W. Taylor, at that time.

Q. Was there a Billinger, or Pilsenger connected with that company?

(Testimony of Stuart C. Du Tot.)

A. Filsinger. Well, what year are you speaking of, now?

Q. Any year. Does that name ring a chord?

A. Mr. Filsinger.

Q. Filsinger?

A. Filsinger; F-i-l-s-i-n-g-e-r.

Q. He was the director of purchases for Crucible? A. That's right.

Q. Did he have a son working for one of the Vanadium companies? A. I believe he does.

Q. Working for which company?

A. Vanadium Corporation of America.

Q. Did they have a contract, requirements contract, with them? A. I don't know.

Q. Did you have a contract with the Vitro Company, one of your annual contracts, in 1940? [1846]

A. I think perhaps we did.

Q. Did the Vanadium Corporation have one, too?

A. I don't know.

Q. Was yours a split requirements contract?

A. It may be—it may have been. I don't recall. It may have been purely a requirement contract, if we had one.

Q. But you have no recollection on that?

A. I have no recollection of how it was.

Q. Mr. Du Tot, when did you start with the Union Carbide Company or any of its affiliates?

A. You mean start my employment?

Q. Yes. A. In 1917.

Q. That was the time the Union Carbide was formed, incidentally?

(Testimony of Stuart C. Du Tot.)

A. It was just about that time.

Q. In other words, it was formed during the First World War? A. That's right.

Q. And were you working with the company during the thirties? A. Yes, sir.

Q. Did you know, during the thirties, where the Vanadium Corporation of America was securing its supply of raw materials? [1847]

Mr. Archer: Well, I object.

Mr. Alioto: Well, from '38 on.

The Court: Objection sustained. You can ask after '38.

Q. (By Mr. Alioto): After January 1, 1938, do you know whether or not your company was selling vanadium oxide to the Vanadium Corporation of America?

A. I would have no knowledge of that, sir.

Q. None at all? A. No.

Q. Didn't you ever read a report prepared by anybody in the Union Carbide organization that referred to that fact? A. No, sir.

Q. Did you know a man named MacQuigg?

A. I knew Mr. MacQuigg.

Q. Was he in the research department of the Union Carbide Company?

A. He was at one time.

Q. Did you do any work with Mr. MacQuigg on the report that related to the relations between the Union Carbide and V.C.A.?

The Witness: Would you repeat that question, please?

(Testimony of Stuart C. Du Tot.)

Mr. Holland: Let's fix the date on this question. What date is he referring to? [1848]

Mr. Alioto: Do you want to read the question, please?

The Court: Read it.

(Question read by the reporter.)

A. No, sir.

Mr. Holland: Fix the date.

Q. (By Mr. Alioto): Did you, at any time after January 1, 1938, see such a report?

A. No, sir.

Q. When was this conversation with Mr. Burwell about which you testified?

Mr. Archer: He testified to two.

Mr. Alioto: Yes.

Q. (By Mr. Alioto): What were the dates of those conversations?

A. I don't know what the dates were. The years, probably 1940 up to 1946.

(Mr. Alioto examining documents.)

Mr. Archer: What you are looking for, Mr. Alioto, is the letter at the end, dated about 1932, and on that ground I object to it.

Mr. Alioto: Well, that's not what I am looking for. But here is what I am looking for. It is in the beginning. [1849]

On Plaintiffs' Exhibit 47 for identification reference is made on page 3 to a S. C. Du Tot in connection with a certain study.

Q. (By Mr. Alioto): Would that by any chance be you?

(Testimony of Stuart C. Du Tot.)

Mr. Holland: If the Court please, he is not supposed to be reading from this document, which would open up the whole period which your Honor has ruled——

The Court: What is the date of that?

Mr. Alioto: I want to ask this witness——

Mr. Holland: 1935.

Mr. Alioto: This is dated 1935, if your Honor please.

Mr. Holland: It is the same document——

Mr. Alioto: I desire to ask the witness whether, in 1940——

The Court: Objection is sustained.

Mr. Alioto: ——he had knowledge——

The Court: Objection sustained.

Q. (By Mr. Alioto): Mr. Du Tot, in 1940, at the time of your conversations with Mr. Burwell—strike that. Let's get that a little clearer.

At the time of your conversations with Mr. Burwell [1850] about which you have testified here on direct examination, did you have knowledge of something that was called the MacQuigg Report?

A. No, sir, I did not.

Mr. Alioto: Well, that takes care of that. That solves the problem for everybody, Judge, in a very easy way, so there was no need to get excited.

The Court: That's encouraging.

Q. (By Mr. Alioto): Did you ever see any of the ferro-vanadium produced by the Apex Smelting Company? A. No, sir.

(Testimony of Stuart C. Du Tot.)

Mr. Alioto: We have no further questions.

Mr. Archer: I have no further questions of this witness.

(Witness excused.)

Mr. Archer: Does your Honor wish to take a recess before I call the next witness?

The Court: We will take a recess.

(Short recess.) [1851]

Mr. Alioto: If your Honor please, I have discussed with Mr. Archer, counsel for the Union Carbide defendants, the letter I wanted to offer through Mr. Remmers, and Mr. Archer has now informed me that he has no objection to the offer without Mr. Remmers on the stand, and so I offer it at this time.

It is dated October 13, 1943, from Mr. Remmers to Mr. Swain, Mr. Pritchard, Mr. Gormely, Mr. Van Fleet and Mr. Price. There are just two short paragraphs that I would like to read from this letter, if your Honor please.

Mr. Archer: I would rather have you read it at some other time.

Mr. Alioto: Fine. I have no objection to doing that, either.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit No. 155.)

Mr. Archer: Your Honor, as my last witness, I call Mr. Colvin.

WILLIAM H. COLVIN

called as a witness by and on behalf of the defendants Union Carbide, and having been previously duly sworn, testified as follows:

Direct Examination

Q. (By Mr. Archer): Will you state your name and address, please? [1852]

A. William H. Colvin, Sarasota, Florida.

Q. What is your present occupation?

A. I am retired from business responsibilities now.

Q. During 1945 did you hold the position with the Crucible Steel Company?

A. Yes, I was president of Crucible Steel Company of America.

Q. When did you become president of Crucible Steel Company of America?

A. February 14th, 1945.

Q. I have the names of three men mentioned in connection with the Crucible Steel Company: a Mr. Felsinger, Mr. Taylor and a Mr. Billingsley. What were Mr. Felsinger's and Mr. Taylor's capacities?

A. Mr. Felsinger was director of purchases for a good many years and died something like March of 1945. His successor was A. W. Taylor, who became director of purchases.

Billingsley was in the sales department at the time of 1945 and 1946; he was the manager of the Pittsburgh branch of the Crucible Steel Company.

(Testimony of William H. Colvin.)

He was manager of our warehouse there and conducted sales within the area of Pittsburgh.

Q. Is Mr. Taylor still alive?

A. No, Mr. Taylor died in October, 1956, I believe.

Q. During the period commencing with February 14, 1945, when you became president of Crucible Steel Company, until 1949, [1853] did the Crucible Steel Company buy ferro-vanadium?

A. In very large amounts, yes, sir.

Q. What is the Crucible Steel Company's principal line of business?

A. The line for which it is probably best known is tool steel in all forms, shapes, sizes and grades. It is active in stainless steel in all varieties, other than the common grades of carbon steels, all forms of open-hearth electric furnaces, vacuum melted alloy steels.

Q. Is the Crucible Steel Company a large producer of tool steel?

A. I believe it is the largest.

Q. From whom did you buy ferro-vanadium after you became president of the Crucible Steel Company until 1949?

A. If the "you" there means the company, our purchases were substantially from the Vanadium Corporation of America with an occasional lot to Carbide.

Q. Were you ever solicited by anybody from Carbide or Electro Metallurgical Sales for the pur-

(Testimony of William H. Colvin.)

pose of having Crucible Steel Company purchase vanadium products?

A. The "you" there means me personally?

Q. Yes, you personally. A. Yes, sir.

Q. By whom were you solicited?

A. By a man named John Swain, who was the president of [1854] the Sales Company, in charge of those sales for the Union Carbide Division.

Q. When did he first solicit your business?

A. I do not want to be too accurate as to that, but it was very shortly after I had assumed actual responsibilities. That occurred March 1st, and it was some time very shortly after that. It could have been in that same month.

The Court: What year?

A. 1945, sir.

Q. (By Mr. Archer): What was the occasion of this solicitation? Did he call you, or what happened?

A. He telephoned, introduced himself, and told me that he had a matter that was of considerable importance to himself, that he would like to discuss with me. He recognized that my quite recent arrival at Crucible made it somewhat awkward to have outside or new problems injected, but that he would like an appointment with me to discuss this matter.

We arranged a time and he came over to our offices and he called on me then.

Q. This was in the early part of 1945, I take it?

(Testimony of William H. Colvin.)

A. It was in March of 1945. It could have been the first few days of April, 1945.

Q. What occurred at your meeting?

A. I didn't know Mr. Swain. After the customary pleasantries of two strangers meeting, but two people who [1855] had common interests, we got down to the business that was the cause of the meeting. Mr. Swain asked me if I was familiar with the purchasing policy of our company as regards ferro-vanadium. He told me that the situation which prevailed was one giving to the Vanadium Corporation, their competitor, the great majority of our business, to almost the exclusion of themselves, that this situation had long been a source of distress to them.

It was irksome, perhaps somewhat embarrassing, and he wanted to know if I was familiar with it and if I was familiar with the reasons for it.

Q. And what did you say?

A. I tol dhim that I was not, and therefore could not carry on this discussion with him any further than to tell him that I wasn't, but I would be very glad to post myself in respect to it. That would involve some inquiries in New York where we then were, and some inquiries in Pittsburgh with our purchasing people, and with the old established Crucible people. It might even involve some checking in Syracuse, where our largest tool steel installation capacity exists.

I had a schedule at that time of spending every other week in Pittsburgh. I was due to leave, I

(Testimony of William H. Colvin.)

think, the following week. If possible I would include the request for this information during that trip. I would come back to New York [1856] with the information if I was able to get it in that time. I would then want an occasion to review it and study it and see whether the data thus developed would support the division of our business that had been established within Crucible, and I would discuss it further with him at that time, and asked that he defer any further discussion until I was so informed.

I was the one who agreed to call him when I was ready for a continuation of these talks.

Q. Did you call him and have another meeting with him?

A. Yes, sir. I can't say whether that was the week after I got back or whether more time than that was involved, but it was a relatively brief time, in any event, and I called Mr. Swain. We made an appointment to meet. I wouldn't now say whether the meeting was at his office or whether he came to our offices. I can say that we did meet.

Q. What occurred at that time?

A. I told Mr. Swain that the volume of total business going out of Crucible to Electro Metallurgical was so very substantial, whether that was measured in dollars or whether it was measured in pounds of ferro alloys—the total in the proportion of our business was so substantial that I didn't see any reason why they should be dissatisfied with it or tell me that they were dissatisfied,

(Testimony of William H. Colvin.)

the volume of vanadium going to the Vanadium Corporation seemed like a reasonable [1857] way was to share our business, and that I had found nothing in the studies that I had made or the review of the reasons of our other people in establishing their policies to interpose any authority from the president's office to change that. [1858]

Q. By "total business" do you mean business in other products than vanadium?

A. Yes, entirely.

Q. What did he say on that occasion?

A. I believe he expressed an understandable regret.

The most interesting thing, however, that he had to say was that he felt my calculations included an error or possibly an omission, and he pointed out to me that there were several ferro alloys which were necessary in the operation of our company and the production of our product for which his company was the only source; we needed to buy those; we did buy them from them; and yet no decision to buy from them was based on any competitive reason; they were the only place to go and get them. And he asked if in my calculations of the total volume, about which I had spoken, included those items, and I assured him that they did, although I didn't know what they were. He asked me if I was familiar with this situation, the single source, so to speak, and I told him that I was not; and he suggested that it would be a fairer way to analyze the total business, to deduct from

(Testimony of William H. Colvin.)

that total that I was being guided by the amount of these single-source, non-competitive items which were bought from them, not in competition but because they were the only source.

He asked me if I would give consideration to that approach and I told him that I would, [1859] I thought that it made sense, and I asked for time to have these figures developed, and that we would meet again and that we would see whether they were substantial or whether they were nominal or whether they would have any effect upon the overall situation.

Q. Did you then have another meeting with Mr. Swain? A. Yes, sir.

Q. And when and where did that occur?

A. That occurred relatively soon after the second meeting, in New York. I can't tell you where it was or any more accurately than that, except that it was not a very long time to gather this data.

I did get it. I did call Mr. Swain, told him that I was ready. He told me that he had his figures.

We met, we compared the figures, and, as I recall, they were within reasonable relationship or harmony.

I did make the deduction—or perhaps he did—and I think he asked me if that had a fact or a bearing upon the matter would it affect my decision or thinking. And I told him that having brought this subject up, I had gone somewhat further. Union Carbide has other divisions which serve the steel business, the steel industry, other

(Testimony of William H. Colvin.)

than Electro Metallurgical, National Carbon—are two of them—and from other units of the Union Carbide Company our company made also very substantial purchases. It seemed to me, and I expressed to Mr. Swain, that if we were going to deduct these [1860] items that he had selected, then it would only be sensible to include these items which I had not included in my personal analysis. Those figures were very substantial. The purchases of the items that Mr. Swain had selected were substantial in themselves but not in relation to the total figure. They represented an important business but not in the volume that we were, that Mr. Swain and I were, then talking about.

When we brought in these additional figures and we were operating, oh, five different steel mills, I think at that time, with sixteen, eighteen, nineteen electric furnaces in them going full; all of the or practically all of the electrodes which do the melting came from Union Carbide, and so on—when you add those figures in, the total figure then becomes overwhelming, of Crucible money going to Union Carbide divisions, overwhelming in the sense that the relationship between that total and the total of these single-source, non-competitive ferro alloys to which—which he had selected. And I told him that on the basis of the study that I had made originally or of the corrected studies we had made together later, that I saw no reason whatsoever to bring about a change in the pattern of our purchases which our purchasing people decided

(Testimony of William H. Colvin.)

upon was in our best selfish interests and that I would not make any change in the absence of some wholly new development, unforeseeable then and then unforeseen, which would justify changing or contemplating a change in our plans. [1861]

And then I told Mr. Swain that having brought this matter up and having had it considered and a decision reached, that I would ask him in the future to conduct his sales of ferro-vanadium in the purchasing office and not in the office of the president. And on that note we broke up.

Q. Well, subsequent to that time did the salesmen from Electromet or Union Carbide attempt to sell ferro-vanadium to Crucible Steel Company in the purchasing office?

A. Including Mr. Swain on down, yes, constantly.

Q. Turning to another subject, the Crucible Steel Company uses ferro-vanadum for making high-speed alloy steels, does it not?

A. Yes, sir.

Q. During the period that you were president of the Crucible Steel Company, to 1949, would a reduction in the price of ferro-vanadium from the $2.70 range to a $2.25 range have increased your purchases of ferro-vanadium for use in high-speed alloy steels?

A. The very short answer to that is no. I can elaborate.

Q. Would you give your reasons?

A. We don't buy ferro-vanadium for any other

(Testimony of William H. Colvin.)

reason than that our customers buy ferro-vanadium bearing alloys from us. We don't stock it or want to hold it or tie our money up in it. If our customers buy more, we buy more. If they buy less, we buy less. A drop of that nominal amount in the price of ferro-vanadium [1862] translated out into steel would have had, as I see it, no commercial impact whatsoever. We are talking about, really, peanuts. The highest vanadium content that I recall in high-speed tool steel, up to the wartime when tungsten high-speed steel was the leading brand, it was 1% vanadium. Under the impact of the war and the introduction of molybdenum, that went up to 2%. There were special varieties in small, tiny quantities that went much beyond that, but the stable, standard market variety carried 2%.

The tool steel itself, with this 2% in it, represents only 5% on the average of the cost of the finished tool, and the finished tool itself is a little point on the end of a great machine tool. The cost of running that is in the material it consumes, in shaping and drilling and forming parts for the ultimate assembly of the article to be finally sold to the public, the labor and the machine hours. The cost of that little tool point is not great but is one that is watched very carefully. So that we are talking about a percentage of a percentage of a percentage of a percentage of a percentage. It gets down to where to try and find that somebody would buy more automobiles or more washing machines or more refrigerators or bridges for a drop

(Testimony of William H. Colvin.)

of that sort in price of vanadium means nothing at all.

And do I answer your question?

Q. Yes. Would you have liked to have got a price reduction in ferro-vanadium? [1863]

A. We are buyers of services and raw materials which we convert into our finished product. Any economy was always greatly received and no questions asked. If we had felt that a reduction in the price was due us, that there was an exorbitant price, that is quite another matter; we would have taken steps.

As a voluntary offer to test out and see whether the market would expand, we would have welcomed it.

Vanadium, you understand, was a declining commodity for many years, except for a very brief time when the defense movement began, in the early times of the war.

Q. Did you ever meet with Mr. Burwell in 1946 or at any time?

A. I have never met Mr. Burwell. I don't know him.

Mr. Archer: I have no further questions.

Cross-Examination

Q. (By Mr. Alioto): Mr. Swain—did Mr. Swain ever offer you a price below that of Vanadium Corporation of America? A. No, sir.

Q. In other words, he offered to sell you at exactly the same price? A. Yes, sir.

(Testimony of William H. Colvin.)

Q. If he had offered you 10c or 15c off the price, would [1864] you have purchased from him as against the Vanadium Corporation of America?

A. Do you mean whether I would have purchased?

Q. Would you have purchased if that was the price differential between VCA and Union Carbide?

A. Do you want an answer to that question?

Q. Yes.

A. All right. Had that occurred, the normal course of events would have been to call our regular source and tell them that they were now asking us to pay a premium and that we were not willing to do it, as they automatically knew. Had they failed to be competitive, failed to meet that price, we would have changed sources.

Q. Now, did Mr. Swain tell you at any time that for some period of time the Vanadium Corporation of America was securing its supply of raw materials from his organization, the Union Carbide group?

A. I don't believe he was at the time I was president of Crucible.

Q. I didn't hear the answer.

A. I don't believe that was true when I was president of Crucible. I didn't know Mr. Swain before I was president of Crucible.

Q. Did you ever meet any other salesman from the Electro Metallurgical Company? [1865]

A. Yes, sir.

Q. Vanadium salesmen? A. Oh, yes.

(Testimony of William H. Colvin.)

Q. Who were some of the men you knew?

A. The man that I knew best was Ward Miller, Vice President in charge of sales.

Q. Vice President in charge of sales?

A. Vanadium Corporation of America.

Q. Of Vanadium Corporation of America?

A. That is what you asked.

Q. No. I am sorry. I didn't make it plain, Mr. Colvin. I apologize. My question was whether besides Mr. Swain you ever met any other salesman or representative of the Union Carbide group.

A. Oh, yes.

Q. Who were they?

A. Mr. Du Tot, Mr. Remmers. I knew Mr. Priestley personally for many years.

Q. Did they contact you during this period of time? A. Oh, no.

Q. Had they contacted you before to sell vanadium or did you just know them socially?

A. I knew Mr. Priestley; he was a man to whom I went from time to time in the steel business, as a kind of a father-confessor. If I had a problem that I didn't know what to do with, [1866] I would go down and ask him what to do with it. He had been with Crucible, you understand, many years before. He knew a lot of our operations and our properties and our problems. I discussed with him various individuals that I was thinking of bringing into the company from the outside.

I did not know Mr. Du Tot, Mr. Swain, Mr. Remmers and others of their sales divisions before

(Testimony of William H. Colvin.)

I came to Crucible in New York. I had known their Western people where I came from.

Q. Did Mr. Priestley try to sell you vanadium?

A. Mr. Priestley was—— As the President in charge of their sales company, I don't think he would have done that. He didn't do it. I don't think he would have.

Q. In other words, your answer is, he didn't do it, is that right? A. That's right.

Q. He never asked you to buy from his company, did he?

A. I would have fallen over backwards if he had.

Q. Despite this friendship you had with him over so long a series of years, is that correct?

A. That's right. There were no purchases of vanadium of any amount before I came to Crucible.

Q. Now, how long had you known Mr. Priestley? A. From what time?

Q. From 19—from the time that Mr. Swain was in your office. [1867]

A. Mr. Swain was in my office in '45, and I think I became acquainted with Mr. Priestley in 19—not earlier than 1936 and not later than 1938.

Q. You say you visited him many times in connection with his being a kind of a father-confessor to you because of his prior history with Crucible?

A. That's right.

Q. Prior to the time that Mr. Swain walked in your office did you know any other salesmen from

(Testimony of William H. Colvin.)

Electro Metallurgical Company or the Union Carbide group?

A. In Pittsburgh or New York?

Q. Anywhere.

A. Yes, I knew them in Detroit.

Q. You knew the salesmen in Detroit. Who were the salesmen you knew there?

A. Why, I couldn't tell you who they were.

Q. Had you purchased vanadium from them before that time?

A. I just testified that my company then used only a very nominal amount, if at all.

Q. You mean the company in Detroit?

A. That's right.

Q. Well, now, is it your testimony that not until Mr. Swain walked in your office in April of 1945 did anybody try to sell you vanadium, anybody connected with the Electro Metallurgical Company?

A. Nobody had any business selling me vanadium at that time. I didn't buy any.

Q. Regardless of whether it was business or not, prior to the time Mr. Swain walked in your office nobody from the Electro Metallurgical Company tried to sell you vanadium? A. No.

Q. Is that right?

A. I didn't buy any vanadium.

Q. Now, then, when was that period of time—excuse me. Prior to the time you came to Crucible you were with what steel company?

A. The Rotary Electric Steel Company of Detroit.

(Testimony of William H. Colvin.)

Q. How long had you been with that company?

A. Since 1933.

Q. Since 1933? A. 1933 until 1945.

Q. O.K. Now, then, this conversation with Mr. Swain, the first time that anybody from Electroc Metallurgical tried to sell you vanadium was in what month of 1945?

A. I would suspect March of 1945.

Q. March of 1945. Now, at that time there was an anti-trust investigation going on, wasn't there?

A. I have since been so advised.

Q. That the investigation was going on at the time Mr. Swain was in your office? [1869]

A. No, I believe that the investigation was then suspended because of the war.

Q. At least you had known that there had been an investigation in process at some time prior to March of '45? A. I didn't know, no.

Q. Well, you know it now?

A. I know it now.

Q. Yes. When Mr. Swain told you that there are many ferro alloys of which they were the only source, did he tell you which ones?

A. I can't answer that other than to say that I believe he did mention two or three.

Q. Do you know which ones they are of which they were the only source of supply? A. No.

Q. In other words, basically, what you told him, as I understand it, Mr. Colvin, is that you weren't going to recognize any distinction in the Union Carbide groups or divisions, that you were going

(Testimony of William H. Colvin.)

to try to balance the purchases as between those two companies; is that it?

A. I think that I went further than that and told him that we tried to give—see that our money went as far as our contribution could to maintain competition and more than one source for us. We had the same situation exactly in tungsten, which was a product of theirs, we wouldn't buy any of it. [1870] We bought it from another source who didn't make vanadium, for example. We did that with Vanadium Corporation as a way to keep two sources in the vanadium business.

Q. Now, finally, did you have some kind of contract with Vanadium Corporation of America?

A. I don't know, myself. I doubt that. We might have.

Q. Do you know whether you had a requirements contract with them?

A. I say I don't know. We might have. I didn't pay attention to those things.

The Court: Did you observe the relationship between these two companies as that of competitors or otherwise?

The Witness: Your Honor, they were very competitive, within my observation, extremely so, on quality, on service, on their solicitation—it was aggressive, and I am talking now about the presidents and vice presidents of those companies, whom I know personally. Yes, sir, they were.

Q. (By Mr. Alioto): How competitive were they on price? A. None.

(Testimony of William H. Colvin.)

Mr. Alioto: Thank you.

The Witness: There is no way to get a premium in the steel business. [1871]

Cross-Examination

Q. (By Mr. Holland): Mr. Colvin, I hope it wasn't just because we were the poor boy that you gave us the vanadium business, was it?

A. No, Mr. Holland. The activities of the Vanadium Corporation of America in starting out with this product, ferro-vanadium, as an alloy, they taught us the early steps of the processing; they, at their own expense, went out to the trade, to the people who were not only our customers but the customers of all of the alloy suppliers, spread the gospel about the value of this material, interested them; were directly responsible I think for Ford's active early interest which really made the vanadium business back before Moly took its place. Vanadium Corporation gave us excellent service at all times, and they were in our plants, at their expense, with technical advisers and counsel. If something was developed elsewhere that we needed to know about, that would help us, they would tell us. If we developed something, they would see that that was spread out to the trade and to competition, keeping everybody up to date, and we always felt, in my knowledge, that it was the early work of the Vanadium Corporation which did a great deal to popularize the conception of alloy steel, not just vanadium but—— [1872]

(Testimony of William H. Colvin.)

Mr. Alioto: What period is the witness speaking of?

Mr. Holland: From 1938 on we are speaking of.

Mr. Alioto: Are you speaking only of the period from 1938 on?

The Witness: That is all my knowledge is.

Q. (By Mr. Holland): was any charge made for these additional services?

A. No, that is a service that goes along with the product.

Q. Were you speaking of your experience other than with Crucible?

A. I am talking about the American iron and steel mills in the growth of the alloy business.

Q. When you said the Vanadium Corporation of America made the early, I think you called it, effort to get the alloy known, what period were you speaking of?

A. I don't know what period that was. That was well back. I was still in school.

Q. How far back?

A. About World War I somewhere.

Q. Is it your testimony here that these two companies have been competitive since World War I down to the present time?

A. No, sir, I do not believe the Carbide Company came [1873] into the vanadium field until about 1926 or 1927, is my recollection.

Q. Is it your testimony that they have been competitive from 1927 down? A. Yes, sir.

Mr. Alioto: Now may I go into this problem?

(Testimony of William H. Colvin.)

The Court: No, you cannot. You really had no business asking that question.

Mr. Alioto: No; he answered Mr. Holland's question. I didn't ask that question.

The Court: We are not going into it.

Mr. Alioto: O.K., Judge. I didn't bring it up. He was answering Mr. Holland. It is not fair for a witness to give an impression of competition, and then not let us show the documents in this matter.

The Court: The Court has ruled on that a number of times, and we are not going back beyond 1938.

Mr. Alioto: But this witness, at Mr. Holland's hand, did do that.

The Court: I know, and that ends it.

Mr. Alioto: All right.

The Court: The only question the Court would ask the witness if it is embarrassing for a man from Florida to come to California.

The Witness: I lived two years in Oklahoma, too.

Mr. Alioto: Let me ask one other question, please.

Q. (By Mr. Alioto): Did you come up in the Crucible Company as a commercial man, or on the technical side? A. On the financial side.

Mr. Archer: All I can say, Mr. Colvin, is thank you very much for coming.

That is the end of our witnesses, your Honor. I believe Mr. Holland has some.

(Witness excused.)

Mr. Holland: I am afraid I have.

Mr. Bigler.

HAYWARD L. BIGLER

called as a witness on behalf of the defendants, and being first duly sworn, testified as follows:

Q. (By the Clerk): Will you state your full name and address?

A. Hayward L. Bigler, 15055 Park Drive, Saratoga, California.

Direct Examination

Q. (By Mr. Holland): Mr. Bigler, you are now a resident of California, is that correct?

A. That is correct. [1875]

Q. Were you for some years a resident of Colorado? A. I was.

Q. Where did you live there?

A. At Cortez.

Q. How long did you live in Cortez?

A. From 1931 until 1955.

Q. Confining our questions to the period July 1, 1938, on, were you in the vanadium business in 1938 in any way?

A. Not in the early part of 1938. In the latter part I was—indirectly.

Q. What was the nature of that business?

A. I was supplying fuel oil to H. J. Kimmerle, Sr., for a small vanadium mill southwest of Blanding, Utah.

Q. What was your principal business, the oil business?

A. The oil distributing business.

Q. Will you tell the jury what further hap-

(Testimony of Hayward L. Bigler.)

pened in respect to that Kimmerle mill that you furnished oil to?

A. Mr. Kimmerle had some financial difficulties and shut down his operation, owing quite a few bills, including quite an expensive bill to me, and in the following year he sought to start the mill up again and came to me for some petroleum products, and because of his past due indebtedness I refused to sell him unless I had some assurance that he would be able to pay, and he eventually gave me an assignment on a portion of the funds to be derived from the sale of this product. [1876]

Q. (By the Court): Who is this you are talking about?

Mr. Holland: His name is Kimmerle. He had a vanadium mill at Blanding.

Q. (By Mr. Holland): This mill was at Blanding, wasn't it?

A. It was about 15 miles southwest of Blanding in the Cottonwood District in Utah.

Q. You eventually, I believe, took over that mill and operated it for the benefit of creditors, isn't that correct?

A. Well, he had further financial difficulties, and an attorney for creditors interceded and shut him down, and the creditors came to me and asked if I would take over the management of that mill, run it for the benefit of the creditors, and see if it would be possible to recoup some of their losses, and I, together with Mr. Usher and a bank at

(Testimony of Hayward L. Bigler.)

Cortez, acted as managers, and kind of conservators of the funds received from that operation.

Q. How long did you run that operation for the benefit of the creditors?

A. That began approximately in the latter part of September or the first of October in 1939, and as I recall it we shut it down in 1940, in February, because of some serious mechanical difficulties and failures.

Q. Where did you sell that oxide? [1877]

A. I believe that was all shipped to the Continental Ore Company in New York.

Q. Was that for foreign shipment?

A. As far as I know it was. We had no way of knowing exactly what the ultimate destination of those shipments were.

Q. What were you paid for it, do you remember?

A. I believe that we got as high as $1.30 for some of that, but I am not sure whether we got that much for all of that, for V_2O_5 contained, that is, per pound.

Q. Did you get more than a dollar for all of it?

A. Yes, I believe we did.

Q. (By the Court): What year was that, now?

A. In the fall of 1939, and January, and possibly February, 1940.

Q. (By Mr. Holland): At that time did you know Mr. Leir?

A. No, I did not know Mr. Leir personally at all during that time. We made shipments to the

(Testimony of Hayward L. Bigler.)

Continental Ore Company in New York, and that was the market that Mr. Kimmerle had developed, and we had Mr. Kimmerle's son working with us at that mill, and we followed right on through with the marketing policies of the previous operation.

Q. In February of 1940 did you shut down the mill to rehabilitate it? You testified it was not working mechanically. [1878]

A. We shut it down and notified the attorney for the creditors that we had so much money at the present time, and asked whether or not we were authorized to spend that for major repairs, or whether or not they wished us to distribute it to the creditors, and after some discussion among themselves we were notified to turn the money over to the attorney for the creditors for distribution, and that was the end of that operation.

Q. Then another operation started?

A. Later on that year myself and one or two other associates decided that there was an opportunity in the vanadium business, and we contacted the owner of the claims that this mill was located on, a Mr. Frank A. Garbutt in Los Angeles, and negotiated a contract with him to lease the property and the old mill and to attempt to rehabilitate, or rehabilitate it as I saw fit, continue the operation, and pay Mr. Garbutt a royalty, as had been the previous arrangement with Mr. Kimmerle and our operation for the benefit of creditors.

Q. You did form a corporation to operate this venture?

(Testimony of Hayward L. Bigler.)

A. We did at a later date. That contract was negotiated in my name and in the name of H. J. Kimmerle, Jr., and Dan Milenski of Cortez, and later assigned to the corporation that was formed.

Q. What was the name of that corporation?

A. Blanding Mines Company. [1879]

Q. During the ensuing period was the operation conducted by the Blanding Mines Company?

A. From the time that the corporation was formed it was all conducted in the name of Blanding Mines Company.

Q. That was before you reopened the mill, wasn't it? A. That is right.

Q. What office did you hold in that corporation?

A. I was the president of the company.

Q. Who were the other officers?

A. Dan Milenski was one. I believe that he was secretary, that is, of the original group. And Fred Brinker was treasurer. And I believe we had as a director a Don Adams in Monticello, Utah, and Marvin Lyman at Blanding, Utah.

Q. When did you get back into operation after your shutdown in February of 1940?

A. Well, we operated some in 1940, and had further difficulties.

Q. Do you remember when you started operating in 1940?

A. No, I do not. I don't remember the exact dates, but it was in the latter part of the summer or fall, as I recall it.

(Testimony of Hayward L. Bigler.)

Q. To whom did you sell your product during the year 1940?

A. We shipped it to Continental Ore Company, as I recall it, or at their instructions, at least. The sale was made and consummated through their office. [1880]

Q. And that oxide was destined for the Apex Smelting Company in Chicago, is that correct?

A. I believe most of it went to Apex Smelting in 1940.

Q. Some of it went direct to Continental Ore?

A. It seems to me there might have been one or two small shipments that went direct to New York, but I wouldn't be too positive about that.

Q. Shortly after you started operating did you feel that with the expenditure of a reasonable sum of money you could double the capacity of that plant?

A. Yes, we thought we could.

Q. Did you try to secure financing from anyone?

A. Well, we tried a little bit locally, and then as an afterthought I believe we approached the Continental Ore Company and tried to get some financing through them in New York, with the proposal that we would like to repay it out of the product, the sale of the product, at least a percentage of the sale of the product.

(A document was handed to Mr. Alioto.)

Mr. Alioto: Do you know who the writer is?

Q. (By Mr. Holland): Mr. Bigler, will you

(Testimony of Hayward L. Bigler.)

look at that letter and see if you can tell me who the writer is, or was? That is a copy of it.

Mr. Alioto: We have no objection to the letter, [1881] itself, but I would like to ascertain who the writer was, if we can.

A. Yes. It says "S-e-e." Rather somewhat of a misprint. But Dan Milenski was the writer, I am sure, and he was secretary of the corporation.

Mr. Holland: I offer it in evidence as defendants' next exhibit in order.

Mr. Alioto: No objection.

(The letter referred to was thereupon marked Defendant V Exhibit 2-I in evidence.)

Mr. Alioto: We have no objection.

Mr. Holland: I wish to read to the jury the letter of September 13, 1940, to Continental Ore Corporation from Blanding Mines Company:

"We have carefully considered the possibilities of increasing the capacity of our mill, and we are of the opinion that capacity could be increased to 25,000 to 30,000 per month within three and a half months. We feel that our logical method of increasing the capacity is to use a de-liming process which we have access to and which is a patented process. By use of such de-liming process, the capacity could be at least doubled.

"In the matter of increase of output, it will take some $20,000.00, and in this locality that is [1882] a considerable sum to raise. We have placed quite a large sum in the construction of the present mill and are now somewhat handicapped by lack of

(Testimony of Hayward L. Bigler.)

funds, and we would like to be able to raise those funds and repay out of sales. Do you know of any arrangements that could be made along those lines?

"We have access to a great quantity of ore that runs quite high in lime content, and since the ore we are working has some lime in it, it takes longer for the roast than it otherwise would, and also recovery is not so high. Reliable chemists inform us that by de-liming that our roasting time could be reduced by one-half and recovery increased by possibly 10%.

"Our development work has progressed quite well and we are well satisfied with our supply. Production has been somewhat handicapped by reason of the recent overhauling of the fuser, and we have a considerable quantity of red cake ready for the fuser. With additional capacity on the fuser and the de-liming process above mentioned, we will accomplish the needed results.

"Of course, we do not care to obligate ourselves for additional funds unless we are assured of a long time contract at a profitable price. [1883]

"Will you please outline to us a long term contract so that we may complete our analysis of the situation?"

The next comes on September 23rd, 1940, a letter from Continental Ore Corporation, Mr. Leir, to Blanding Mines Company:

"Gentlemen:

"We refer to your letter of September 13th regarding a possible increase in your production.

(Testimony of Hayward L. Bigler.)

"Apex and ourselves have come to the conclusion that we must keep our funds liquid for the cash payments for our raw materials which, as you may imagine, run into considerable amounts.

"We therefore, unfortunately, cannot consider participating in the financing of your mill."

Then there is the suggestion that they apply to the RFC (continuing reading):

"We are, of course, prepared to make a contract with you for either a fixed quantity or, at your option, for your total monthly output for, let us say, a period of three months, renewable.

"We hope that some arrangement of the kind outlined above will suit you and we look forward to hearing from you further." [1884]

Q. (By Mr. Holland): Mr. Bigler, did Continental Ore Company, or Apex Smelting Company, ever at any time furnish you with any financing or financial help in connection with your mill?

A. Not at all.

Q. When you in your letter asked for a long time contract in order to spend this money on the mill, did you have reference to a three-month contract? A. We did not.

Mr. Alioto: If your Honor please, I think it is clear that this witness did not write that letter. He was asked what was said in a letter.

Mr. Holland: I will lay a foundation for this.

Q. (By Mr. Holland): Mr. Bigler, who ran the Blanding Mines Company, and who made their decisions in respect to their policies?

(Testimony of Hayward L. Bigler.)

A. I did to a great extent.

Q. And when important letters such as this were written, would you confer with the other officers before writing? A. That's right.

Q. Do you recall conferring with Mr. Milenski prior to the writing of this letter? A. Yes.

Q. And did he write this letter at your instructions?

A. He wrote it with my consent and approval.

* * * * *

Thursday, June 19, 1958, 9:30 o'clock a.m.

HAYWARD L. BIGLER

called as a witness by and on behalf of the defendants, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination—(Continued)

Q. (By Mr. Holland): Mr. Bigler, just before court adjourned yesterday, you testified to the fact that in the fall of 1940 you had applied for financing a long-term contract with Continental Ore Company, is that correct?

A. That's correct.

Q. And you had received a letter from Mr. Leir to the effect they would not indulge in financing and that he would give you a contract limited to three months duration. Is that correct?

A. That's right.

Q. What price were you receiving for your

(Testimony of Hayward L. Bigler.)

oxide from the Continental Ore and Apex in the fall of 1940, do you remember?

A. It was approximately a dollar to a dollar three cents a pound. I don't recall exactly at what period there were changes and whether or not that was f.o.b.—I believe that was f.o.b. Chicago, if it was a dollar, and maybe a dollar three at rail points in Colorado or Utah. And, if I remember [1888] correctly, we paid three percent—two and a half or three percent commission to Continental Ore for selling the product.

Q. And on the first of January, 1941, was a price change put into effect, do you remember?

A. I couldn't ascertain.

Q. To refresh your recollection, I will hand you a couple of letters and ask you if you can refresh your recollection from those letters.

A. (Examining.) Yes, I remember that.

Q. What change in prices was put into effect by Continental Ore and Apex on January 1st of 1941?

A. According to that letter, it indicates a dollar a pound f.o.b. Chicago.

Mr. Alioto: Counsel, may I see the letter from which the witness refreshed his recollection?

Mr. Holland: Certainly. I will put them in if you prefer. I am trying to hold the size of this record down.

Mr. Alioto: No. I just wanted to see it, that's all.

(Testimony of Hayward L. Bigler.)

Mr. Holland: I mean, I will do whatever you want to do.

Mr. Alioto: I have no preference.

Q. (By Mr. Holland): What change was made in the price paid at that time? [1889]

A. The reduction of three cents a pound, I believe—it was either two or three cents a pound. That was to a dollar a pound f.o.b. Chicago, according to that letter.

Q. Now, Mr. Bigler, how long did you operate after the first of January, 1941, do you remember, approximately?

A. We didn't operate very long in '41. I don't remember the date. We shut down to make some further improvements and changes in the mill, and, as I recall it, we did not resume operations other than on an experimental basis and test runs until the fall of '41.

The Court: You are speaking of Apex?

A. No, I am speaking of our own milling operation at the Cottonwood Mill at Blanding, Utah.

Q. (By Mr. Holland): And you say you started up again in the fall of 1941. Theretofore you had sold your product only to Continental Ore and Apex Smelting through Continental Ore, is that correct?

A. I don't believe we sold to any other parties during the operations when I had the part in it.

Q. In the fall or summer or about the time shortly before the time you reopened your mill,

(Testimony of Hayward L. Bigler.)

did you make any efforts to bring about an increase in the price you had been receiving?

A. Well, it was during the summer of '41 while we were doing the improvement work on the mill that we decided that we would investigate to find out if there were any other more [1890] favorable markets than we had, and Mr. Harrison, who was with us at that time, and Mr. Brinker, carried on some correspondence and made some inquiries as to where vanadium oxide was used in the industry and endeavored to get quotations from several different parties.

Q. And did you get quotations from different parties?

A. I think we had quotations from two or three.

Q. Including Vanadium Corporation of America? A. (Witness nods head.)

Q. Now, you produced some oxide in the fall of 1941, is that correct?

A. Yes, we produced some but I do not believe we had any great amount accumulated until late in the fall.

Q. And did you finally make a sale of that oxide?

A. I believe the next sale we made was to the Vanadium Corporation of America.

Q. Do you remember about when that was?

A. It was around either late in 1941 or very early in January in 1942, as I recall.

Q. Do you remember the price at which that sale was made?

(Testimony of Hayward L. Bigler.)

A. Dollar ten a pound f.o.b. mill, our mill at Cottonwood.

Q. Were there advantages other than the actual price in selling to Vanadium Corporation of America as opposed to selling to Continental Ore or Apex?

A. Yes. We had no expense whatever in transportation [1891] to rail heads. The Vanadium Corporation accepted our product molded in bricks. They furnished the shipping bags, and we had no expense as far as assaying was concerned, as we had had with shipments to North Continent Mines where we had—I mean North—I mean Continent Ore—Continental Ore, which, as I recall it, was paid one-half of Ledoux and Company's sampling and assaying.

Q. Did you feel that, all things considered, the price of a dollar ten paid by Vanadium Corporation represented the best offer you had?

A. Very much so.

The Court: What other offers did you have?

A. We had the offer from—we had an offer from the U. S. Vanadium Corporation, for one, and we had the offers from Continental Ore at that time, too.

The Court: What prices did they offer?

A. I think the U. S. Vanadium offered 90 cents a pound, if I remember correctly. I don't believe we had any other offer from them. And that was early in the summer of '41 we contacted them.

And there was a lot of correspondence with Con-

(Testimony of Hayward L. Bigler.)

tinental Ore, back and forth, on the price, and I don't recall exactly what varied offers were made by them. It started out at a dollar two or a dollar three, and I think they gradually increased it up to the equivalent around a dollar fifteen [1892] cents f.o.b. Chicago, we paying three percent commission on that, I believe, for—but I can't be too sure unless I have the correspondence, because my memory is a little bit hazy on what occurred back sixteen, seventeen years ago.

Q. (By Mr. Holland): Was a dollar ten from Vanadium Corporation of America a better price, all things considered, than a dollar fifteen, offered by Continental Ore?

A. We considered it so because there were no transportation costs, no assaying costs, no packaging costs, no freight at all to pay.

Q. In other words, V.C.A. picked up your ore right at your mill, is that correct?

A. I might say, the stuff was weighed and we could pick our check up at Monticello the next day for 80 percent of it.

Q. There is in evidence a letter, in Exhibit No. 131, which is a letter from Blanding Mines by Dan Milenski to Apex Smelting Company, dated January 9, 1942, which states:

"At the advice and recommendation of the owner of our claims, it will be necessary for us to dispose of our product here. We regret very much that we will be unable to deal with you."

Do you know about that letter?

(Testimony of Hayward L. Bigler.)

A. Yes, I recall such a letter.

Q. What did he mean by "at the advice and recommendation of the owner of our claims it will be necessary for us to [1893] dispose of our product here"?

A. Well, Mr. Milenski worded that letter, as I recall it, because of the fact that Mr. Garbutt received a royalty that was based on our net f.o.b. Blanding, and because of the fact that the dollar ten was in our opinion just as good or better because of the fact that we did not have to grind and we did not have the losses that might be incurred from grinding and the other expenses, that we would be better off to sell locally, that the net return would be at least a cent or two a pound greater than if we went to the expense of grinding and shipping to Chicago, and we did not care to install the necessary equipment for the grinding of the product that came from the mill molded in bricks, approximately a hundred pounds in size.

Q. Well, now, did Mr. Garbutt put any pressure on you to sell the Vanadium Corporation of America?

A. I don't believe that he did. I think that it was strictly an economic factor as far as he was concerned, and knowing Mr. Garbutt as I did, the dollar counted with him, and if he figured there was some net advantage to us, why, he would definitely recommend it to be sold. In fact, I might say, I don't recall exactly the wording in the old

(Testimony of Hayward L. Bigler.)

original contract that we had with Mr. Garbutt, but he had a profit-sharing clause in that, too.

The Court: Who is Mr. Garbutt, now? [1894]

A. He was the owner of the claims on which the mill was located that we were operating.

Q. (By Mr. Holland): In other words, you consulted with him before determining where to sell your product because he had an economic interest in it?

A. That's right. He definitely had an economic interest in our operation, either through royalty or profit-sharing agreement.

Q. Well, now, along in the spring of 1942, as shown by Exhibit 131, you asked on March 27 Mr. Leir to submit the best price and for a six months' —and to take your output for a six months' period, and he came back and offered to take your output at $1.20 your nearest station. "Acid must be crushed to one-eighth inch and down. We return bags freight collect."

And you turned that offer down.

Will you state why?

A. Well, as I recall, at that time we conferred again with Mr. Garbutt and he thought that inasmuch as we were getting what was considered to be a satisfactory price at that time and this was going to require the installation of crushing machinery, and again the inconvenience of the dust in the mill, which was irritating, and the dust losses, that we probably would be better off to continue

(Testimony of Hayward L. Bigler.)

to sell the product in the form that it came from the mill, instead of crushing. [1895]

Q. (By the Court): Did you have any other source for the ore as it came from the mill except the Vanadium Corporation?

A. The offer that came from Continental here by this letter that Mr. Holland just referred to.

Q. (By Mr. Holland): At that time you were selling your oxide to V.C.A. for $1.10 picked up at the mill, is that correct?

A. That is right.

Q. You considered that, all things considered, that was better than $1.20, in view of the installation of the crushing equipment?

A. Well, no, we didn't consider it—I mean, we didn't consider it was any better than the $1.20, but because of the fact that the cost of the crushing equipment and the cost of crushing was going to run that cost up, we couldn't tell exactly how much. But if we had to amortize the cost of the crushing machinery, depending on how long it was going to be used, it might have run that cost up to even more than the $1.20, if it was only for a comparatively short period of time.

Q. And then you had the other advantages that you spoke of before, is that correct?

A. That is right.

Q. (By the Court): Was your decision to sell, then, as you sold it, based [1896] upon what you considered economic reasons?

A. Yes, and because of the fact that Mr. Gar-

(Testimony of Hayward L. Bigler.)

butt had the privilege of, at any time, under his contract, asking us for a percentage of the profits, and he could even have stepped in and, as I recall, have bought a half-interest in our milling operation. We had to confer with him, and his recommendations were that inasmuch as this was apparently only on a temporary basis, and inasmuch as we had a very satisfactory outlet at $1.10 a pound in the brick form, we would probably be better off to continue to sell as we had for the previous few months to V.C.A. at $1.10 net to us f.o.b. our mill. We had no trucking expense, no packaging expense, they picked it up with their own truck, we weighed it at the mill, it was re-weighed when it got to its destination, sampled, we were furnished with the pulp, the settlements came through, we ran our own analysis in our own laboratory, and no expense to us at all after it was picked up at the mill.

Q. If you had sold to Continental Ore what would you have been required to do?

A. We would have been required to grind that to one-eighth inch, which we didn't want to do. We didn't have the facilities to do it, and we didn't care to install them. We would have been required to ship that in tight packages, because one-eighth inch stuff has also even dust. It would have had to be dust-proof containers. And in the event of a damaged [1897] container, there could have been loss incurred in the shipment.

The grinding of fused vanadium oxide produces a very irritating dust, which actually, sometimes,

(Testimony of Hayward L. Bigler.)

if the men got too much of it, resulted in a form of pneumonia, and we just didn't care to have that condition existing in the mill.

(The letter formerly referred to was marked Defendant V Exhibit 2-J in evidence.)

[See Book of Exhibits.]

Mr. Holland: I would like to read Defendants' Exhibit V 2-J, being a letter of March 16, 1942, from Mr. Leir to Blanding:

"As you can see from the enclosed clipping, prices for ferro alloys will remain unchanged during the second quarter. However, we have an idea which makes it possible for us to pay our suppliers an especially high price, which would work out in your case to be as high as $1.20 f.o.b. Blanding."

Q. (By Mr. Holland): At approximately this time Vanadium Corporation purchased your claims from Mr. Garbutt, did they not?

The Court: What was that?

Q. (By Mr. Holland): Vanadium Corporation of America purchased the Garbutt claims from Mr. Garbutt, the claims that Blanding Mines Company had a lease on, is that correct?

The Witness: What was the date of this [1898] correspondence?

Mr. Holland: This was back in March.

Mr. Alioto: March 16, 1942.

A. It was subsequent to that, as I recall it—sometime in April—that we were notified that such negotiations were about to be consummated, and I believe it was after the 1st of May that we were

(Testimony of Hayward L. Bigler.)

notified definitely that the deal had been closed and signed.

Q. (By Mr. Holland): And thereafter, early in June, you made an agreement, a supplemental agreement, with the Vanadium Corporation, under which you took the cream of the claims around your mill and continued to operate on those, is that correct? A. Yes.

Mr. Alioto: Of course, we were accused of asking leading questions, your Honor. We will object to that as leading. If they have a contract, they should put the contract in.

The Court: It is a leading question.

Mr. Holland: You can put it in if you want.

Mr. Alioto: Do you have the contract?

Mr. Holland: Have you got it?

Mr. Alioto: Yes. I would like to put it in.

Q. (By Mr. Holland): Do you recall approximately when that contract was [1899] made with the Vanadium Corporation?

A. Well, it was around the first part of June, as I recall it, that we consummated the revision of the contract.

Q. Did that agreement with the Vanadium Corporation require you to sell their oxide to the Vanadium Corporation? A. No, it did not.

Q. There is in evidence a letter dated June 20th from Mr. Leir to Blanding in which he says:

"The Apex Smelting Company forwarded your letter of June 16th to us and we take pleasure in enclosing herewith a schedule showing the prices

(Testimony of Hayward L. Bigler.)

at present paid by the Apex Smelting Company for fused vanadium oxide."

And those prices run from $1.10 on small lots to $1.15 on lots in excess of 10,000 pounds.

And on June 23rd you wired:

"Letter received. Quotation not satisfactory."

The Court: How was that?

Mr. Holland: "Letter received. Quotation not satisfactory."

Q. (By Mr. Holland): Now, Mr. Bigler, shortly after you asked for this quotation from Apex your mill burned down, I believe, did it not?

A. That is right. [1900]

Q. When was it reopened?

A. Well, the Defense Plant Corporation, as I recall it, was the government agency that stepped in and rebuilt the mill for us. It was not a duplicate of the old mill, but they did rebuild a mill of approximately a 15-ton-per-day capacity. I believe it was in 1943, in the early part of the summer, that we got that mill into operation.

Q. And did you operate that mill from that point on?

A. No, we operated that mill for approximately two months, but it had a different type of roast. It had that batch run that the Defense Plan Corporation engineers were offering and insisting that we put in, and it was not satisfactory as far as recovery, and neither was it satisfactory as far as the quality of the product was concerned, and the two months that we operated we operated at a loss.

(Testimony of Hayward L. Bigler.)

Q. What did you do then?

A. We shut the mill down. I had asked for more subsidy or assistance, or to operate on a cost-plus basis, from the governmental agencies at that time and was turned down on it. Also I asked if we could expect to be paid for uranium concentrate, which I knew was being recovered at other mills in the Plateau area, if we installed a step to recover that, and that was hush-hush. They wouldn't even discuss uranium with us.

So we shut down and negotiated a contract to sell over [1901] to the Metals Reserve Corporation, and fr[illegible] there on confined our activities to mining.

Q. [illegible]d that ore was destined for Metals Reserve mill?

A. It was delivered to whatever stockpiles Metals Reserve designated.

Q. How long did you sell ore to the Metals Reserve program, do you remember?

A. Until they ceased buying, which, as I recall it, was around the first of March of 1944.

Q. What did you do then?

A. We decided to try to reopen the mill and run again. I didn't quite approve of it, but Mr. Brinker was our engineer and metallurgist. He thought we ought to do it. And so I agreed to go along with him on a short period of time experimental basis and see whether or not we could improve the recovery that we had gotten before and make it profitable.

Q. And did you reopen the mill?

(Testimony of Hayward L. Bigler.)

A. Yes, we did.

Q. At that time did you approach anyone with respect to purchasing your product?

A. Yes. We, I think, approached more than one, but I don't recall. Mr. Brinker was in charge of that. And we found that at that time there was no longer an urgent need for fused vanadium oxide and the market was extremely dull.

Q. Did you approach Continental Ore Company? [1902]

A. Yes, I believe we did. Either Mr. Brinker or Mr. Milenski, on behalf of Blanding Mines Company, started correspondence with them.

(A document was handed to Mr. Alioto.)

Mr. Alioto: We have no objection to any of this material.

(The exchange of correspondence referred to was marked Defendant V Exhibit 2-K in evidence.)

[See Book of Exhibits.]

Mr. Holland: Exhibit 2-K, of which I shall read portions, consists first of a letter of February 8, 1944, to Mr. Leir, from Blanding Mines, or probably—simply signed by Milenski (reading):

"In line with your telephone conversation yesterday I talked at length to Blanding Mines' engineer, Mr. Fred A. Brinker, Durango, Colorado, concerning the probable disposition of this concentrate. I found that Mr. Brinker has been in contact with both U. S. Vanadium Company and Vanadium Corporation of America. However, he has dealt with

(Testimony of Hayward L. Bigler.)

neither, and as far as Mr. Brinker is concerned, he was willing to make an equitable deal with your company, as I advised over the phone. The process which Brinker discovered while in the employ of Blanding Mines is the separate property of Mr. Brinker.

"Blanding Mines controls quite a number of claims, [1903] and with these claims and others we could acquire or control it is our opinion that we could, through this process, concentrate and treat the concentration and recover approximately 50,000 pounds of vanadium and a considerable quantity of uranium every month.

"Mr. Brinker suggests that if you could spare the time to make a trip to this section, he believes the same highly desirable and advisable, for the reason that you could see these properties and could see the mills in this territory, and in addition you could get a complete picture of the actual mining and mill costs and production practices and problems.

"Blanding Mines Company's records are kept in great detail, and we have cost analyses of every phase of the operation.

"We would believe that it would be unavailing to meet in any location other than here for the reason that you ought to familiarize yourself with the production of vanadium and uranium.

"I believe that Blanding Mines would be interested in working out a joint undertaking, or some other arrangement whereby we could work in

(Testimony of Hayward L. Bigler.)

harmony and to the mutual advantage of each other, and that such an arrangement is highly desirable on account of your [1904] marketing setup and your marketing ability, and our milling and producing experience.

"To utilize Mr. Brinker's process we would need a concentrating mill and a treatment plant. Expansion should take care of itself. The costs of recovery by this process will be much less than it has been in the past. Whether or not others would be licensed is another problem."

And in answer to that——

The Court: Who wrote that letter?

Mr. Holland: That was written by Mr. Milenski of Blanding Mines to Mr. Leir.

In answer to that, on the 14th of February, Mr. Milenski received a wire from Mr. Leir reading as follows:

"Just received your letter of the eighth. Intend to be in Colorado very shortly and probably leave before end of month. Would like to bring friends with me interested in financing. Has new process been actually proven on vanadium ore and on which scale? Please answer this again as detailed as possible by wire."

The Court: What question was to be answered?

Mr. Holland: The question about Brinker's concentrating process.

Then on the 18th a wire from Mr. Leir:

"Will arrive Grand Junction, La Court Hotel, Wednesday evening March first and be available

(Testimony of Hayward L. Bigler.)

Thursday and Friday March second and third. Must leave Grand Junction Friday evening for Denver. Please arrange to come to Grand Junction with your associates."

Mr. Milenski wired Mr. Leir:

"Suggest you arrange to have us meet you in Alamosa."

Mr. Alioto: May we have the date of that wire?

Mr. Holland: It doesn't say; there is nothing on it to show.

Mr. Alioto: All right.

Mr. Holland (reading): "Suggest you arrange to have us meet you in Alamosa. You may get the train from Denver to Alamosa in the evening. This would permit you to examine our mining and mill records in Durango, Colorado, and then we could go to the mining districts near the mill and we could take you to Grand Junction if you wish. Deem it advisable for you to have about three days in this territory, as we desire that you thoroughly familiarize yourself with our operations and holdings."

Q. (By Mr. Holland): Mr. Bigler, as a result of these letters and wires, what happened?

A. Nothing. [1906]

Q. Did you meet Mr. Leir in Grand Junction?

A. Oh, yes. We went up there and found quite a group of others there, also.

Q. Was there anyone interested in financing the project?

(Testimony of Hayward L. Bigler.)

A. Not at all. Couldn't even get the matter discussed.

Q. What did you discuss in Grand Junction?

A. As I recall it, there was an effort being put forth to form an association of ore producers, independent association of ore producers. I forgot what the proposed name of it was. [1907]

The Court: What conversation did you have with Mr. Leir at that time?

A. Very little. I don't recall, but it was very apparent that, he told us, they were not at all—I will say that he told us they were not interested in financing any milling operations.

Q. (By Mr. Holland): Did you discuss the question of a contract for him to take the product of your mill at that time?

A. Yes. I believe it was at that time—it was about that time. And I do not recall definitely as to whether or not we had much of an opportunity to discuss the contract at Grand Junction or whether we resumed our discussion by correspondence on a contract for the product of any mills that we might operate in the future.

Q. Well, now, as a result of that meeting in Grand Junction, Mr. Leir submitted to you a proposed contract for the purchase of the product at your mill, did he not?

To refresh your recollection, I show you Exhibit 139.

A. (Witness examining.) Yes, that contract was submitted.

(Testimony of Hayward L. Bigler.)

Q. Do you recall a contract being submitted to you?

A. As I recall it, it was delivered to Mr. Milenski.

Q. Do you recall discussing it with Mr. Milenski? A. Definitely. [1908]

Q. And do you recall that Mr. Milenski wrote an answer? A. Yes, he did.

Q. In response to the contract?

A. Yes.

Q. This is a contract or a draft of a contract with the blank day of March, 1944, between Blanding Mines Company, party of the first part, and Continental Ore Company, party of the second part.

I shall just read certain portions of it and Mr. Alioto, of course, can read anything that he might consider significant.

Paragraph I recites:

"Continental undertakes to receive delivery of the entire output of vanadium pentoxide as produced by Blanding as the same shall or may be received for delivery from time to time by Continental, but subject to the limitations hereinafter in this agreement contained, and Continental undertakes and agrees upon the delivery thereof to pay to Blanding the purchase price thereof, and Blanding covenants and agrees that during the life of this contract that it will not sell or offer for sale any vanadium pentoxide unless and until Continental shall give notice that it will not accept de-

(Testimony of Hayward L. Bigler.)

livery of the same and then only upon the terms and conditions hereinafter in this agreement more particularly provided."

Now, in his letter to Mr. Leir of March 24, which is also part of this agreement and which is written to state Blanding's position in respect to this contract, Mr. Milenski states:

"In Paragraph I of your contract, the recital is 'Continental undertakes.' Throughout this contract we notice that 'Continental undertakes' and in most instances 'Blanding agrees.'

"Paragraph I also states that you will receive delivery of the entire output of vanadium as the same may be received from time to time for delivery. This is definitely objectionable, and we insist that you agree to take our entire output up to 50,000 pounds of V O contained. Of course, at the present time we can only make about 15,000 pounds per month and as per our conversation with you in Grand Junction, we realize that we will need financial assistance to increase the output above 15,000.

"Paragraph I is further objectionable in that the privilege is left with Continental to give notice that it will not accept delivery. If Continental would not accept delivery, we could only sell upon such terms and conditions as you have set forth. We believe the contract should be a contract in which you [1910] would unconditionally agree to buy and we agree unconditionally to sell. However, if you would desire or need some arrangements to

(Testimony of Hayward L. Bigler.)

cease buying, we believe that at least six months' notice should be given. Of course, some other arrangement might be worked out for your protection in the event the market should decline to the point where you could not accept. The suggestion of six months' notice is purely arbitrary and three months might be sufficient."

Do you recall that clause in the proposed contract? A. Yes.

Q. And reaction to it? A. Yes.

Q. Then Paragraph IV says:

"The price of one dollar ten per pound vanadium pentoxide is based upon two percent sodium Na_2O, and such price will be increased or decreased for any sodium Na_2O above or below the two percent with pro rata adjustment for fractions."

Now, had you ever been penalized for any excess sodium oxide over two percent in your product before?

A. It had never been mentioned at any time.

Q. And did you at this time have an analysis made to determine what the sodium content was of your oxide? A. Yes, we did. [1911]

Q. And how much was it?

A. I think the average was between six and seven percent on all previous shipments that we had retained samples from.

Q. So that penalty for any sodium oxide over two percent would have materially affected the price that you had received under this proposed contract, is that correct? A. Yes.

(Testimony of Hayward L. Bigler.)

Q. Now, Mr. Milenski in respect to that paragraph says:

"As to Paragraph IV in which you recite the two percent sodium oxide, it was our understanding that this was to be based on sodium *instead of* oxide, and we now suggest that the minimum sodium content be based upon our average sodium content in the fused black, which we have made in the past. We believe that we can hold the sodium to a minimum. However, we desire to ascertain what the sodium content was in our former production before we commit ourselves to hold to an agreed minimum. After we have agreed upon the minimum, the pro rata adjustments either upward or downward could easily be arrived at. In this connection we submit that there is nothing in the proposed contract which clarified the adjustments which should be made."

Now, subsequently the exhibit shows a letter was received by Blanding Mines from Continental Ore signed by [1912] Mr. Leir:

"We are in receipt of your wire of March 24, and after considering all angles, we feel that at the present time it would not seem advisable for us to enter into a contract as suggested by you without the framework of an agreement as outlined in the draft we sent you. We hope that you will understand our position. We believe that a straight purchase contract does not do justice to the general situation which should be covered by

(Testimony of Hayward L. Bigler.)

the agreement which we now have under discussion.

"We trust that in the near future you will be able to clarify the points which you say need additional thought. Looking forward to hearing from you in this respect, we are,

"Yours sincerely, Continental Ore."

The Court: Did you finally enter into a contract with Continental Ore?

A. No, we didn't.

Mr. Holland: The wire of March 24 to which this refers, I would like to put in evidence.

Mr. Alioto: May we see it?

(Between counsel.)

Q. (By Mr. Holland): Do you know who sent this wire, Mr. Bigler? [1913]

A. It is my handwriting in pencil on the bottom. I presume that the wire was actually sent by Mr. Milenski after he and I discussed it.

Mr. Alioto: We have no objection, on that identification.

(Wire March 24 to Continental Ore from Milenski received in evidence and marked Defendant V's 2-L.)

[See Book of Exhibits.]

Mr. Holland: This is a wire to Henry John Leir, Continental Ore Company:

"Contract received. Some points need clarification. We suggest that while these points are being discussed that you agree by letter to purchase our entire output up to 20,000 pounds vanadium pent-

(Testimony of Hayward L. Bigler.)

oxide per month for a period of nine months at a price of $1.10 per pound contained of 85% grade or better less carload freight Utah shipping point to New York. Letter follows."

And there is some writing in pencil, which is difficult to read. I will let Mr. Alioto read it if he wants to.

Q. That was the wire, was it not, in which the letter of March 24 that I have just read was in answer to? A. I believe that is right.

The Court: That is the letter in which you raised certain objections to the contract?

A. That is right. [1914]

Q. (By Mr. Holland): Now, as you stated, I believe, Mr. Bigler, you did not enter any agreement with Mr. Leir at this time, is that correct?

A. That is correct.

Q. Did you continue to operate the mill?

A. Well, as I recall it, this was in March of '44, the Metals Reserve ore-buying program had ceased, the mill had been idle there for several months, and we began in March to recondition the mill and make a few improvements and changes, and exactly on what date we resumed production, I am not sure, but it was in March or early in April, latter March or early April that we resumed the operation actually.

Q. And how long did you operate?

A. Oh, I would say, as I recall it, it was less than two months or not to exceed two months.

Q. And why did you shut down?

(Testimony of Hayward L. Bigler.)

A. We weren't able to negotiate any kind of a suitable market and find a satisfactory outlet, and our cost was so high that the coverage was not too good, we just decided it was economically unfeasible for us to try to operate the mill and we would be better off to shut it down than to continue to lose money.

Q. If you had been able to negotiate a contract with Continental Ore, would you have continued to operate the mill?

A. Well, if we had been able to negotiate a contract [1915] with Continental Ore at a satisfactory price——

Q. At $1.10?

A. Yes. We thought we could operate at $1.10. As I recall it, we estimated our costs, after the payments of rental to the Defense Plant Corporation, to be somewhere in the neighborhood of a dollar a pound.

Q. Now, I believe by the time you shut down you had produced about 12,000 pounds of oxide, is that correct?

A. I believe that's about correct.

Q. And did you offer that oxide to Mr. Leir?

A. Yes.

Q. Did he buy it? A. No.

Q. State, if you can, a little more fully just what happened in respect to that transaction.

A. He wanted us to ship a small quantity and we didn't want to make shipments in small quantities because of the transportation factor, and we

(Testimony of Hayward L. Bigler.)

figured that if we could not negotiate a contract to take our entire output from time to time as we saw fit to ship it at a satisfactory price, there was certainly no object in operating the mill.

Q. Mr. Bigler, the highest price you charged for vanadium oxide during March of 1942 was $1.10 f.o.b. mill paid by V.C.A., is that correct?

A. That's right. That's the highest price that we ever [1916] received during the period from '41 on.

Mr. Holland: We offer at this time in evidence the O.P.A. general price regulation adopted April 28, 1942, to take effect May 11, 1942.

Mr. Alioto: No objection.

The Court: Can you stipulate how long that was in effect?

Mr. Alioto: Yes. I will take Mr. Holland's statement on that, if your Honor please.

Q. (By Mr. Holland): How long was this in effect?

Mr. Archer: April '48.

Mr. Holland: Until April '48?

Mr. Archer: '46, it was. This was in effect until November 1943 exhibit which I have put in, which had the specific regulation——

Mr. Neaher: It superceded——

Mr. Archer: Just the same prices continued then until 1946.

Mr. Alioto: Do you tie it into the 1946 election? I was wondering what connection the O.P.A. with the 1946 elections.

(Testimony of Hayward L. Bigler.)

We will stipulate it went up to the 1946 elections.

Mr. Holland: Will you also stipulate, Mr. Alioto, that this covers vanadium oxide, this regulation?

Mr. Alioto: We will stipulate that the document covers what it says it covers. If you have another document covering vanadium oxide specifically, then I think it ought to go in.

Mr. Holland: This is the statement of considerations for Regulation 489 which we offer in evidence in conjunction with this exhibit.

Mr. Alioto: What is the source of this document, Mr. Holland? May I inquire what is the source of this document?

Mr. Neaher: That confirms the fact that this does apply to ferro-vanadium. If you are willing to stipulate, we don't need the document.

Mr. Alioto: What is the source of the document?

Mr. Neaher: That is the government which was attached to the other exhibit.

Mr. Alioto: Is this issued by the government?

Mr. Neaher: Yes.

Mr. Alioto: I have no objection to this going in then, if your Honor please, none at all.

(Price regulations admitted into evidence and marked Defendant V's Exhibit 2-M.)

[See Book of Exhibits.]

Mr. Holland: That is all.

The Court: What happened to the mill, what did you do with the mill?

A. The mill, in '44, after we shut it down we

(Testimony of Hayward L. Bigler.)

turned it back to the Defense Plant Corporation.

The Court: That is the government?

A. Right. See, they built—rebuilt the old mill or they built a new mill for us after the fire in June in 1942.

The Court: You had no further control over it?

A. Well, we had the operation of it but the title to the mill itself remained with the Defense Plant Corporation, and if we had had operated it sufficiently long to pay out at so much per pound for the product, we would have eventually acquired title to it, but we didn't operate sufficiently long, it was impossible for us to operate to make a profit. We would have been broke and badly in debt if we had continued to try to operate that mill.

The Court: And when was it you determined to give it back to the government?

A. It was in the latter part of '44, some time after July 1st, and I don't remember the exact date, your Honor.

The Court: Very well. You can cross-examine.

Cross-Examination

Q. (By Mr. Alioto): There came a time when V.C.A. made some kind of a deal with Garbutt, didn't there?

A. Are you referring to the acquisition of the claims?

Q. Yes. A. Yes.

Q. And after that they gave you a little trouble, didn't they? [1919] A. Who?

(Testimony of Hayward L. Bigler.)

Q. Garbutt. After he made his deal with V.C.A., he gave you a little trouble, didn't he?

A. Yes.

Q. He put a little pressure on you?

A. What do you mean now, "a little trouble"?

Q. Well, he charged you with bad faith, among othe things, after he made his deal with V.C.A., didn't he?

A. That's right.

Q. Sure. And he tried to close you down, didn't he?

A. No, he didn't try to close us down.

Q. He sued you, didn't he?

A. He sued us.

Q. And he asked for an amount of money which had he won would have closed you down?

A. But his suit was based on asking us to pay for something that we had already paid for.

Q. All right. And this happened only after he made his deal with V.C.A., didn't it?

A. May I go a little further?

Q. Yes, you may say anything you want, Mr. Bigler.

The suit that Mr. Garbutt filed against us was thrown out of the District Court in Salt Lake City.

Q. Yes?

A. The judge that heard the appeal, sent down an order [1920] that it should be heard, there should be conducted a trial, and we defeated Mr. Garbutt

(Testimony of Hayward L. Bigler.)

in the trial. It was appealed again and we defeated him in the appeal.

Q. Yes.

A. Is that conclusive?

Q. Yes. And I congratulate you for doing that, for winning over Garbutt, because you should have won over Garbutt, because the claim of bad faith he brought against you was false, Mr. Bigler. But the fact remains he did not bring that claim and try to close you down until he made his deal with V.C.A., isn't that right?

A. Well, that is right.

Q. And didn't you tell Mr. Leir at the hotel in Grand Junction that V.C.A. and Garbutt were putting tremendous pressure on you?

A. I don't recall.

Q. And didn't you also tell him at that time that you were looking to an independent supply because you knew that V.C.A. would put you out of business if they continued?

A. That I was looking for an independent supply?

Q. Yes.

A. I wasn't looking for an independent supply of anything.

Q. An independent outlet, I mean.

Q. (By the Court): Did you make that statement to Leir?

A. It is probable that we did. I don't recall. Because we were definitely looking for any advantageous outlet we could get at any time.

(Testimony of Hayward L. Bigler.)

Q. (By Mr. Alioto): Let us get the actual chronology of the way this thing [1921] developed. Up until toward the end of 1941 you were selling your product to the Continental Ore Company, and you were very much satisfied with the sales price you were getting?

A. No, we were not satisfied with the sales price we were getting or we would not have been out looking for a better market.

Q. What was the sales price you were getting?

A. About $1.00 to $1.02, less commission.

Q. And then he offered you $1.05, didn't he?

A. I don't recall the progressive stages in which the price was increased.

Q. And at the time you got that offer of $1.05 you said, "We particularly like the sound of that $1.05," didn't you?

A. What is the date of that?

Q. Let me show you a letter of November 19, 1941, which indicates, Mr. Bigler, that you went out to see some football game in Denver, but aside from that will you be good enough to look at the last two paragraphs of that letter?

The Court: You need not tell how the game came out.

Mr. Alioto: I just hope your team won, Mr. Bigler.

A. Mr. Milenski wrote the letter. It is his signature.

Q. (By Mr. Alioto): Yes, we have had a lot of letters by Mr. Milenski in evidence. [1922]

(Testimony of Hayward L. Bigler.)

I will offer this in evidence at this point.

Did you see this?

Mr. Holland: Yes. Go ahead.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 156 in evidence.)

Q. (By Mr. Alioto): Incidentally, Mr. Milenski is living, isn't he? A. Yes.

Q. He is in Cortez, Colorado, today?

A. Right.

Mr. Alioto: November 19, 1941:

"Upon my return I find that Bigler has sauntered off to Denver to see a football game and will return on Saturday. As we pay a royalty to the owner of the claims, I have advised him of your offer, and will undoubtedly hear from him by the first of the week. The product that we have ready for shipment is molded and not ground. We would much prefer not grinding it as it will take additional equipment which we are not particularly anxious to buy. However, we might make some arrangement to grind it if absolutely necessary.

"We particularly like the sound of that $1.05.

"With best regards,

"Dan Milenski."

And that is dated November 19, 1941. [1923]

Q. (By Mr. Alioto): Now then, shortly thereafter Mr. Leir, as you already testified, actually offered you $1.20 f.o.b.? A. Shortly——

Q. Blanding? A. No, not shortly.

Q. Well, within three months?

(Testimony of Hayward L. Bigler.)

A. Well, what is the date on that?

Q. November 19, 1941.

A. I don't believe so.

Q. We will get the exact date in a moment, but let me ask you whether you did not tell the Continental Ore Company at the time that Garbutt was pressuring you to give your output to V.C.A.?

A. I had never told Mr. Garbutt that.

Q. Did Mr. Milenski tell him?

A. Well, the correspondence will have to stand on its own on that.

Mr. Alioto: Where is 131?

Q. (By the Court): Did you make the statement to Mr. Leir contained in the question?

A. What statement was that, your Honor?

Q. The question that you were being pressured by Mr. Garbutt—whatever his name was—to sell—

A. Frankly, I don't think I ever made such a statement to Mr. Leir, because I have never had any conversations with Mr. Leir other than the one we had at Grand Junction. Mr. Milenski talked to him on the phone, and I can't remember ever talking to Mr. Leir other than the time I met him in Grand Junction. I had plenty of conversations with Mr. Garbutt, because I conducted most of the negotiations with Mr. Garbutt.

Q. (By Mr. Alioto): Let me show you a document dated January 9, 1942, already in evidence, which reads as follows:

(Testimony of Hayward L. Bigler.)

"Apex Smelting Company.

"Gentlemen:

"At the advice and recommendation of the owner of our claims it will be necessary for us to dispose of our product here. We regret very much that we will be unable to deal with you.

"Very truly yours,

"Blanding Mines Company,

"By Dan Milenski."

I take it that Mr. Milenski was authorized to send that letter to the Apex Smelting Company, wasn't he?

A. I think he was, yes.

Q. Now, the owner of the claims referred to in this letter is the same Mr. Garbutt who sued you?

A. That is right. [1925]

Q. As previously stated? A. True.

Q. When was it that you first received any intimation that Mr. Garbutt and V.C.A. were dealing with each other?

A. I can't be sure of the date.

Q. Wasn't it right in the beginning of 1942, just about the same time? A. Probably.

Q. As a matter of fact, the formal contract between them was dated April 1st of 1942, was it not?

A. I don't know. I never did see the contract.

Q. Whatever happened to the files of the Blanding Mines?

A. Blanding Mines Company is a dissolved and liquidated corporation now. The last of the files that I knew of, they were left in Durango.

(Testimony of Hayward L. Bigler.)

Q. Who picked them up, do you know?

A. A lot of them were lost in Malen Wilson's office in Salt Lake City at the time of that trial. Most of the rest of them were subpoenaed in a Grand Jury investigation in Denver.

Q. Where are they now?

A. I haven't them.

Q. Did the government send them back to you?

A. They sent back a part of them.

Q. Where are they now? [1926]

A. In Durango, I presume.

Q. Where, in Durango?

A. Probably in Fred Brinker's office.

Q. And Fred Brinker works for what company?

A. The Vanadium Corporation of America.

Q. Yes. Do you have the contract between yourselves and Mr. Garbutt?

Mr. Holland: We have not been able to find it here. We will look for it this noon. I am sure we have a copy of it.

Q. (By Mr. Alioto): That lawsuit alleged that shortly after the V.C.A. made this deal with Garbutt, that you were aware of it and were informed about it. That is correct, isn't it?

A. That is right.

Q. And you knew shortly in the beginning of 1942 that V.C.A. had an interest in these claims with Garbutt?

A. That is right. But may I add one thing? That deal was made with our contract in full force and effect, and in good standing.

(Testimony of Hayward L. Bigler.)

Q. Yes.

A. V.C.A. recognized it, and so did Frank Garbutt.

Q. When was it that Garbutt first threatened to sue you for bad faith? Do you recall the date?

A. No, I don't. It was late—— [1927]

Q. In 1942, wasn't it, the same year?

A. It was in the fall of 1942, I believe.

Q. Let us see if we can't get a chronological picture of V.C.A.'s involvement with Garbutt, and then what happened to you.

How much of an interest did V.C.A. take from Garbutt, do you know?

A. I have never seen the contract, so I have no knowledge whatever of its contents.

Q. Under your contract you had to pay a certain royalty, or a certain interest, a percentage interest, to Garbutt, didn't you?

A. That is right.

Q. Now, that contract is one of the papers, I take it, that Mr. Brinker of the Vanadium Corporation of America has?

A. I presume it is still in the files, that we have a copy of it. We should have.

Q. Do you have that contract here in San Francisco?

Mr. Holland: I will look for that.

Mr. Alioto: Thank you very much.

Q. (By Mr. Alioto): Under that contract part of your net profits had to go to Garbutt?

A. That is right.

(Testimony of Hayward L. Bigler.)

Q. Now, there came a time when V.C.A. succeeded to [1928] Garbutt's interest in that contract, so then part of your profits had to go to V.C.A.?

A. No, because that contract was negotiated, and that was all stricken.

Q. What was stricken?

A. The portion of it that stated that V.C.A. was to participate in our profits, as I recall.

Q. About what time was that stricken? Was it after V.C.A. got into the picture?

A. It was a revision of the Garbutt contract.

Q. Made when?

A. After V.C.A. got the claims.

Q. So there was a period of time when V.C.A. had Garbutt's interest in your profits, isn't that right? A. That is right.

Q. And that period of time began at least in April, 1942, didn't it?

A. No—well, I couldn't say, I couldn't say. The dates are not a part of my knowledge at all.

Q. Let me call your attention to the case of Garbutt against the Blanding Mines, and to the statement:

"According to the complaint on May 4, 1942, Garbutt assigned his right, title and interest in the contract to the Vanadium Corporation of America, and thereafter the Vanadium Corporation of America was [1929] entitled to all the benefits thereunder." A. That is right.

Q. Does that refresh your recollection that that was the date on which it happened?

(Testimony of Hayward L. Bigler.)

The Court: Wouldn't that naturally follow, if they bought the claim? Wouldn't they step into the shoes of Garbutt?

Mr. Alioto: Yes, there is no question about that, if your Honor please. I am simply trying to fix the date. We did not hear anything about this on the direct examination, and I want to bring out V.C.A.'s involvement with Garbutt. I want to fix the date. I have no doubt about the law of assignment.

Q. (By the Court): What is the date?

A. This is May 4th, there, I believe.

Is that right?

Q. (By Mr. Alioto): Does that refresh your memory that that is the date on which it happened?

A. I wasn't there and I have never seen the document, Mr. Alioto.

Q. Weren't you informed about it, Mr. Bigler?

A. We were notified that the Garbutt claims had changed hands. [1930]

Mr. Holland: We will get that for you, Mr. Alioto.

Mr. Alioto: Thank you.

Q. (By Mr. Alioto): What was that you just said?

A. We were notified that the Garbutt property had changed hands and that V.C.A. was the purchaser.

Q. And thereafter you dealt with V.C.A.?

A. We were also notified that our contract was in full force and effect and in good standing.

(Testimony of Hayward L. Bigler.)

Q. Yes. But thereafter you dealt with V.C.A.?

A. That is right.

Q. (By the Court): And that is when you secured a modification of the contract?

A. That is right.

Q. (By Mr. Alioto): In other words, it was V.C.A. that modified the contract with you?

A. That is right.

Q. Do you know how much of Garbutt's interest V.C.A. had acquired?

A. I have no reason to know anything about the dealings between V.C.A. and Garbutt.

Q. I am just asking. V.C.A., when they took over Garbutt's interest, became your lessor, didn't they? [1931] A. That is right.

Q. In other words, you were dealing with Garbutt in connection with what have been called the Cottonwood claims. That is correct, isn't it?

A. That is right.

Q. Approximately where on this map are these Cottonwood claims located?

A. They are about 15 miles southwest of Blanding on Cottonwood Wash.

Q. That is right about in the area I am indicating. Blanding is indicated to be in the Monticello Mining Area, and they were south of Blanding? A. Yes, south and west.

Q. The mill was built around those claims, was it not? A. It was built on the claims.

Q. Let us get a little history of that mill so

(Testimony of Hayward L. Bigler.)

we will lead up to this picture as to when V.C.A. entered the picture.

In 1937 that mill was built, was it not, as a 10-ton mill, built on these Cottonwood claims?

A. I don't know; I had nothing to do with it in 1937.

Q. Well, the mill, in any event—you came in as a creditor, isn't that a fact, Mr. Bigler?

A. In 1938.

Q. Yes. What kind of a creditor were you? What were you selling to the mill? [1932]

A. Petroleum products, fuel oils and lubricants.

Q. And the operator of the mill was a man named Howard Kimmerle, is that correct?

A. H. J. Kimmerle, Sr.

Q. H. J. Kimmerle, Sr. And you sold him petroleum products. And there came a time when he could not pay his bills, so you took over?

A. No, I didn't take him over.

Q. Or you and a group of creditors took over the mill?

A. No, I didn't take him over.

Q. What happened?

A. I was eventually paid by an assignment that was subsequently made by Mr. Kimmerle to me when he wanted to resume operations. It was a percentage of his proceeds. And my bill was paid in full.

Q. I thought you testified on direct examination that there came a time when you took over the operation of the mill for the benefit of the creditors.

(Testimony of Hayward L. Bigler.)

A. I was asked by the creditors to take over the operation and manage it for the benefit of the creditors and see if it was possible for them to recoup some of their losses.

Q. Fine. That is all I had reference to, Mr. Bigler; not anything else.

Do you remember approximately when it was that you took over? [1933]

A. In 1939, about September, as I recall.

The Court: We will recess at this time for ten minutes.

(Short recess.)

Q. (By Mr. Alioto): Mr. Bigler, I want to make something very plain in the record before going further, particularly in view of what I perceive to be a reaction on your part. I did not mean to imply that we believe the Garbutt charges of bad faith against you were true. We believe to the contrary, that Garbutt charges were false.

What I wanted to point out there was after an association with V.C.A., certain things happened in this case.

Now then, I think we were at the point where you were telling us you were a creditor of Mr. Kimmerle and there came a time when you took over the operation of the mill for the benefit of the creditors.

Do you recall, Mr. Bigler, approximately when that happened?

A. Approximately when we took over and began the operation for the benefit of the creditors?

(Testimony of Hayward L. Bigler.)

Q. Yes, sir.

A. It was late in September of '39 or early in October that we started the mill up on that phase of the operation.

Q. At that time who operated the mill besides yourself, Mr. Bigler?

A. Howard Kimmerle was in the mill all of the time, I was responsible for the operation, Mr. Usher was custodian of the funds—conservator.

Q. Now then, you tried to operate for the benefit of the [1934] creditors during that period of time, didn't you?

A. We did operate for the benefit of the creditors.

Q. All right. Do you recall that during that time or just prior to that time that the United States Vanadium Company tried to buy the mill from you?

A. I knew nothing of that whatever.

Q. Did Kimmerle ever tell you that the United States Vanadium Company—— A. No.

Q. ——tried to buy the mill from him?

A. No.

Q. Now then, that operation for the creditors continued up until just before March of 1940, that is correct, is it not? A. I believe, yes.

Q. Then in March of 1940, you and Mr. Milenski formed some kind of a financial organization for the purpose of taking over the mill, is that right?

A. No, we made a trip to Los Angeles in the

(Testimony of Hayward L. Bigler.)

early part of '40, in the spring, March or April, I believe, and discussed with Mr. Garbutt the possibilities of a contract directly with him.

Q. Who made the trip? A. Pardon?

Q. Who made the trip? [1935]

A. Mr. Milenski and myself.

Q. And you conferred with Mr. Garbutt?

A. I believe Howard Kimmerle, Jr. went with us on that same trip.

Q. When you made this trip to confer with Mr. Garbutt, you and Mr. Milenski had agreed, had you not, that the prospects for a profitable operation were good?

A. Well, Mr. Milenski was not at all familiar with any phase of our operation for the benefit of the creditors, and it was after that that I had discussed it at all with Mr. Milenski, and he at that time was acting as my attorney and I only took him along to California with me to discuss the matter with Mr. Garbutt.

Q. Well, did there come a time, though, when you made a deal with Mr. Garbutt, and that was about March of 1940?

A. Well, it was about March; it might have been April or the first part of May, even, it was the early part of 1940.

Q. In any event, you secured a lease from Mr. Garbutt, did you not? A. Right.

Q. Just give us the essence of that transaction with Garbutt, what was the deal?

A. It was a long-drawn out, complicated agree-

(Testimony of Hayward L. Bigler.)

ment and it provided for a three percent royalty based on the net selling price f.o.b. the mill at Cottonwood. [1936]

Q. Net selling price of the ore, is that correct?

A. The net selling price of fused vanadium oxide.

Q. All right. Three percent based on the selling price of fused vanadium oxide.

A. And that was based on 100 percent of the V_2O_5 contained in the ore, not on the recovery.

Q. Yes. And how long was this to last, how long a deal did you make?

A. It was one of those rather indefinite deals, that could just run on. I forgot—I don't even believe there was a termination date in it.

Q. At the time you made this deal, was the mill in condition to be operated immediately?

A. No.

Q. Did you undertake to do anything to that mill?

A. We installed several pieces of new equipment, the main one being the roaster.

Q. At the time you made this deal with Mr. Garbutt, you must have believed that it was a good business transaction? A. Yes.

Q. Is that correct? A. Yes.

Q. You felt that the market conditions were such at the time that it was well for you to make this kind of a deal?

A. Well, because of the fact that we made a profit for [1937] the creditors in the three months

(Testimony of Hayward L. Bigler.)

operation or four months operation, whatever it happened to be, all things being equal and the future looked fairly stable at that time we assumed that we would be able to operate for ourselves at a profit, also.

Q. During this period of time that you made a profit by which you were able to pay something to the creditors, to whom were you selling your product? A. Continental Ore.

Q. And your relations with Continental Ore were perfectly satisfactory, weren't they?

A. They paid for everything that we shipped to them.

Q. As a matter of fact, they had some kind of an arrangement where they put the money in the bank before the product was shipped?

A. We were allowed to draw 80 percent, I believe, or 75 percent, or something like that, of the estimated value in the shipment.

Q. And that was based upon the money having been put there in advance, isn't that correct?

A. I don't remember the circumstances on that. That's very vague in my mind and the records on that old operation were not preserved at all.

Q. In any event, you didn't have to wait for your money until the material arrived some place?

A. No.

Q. Do you recall what price Continental paid you at the time that you were operating for the creditors?

(Testimony of Hayward L. Bigler.)

A. It was approximately a dollar a pound plus or minus—I could not be too sure of it.

Q. It was the top of the market, at any event, wasn't it, Mr. Bigler?

A. Well, it was apparently the best price that we could get at that time.

Q. Did you try to get a better price from the United States Vanadium Company?

A. I don't know that we even contacted the United States Vanadium Company.

Q. Did you try to get a better price from the Vanadium Corporation of America?

A. I don't think we even contacted—in fact, if you will realize that at that time I was only directed to manage that operation as far as the mining and milling and the shipping and we pursued the same policy that had been followed by H. J. Kimmerle, Sr. Assuming that probably if we continued to operate that mill for the benefit of the creditors sufficiently long to recover for them all of the debts, that the mill would probably be turned back to Mr. Kimmerle.

Q. Why wasn't it turned back to Mr. Kimmerle?

A. It broke down completely, and there were approximately [1939] 70 to 75 percent of sufficient funds to repay the creditors in full, and the creditors' attorney asked us to turn that over to him and not spend any of it in repairing the mill.

Q. Well, then, you paid off the creditors three-quarters of their claims?

(Testimony of Hayward L. Bigler.)

A. I didn't pay them at all. I turned it over to their attorney and he distributed the funds.

Q. I mean, you turned over to somebody approximately three-quarters of the claims, is that right?

A. We turned over sufficient funds to take care of approximately three-quarters of the claims.

Q. Now then, is it not a fact that you also got as high as $1.30 for some of the oxide you sold to Continental at that time?

A. I don't know. As I told you, I didn't recall. It is possible, because that was during the period prior to the time that there was an embargo on vanadium oxide and it was probably sold on a foreign market.

It seems to me that correspondence I have had or read after that time with Continental Ore referred to a foreign market.

Q. Now then, in any event, when you——. Incidentally, who was a man named Usher? There is a statement by Mr. Milenski that the vanadium mines at Blanding formerly operated by H. J. Kimmerle, he says in Plaintiffs' Exhibit 131, formerly [1940] operated by H. J. Kimmerle and later by Bigler and Usher—who was Usher?

A. He was the banker in Cortez who handled the funds. Designated to handle the finances on this and receive the funds and deliver them at the discretion of the attorney for the creditors.

Q. In other words, he helped you during that creditor period? A. That's right.

(Testimony of Hayward L. Bigler.)

Q. Now then, however, beginning in 1940, when you and Mr. Milenski took over, you were operating for your own account at that point, were you not?

A. Yes. That is right.

Q. Who was in that transaction, just you and Milenski? A. No, Art Kimmerle, Jr.

Q. And how were the shares split at that time, Mr. Bigler?

A. I don't recall. We eventually formed a corporation.

Q. In any event, you did secure a lease from Garbutt. Now, what was done on the mines themselves—the Garbutt claims——.

Now, what about the mill itself, did you make some kind of an arrangement to operate that mill?

A. The lease on the property included all facilities thereon.

Q. Now, then, from the period you got into production—about July of 1940, did you not?

A. Approximately then.

Q. At the time you got into production, you got in touch with Mr. Leir, Continental Ore Company?

A. That's correct. I believe Mr. Milenski probably handled the correspondence in connection with that.

Q. And between 1940 and January of 1941 you shipped your materials to the Continental Ore Company, did you not? A. Correct.

Q. Now, then, in January of 1941, do you recall Mr. Leir telling you that he had heard that the

(Testimony of Hayward L. Bigler.)

Vanadium Corporation of America had secured an option on those claims?

A. No, I don't recall that. What is the date that you mentioned there?

Q. January '41, or, rather '42—I am sorry.

A. No, I don't recall that. I think it was about that time that the Vanadium Corporation of America approached us about buying ore and we negotiated a contract to sell them the finished product. And they even discussed buying the claims. We told them that we didn't own the claims.

Q. Now, can you fix the approximate time when that happened, Mr. Bigler?

A. I think that it—as I said, it was approximately that time, maybe late in the fall of 1941, that some representative of the Vanadium Company called on us asking if we would be [1942] interested in selling the claims.

Q. Who was that representative? Was it a Mr. Kett? Or a Mr. Viles?

A. I believe it was Mr. Kett, and at a subsequent — subsequently Mr. Kett and another — I believe he was Mr. Bransome — and Mr. Kett came to us at one time in Cortez, and I told him that ——

Q. Excuse me, before you tell us what you told them. Where was the meeting held in Cortez, do you recall?

A. I don't know whether it was held in my office or Mr. Milenski's office, one of the two.

Q. Who was present at that meeting?

A. Mr. Milenski and myself.

(Testimony of Hayward L. Bigler.)

Q. Mr. Kett and Mr. Bransome?

A. I'm not sure whether Mr. Bransome and Mr. Kett were both present at that time or not.

Q. But there were occasions when you saw both Kett—when you saw Mr. Kett and Mr. Bransome, you saw both of them at some time, is that it?

A. Yes. And I don't recall whether it was together or separate.

Q. All right. Now, whether together or separately, what was the substance of the conversation between you and Mr. Kett and Mr. Bransome?

A. We were approached to find out if we would be interested in selling the claims.

Q. And at that time were you selling the vanadium oxide to the Continental Ore Company?

A. We were not in production. That was in the fall of '41. We were in experimental operation and didn't have production steady at that time, we had nothing to sell yet.

Q. In the fall of '41? A. Right.

The Court: What did you say in that conversation?

A. I told either one or both of them, whichever it was, that we did not own the claims, that we only had a lease on them, and, as I recall it, they asked if it would be all right if they talked to the owner of the claims. And I said, "We have got no objection to your talking to the owner of the claims, as long as you recognize our leases being in full force and effect." [1944]

Q. (By Mr. Alioto): Just before this conversa-

(Testimony of Hayward L. Bigler.)

tion you folks had remodeled your mill, had you not?

A. We were in the process of completing the remodeling and testing it at that time, as I recall.

Q. You figured, then, you were producing about 5,000 pounds per week?

A. We hoped to. Whenever we figured, we oftentimes figured wrong.

Q. That happens. That happens all the time, Mr. Bigler.

I would like to read, so we can get a continuity to this testimony, the letter of October 31, 1941, which is part of Plaintiffs' Exhibit 131. It is a letter from Mr. Dan Milenski to the Apex Smelting Company. It states as follows:

"In response to a request of Mr. Henry J. Leir we wired you as follows: We are in no hurry to start shipment. We are producing approximately 25,000 pounds per week. Production undoubtedly will double in 1942. Letter follows."

Mr. Holland: Is that 2,500, Mr. Alioto?

Mr. Alioto: 2,500. Did I say 25,000?

Mr. Holland: Yes.

Mr. Alioto: I am sorry (reading): "We are producing approximately 2,500 pounds per week. Production undoubtedly will double in 1942. Letter follows. [1945] Our mill has been completely rebuilt and we have a centralized power plant. The bugs have been removed much better than expected. As yet we are not trying to crowd the mill, or even put it up to the production that it will take. We

(Testimony of Hayward L. Bigler.)

have gathered considerable data and are expecting we will soon be producing over 5,000 pounds per week. Our product is over 85 percent pure, i.e., V_2O_5. Your quotation of $1.05 Chicago is below other offers which we have received, and we are not disposed to sell for that price with better offers available. We suggest that if you desire, that you submit a new offer. We might be agreeable if price is satisfactory to contract for shipments at stated intervals of certain size. The writer plans on being in Chicago somewhere around November 10th and will endeavor to call on you and discuss the situation."

Q. (By Mr. Alioto): I take it you conferred with Mr. Milenski at or about the time that letter was sent, Mr. Bigler? A. I presume so.

Q. Do you recall who had offered you a higher price than $1.02 at the time?

A. A higher price than what?

Q. Than $1.02. [1946]

A. What is the date of this?

Q. This is October 31, 1941.

A. Well, I don't know that we had a firm offer at that time yet, but we were in the process of negotiating with the U. S. Vanadium Corporation, and the Vanadium Corporation of America, and had other correspondence out, and the Vanadium Corporation of America had implied, as I recall it, that our product was up to certain specifications, that they might pay us as high as $1.10 a pound.

(Testimony of Hayward L. Bigler.)

Q. You say they implied it. You mean somebody in their organization?

A. Talked to first, inferring that they would have to get the approval from higher up as to whether or not they would.

Q. Did Mr. Kett or Mr. Bransome tell you that at the time he was negotiating?

A. I don't believe they did. I don't think we ever discussed anything about the price on fused vanadium oxide.

Q. By reference to that letter of October 31st that I have just read, can you fix the approximate time that you had your discussions with Mr. Kett and Mr. Bransome, that reports a certain progress in connection with the remodeling of the mill, and I thought that might help you fix the time when you talked to Mr. Kett and Mr. Bransome?

A. No, I couldn't fix it very accurately. The first negotiations that we had with the Vanadium Corporation of America [1947] at all in connection with the sale of products were in the summer of 1941, when we were tearing out the old roaster and had a batch of clean-up, and there was quite a bit of impure vanadium oxide out of the old roaster, and we asked them for an offer on it.

Q. Who did you ask, do you remember?

A. Well, Mr. Harrison was in charge, and he probably contacted someone in their Naturita office, as I recall it, and they asked for samples.

Q. Yes.

(Testimony of Hayward L. Bigler.)

A. And we sold that product which, as I recall it, ran approximately close to 60 percent.

Q. Yes.

A. In fused vanadium oxide, at a fairly good price—not anywhere near the price of the 85 percent pure stuff, but we got a pretty good price for it and cleaned it up. That was the first negotiations we had. These other negotiations came subsequent to that, when we were approached by them on the purchase of claims, and we contacted them later to sell our 85 percent pure oxide, and at the same time began negotiations in contacting them in the fall of 1941. And I can't tell you exactly when, because a lot of it was done by Mr. Harrison, and done by telephone or personal conversations.

Q. Yes, we understand that. In any event, it was in the fall of 1941 that there were conversations both about buying [1948] your claims and about buying your oxide?

A. We didn't own any claims.

Q. I understand that. Let me rephrase it.

You had conversations with Bransome and Kett about V.C.A. buying the Garbutt claims, and conversations about buying oxide with these other V.C.A. folks took place at or about the same time?

A. I believe so. It was within the same period.

Q. And they offered you at that time how much, do you recall?

A. We began to negotiate on the basis of $1.10 a pound, because we found out that fused acid of that type had a market value of approximately

(Testimony of Hayward L. Bigler.)

$1.10 a pound, and that if we sold for less than that we were not getting its full value.

Q. In any event, in that period of time, when you opened up in October, you still sold to the Continental Ore, didn't you?

A. I don't recall whether we made any shipments in 1941 to the Continental Ore Company or not.

Q. Let us see if we can't be helpful on that.

Do you recall Mr. Milenski said he was going to Chicago, and the next letter is November 14, 1941, in which Mr. Lippa writes to the Continental Ore Company:

"In reply to your letter of November 13th regarding Mr. Milenski, please be advised that we have [1949] arranged to pay them $1.05 Chicago."

And then you will recall Mr. Milenski's letter that I read a little earlier about that $1.05——

A. But it doesn't say anything about any shipment being made, does it?

Q. No, this does not.

A. So I don't know whether there was any shipment made to them at all there.

Q. Do you recall on January 6, 1942, Mr. Leir wrote this letter—and this letter is in evidence—and I think this is continuing the story here:

"Attention: Mr. H. L. Bigler"——

from Mr. Leir:

"We understand that your Blanding Mill and your mining claims (or perhaps only one or the other) are at present under option to the Vana-

(Testimony of Hayward L. Bigler.)

dium Corporation of America. We should very much appreciate your informing us frankly as to whether this information is correct. We hope you will not hesitate to tell us your position in that respect, in view of our long and pleasant relations, and the complete cooperation we have always given you.

"In any case, we wish to say that it is, of course, the tendency of the U. S. Vanadium Corporation and the Vanadium Corporation of America [1950] to firmly establish their monopoly by getting hold of all sources of vanadic acid, so as to impede the operations of their sole competitor, the Apex Smelting Company.

"However, we do not see any advantage to you in lending your facilities to this project. If you will sell out to the Vanadium Corporation at this time, you will only have to pay a lot of taxes, instead of holding onto a continuous business which, in cooperation with us, will be profitable for you for years to come.

"During the war we can pay you a satisfactory price for the acid, and once the war is over we can again obtain for you the higher prices which govern the foreign markets. This would not be the case if you sold out now, or tied up your production with the Vanadium Corporation, because it would be they who would profit by these interesting foreign markets.

"This situation may arise much more quickly than most people think. We do not believe the war

(Testimony of Hayward L. Bigler.)

will last for years and years, as is often anticipated. We think that conditions in Europe, and especially in Germany, are such that the end may come within this year." [1951]

And this is January of 1942 (continuing reading):

"For all these reasons we think it is much more to your advantage to stay independent, and we should like to hear from you in this respect."

I take it when you received this letter, Mr. Bigler, you and Mr. Milenski discussed the type of answer that you would give to Continental?

A. We were not approached by the Vanadium Corporation to sell anything that we had. They were approaching us about buying the claims, and whether or not they pursued that at that particular time or later, I don't know. They might have gone to Mr. Garbutt, then, or they might have waited two or three months, I don't know.

Q. Do you remember discussing the answer to this letter to Mr. Leir? The answer is dated January 9, 1942, which I think I have already read:

"At the advice and recommendation of the owner of our claims, it will be necessary for us to dispose of our product here. We regret very much that we will be unable to deal with you."

Now, the owner of the claims was Garbutt?

A. That is right.

Q. And to whom did you dispose of the product here in January, 1942?

(Testimony of Hayward L. Bigler.)

A. We disposed of the product to the Vanadium Corporation of America. [1952]

Q. At what price?

A. At $1.10 a pound f.o.b the mill in bricks.

Q. You recall Mr. Lippa wrote you back and said:

"We have your letter of January 9th, and we regret exceedingly to note you are compelled to dispose of your material in your district, as we enjoyed doing business with you, and we were looking forward to receiving increasing amounts from you.

"However, should the situation change in the future, we will appreciate it if you will again get in touch with us."

That is Mr. Lippa to Mr. Dan Milenski.

On January 14, 1942, Mr. Milenski writes to the Continental Ore Company:

"Dear Mr. Leir:

"We do not know exactly what our plans will be for the future operations of the Blanding mill as in making these plans we must naturally consider the views of Mr. Garbutt, the owner of the claims, for the reason that through Mr. Garbutt we secure valuable information which is working to our advantage. Our marketing is being handled principally through Mr. Garbutt and we are getting a satisfactory price which is much better than the price offered by Apex. [1953]

"Possibly in the near future we might have reached definite plans for future operations, and if so we will advise you."

(Testimony of Hayward L. Bigler.)

Now, is the statement that your marketing was being done through Mr. Garbutt in January, 1942, a true statement?

A. It was not being done through Mr. Garbutt. We only conferred at times.

Q. Excuse me. May I get the question in this record?

Is the statement made by Mr. Milenski to Mr. Leir on January 14, 1942, that:

"* * * we must naturally consider the views of Mr. Garbutt, the owner of the claims, for the reason that through Mr. Garbutt we secure valuable information which is working to our advantage. Our marketing is being handled principally through Mr. Garbutt * * *"

Was that statement correct, in January, 1942?

A. No; no, it wasn't being handled principally through Mr. Garbutt. We only conferred with Mr. Garbutt from time to time.

Q. Why do you think Mr. Milenski told Mr. Leir that?

A. I didn't write the letter. He wrote it that way. And I think it is a little ambiguous.

Q. Didn't you confer with Mr. Milenski at the time he wrote this letter? [1954] A. No.

Q. In any event, it was perfectly clear at the time the letter was written you were selling to the Vanadium Corporation of America?

A. That is right.

Q. You must have been aware in January of 1942 that the Vanadium Corporation of America

(Testimony of Hayward L. Bigler.)

was in dealings with Mr. Garbutt about acquiring an interest in his claims, weren't you?

A. Well, we might have suspected that they were because of the fact they had approached us to buy the claims.

Q. Mr. Bigler, in just old plain American language, didn't Garbutt tell you you had to sell to V.C.A.? A. He did not.

The Court: You are putting your answer in the same old kind of language, then.

Q. (By Mr. Alioto): Let us look at some, perhaps, un-American language by Mr. Milenski on January 9, 1942 (reading):

"At the advice and recommendation of the owner of our claims, it will be necessary for us to dispose of our product here."

A. This says "advice," doesn't it, "and recommendation"?

Q. Yes. A. Not orders. [1955]

Q. That "it will be necessary for us to dispose of our product here."

Was it necessary, in January of 1942, to do that?

A. No, it wasn't necessary.

Q. But you did it? A. That is right.

Q. Did Mr. Garbutt tell you why he wanted you to sell your output to Vanadium Corporation of America?

A. I don't think Mr. Garbutt ever told me that he wanted me to sell. Knowing Mr. Garbutt as I know him, there was one thing that he was interested in, and that was a dollar, and he would tell

(Testimony of Hayward L. Bigler.)

me to sell that product wherever I could get the best possible net return to me for it.

Q. This language about advice and recommendations, I take it, was not made to you. Was it made to Mr. Milenski?

A. If it was, I don't know of it.

Q. Did you discuss the marketing of vanadium oxide with Mr. Garbutt, or was that Mr. Milenski's business?

A. We discussed such things, and I do not believe that just because that is worded in such a manner that it might be interpreted to be ambiguous—or interpreted ambiguously—that we ever received any orders directly from Mr. Garbutt to sell our product to any one individual or company.

Q. Incidentally, Mr. Milenski, the writer of the letter, is an attorney-at-law, is he not? [1956]

A. That is right.

Q. And he is still practicing in Cortez?

A. That is right.

Q. He is a pretty good attorney, as a matter of fact, isn't he? A. That is right.

The Court: You can't always tell what your lawyer puts in a letter.

The Witness: No, I can't.

Q. (By Mr. Alioto): Of course, in this instance he was not just your lawyer; he was your partner, wasn't he?

A. He was the secretary of a corporation.

Q. He had a financial interest in the deal, didn't he?

(Testimony of Hayward L. Bigler.)

A. Sure he did. But that doesn't mean he can't write a letter ambiguously.

Q. How much of a financial interest did he have, Mr. Bigler, do you recall?

A. No, I do not at that time.

Q. Now then, is it not a fact that in March of 1942 you folks made a deal with V.C.A. under the terms of which two-thirds, or you acquiesced in the deal between V.C.A. and Garbutt under which two-thirds of the Cottonwood claims were released to the immediate possession of V.C.A.—that is, the Vanadium Corporation of America? [1957]

The Witness: What was your question, again, now, please?

Q. (By Mr. Alioto): Let me put it directly: Do you recall in March of 1942 whether or not two-thirds of the Cottonwood claims in which you mined were released to the immediate possession of the Vanadium Corporation of America?

A. They were not.

Q. Do you recall whether or not the Vanadium Corporation of America at that time succeede to Garbutt's rights in the royalty of one-third of the Blanding profits? A. On what date?

Q. In March of 1942. And if the date is bothering you, let me say in or around March of 1942.

A. I didn't even know at that time that the Vanadium Corporation of America was actively negotiating with Mr. Garbutt. The contract was consummated and dated May 4th.

(Testimony of Hayward L. Bigler.)

Q. You suspected it, to use your language, didn't you? A. Why should I?

Q. I don't know.

A. How could they divide up claims that we had the lease on 44 of them without our consent, with our contract in full force and effect?

Q. Let me put it: In May of 1942 you came to the realization, did you not, that Garbutt had transferred his rights [1958] under the lease with you to the Vanadium Corporation of America?

A. That is right.

Q. For one-third of the royalty, was it?

A. For a three percent royalty, and the other provisions that I can't recall the exact wording on, and I wouldn't attempt to try to quote them.

Q. Counsel will be good enough to look for those contracts for us during the noon hour.

Now, after V.C.A. came into possession, and you were aware of the V.C.A. interest in these claims, did you then negotiate another deal with V.C.A.?

A. Yes. [1959]

Q. Was that the subject of a contract?

A. That was a contract.

Q. A written contract?

A. That was negotiated in the latter part of May or first of June.

Q. All right. Now tell us what that deal was, give us just the basic essentials of it.

A. Well, there were a lot of ambiguities in the contract that we had with Garbutt.

(Testimony of Hayward L. Bigler.)

Q. Mr. Milenski didn't draw up this contract, did he? A. Garbutt did.

Q. Okay. A. And——

The Court: Let him answer.

Mr. Alioto: I'm sorry.

A. There were a lot of disputable points in it and we were very unhappy about it. In fact, there had been times when I had tried to get some clarifications in it from Mr. Garbutt and he modified everything by letters stating that we would have no trouble on it as long as we continued our operation as we were and just let the matter ride.

So, when the Vanadium Corporation of America notified us that they were buying, we began negotiations with them. In fact, in the conversation—in one of the earlier conversations we had tentatively stated that there were some of those [1960] claims we considered of no particular value, and we were only operating on a part of them. And they asked us if we would release to them that part of the claims that we had done no exploratory work on and were doing no mining work on.

Q. (By Mr. Alioto): And was that about two-thirds of the claims?

A. Well, it was the worthless part of them, as far as we were concerned.

Q. Was it approximately two-thirds, whether worthless or not, so that my "two-thirds" figure of a while ago didn't come out of the air?

A. Well, it might have been as far as total area is concerned.

(Testimony of Hayward L. Bigler.)

Q. Yes. Okay. And then what else happened, what was the deal that you made?

A. We revised the contract very much to our advantage on the balance of it.

Q. And you gave Vanadium Corporation of America immediate possession of an area at least two-thirds of the claims?

A. Not immediate possession. They agreed to do a lot of core drilling for us on the part that we were reserving to determine whether or not we were satisfied that there was sufficient ore body within that area for us to continue to run our mill on.

Q. Yes? [1961]

A. That was consummated. They did the drilling and we were satisfied with the ore body because the results of the drilling were very favorable.

Q. And then what happened to that two-thirds area?

A. We released it to V.C.A. because we didn't care to operate on it. It was high lime ore and low grade ore that was in there, as far as we were concerned, of no value to us at all.

Q. Okay.

The Court: Well, they owned the property subject to your lease on it?

A. Yes, but we had the lease on all of it, approximately forty claims, or fractions of claims.

The Court: Now, V.C.A. then bought those claims—they bought them from Mr. Garbutt?

A. Yes, sir.

(Testimony of Hayward L. Bigler.)

The Court: So you had a lease——

A. From V.C.A.

The Court: ——on certain claims that you thought were worthless? A. Yes.

The Court: And those are the ones that you released? A. That's right.

Q. (By Mr. Alioto): And later on you say that the [1962] core drilling established the fact that those claims had——

A. I said the core drilling established the fact that the area that we reserved contained sufficient ore to justify the continued milling operation as we hoped to have it continue.

Q. Now then, you wanted to continue with the operation then? A. We did.

Q. And did you? A. Yes.

Q. For how long?

A. The lease ran for 15 years, it ran out last year, and it was never canceled.

Q. Well, a few weeks after you made the deal with V.C.A., the mill burned down, didn't it?

A. That's right.

Q. So that shut you down.

Mr. Holland: You are not blaming us for that?

Mr. Alioto: I don't blame anybody for anything. I am just developing whatever the facts are.

Q. The mill burned down? A. Yes, sir.

Q. And then what happened?

A. We were approached by the Defense Plant Corporation to rebuild the mill and we told them that we didn't have the necessary finances to re-

(Testimony of Hayward L. Bigler.)

build it, and they said "We need the [1963] vanadium production badly * * *"

The Court: Now, that is the government agency?

A. Yes, sir.

Q. (By Mr. Alioto): Yes?

A. "* * * and we will rebuild it for you if we can get everything worked out and are satisfied that the ore reserves are sufficient."

Q. Yes?

A. And so subsequently that mill was built by the Defense Plant Corporation.

Q. Where?

A. On the Cottonwood claims there.

Q. Well, as a matter of fact, isn't this what happened, that you then drew up plans for a new and a larger mill of a 25-ton capacity, is that right?

A. Well, I don't remember the capacity that we proposed to rebuild.

Q. In any event, you drew up plans for a new and larger mill?

A. Mr. Brinker was the construction and metallurgical engineer with us and he prepared all those plans and specifications.

Q. He is the man who is now working for V.C.A.

A. That's right.

Q. And, of course, he is still living? [1964]

A. He started working for V.C.A. just a short time back, relatively speaking, a few years ago.

Q. Yes. All right. Now, anyway, new plans were drawn up. Under the new plans you didn't propose to put the mill in the same place where

(Testimony of Hayward L. Bigler.)

the mill had burned down, did you? You proposed to put it between Cottonwood and a new group of claims on which you had secured an option, isn't that correct?

A. I believe we contemplated that at one time.

Q. What did V.C.A. tell you when they saw those plans?

A. Well, at first they agreed to do it and then they read their contract, and it stated that any mill had to be built on those claims, and they insisted we build the mill on the claims if we were to preserve our contract.

Q. In other words, they told you that they would cancel the lease on you if you built the mill where you wanted to build it?

A. Well, according to the terms of the contract, we would be automatically canceled if we built the mill any place else.

Q. That is what they told you they would do?

A. Yes.

Q. Who told you that?

A. Nobody told me that. It was told to Mr. Brinker.

Q. Who told Mr. Brinker that?

A. Oh, one of the Vanadium Corporation officials. I don't [1965] remember.

Q. Which one? Was it Kett?

A. I don't know.

Q. Mr. Kett, I mean. A. I don't know.

Q. You have no idea at all at this time who it was that said that?

(Testimony of Hayward L. Bigler.)

The Court: He has answered your question, he didn't know.

A. He didn't tell me.

Mr. Alioto: All right.

Q. In any event, you yielded to this and you built a 15-ton mill at Cottonwood? A. Right.

Q. With the help of the Defense Plant Corporation. That's the fact, is it not?

Now, the fire occurred some time in April of 1942, did it not? A. June.

Q. June of '42. And your new mill wasn't completed until March '43, isn't that right?

A. That's right.

Q. Now then, you were visited by a fellow named Mr. Edwards at that point, weren't you?

A. I don't remember. [1966]

Q. Well, at this point now the Metals Reserve program was in effect, was it not?

A. I couldn't say what date that the Metals Reserve program went into effect, I don't recall.

Q. Well, who was running the mill when you opened up, your new mill, in March '43?

A. Brinker was the metallurgical engineer directly in charge of it.

Q. What were you doing in connection with this operation? A. Looking after the mining.

Q. Did you have any other occupation at this time, incidentally, Mr. Bigler? A. Yes.

Q. Or did you devote your full time to this operation?

(Testimony of Hayward L. Bigler.)

A. I devoted probably 20 per cent of my time to this.

Q. To this operation? A. Yes.

Q. And what was your other business at this time?

A. I had my refined petroleum products distributing business.

Q. Distributing whose products?

A. Continental Oil Company.

Q. Continental Oil Company? A. Yes.

Mr. Holland: No relation? [1967]

Mr. Alioto: No relation.

Q. Do you know whether at the time you opened your new mill a man Edwards called at the mill and advised you to stop producing vanadium acid? And instead ship your ore to V.C.A.'s Monticello plant?

A. I am reasonably sure that he didn't.

Q. Did not. Okay. In any event——

A. If he did, I didn't hear about it.

Q. In any event, after you built the mill, you didn't operate it, did you? A. Yes.

Q. For how long?

A. For approximately two months.

Q. And then what did you do?

A. Because of the fact that we were losing money on it, we shut it down.

Q. In other words, in March of 1943 you opened a mill which had been built with Defense Plant funds. Tell me, was it a good mill?

A. And also designed by Defense Plant engineers?

(Testimony of Hayward L. Bigler.)

Q. Yes.

A. Who installed batch roasts, which did not work satisfactorily at all.

Q. So after two months you closed the mill down?

A. There was nothing in the contract that said we had to [1968] run it and lose money.

Q. How much money did the government spend building it? A. I don't know.

Q. Oh, about how much?

A. You'd have to dig into the figures on that. I have no way of recalling or nothing at all.

Q. Well, was it over a hundred thousand dollars?

A. Not that I know of.

Q. Where are—— A. I couldn't say.

Q. Where are these figures, are they also in the hands of V.C.A.?

A. You would have to get those from the Defense Plant Corporation, I think.

Mr. Alioto: May we have them?

Mr. Holland: We haven't got them

Q. (By Mr. Alioto): In other words, the only one that knows how much it cost to build that plant would be somebody in the Defense Plant Corporation in Washington right now?

A. It is possible that Mr. Brinker might be able to testify to that because he was the engineer—our engineer—that collaborated with the Defense Plant Corporation engineer in the designing and construction of that mill.

The Court: Well, your answer is you don't know?

(Testimony of Hayward L. Bigler.)

A. That's right. [1969]

Q. (By Mr. Alioto): Now, this was a 15-ton mill? A. Approximately.

Q. Was it not?

A. Approximately; designed to process 15 tons of ore.

Q. To whom did you sell the ore then when you closed down the mill? A. The ore?

Q. Yes.

A. We sold the ore to the Metals Reserve.

Q. And that ore was sent to Monticcilo, to the V.C.A. plant at Monticello?

A. It was sent to wherever the Metals Reserve administration instructed us to stockpile it.

Q. I appreciate that.

The Court: That was a government agency?

A. That's right.

Q. (By Mr. Alioto): I appreciate that, but can't you give us some help as to where the ore went, where your ore went?

A. Big part of it was unloaded first at Monticello and a lot of it that was then transferred to Durango. And where it ultimately was processed, I don't know. It made no difference.

Q. Now then, there came a time in the latter part of 1943 when you got together with a man named Mr. Sitton in connection [1970] with the possibility of acquiring the Durango mill that had been built with government funds and operated by U.S.V. up to that point, do you recall that?

A. No, in 1943 that mill was being operated by

(Testimony of Hayward L. Bigler.)

U.S.V. and was operated until March the 1st, 1944, or shortly after.

Q. Yes, but you are aware of the fact that at the end of 1943 there were conversations about stopping the production, the excess production of vanadium, and of canceling the Nisley-Wilson contract, and of canceling other contracts; you knew that?

A. No, I am not—the only information that I have was that we were—I recall that we were notified, I believe it was some date in January, that the Metals Reserve ore-buying program would cease on March the 1st.

Q. Now, whenever it was, at the time you received that information, did you join with other people in connection with forming a plan to take over the Durango mill? A. No.

Q. Was there a time when you got in touch with a Mr. Sitton?

A. I knew Mr. Sitton. I sold him petroleum products for his farming operations and saw him probably every few days. And I don't know what you are referring to.

Q. Now, you testified, I think on direct examination, that you had some kind of a meeting at the hotel in Grand Junction at which Mr. Leir was present? [1971]

A. That was in March of '44.

Q. March of '44. All right. Was Mr. Sitton there? A. I believe he was.

(Testimony of Hayward L. Bigler.)

Q. And who else was there? Give us all the people you remember being there.

A. Well, frankly, I don't remember very many of them. I think Mr. Balsley was there.

Q. Who was he?

A. He was a resident of Moab and an owner of quite a few mining claims.

And a man by the name of Mr. Bennett.

And a man by the name of Mr. Wright.

There were——

Q. Who was Wright?

A. There were a few other independent claim owners that were strangers to me.

Q. And you had been invited to that meeting, had you not?

A. Well, we went there primarily to discuss with Mr. Leir—or we thought we were there to discuss with Mr. Leir the refinancing program and enlargement of our mill. I knew nothing of any—of the subject matter that came up at the meeting prior to the time that we arrived at Grand Junction.

Q. Mr. Bigler, before you got to Grand Junction you say that you had no idea at all of the purpose of this meeting, that it was to organize a group of independent ore producers [1972] for the purpose of insuring a steady, dependable source of ore and vanadic acid?

A. I stated that I went there primarily to discuss with Mr. Leir and some of his associates that we thought were going to accompany him, the fi-

(Testimony of Hayward L. Bigler.)

nancing and the enlargement of the mill that we hoped to reopen.

Q. Now, regardless of your primary purpose, Mr. Bigler, my question at the moment is——

The Court: Well, did you know of this other plan, other purpose?

A. I think by the grapevine I heard there was something in the wind for that, but I don't know that I had—I don't—I am sure I had no actual information about it at all. In fact, it was a surprise to me that the meeting was specifically for that purpose alone.

Q. (By Mr. Alioto): Why? Did somebody take you to task for attending that meeting?

A. No, nobody took me to ask for attending that meeting.

Q. All right. At this meeting there were a group of producers, those that you have mentioned, among others. Now, at the meeting was there a discussion which you heard that related to the formation of an association of independent miners of ore so that there would always be a steady dependable source of ore supply for vanadic acid, do you remember any discussion about that? [1973]

A. There was a discussion about that and a discussion about the building of a mill, but who was going to put up the finances never showed up.

Q. I think a while ago you said—Mr. Holland handed you an exhibit of his called Defendants' V-2-L, and I think you said at the time that you had some handwriting on that letter.

(Testimony of Hayward L. Bigler.)

A. Yes, sir.

Q. Do you identify that handwriting as yours (handing witness)? A. Yes, sir.

Q. Would you be good enough to read the last two items of that handwriting?

A. This, by the way, is dated March the 24th, probably two or three weeks after that meeting.

Q. Well, now, then do you fix the meeting——

The Court: March 24, when?

A. In 1944.

The Court: All right. Now let him answer the question.

A. And it was after the receipt of the proposed contract that Mr. Holland read.

My notes on the bottom of this wire, if it is a wire, that was apparently sent by Mr. Milenski, my notes on the bottom of it are referring to the objectionable features in the contract, [1974] and it reads:

"Price and/or ferro grade," which apparently means that there was no specific price or grade referred to in the contract.

"Drums returned at his expense or ship in sets. Furnish one-fourth, possibly finer."

Now, he apparently asked for ground product again.

"Sodium average in shipments to V.C.A." and that referred that we were only agreeable to a sodium penalty providing that the allowable sodium was based on the amount of sodium that had been

(Testimony of Hayward L. Bigler.)

in the shipments that we had made for the last year and a half or so.

"Uranium"—have got in there "future"—that means that the uranium picture was very uncertain and there should be some definite provision or agreement on that.

And then at the bottom it says, "Association articles."

Q. What does that mean?

A. That was after the meeting and the articles of the association were being formed and we hadn't even seen them yet.

Q. All right. Now then, the "association articles" refer to something that was discussed at the meeting? A. That's right.

Q. Is that correct, Mr. Bigler? [1975]

A. Yes.

Q. Tell us everything you remember being discussed at that meeting about an association or independent ore producers.

A. Well, frankly, I didn't listen to too much of it because I was not particularly interested, because it was apparent that it was an association of ore producers and not for the benefit of a milling operation because there was no provision in the agreement to start a mill.

Q. Didn't Mr. Leir tell you at the time of that meeting in Grand Junction that if any independent ore producers or anybody else was able to demonstrate that they could produce 50,000 pounds of vanadium oxide per month without interruption,

(Testimony of Hayward L. Bigler.)

that he would build a ferro-vanadium mill in Colorado? A. I don't recall that he did.

Q. Didn't he give you that in writing, as a matter of fact?

A. No, he didn't give me that in writing. You can read the contract that he submitted to us as to what he proposed and there were any number of objectionable features in it as far as we were concerned.

The Court: Well, was Mr. Leir active in the meeting that you had?

A. He took charge of it.

Q. (By Mr. Alioto): He presided at that meeting, didn't he? [1976] A. That's right.

Mr. Alioto: Where is the contract that Mr. Holland put in?

Paragraph VIII of the contract submitted to the witness and Mr. Milenski and is part of Mr. Holland's Exhibit 2-K—the V-2-K—reads as follows:

"In the event that Blanding shall produce over a period of blank months a quantity of 50,000 pounds vanadium pentoxide contained per month and it shall be apparent that such production can be maintained over a reasonable period thereafter, Continental undertakes to construct a plant in the State of Colorado for the utilization of the process for the manufacture of ferro-vanadium. In the event that such a plant shall be erected by Continental, all ferro-vanadium produced from such plant shall be sold by Continental, and after Continental shall have paid the expense of such manu-

(Testimony of Hayward L. Bigler.)

facture and deducted a reasonable amount for amortization and the sum of five per cent upon the net sales price for profit, the balance received upon the sale of the said product shall be paid to Blanding."

Now, do you recall whether or not in view of that—does that refresh your memory as to whether or not there was a discussion at the hotel meeting about the construction of a [1977] ferro-vanadium plant in Colorado?

A. No, it doesn't. And besides that, that says "undertakes." It doesn't say "agrees". If you will read the letter that Mr. Milenski wrote and in which I collaborated with him in reply to the letter that accompanied that, and after reading that contract, you will see the analysis that we made of it.

Q. Well, I mean you objected to the word "undertakes"—is that what you objected to?

A. He didn't agree to anything. He didn't even propose to. He "undertakes".

Q. Well, did you ask him to change the word "undertakes" to read "agree"?

A. Read the letter that we wrote in reply to this.

Q. Do you claim the letter you wrote in reply refers to that paragraph?

A. It refers to that entire contract.

Q. Well, I think the letter has already been read in evidence. I don't see it here. I have no objection to reading it again.

The Court: While you are looking for it, we will take a recess.

Mr. Alioto: There is nothing in the letter about that, Judge.

(Thereupon a recess was taken until 2:00 o'clock p.m. this date.) [1978]

Thursday, June 19, 1958—2:00 O'Clock P.M.

HAYWARD L. BIGLER

a witness on behalf of the defendants, on the stand at the time of recess, having been previously duly sworn, resumed the stand and testified further as follows:

Cross Examination—(Resumed)

Q. (By Mr. Alioto): Mr. Bigler, this morning when we spoke of the construction of a new mill with the help of certain government funds, do you recall now how much in government funds you received in connection with that construction?

A. No.

Q. Was it $25,000? A. I don't know.

Q. Was there a man named Dune Harrison associated with you at that time?

A. Yes, there was.

Q. What was his business?

A. He was in charge of our milling operation.

Q. In charge of what operation?

A. Superintendent of the milling operation.

Q. Milling operation.

Did you also have a man named Brinker working

(Testimony of Hayward L. Bigler.)

with you at that time? [1979] A. That's right.

Q. What was his business?

A. He was a consulting mining engineer. He was secretary of our corporation and in charge of our metallurgy work.

Q. I take it both of these men participated in any discussions or plannings so far as the building of your mill was concerned?

A. I would say Mr. Harrison did after he joined the company.

Q. Well, did he join it at the time your new mill was being constructed in 1943?

A. I don't remember the exact date. Mr. Brinker hired him.

Q. Mr. who?

A. Mr. Brinker hired him.

Q. Both of these men were very competent men, weren't they? A. We thought them to be.

Q. As a matter of fact, Mr. Harrison wound up as a superintendent of V.C.A.'s plant at Naturita?

A. Several months later, after our operations were all over with.

Q. And Mr. Brinker wound up as a superintendent at V.C.A.'s plant at Durango?

A. I don't know what his capacity is there. He is an [1980] employee of V.C.A.

Q. You say these two men didn't know how to build a mill in 1943?

A. I didn't say that.

Q. What did you say?

A. I would like to have the record read. I don't

(Testimony of Hayward L. Bigler.)

remember I said that. I don't know what you are driving at.

Q. I thought you said that some of the government engineers had messed this mill up so badly that you couldn't operate it, and that is why——

A. I didn't say that any government engineers messed it up so badly. I said the batch roasters were installed at the recommendation of the government engineers, and they were not so satisfactory as the old roaster that we had, and our recoveries were low, and it was impossible for us to operate at a profit.

Q. I take it Mr. Harrison and Mr. Brinker participated in the decisions to set up whatever kind of roasters were set up, didn't they?

A. I don't think that Mr. Harrison and Mr. Brinker were aware of some of the problems that were going to exist after that mill was started with that type of a roaster. They were influenced by the recommendations of the government engineers, and it was the government money that was going to pay for the cost of the construction. [1981]

Q. It was the same kind of government money that was going to pay for the cost and construction of the V.C.A. mill at Monticello, too, wasn't it?

A. I am not aware at all of how that V.C.A. mill at Monticello was constructed.

Q. But you are aware of the fact that it did work, aren't you? A. Yes.

Q. And you are aware of that because some of your ore went into that mill?

(Testimony of Hayward L. Bigler.)

A. No, not because of that.

Q. By what?

A. The V.C.A. mill at Monticello had Skinner roasters in them, and they were not batch roasters.

Q. Those mills were both built by the same government money, weren't they?

A. (Witness shrugs shoulders.)

Q. Let's go on to the discussion we had this morning, sir. Let me get at it this way: It would appear from the correspondence that in February, March and April of 1944 Mr. Milenski kind of took a leading hand in negotiations, rather than you. Would that be about correct?

A. In what?

Q. At the time of the meeting at the hotel in Grand Junction, and in conjunction with the formation of an association, [1982] it would appear that Mr. Milenski, rather than you, took the leading hand in negotiations. Would that be about right?

The Court: What negotiations?

Q. (By Mr. Alioto): Negotiations relating to the association, to the contract relating to the construction of a ferro-vanadium plant in Colorado.

A. I am not aware that there were ever any negotiations for the construction of a ferro-vanadium plant in Colorado. And the only reason that Mr. Milenski took what appears to be an active interest, a more active part in the negotiations at this time, was because Mr. Milenski had usually conducted the correspondence with Mr. Leir. I was not

(Testimony of Hayward L. Bigler.)

acquainted with the man; I never met him; I never even talked to him on the phone, as I remember.

Q. Then you were still active in this organization—— A. That's right.

Q. ——in the beginning of 1944, I take it, Mr. Bigler? A. That's right.

Q. At that time there was some kind of a negotiation with a Mr. Sitton. Do you know what that was all about?

A. Whose negotiation with Mr. Sitton?

Q. Well, apparently Mr. Milenski was carrying them on.

A. Mr. Sitton had nothing whatever to do with the Blanding [1983] Mines Company's operations.

Q. Let me show you a letter dated March 17, 1944. It is from Mr. Leir to Mr. Daniel Milenski in Cortez, Colorado, that refers to the association and the so-called Sitton deal, and it is that deal that I am interested in finding out about.

A. I know nothing about any Sitton deal. Mr. Sitton was present at that meeting in Grand Junction together with several other independent claim owners.

Q. Well, do you want to read that to yourself, Mr. Bigler, and then see if that letter refreshes your recollection at all as to any deal that Blanding had with Sitton?

A. (After perusing letter): I certainly don't know what he is referring to. I would infer that from that first paragraph (reading):

"Re-tel. Unable to agree in writing with Sitton

(Testimony of Hayward L. Bigler.)

on deal, and since we cannot we insist all officers of proposed organization be either Utah or Colorado residents as well as independent producers."

Must refer to some deal that in conversation in negotiations that Mr. Milenski had had directly with Mr. Leir in connection with the formation of an association, and I was never particularly interested in the formation of the association because I didn't think it would work.

Mr. Alioto: Let's offer this letter into evidence, if your Honor please, so that we can see what we are speaking [1984] of here. It has attached the contract that is already in evidence. We will offer it as plaintiffs' exhibit next in order in connection with this cross examination. Letter of March 17, 1944, from Mr. Leir to Mr. Milenski.

Mr. Archer: You are not offering it against the Carbide Company?

Mr. Alioto: Not at this moment, no.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 158 in evidence.)

[See Book of Exhibits.]

Mr. Holland: Is that one letter?

Mr. Alioto: It is a letter that has a contract attached. It is the same contract you submitted, Mr. Holland. We can remove the contract, but it is physically attached rather hard at the moment, and we can do it at a more convenient time.

Mr. Holland: If it is the same one, why don't we save a little——

Mr. Alioto: I am going to do that, but it is at-

(Testimony of Hayward L. Bigler.)

tached a little hard, and I don't want to mess up the exhibit going in.

March 17, 1944, Mr. Leir writes to Mr. Milenski as follows:

"Dear Mr. Milenski:

"Thank you for your wire reading as follows:

"'Retel Unable to Agree in Writing With Sitton on [1985] Deal and Since We Cannot We Insist All Officers of Proposed Organization Be Either Utah or Colorado Residents as Well as Independent Producers.'"

And then—that's a telegram—the letter follows:

"I must admit that I don't quite understand why you insist that all officers be Utah-Colorado residents as well as independent producers. For that matter, Mr. Sitton is eligible in both instances whether you complete your private deal with him or not. Of course, I hope that you will be successful in your agreement with Mr. Sitton as well as with regards to the association.

"Mr. Pleasants had a trial in court which delayed all his other work, but he promises to let us have the contracts today or tomorrow. As soon as we receive it it will be forwarded to you.

"Needless to say, both matters, the Sitton deal and the formation of the association, are considered of equal importance by me.

"Please keep me informed as to developments.

"Continental Ore Company.

"By Henry J. Leir."

The Witness: May I——

(Testimony of Hayward L. Bigler.)

Q. (By Mr. Alioto): Yes, Mr. Bigler. [1986]

A. I call your attention that that says a private —"your private deal," and not "Blanding Mines Company deal."

Q. Well, was it a private deal?

A. I don't know. Mr. Milenski wrote the letter, and that letter is addressed to Mr. Milenski.

Q. That is what I am trying to establish, since we had a lot of other letters written by——

A. I say that Blanding Mines Company had no deal pending of any kind with Sitton.

Q. All right, that is what I want to establish. As far as you are concerned, you were not part of this Sitton arrangement?

A. I had no dealings whatever with Mr. Sitton.

Q. All right. Now, Sitton was a very substantial ore producer in the area at the time, was he not?

A. Well, he produced and shipped quite a lot of vanadium and uranium ore.

Q. Don't you recall at the time of that meeting in Grand Junction that Mr. Leir said that the "indispensable thing we must have is an assurance of a continuous supply of raw material, and that if an arrangement can be made with Mr. Sitton, who standing alone could assure us of that, that would be all right; if not, there ought to be an association of ore producers who could assure us of a continuous supply of ore during the time we have in mind" —do you recall that being [1987] said?

A. No, I don't, not at all.

Q. Now then, don't you recall that at that meet-

(Testimony of Hayward L. Bigler.)

ing at the hotel there was some discussion about the ore producers being organized for the purpose of affording a continuous dependable source of supply, and that the Durango plant might be purchased—the government plant at Durango—for the purpose of getting a real large competitor to both V.C.A. and U.S.V.?

A. No, I have no recollection of that at all.

Q. Were you in on any of the negotiations with either Mr. Sitton, Mr. Milenski, or anybody else, in connection with making an offer on the Durango plant? A. No, I was not.

Q. In October of 1944 we have a telegram from Mr. Burwell, I think, relating to that.

In October of 1944 were you in any kind of commercial relations with Mr. Sitton?

Mr. Archer: I believe it is March, '44.

Mr. Alioto: March. You're correct. March, '44.

A. I certainly don't recall any personal relations that I had with Mr. Sitton in a business way, or as a representative of the Blanding Mines Company, with Mr. Sitton.

Mr. Archer: The telegram doesn't refer to this witness.

Mr. Alioto: No, the telegram refers to Sitton and [1988] others.

Q. (By Mr. Alioto): Now, that is about the same time as the meeting in the hotel, and at the same time as this association talk, and I am just

(Testimony of Hayward L. Bigler.)

asking the witness if he doesn't remembe. all the talk of forming an association of independent producers.

The Court: He says he doesn't know anything about it.

Q. (By Mr. Alioto): That is still the state of your recollection? A. That's right.

Q. That the association had nothing to do with the Durango plant?

A. Not to my knowledge.

Q. O.K.

A. In fact, I had very little interest in the formation of the association, as I told you, because I doubted if it would work.

Q. Well, it ultimately was formed, wasn't it, the Uranium Producers Association, headed by the same Mr. Balsley who was present?

A. Well, I don't know what—how this Uranium Producers was formed, but it was not formed at this time, to my knowledge.

Q. It ultimately was formed, and it has done a tremendous [1989] job, hasn't it? It has done a tremendous job? A. I don't know.

Mr. Alioto: Let me have this marked for identification.

(The contract referred to was thereupon marked Plaintiffs' Exhibit No. 157 for identification.)

Q. (By Mr. Alioto): I show you what has been marked for identification Plaintiffs' 157, which

(Testimony of Hayward L. Bigler.)

purports to be a copy of a contract signed by H. L. Bigler, president, Blanding Mines Company, and Dan Malenski, secretary, and on behalf of the Vanadium Corporation of America, by E. D. Bransome, president, and P. J. Gibbons, secretary, 420 Lexington Avenue, New York City. Will you be good enough to look at that contract, Mr. Bigler, and then tell us whether that is the agreement that was made between you and V.C.A. in June of 1942?

A. Yes, that is the agreement that supplements the agreement, or replaces the agreement that we had with Mr. Garbutt.

Mr. Alioto: We will offer this in evidence, if your Honor please—the agreement between V.C.A. and this witness.

Mr. Archer: Are you offering it against——

Mr. Alioto: At this point, against V.C.A. only, yes.

Mr. Holland: No objection. [1990]

Mr. Alioto: I take it there will be applicable instructions covering the rule.

The Court: Let it be admitted, there being no objection. I don't see its competency, materiality.

(The contract formerly marked Plaintiffs' Exhibit No. 157 for identification was now received in evidence and so marked.)

[See Book of Exhibits.]

Q. (By Mr. Alioto): Now, this is a long agreement and we won't go into all of it, Mr. Bigler.

(Testimony of Hayward L. Bigler.)

Paragraph II of this agreement provides as follows:

"All ore mined by Blanding on the leased premises and considered by it to be of too low grade to mill, will be separately stockpiled by Blanding on the leased premises, and at any time at the option of Vanadium shall be sold to it at the market price current at the time for such ore, less, however, in lieu of royalty payable by Blanding to Vanadium in respect of such ore, an amount equal to five cents per pound of contained vanadic oxide (V_2O_5) in such ore. If Blanding desires to sell this ore to a third party and Vanadium does not desire to purchase it on the above basis, the Blanding may sell such ore to a third party and pay Vanadium five cents per pound of contained vanadic oxide in such ore so sold. Except as Blanding shall mill, or separately and normally stockpile in order to mill, ore mined on the leased premises, whatever the grade of such ore, Vanadium shall have a like option to purchase such ore and to the extent that Vanadium shall elect not to purchase the same, a like right to royalty upon the sale thereof to a third party."

That is a little involved as legal language, but in practice wasn't the deal that if you sold your ore to a third party, the ore described in this paragraph, that you had to pay a royalty on it to the Vanadium Corporation of America?

A. That is right.

(Testimony of Hayward L. Bigler.)

Q. And the royalty was five cents per pound of contained vanadic acid in such ore?

A. That is right.

Q. Do you recall whether or not any ore was sold to a third party on which this royalty to V.C.A. was paid?

A. There were a lot of ores sold to Metals Reserve at a later date and V.C.A. was paid the royalty according to the provisions of that contract.

Q. Other than to Metals Reserve, did you sell any ore to a third party that called for the application of this five-cent royalty figure?

A. No, and neither did we sell to V.C.A. that I remember of.

Q. There is another clause, Paragraph VI, I want to call your attention to, and that is:

"Any claims located or acquired by Vanadium south of Spring Creek or east of Cottonwood Creek and within a distance of one mile of the claims covered by this agreement, may at the option of Blanding be operated and mined by Blanding upon payment of the royalties stated in Paragraph I and II hereof. Any claims located or acquired by Blanding [1993] south of Spring Creek or east of Cottonwood Creek and within a distance of one mile of the claims covered by this agreement may, at the option of Vanadium, be purchased by Vanadium at the cost of acquisition or location, including exploration, but the maximum price payable by Vanadium therefor shall be $300 on any one claim, and any such claim purchased by Vanadium

(Testimony of Hayward L. Bigler.)

may be operated by Blanding on the same royalty basis as the claims covered by this agreement."

Do you recall whether or not you attempted to purchase any claims in the vicinity under this clause?

A. No, that is a carry-over from a provision in the Carbide contract, and while the Carbide contract was in effect, we did acquire and file on additional claims which we transferred to Mr. Garbutt, which were later included in the number of claims that were under lease.

Q. Then you made this same provision with the Vanadium Corporation of America?

A. That is right.

Q. Did you insist on the inclusion of that clause or was that simply presented to you?

A. We didn't object to it. It was in the other contract.

Q. The Vanadium Corporation proposed that clause giving them the right to acquire—— [1994]

A. No, they didn't propose it. It was in the Garbutt contract. And that was one of the indisputable and non-contestable provisions in there that we had no objection to.

Q. Who drew up this contract, do you know?

A. Mr. Milenski and Mr. Bissell worked out the wording on that.

Q. Who was the second gentleman?

A. Mr. Bissell, the attorney for the Vanadium Corporation of America.

Mr. Alioto: We offer this in evidence. I want

(Testimony of Hayward L. Bigler.)

to come back to this. I know you said you didn't remember anything about the Durango situation, but there is a telegram in evidence dated about the time of this meeting and association talk. It is February 29, 1944 from Blair Burwell in which he says:

"Brock advises——"

Mr. Holland: Your Honor, I object to his reading this telegram to this witness. It was not to this witness.

Mr. Alioto: I didn't say it was. I am trying to refresh his memory.

The Court: Let him see it.

Mr. Alioto: I will be glad to let him see it.

Q. You notice this telegram mentions a man named Brinker, as well as Milenski. Brinker was working with you at the time, wasn't he? [1995]

Mr. Holland: It doesn't mention Milenski, does it?

Mr. Alioto: No, the telegram mentions Brinker. You already had the evidence that relates to Milenski, in the contact with Sitton.

Q. In February 1944 was Mr. Brinker working with you?

A. Mr. Brinker was one of the stockholders and officers of the Blanding Mines Company, and to that extent only did I work with Mr. Brinker, and what Mr. Brinker—how Mr. Brinker was negotiating and carrying on any of his personal affairs, I had no particular basis for knowledge of that, and I didn't care.

(Testimony of Hayward L. Bigler.)

Q. In other words, you did not care if Mr. Brinker and Milenski made a separate deal to set up a competitive vanadium mill, is that it?

A. If I didn't object to it——

Q. Yes?

A. ——it was perfectly within their rights to do so, and I didn't object to it.

Q. In any event, the fact that Brinker, we now have Brinker associated with Sitton in connection with the Durango plant, that still does not recall anything to your memory that Blanding——

A. That doesn't recall anything to my mind because Blanding Mines had no particular part in any of that.

Q. At this time were Brinker and Sitton the only other [1996] stockholders besides you in the Blanding Mines? A. Were who?

Q. In February 1944 was Mr. Milenski—you are right.

In February 1944 Mr. Brinker and Mr. Milenski both were stockholders of Blanding Mines?

A. That is right.

Q. Were there any other stockholders?

A. Yes.

Q. Do you recall what proportion of the stock was held by these two? A. Not exactly.

Q. Was it a majority?

A. But the controlling stock of the Blanding Mines Company was held by myself, Mr. Milenski and Mr. Brinker.

(Testimony of Hayward L. Bigler.)

Q. The three of you had more than fifty percent? A. Yes.

Q. Did Mr. Brinker and Mr. Milenski standing alone have more than fifty percent? A. No.

Q. Who were the other stockholders of Blanding's at this time?

A. Well, there was a Donald Adams at Monticello, Utah; Marvin Lyman at Blandings, Utah; I believe D. E. Harrison held some stock in it, and one or two others that probably held a few shares. I can't recall. I couldn't see that it [1997] made any particular difference.

Q. Are you still in business, Mr. Bigler, or are you retired now?

A. I am still self-employed.

Q. What is your business at the present time?

A. Looking after my present investments in farming and ranching operations, and some mining claims and holdings in the Colorado Plateau area.

Q. Do you presently have any commercial relations with the Vanadium Corporation of America?

A. No.

Mr. Alioto: We have no further questions, if your Honor please.

Mr. Holland: I would like to put one more letter in the record on this 1944 situation.

Mr. Alioto: No objection.

(The document referred to was thereupon received in evidence and marked Defendant's Exhibit V-2-N.)

Mr. Holland: This is a letter dated March 31st,

(Testimony of Hayward L. Bigler.)

1944, from Mr. Leir to Blanding Mines Company, attention Dan Milenski.

"Your letter of March 24 and ours of March 27 no doubt crossed in the mails.

"Before entering into further details, we would like to make some general remarks so that you can properly appraise our situation:

"When shipments on V_2O_5 from Utah and Colorado decreased, and at a time when we needed them the most, we decided to make ourselves independent. We created equipment for the treatment of foreign vanadium ores, and frankly speaking, we are not in need of any material from Utah/Colorado today, unless we should want to expand our present business considerably.

"We will buy from you only if you are willing to make long-term contract with us which will protect our interests to that any changes we might make now in your favor (and to the detriment of our own conversion of foreign ores) would not prove harmful to our own interests one day.

"As long as your output is only 15,000 pounds per month there are no particular difficulties with regard to our own outlets, but the moment you achieve a larger output, we would like to see an 'association' created, because the 'association' would give us a better standing in the marketing of the finished product.

"The price must be based on the Na_2O contents because whatever Na_2O we have in the acid will absorb a like quantity of V_2O_5. [1999]

(Testimony of Hayward L. Bigler.)

"We would be willing to buy the material in full carloads, which would in turn enable you to make considerable savings on freight and packing. We would accept so-called asphalt laminated paper bags, which we can buy for you at about $100 per 1,000 delivered Utah, or 10c per bag. The bags can easily contain 100 pounds.

"In giving you these advantages the 2% Na_2O basis which I mentioned in Grand Junction should be reduced to 1% Na_2O.

"We believe that the above will show you our position in the matter, and we await your reaction before going further into the other details which, we are certain, can be worked out to our mutual advantage."

Mr. Holland: That is all of the witness.

Q. (By the Court): Did you sell any to them on the basis of one or two percent sodium content?

A. No, sir, we did not.

Recross-Examination

Q. (By Mr. Alioto): Mr. Bigler, at this meeting at the hotel, did you say in substance or effect that you were against any association of any kind?

A. No, I did not.

Q. As a matter of fact, Mr. Milenski was appointed to [2000] get together some kind of articles for an association, wasn't he?

A. I think that there was a committee appointed there at that meeting, and I believe that Mr. Milen-

(Testimony of Hayward L. Bigler.)

ski was one of the members of the committee, as I recall.

Q. Yes. Now, prior to that time, when you were supplying Continental Ore Company, you suddenly ceased supplying that company and turned your production over to the Vanadium Corporation of America. You have already testified to that.

A. Yes.

The Court: Was that on account of the price?

A. It was partially on account of the price and some of the other provisions and reasons that I believe I stated heretofore, the lacking of the grinding requirements and the saving of freight. V.C.A. picked up all the shipments that were made to them right at our mill with their own trucks.

Q. If you had sold to Continental, what would you have had to have done?

A. That mill was one hundred and some odd miles from the closest railroad and we would have had to package it and deliver it by truck to a rail point for shipment to whatever point was designated by Continental, or Chicago, or New York.

Q. You considered the price that was offered you by the Vanadium Company of America as a good business proposition?

A. We considered it far better than installing crusher equipment for grinding and shipping according to the specifications that were being placed by the Continental Ore Company.

Mr. Alioto: May I have Exhibit 131?

(Testimony of Hayward L. Bigler.)

Q. Mr. Bigler, didn't there come a time when Continental Ore offered you $1.20 per pound?

Mr. Holland: Your Honor, we could go on forever here. I do not think this is proper recross.

Mr. Alioto: The Court has just asked a question which I submit is contrary to the evidence. We have some information on the very subject matter that the Court inquired into. It will take me five minutes to get at it. I would like the opportunity to do it.

The Court: Go ahead. If you can get through anything in five minutes, let us have it. All of this is immaterial to the issues in this case. I have indicated as much right along.

Q. (By Mr. Alioto): That $1.20 price was f.o.b. Blandings, was it not?

A. I don't remember. You have a letter there—

Q. Let me show you Mr. Leir's letter to Dan Milenski of March 16th, 1942.

A. I would not consider this an offer.

Q. I mean the $1.20 price that was spoken of was f.o.b. Blanding? [2002]

A. That is right, but this is not a specific offer. May I read the paragraph that you are referring to?

The Court: Read the letter.

The Witness: It says:

"Dear Mr. Milenski:

"We refer to our letter of March 5th, to which we have not yet received any reply. As you can see from the enclosed clipping, prices for ferro alloys will remain unchanged during the second

(Testimony of Hayward L. Bigler.)

quarter. However, we have a need which makes it possible for us to pay our suppliers an especially high price, which would work out in your case to be as high as $1.20 f.o.b. Blanding. If you are interested in a contract, let us know."

Now, that just says that it would work out in our case — might work out in our case — "which would work out in your case to be as high as $1.20."

Q. You answered in connection with the Judge's question that your main objection was that you did not want to refine this ore as they wanted to have it refined.

A. We didn't choose to grind it and ship it in such form.

Q. Now, you had an offer from Continental in May, 1942 through Mr. Dan Milenski that if you did not want the $1.20 for flakes, that is, the ground material, he would pay $1.17½ for lumps, didn't you? A. I don't remember.

Q. It is in evidence in this case, in any event, as Exhibit 131.

A. I might call your attention, inasmuch as you keep emphasizing that, that until such time as we had been offered and began to receive $1.10 a pound, we had never been offered by the Continental Ore Company more than $1.02 or .03 cents a pound less the commission in most cases.

Q. Do you recall that when you broke away from the Continental Ore Company to sell to V.C.A. that was at or about the time that V.C.A. and Carbide started negotiating, as you have testified?

(Testimony of Hayward L. Bigler.)

Do you recall at that time, too, there was some letter from Washington which indicated that it was all right for the Blanding production to go to Apex and Continental?

A. It was not an order for us to ship.

Q. No, it was not.

A. And we were not co. reed by Mr. Garbutt or V.C.A. to sell to V.C.A.

Q. Who was the man named Eaton in your organization? L. Eaton.

A. L. Eaton?

Q. I show you a letter dated February 23rd, 1942 to [2004] Apex Smelting Company written by an L. Eaton, who purports to be an Assistant Secretary. Will you be good enough to tell us who he is?

A. That was a secretary of Mr. Milenski's, and that letter undoubtedly was written in Mr. Milenski's absence.

Q. Will you just read the letter? Is there something about the letter that you wish to correct in the light of your recollection of what happened?

A. No.

Q. This letter represented the agreement——

The Court: What is the letter?

Mr. Alioto: We will offer it into evidence, if your Honor please.

Mr. Holland: I have not seen it.

Mr. Archer: You are not offering this against Carbide, are you?

Mr. Alioto: At the moment against V.C.A.

(Testimony of Hayward L. Bigler.)

Mr. Holland: I do not know how long this is going to go on. It has nothing to do with my redirect examination whatever.

Mr. Alioto: I think it has, your Honor, and this is the last document that is going in.

The Court: If that is the last one, let it go in.

Mr. Alioto: We have difficulty to under your Honor's comment that something they do in connection with an Apex source of supply is not material to this action in 1942. We are offering it on that basis.

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit 159.)

The Court: Your witness, Mr. Leir, testified at the time he severed connections with Apex that he had ample material there.

Mr. Alioto: He was speaking of a specific month in January, if your Honor please, speaking of a specific month, and we know that Mr. Bayer wrote to the government and said they could not operate because of lack of supplies, and that is a Jury question to be determined.

Mr. Holland: He didn't say——

Mr. Alioto: That they could not operate to capacity because of lack of supplies.

The Court: And they exported a lot of it.

Mr. Alioto: I think the record shows otherwise. I think there is a factual conflict there and we would like an opportunity to present it.

In any event, this letter of February 23rd, 1942,

(Testimony of Hayward L. Bigler.)

is from the assistant secretary of Blanding Mines to Apex Smelting Company:

"We have your wire of February 14 and letter confirming the wire. No report was made at an earlier date for the reason that we were endeavoring to become more familiar with the situation.

"As we take the letter we received from the War Department, we are not directed to sell our product to you, and as previously advised, other arrangements have been made for the sale of our product and we have informed the War Production Board that we desire to continue with our present sales arrangement.

"We regret that we are unable to sell our product to you; however, you are aware of our set-up and the fact that we are merely operating under a lease. We are producing now under somewhat of a handicap for the reason of adverse climatic conditions with result of poor roads."

Q. At the time he stated that you were operating under a lease, that was the lease with Carbide, is that correct, is it not?

A. What is the date?

Q. February 1942.

A. That is true.

Q. And the lease that was shortly thereafter turned over to the Vanadium Corporation of America? A. That is right.

Mr. Alioto: We have no further questions of this witness.

(Testimony of Hayward L. Bigler.)

Further Redirect Examination

Q. (By Mr. Holland): Were you aware that had you accepted this offer $1.20 or $1.17½ from Mr. Leir, you would have been unable to fill it because price regulations would have limited your price to $1.10?

A. I just don't recall. I remember that there was some price establishment at that time, but as to what date I became familiar with it, I am not sure.

Mr. Holland: That is all.

Mr. Alioto: We have no further questions.

The Court: Step aside.

(Witness excused.)

FREDERICK F. KETT

a witness called by and on behalf of the defendants, Vanadium Corporation of America, and being first duly sworn, testified as follows:

The Clerk: Will you please state your full name and address?

The Witness: Frederick F. Kett, 409 Hare Lane, San Mateo.

Direct Examination

Q. (By Mr. Holland): Mr. Kett, were you formerly employed by the Vanadium Corporation of America? A. I was.

Q. In what capacity were you employed by that company in 1938?

(Testimony of Frederick F. Kett.)

A. You mean before or after Mr. Reece died?

Q. After Mr. Reece died.

A. Well, I took his job as general manager of mining.

Q. Do you remember when he died?

A. Yes, January 19th, 1938.

Q. Then on July 1, 1938, you were general manager of mining? A. That is correct.

Q. Did you hold that position during the period 1938 to 1949?

A. Yes, up until the time I retired.

Q. When did you retire, Mr. Kett?

A. June 1st, 1950.

Q. Mr. Kett, if you do not object, will you state your age?

A. Yes, I will be 76 next October.

Q. Mr. Kett, in the year 1940, I believe you started the Naturita plant, reopened it, is that correct? A. Yes.

Q. Did you have charge of that?

A. Yes. [2009]

Q. Prior to the opening of that plant or prior to the preparations for opening that plant, had Vanadium Corporation been buying any ore on the Colorado Plateau? A. Yes.

Q. Immediately prior, I mean?

A. Yes.

Q. When after 1938 did you start buying ore, do you remember?

A. Oh, late in the summer of 1939.

Q. That was when you first started to buy ore?

(Testimony of Frederick F. Kett.)

A. I think so.

Q. And you opened the plant in the summer of 1940, is that correct? A. Yes.

Q. Did you have charge of fixing what prices Vanadium Corporation would pay for ore?

A. From the independent miners?

Q. From the independent miners.

A. Yes, I did.

Q. What did you do in respect to establishing your opening price?

A. Well, we made quite extensive calculations based on what we thought it would cost to produce the oxide through our metallurgist in Bridgeville, and from that we figured that we could pay *around cents* per pound contained V for [2010] two percent ore, and that was the basis of our starting point of our payments.

Q. The price schedule which is in evidence in this case, Mr. Kett, shows a price of 21 cents for two percent ore. Do you know how that price came in?

A. We started at 20½ but we didn't get any ore.

Q. Why was that?

A. Well, the U.S.V. were paying 21 cents and we thought as we were 14 miles closer to the suppliers, that our calculation of 21 cents was too high to the miner to save a 14-mile haul anyway.

Q. (By the Court): You mean 20½?

A. Beg pardon?

Q. You said 21. You mean 20½?

A. No, we had figured originally at 20, but we

(Testimony of Frederick F. Kett.)

didn't put that price on for the miners because we didn't think we would get any at 20, because U.S.V. were paying 21, but we did think we would get it at 20½. So we tried it at 20½, but we still didn't get it, and we decided to settle for 21.

Q. (By Mr. Holland): And then there is in evidence a price schedule showing that very shortly, in July of 1940, you changed the schedule so that you paid on the basis of each tenth of a percent in the ore—in other words, your first schedule had a certain price of 21 cents for——

A. For two percent.

Q. ——two percent ore, and for two and a half percent ore there was a slightly higher price.

A. Yes.

Q. And then in July, I believe, you put in a price which made the break at each tenth of a percent, is that correct? A. That's correct.

Q. For what reason did you do that?

A. Well, of course, that was to the advantage of the miner to get it on every tenth instead of every half percent. [2012] Naturally, if he brought in ore running 2.49, he would get paid just the same for it as he would for bringing up any ore that went 2.190 on the half-percent break. But on the tenth break he would get it on every tenth of one percent, which is about five times better for him.

Q. Was this change made on the basis of any agreement you made with U.S.V.?

(Testimony of Frederick F. Kett.)

A. Not at all. That was our effort to get miners to bring us the ore.

Q. Did you know whether or not U. S. Vanadium established a similar scale to the one you established in July—that is, with breaks on each tenth? A. No, I do not.

Q. Now, Mr. Burwell testified that there was some conversation in New York between him and Mr. Van Fleet and Mr. Bransome at which it was not agreed, but there was a statement made that they would each pay 21 cents for ore. Do you know of any such agreement?

A. I never heard of it.

Q. Did you ever receive any directions from Mr. Bransome to pay 21 cents and to keep the price pegged there?

A. No, I don't think so. Not as far as I remember.

Q. Did you do anything else besides this tenth of a percent price scale in order to try to induce the miners to sell their ore to you rather than to U.S.V.? [2013]

A. Yes, we did. These miners were all little fellows, financially, and they had no equipment whatsoever. The miners just had hand-drilling, and so forth. So we thought those boys would look very favorable on having a little help, and we went and spent $30,000 on small compressor outfits. Each one consisted of a small portable compressor and a jackhammer drill, and drills, and forge to sharpen the steel with, and tools like that. So we got about

(Testimony of Frederick F. Kett.)

15 of those, and we spread them around among the most productive ones of our suppliers on the basis they would pay, I think, $1.00 a day rent—I have forgotten exactly—which was to apply on the purchase of that equipment if they ever wanted to buy it, or if they never wanted to buy it, then whenever they quit shipping to us they returned the thing to us, and the dollar a day that they had paid and which had been deducted from the proceeds of the ore that they brought to us, well, that finished the deal.

Q. And did you do anything else in an effort to attract ore?

A. Well, we put in a pretty efficient little sampling plant, for one thing, which they liked very well.

Q. What did you do about hauling allowances?

A. About what?

Q. Hauling allowances.

A. No, not at that time, nothing. That came on much later. [2014]

Q. When did that come on?

A. I would say about late in '42.

Q. And what happened? Tell the jury what happened in respect to hauling allowance.

A. Well, the ore that had been coming to us—and we were 14 miles closer to most of the suppliers—started going past us, and we didn't know why our old customers were going 14 miles further. But we investigated, and the talk was that they were paying something extra to these fellows to

(Testimony of Frederick F. Kett.)

haul it. So we investigated that, and the first one that we heard was getting an extra allowance was one of our best producers, and we heard—no, he himself said he was getting $2.00 a ton for the haul.

So I asked them down at U.S.V. was this fellow getting his $2.00 a ton, and after they investigated they said no, he wasn't getting anything extra.

However, these rumors kept coming in about haulage allowances—no stated amount to anyone, but just what they had to offer him to induce him to pass by us.

We at that time tried to get either a settlement sheet made out by the U.S.V. to these fellows, you see, which would show that hauling allowance, if there was any, or a sworn statement from him.

Now, while they all said that they were getting this allowance, there wasn't one of them that would give us any proof.

So in order not to have any more jawing with them about possible haulage allowances, we frankly came out and said, "We will pay you fellows three cents per ton mile for hauling up to 60 miles."

Well, they liked that idea of a fixed amount that they didn't have to dicker for, or complain about, or anything else, and the ore started coming in again.

We afterwards raised that to four cents, and made a much longer haul, too. I mean, we, instead of limiting it to 60 miles as at first, I think we paid for any old mileage at four cents.

(Testimony of Frederick F. Kett.)

Q. And was that done in accordance with any agreement you had with United States Vanadium?

A. Oh, no, not at all. I don't think they knew anything about it until it was an accomplished fact.

Q. Did you ever hear of, or know of any connection with any agreement with United States Vanadium as to what price would be paid miners for ore? A. None whatever.

Q. Mr. Burwell testified that in 1942 he and Mr. Bransome and you, and possibly John Hill, met in Dove Creek, Colorado, at which time Mr. Bransome made the statement that he was going to raise his price to 31 cents, and Mr. Burwell said he would go along. Did you attend any such meeting? [2016]

A. No, I never attended any such meeting. I never heard of it until it was mentioned here lately.

Q. What was your policy as the man in Vanadium Corporation who determined the prices to be paid for ore, what was your policy in connection with raising the basic base price of ore? In other words, why did you——

A. They never were raised to amount to anything from our original figures.

Q. Except when they went from 21 to 31, is that correct?

A. Oh, yes, but that was Metals Reserve, that wasn't us.

Q. That was because of Metals Reserve competition in selling ore? A. Yes.

(Testimony of Frederick F. Kett.)

Q. Well, why weren't they raised? Why didn't you raise your price?

A. Well, the ore was coming in satisfactorily at those prices.

Q. Well, you have testified that U.S.V. at times paid haulage allowances and got them to haul ore by your plant. Why didn't you raise the base price, say, from 21 to 22 cents, instead?

A. I didn't want to start any price war on that, because their costs were very much less than ours were, always, and they could have just kept on raising and raising until they put us out of business. [2017]

Q. Did you feel that you were paying the miners a fair price for the ore?

A. Yes, we did.

Q. Did you ever discuss ore prices with anyone at United States Vanadium?

A. No, never.

Q. Not even in a casual way?

A. Well, possibly something might have been said like "These miners are never satisfied with the prices."

The other guy would say, "No, they never are."

But that was not a discussion of ore prices.

Mr. Holland: I believe that is all.

Cross-Examination

Q. (By Mr. Alioto): Mr. Kett, when some miner told you he was getting a higher price or a hauling allowance from the United States Vana-

(Testimony of Frederick F. Kett.)

dium Company, it was your practice, was it not, to go talk to the officials of U.S.V. and check that miner's story? A. No, not at all.

Q. Didn't you do it at all?

A. I did it once.

Q. Now, who was it that you talked to in the United States Vanadium Company?

A. Mr. Haldane.

Q. And who was Mr. Haldane?

A. He was their general superintendent at Uravan.

Q. Do you recall approximately when that was, Mr. Kett?

A. No, I don't but I suppose it was about the middle of '40.

Q. You went to Mr. Haldane and asked him whether or not it was true that he was paying a hauling allowance, is that it?

A. No, I telephoned him.

Q. You telephoned him? A. Yes.

Q. What did you tell him over the telephone, Mr. Kett?

A. That this man, Lyon, who was passing by us, claimed he was doing it because he was getting $2.00 a ton over and above whatever the price was, which was for the haul.

Q. And then what did Mr. Haldane say to you? What did the gentleman from U.S.V. say to you, Mr. Kett?

A. Well, he waited about two days until he had investigated it, and—he didn't tell me; I think I

(Testimony of Frederick F. Kett.)

had left Naturita by that time. But, anyway, he conveyed the idea that Mr. Lyon was lying.

Q. So on the basis of that you didn't give him the $2.00 hauling allowance, did you, Mr. Kett?

A. No, we did not.

Q. Now then, you said in answer to your counsel's question that you didn't want to start a price war against U.S.V. [2019] Is that because their costs were so much lower than yours?

A. That was pretty much the reason, all right, but we were paying about all the traffic would bear. If we raised that price very much we couldn't make anything on the oxide.

Q. Approximately what was your cost of producing oxide as compared to the United States Vanadium's, Mr. Kett?

A. Well, I don't know what their cost was, but ours was very much—was double theirs.

Q. Your cost of producing oxide?

A. I think so.

Q. Yes. You have had conferences, of course, with both Mr. Van Fleet and Mr. Burwell on many occasions, have you not?

A. No. On very rarely—not as far as I remember. Only one in nine years.

Q. One in nine years?

A. Something like that.

Q. Do you remember having a conference with Mr.—do you remember a conference with Mr. Van Fleet about competitive activities on the Colorado

(Testimony of Frederick F. Kett.)

Plateau relating to the building of a mill at Gateway, Colorado?

A. That wasn't a conference; that's two fellows meeting in the middle of the street and saying, "Did you hear there was a mill going up in Gateway?"

"Yes."

"Well, what do you think about it?" [2020]

"Well, I don't think it will be a success." Period.

Q. And you didn't regard it as very important at all? A. Not at all.

Q. So you wrote a memorandum about that conference to the president in New York, didn't you? A. That's right.

Q. Why did you write a memorandum about it to the president in New York if you didn't think it was important?

A. I thought he should know about it, just as much as Mr. Van Fleet, or anybody else. It was in our neighborhood. And there weren't very many mills starting down there, so naturally, it was of interest.

Q. It was of interest as a competitive matter, I take it?

A. No. You mean as a competitor?

Q. Yes.

A. No, sir. We didn't — we never considered them as a serious competitor.

Q. Did you ever get suggestions from any of your personnel that you ought to acquire claims

(Testimony of Frederick F. Kett.)

for the purpose of seeing that they didn't fall into competitive hands, Mr. Kett?

A. Received what orders, for what?

Q. Did you ever receive recommendations from any of your personnel that certain claims ought to be acquired for the purpose of keeping them out of the hands of the competitors?

A. You mean personnel working under me?

Q. Yes, sir.

A. Well, we were all on the lookout for claims all the time, and we certainly wanted to keep them out of the hands of U.S.V.

Q. Yes. How about anybody else?

A. No, we weren't worried about anybody else. The boys were asking so much money for these claims that you had to be a millionaire to talk to them.

Q. Well, there is a letter in evidence, Mr. Kett, from Mr. Viles, who was your assistant manager of the western division in Naturita.

A. That's right.

Q. He later became the head man, didn't he?

A. That's right.

Q. And it is addressed to you at 420 Lexington Avenue, New York, in connection with the purchase of Dry Valley. And in that he says:

"In regard to the purchase of the Dry Valley property belonging to the Moly Corporation, there is considerable low-grade ore in the Frisco and Waterfalls group, and this property, in my mind, if it could be purchased, say, for $2,000, would be

(Testimony of Frederick F. Kett.)

a good investment if only to prevent some outsider getting ideas in regard to the Monticello plant."

Now, you don't contend that that outsider getting ideas in regard to the Monticello plant was the U. S. Vanadium Company, do you?

A. Oh, no. And furthermore, I remember that letter. But it didn't make sense to me, because here's two claims—only two or three claims—I don't know how many there were—quite a ways from the Monticello plant, and how anybody, if they acquired two claims, could get any ideas about any plant at all, was to my mind pretty absurd.

Q. In any event, Mr. Kett, do you remember there was an occasion when you worked out a joint arrangement with the United States Vanadium Company to mine on your mining claims?

A. Yes.

Q. And do you remember under that arrangement that you had an overdraft of about 300,000 pounds?

A. I was told that. I had nothing to do with the arrangement whatsoever.

Q. But you knew that you had an overdraft of 300,000 pounds, didn't you?

A. No, sir, I didn't.

Q. Don't you recall having a discussion of working out a method of getting that overdraft worked out?

A. Yes. But you asked me if I knew it was 300,000 pounds. I didn't.

Q. Yes, sir. But there appears on——

(Testimony of Frederick F. Kett.)

A. I knew there was an overdraft.

Q. There appears to be a letter here from you written in August, 1941, to Mr. Bransome, your president. It's quite understandable you wouldn't remember something that far back. But in that letter you say:

"It is possible that Van Fleet may present some sort of a concrete proposal on the subject of the Dry Valley contract assignment before my return to New York from Colorado. It occurs to me that it may be that Dry Valley possibly is looking very sick right now and that the probability of getting even 10,000 tons from it may be very slim. This is probably not so, but it could happen. Therefore, I think that either you or Mr. Gibbons should phone Van——"

and that's Van Fleet, of the competitor——

"——and suggest that his proposal embody the following: The 10,000 tons—or rather, 300,000 pounds of recovered V_2O_5 to be taken from the property before June 1, 1942. If this amount is not taken from the property before that date, then our obligation to return them any further ore in liquidation of the 300,000 pounds of oxide is cancelled."

Now, does that refresh your memory?

A. Yes. But you didn't ask me that.

Q. Well,—— A. You said—— [2024]

Q. Yes, Mr. Kett,——

A. You said at the time that we started to deliver them ore——

(Testimony of Frederick F. Kett.)

Q. Well, I didn't mean——

A. That's long before that letter was written, and at that time I didn't know about the commitments.

Q. Well,——

A. But later on, when you talk about Dry Valley, yes, at that time I knew——

Q. And you knew that you had an overdraft of 300,000 pounds of oxide which you had acquired from the other company?

The Court: Before we enter into Dry Valley——

Mr. Alioto: If your Honor please, I was going to——

The Court: ——we will take a recess.

(Short recess.)

Mr. Alioto: If your Honor please, Mr. Holland has informed me that the chief managing agents of the Vanadium Corporation of America, namely, Mr. Bransome, Mr. Gibbons, and Mr. Laub, will be called to the stand as witnesses, and in view of that I would rather take up these facts with them, rather than to go further with Mr. Kett, although I understand Mr. Holland has a question he would like to ask.

Mr. Holland: Just one question.

Redirect Examination

Q. (By Mr. Holland): Mr. Kett, when you stated that the costs of U. S. Vanadium were considerably less than Vanadium Corporation's, you

(Testimony of Frederick F. Kett.)

were referring to the Vanadium Corporation's costs at Naturita, were you not? A. Oh, yes.

Q. You were not talking about the Peruvian costs? A. No.

Mr. Holland: That is all.

Mr. Alioto: We have no further questions of the witness.

Q. (By the Court): Why was their cost lower than yours? What particular reason?

A. Well, they own their own mines, which were very productive, and were very close to them, and I think most of their tonnage, except what they were buying from the independent miners, was not over about six or eight miles away, and a downhill haul all the way. But we had mines in the same vicinity, and it was a much longer haul to us, and they were nowhere near as productive mines as the ones that they had, so their costs must have been less. Also, they were handling about three times the tonnage per day that we were. So, of course, their costs were less on that basis and for that reason. But they were less—much less.

The Court: That is all. You can stand aside.

(Witness excused.)

PATRICK J. GIBBONS

called as a witness on behalf of the defendants, and being first duly sworn, testified as follows:

Q. (By the Clerk): Will you state your full name and address?

(Testimony of Patrick J. Gibbons.)

A. Patrick J. Gibbons, 41 Constantine Place, Summit, New Jersey.

Direct Examination

Q. (By Mr. Holland): Mr. Gibbons, were you employed by the Vanadium Corporation in 1938?

A. I was. [2027]

Q. When did you first enter the employment of Vanadium Corporation?

A. Well, I first entered the employment of Vanadium Corporation in 1919, but I had been with the predecessor company prior to that. I went into the vanadium industry in 1913.

Q. Will you state the various positions you held with the Vanadium Corporation through the years?

A. I started as paymaster, and then around about 1920 I was works accountant, later plant auditor.

In 1926 I went to New York as assistant treasurer, and about the same year became assistant secretary and assistant treasurer. And in 1930 I became secretary-treasurer and held that position until 1943, when I became executive vice-president, which position I held until my retirement in 1952.

Q. Will you describe for the jury the problems involved in going into the vanadium business, and in a general way tell them what it is all about? They may not have entirely clear the picture.

A. I can't do it in a few words, but I will do my best.

Vanadium is a business in which the product,

(Testimony of Patrick J. Gibbons.)

to begin with, does not sell itself, so therefore, in my explanation, I am going backwards. I will start with the first important need in the business.

Q. We had better not go prior to the year 1938.

Mr. Alioto: Yes, we will agree with that.

A. When I say I go backwards, I mean in my statement, not in time. Anything I say will apply to the years 1938 to 1949, inclusive. What I mean is I want to start at the end instead of the beginning with the sales and service departments, who built up the demand for the product, vanadium.

Now, the sales department, in addition to the usual salesmen who knock at the doors of the directors of purchase and the general purchasing agents, also have a department of highly trained technical men. These men go into the mills where they consult and advise and take off their coats and help the melter or advise the metallurgical engineer or metallurgist, whoever is there, in the applications of vanadium.

In addition to that there is another department, which is helpful, but not within sales—that is the research and development of new products. Research and development, they work on new applications, new alloys. And with the help of new products, or applied metallurgy, which you call the boys in sales, will discuss with the technical men in the steel companies not only the application of ferro alloys to their industry, but new uses for it, and will go so far as, if they themselves, in their laboratory, have an idea of a new alloy steel, vana-

(Testimony of Patrick J. Gibbons.)

dium steel, they will make small heats in little loop pots about this big (indicating), and if they are satisfied as to the steel they have gotten from them, they will go into a mill and make arrangements with the steel maker to make them a commercial heat, which, if it is possible, they will just have laid the groundwork to have some user of steel—I mean, now, the consumer, the customer of the steel company—take that heat and use it in his application. It may be an automobile industry, railroad, or the tool industry.

If that arrangement cannot be made, they will have the heat made, anyway, and we, the Vanadium Corporation, will then pick up the slab or billet resulting from that heat, and we would store it in our warehouse. In my day that was at Bridgeville, Pennsylvania. And over the years they would have these different steel billets piled up there, and if at any time a consumer had an idea about a new steel, he would call in to our research people, or they would be calling on him, and after discussion every once in awhile you would see a crane pulling one of those billets out of the pile, and they would ship it to the consumer. Generally that was done without cost to the consumer and was an expense to the corporation.

In addition to that its research group worked on pamphlets and handbooks and the like, and we have one handbook of which the research people, and I think the corporation as a whole, is very proud. It is called "Vanadium in Iron and Steel."

(Testimony of Patrick J. Gibbons.)

And we have been told by some of our steel-making friends that their smelters have made presents of this [2030] handbook, and they use it just as that, as a handbook. That is what makes the vanadium business. There has got to be a demand for it. It doesn't sell itself.

The next part, and an important part, is the subject of ore reserves. As you have no business unless there is a demand for your product, you have no product unless you have ore reserves.

Mr. Alioto: Your Honor, I am loathe to interrupt at this point, but it seems that this is a long narrative statement containing conclusions and hearsay, and it isn't proper. I suggest that questions and answers be asked.

The Court: I do not know of anyone who is in a better position to tell the Court and jury what they ought to know and what they would like to know about this very important subject. I see nothing improper about it. Overruled.

Proceed.

A. (Continuing.) The ore reserves.

The ore reserves have come into this lawsuit, and they are very important—not only very important, but necessary. And quite a bit of money can be tied up in your ore reserves. My own company, in 1938, decided to go into the Colorado Plateau, and we had to start at scratch. We had just a few ore bodies out there that had been with us since 1919, and maybe 1930 or something.

And so we had to contact independent miners.

(Testimony of Patrick J. Gibbons.)

Our men had to scour the whole Plateau looking for locations that were free in order to locate, develop, and see if you had mining properties in the beginning, and trying to operate a 100-ton-a-day mill. That was quite a problem.

But we finally got our reserves in shape so we were able to be listed, about the end of the war, as about a 750-ton-a-day operation. That was in two plants, one at Naturita and one at Durango, both in Colorado.

Now, you have your ore reserves, which costs you a lot.

The next step, a very important step, but not as important as reserves and the market, is the leaching plant. The leaching plant is the plant to which you feed the raw vanadium ore. And by what is called the roast-quench-leach process, you subtract the vanadium values from that raw ore in the form of fused black oxide, fused pentoxide, or just oxide. You hear the terms intermingled. It all means the same thing. That is what we consider an intermediate product, the product from which we make our end product, which is ferro-vanadium.

Ferro-vanadium is produced either by the alumina thermit method—that is, melting with aluminum, getting the heat from the aluminum—or the electric furnace, where the arc produces the heat.

The electric furnace is an expensive installation. Power, alone, in an electric furnace is very important, because when you contract for power you

(Testimony of Patrick J. Gibbons.)

contract to take so many units of power for a certain period of time—a month—well, if you contract for 12,000 kilowatts, you take 12,000 kilowatts, or you pay for about 60 percent of it whether you use it or not. And so that becomes expensive.

That is where the danger of an intermittent operation hits the operator.

Now, we have ferro-vanadium, which is turned over to the sales department, who now have to build, and have built, a market to which they sell it.

All of this costs money. It takes a considerable investment to get to that point, and it takes a lot everywhere along that line, along that flow sheet, whether in the reduction mill or the leaching plant. You have to have your metallurgists, your engineers, and they have got to control, because if you don't get a 75 percent recovery from your ore—I will illustrate that in figures.

Milling heads, milling ore in the Colorado Plateau will average roughly around two percent, meaning you have 40 pounds to the ton. You must recover 30 pounds of that 40 in your finished black oxide to have what we would consider a good, efficient operation.

All of this costs money, and that is my story of vanadium. [2033]

Q. (By Mr. Holland): Mr. Gibbons, Mr. Alioto put some figures on the board here—ore we had purchased from U. S. Vanadium. You will notice a figure in 1938 of 130,052 pounds. Is that figure correct? A. Yes.

(Testimony of Patrick J. Gibbons.)

Q. And during that same year was the Vanadium Corporation's mine in Peru in operation?

A. Yes, it was.

Q. And have you figured how much vanadium we brought up from Peru for our needs?

A. I have no figure with me, but I know the figure.

Q. Do you know the figure?

A. Yes. It was about one million and three-quarters pounds of vanadium contained, which would be about three and a half million pounds of V_2O_5, which you have there. That is V_2O_5.

Q. That would be three and a half?

A. About three and a half million.

Q. And for the year 1939 there is a figure of 517,000.

Do you mind if I erase some of this?

Mr. Alioto: No objection at all. [2034]

Q. 847 Palms—I believe it was testified that that was Maggie C. ore——

A. It's 848, just to be correct.

Q. 848.

Do you mind if I change that?

Mr. Alioto: No, not at all. Change it down below to. You have to make the addition conform.

The Court: That question I didn't understand. What was the amount in 1939?

Mr. Holland: 517,848 pounds from the Maggie C. operation.

Q. Is that correct?

(Testimony of Patrick J. Gibbons.)

A. There is missing there (on the blackboard) about 77,500 of direct purchases that year.

Mr. Holland: Those are direct purchases from U.S.V.

A. Direct purchases from U.S.V.

Q. At various prices.

A. That special order had three prices on it; it had 80c, $1.10, $1.18.

Q. Now, during that year how much did we bring up from Peru?

A. V_2O_5, about four and a half million.

Q. Four and a half million V_2O_5?

A. Yes.

Q. And in the year 1940 there is 200,000 pounds? [2035]

A. Yes. The balancing figure from the Maggie C.

Q. That was taken out of Dry Valley?

A. Some of it from Dry Valley, yes.

Q. And during that year how much did you bring up from Peru?

A. Two million nine, roughly, in V, which would be five million eight.

The Court: Where did you process this ore that you brought from Peru?

The Witness: At Bridgeville, Pennsylvania; in our reduction plant there.

Those figures, Mr. Holland, I have rounded them out. I haven't held them to the pound.

Q. (By Mr. Holland): What?

A. I say, I haven't held them to the pound.

The Court: That's approximately?

(Testimony of Patrick J. Gibbons.)

The Witness: They are approximate figures, but within five—less than 5%.

Q. (By Mr. Holland): So that approximately 925,000 pounds was purchased from U.S.V. during those three years, is that correct?

A. That's correct.

Q. And at the same time 13,800,000 pounds were brought up from Peru, is that correct?

The Court: Is that correct? [2036]

The Witness: Yes.

Q. (By Mr. Holland): Now, do you know during those three years how much vanadium oxide was sold to the French Government at the request of the U. S. Government?

A. I can give you the total. I think the shipments were made in '38 and '39, approximately 712,000 pounds of contained V_2O_5 in concentrates and high-grade ore. That's included in the 13,800,000.

Q. Then without that shipment to the French Government we would have attained approximately all of our requirements from Peru, is that correct—could have?

A. We could have. In other words, the purchase for the oxide on the Maggie C. agreement just about equalled what we shipped direct from Peru to the French.

Q. Do you remember what price that was sold to the French at?

A. I think there were two prices there, 72c and 76c per pound.

(Testimony of Patrick J. Gibbons.)

Q. Now, Mr. Gibbons, we have heard a lot about Maggie C. and nobody seemed to know very much about her. Could you tell us anything about Maggie C.?

A. Well, tell Mr. Alioto I was introduced to the sinister lady.

Mr. Alioto: Nobody else knew her.

The Witness: That Maggie C. was a contract which we referred to as the Maggie C. contract. A certain ore body which was owned by the Vanadium Corporation was adjacent to the mine workings of the U.S.V. and in 1939, with the authority of our board of directors, Mr. Bransome negotiated an agreement. The negotiations took place between Mr. Bransome for Vanadium—he was President of the Vanadium Corporation—and Mr. Van Fleet, who was President of U.S.V.

Under this agreement U.S.V. were to mine the Maggie C. and convert the raw ore to finished black oxide, using the 75% recovery figure which I mentioned before, which means that for every pound they took out—they got 40 pounds, but they had returned to us 30 pounds in the form of black oxide.

Now, the handling——. Oh, this contract was a toll agreement, so-called, and for every pound that they presented to us or shipped to us we paid 65c a pound V_2O_5 contained in oxide with the proviso that if their cost increased we would pay 75c per pound of V in black, and I believe the terms of the contract was five years.

(Testimony of Patrick J. Gibbons.)

It was a simple, little—less than two-page contract, just more a memorandum agreement than a contract. That is the part of the Maggie C. contract.

Now, the taking of the oxide under that contract was between the Vanadium Corporation and the Electro Metallurgical Sales Corporation, because Electro Metallurgical Sales sold all the products of U.S.V., so that any drawings under [2038] that or requisitioning was requisitioned against Electro Metallurgical Sales. I didn't requisition it because at this time I was in charge of procuring raw materials, such as vanadium ore and chrome ore, for the operations.

The Court: But the point here, the point I think the jury and the Court want to know, why were you making a contract with this other company. Why didn't you handle it yourself?

The Witness: We didn't have a treatment plant in Colorado at the time. Our treatment plant in Colorado was not built I believe until 1940, sometime in 1940, and we had an old plant that was not fit for operation, and in '39——

The Court: Did you consider it a good business proposition from your standpoint to make this arrangement with the other company?

The Witness: From our standpoint, the standpoint of Vanadium Corporation, I considered it an excellent proposition.

The Court: Proceed.

Q. (By Mr. Holland): Now, under this Maggie

(Testimony of Patrick J. Gibbons.)

C. arrangement we were—V.C.A. were furnishing its own ore, is that correct?

A. Oh, yes; the Maggie C. property belonged to the Vanadium Corporation, and the 65c or the 75c we paid was just for the tolling of the ore, the running of it through their [2039] leaching plant.

Q. In the nature of a toll charge, is that correct?

A. In the nature of a toll charge.

Q. Now, I believe V.C.A. took deliveries of oxide ahead of the mining of the ore, is that correct?

A. Yes. That is the fact. I would requisition the New York office of Electro Metallurgical Sales for shipments, and they kept the shipments rolling along until one day they said, "Wait a minute, boys. You're getting away ahead of yourselves," and that is the 1940—the 200,000 pounds—that was the last requisition they accepted from us under the Maggie C., and that was shipped to us I believe over the first half of 1940, the last shipment being received in June. And then they said, "Now, we are in a position where you have taken nearly twice as much in oxide as we have taken in ore, so until we get that in balance no more oxide." So they proceeded to still work the ores from the tonnages they took out in a rather leisurely fashion and they worked the full year, finishing out the year 1940; they worked all the year '41, and were in two or three months of '42 before they reached the 717,848 which we had taken from them. Now——

Q. They first worked out the Maggie——

(Testimony of Patrick J. Gibbons.)

A. I was going to say, the Maggie C. had gone out of the picture before that and a supplemental agreement was made covering certain claims of Dry Valley, and the final tonnages [2040] of ore to meet —to balance out what we had taken from them— came from the Dry Valley deposits.

Q. Now, if V.C.A. had been unable to make the deal with U.S.V. to buy this oxide during 1938-1939-1940, could it have brought that oxide up from its own Peruvian mine?

A. Yes. But there is a point there, too. It could be brought up. It would be in the nature of high grading a mine, taking out the richer ores, which you like to hold to average the ores which may be lower.

As a matter of fact, under the pressure of the war after 1941 we brought up big tonnages of that raw ore to run here through a plant which we built at Bridgeville, and we could have done it at that time, we could have enlarged our leaching plant at Bridgeville, which was done later, but right at this period it was much more—we thought it better business for us to buy as long as we could and work the agreement, the toll agreement at Maggie C., rather than to bring up that richer ore and put the money in the increased leaching plant.

Q. Mr. Gibbons, you spoke about "under pressure bringing up ore from Peru during the war." Was Vanadium Corporation under pressure from the Government to produce as much vanadium and ferro-vanadium as it possibly could?

(Testimony of Patrick J. Gibbons.)

A. Yes. There was a gentleman in the old O.P.A.—his name was Harry Masters—I believe his name has been mentioned before—who was the—— [2041]

Q. You said the O.P.A. You mean the O.P.M.?

A. O.P.—Office of Price Administration—wasn't it?

Q. Wasn't he in the Office of Production Management? A. Maybe that was it.

Q. I show you (handing witness document)——

A. I get mixed up on those alphabetical outfits. (Examining offered document). Office of Production Management, that's it.

Mr. Masters called on us regularly. He was in my office at least once a week, usually on Monday morning, because I think he lived in New York and he used that as an excuse to spend the week-end in New York: He had to see me on Monday morning. But he pressed us and told us at one time that he expected seven million pounds of contained V in ferro-vanadium to be produced by the industry in 1942, of which he was asking the Vanadium Corporation to increase their production until we would hit the four million pounds of contained vanadium in ferro, and we had to go through various maneuvers to do that, to bring up the richer ore, increase the capacity of our leaching plant at Bridgeville. We finally made an agreement with the Defense Plant Corporation and built a plant for them at Monticello, Utah.

Q. In connection with that did you receive a

(Testimony of Patrick J. Gibbons.)

letter from Mr. Masters dated August 21, 1941 (handing document to witness)?

A. (Witness examining.) This is Mr. Masters' letter. [2042] Addressed to the attention of Mr. Bransome, in which he refers to a conference held in my office, between myself, Gus Laub, who was then our General Manager of sales, and Jerome Strauss, our chief research man.

Q. As a result of this conference or as a result of this letter was the Monticello plant built?

A. I think it was after the receipt of that letter and through the action of Mr. Masters' department that Mr. Bransome called on Mr. W. O. Clayton, who I believe was at that time—he was in O.P.M.—he was with Jesse Jones—and that was the beginning of the discussions of Monticello.

Mr. Holland: Offer in evidence as Defendants' next exhibit.

Mr. Alioto: If your Honor please, there is no basis in evidence for admitting a document which was written by a Government official to a Mr. Bransome, no basis that I know of.

The Court: Objection overruled. Exception allowed.

(Letter dated August 21, 1941, from Masters to attention of Bransome, received in evidence and marked Defendant V Exhibit 2-O.)

Q. (By Mr. Holland): Mr. Gibbons, this letter refers to a conference in which you were, does it not? A. Yes, it does. [2043]

Q. In the course of your regular duties at Vana-

(Testimony of Patrick J. Gibbons.)

dium Corporation was this called to your attention at the time it was received?

A. It was.

Q. It says:

"Dear Mr. Bransome:

"Subject: Vanadium increase in production.

"Confirm telephone conversation with your good self this afternoon and referring to a conference held in the office of your company last Friday between Messrs. P. J. Gibbons, Gus Laub, Jerome Strauss——"

Who is Jerome Strauss?

A. Jerome Strauss was head of our Research Department, Research and Development.

Q. (Reading.) "——Jerome Strauss and myself, it has been fully explained to your company the present supplies of vanadium available to this country, both domestic and foreign, will fall far short of the quantity which this office is asked to supply during 1942. Estimates of consumption for 1942 have been furnished to your company, and while it may not be possible next year to reach the estimated requirements it is absolutely necessary that every effort be made by producing companies to approach as [2044] nearly as possible the estimated requirement figure of 7,000,000 pounds.

"From information furnished us by your officials named above your present production rate, including products both from domestic and Peruvian sources, is about 2,700,000 pounds. We understand that it may be possible for your company to achieve

(Testimony of Patrick J. Gibbons.)

by the end of this year a production rate of 3,000,000 pounds."

Now, is he talking about contained V in ferro-vanadium?

A. Contained V in ferro-vanadium, yes.

Q. And that would be the equivalent of about 6,000 pounds of oxide—I mean 6,000,000 pounds?

A. Are you referring——

Q. I am referring to——

A. It would be just double. [2045]

Mr. Holland: (Reading)

"This office requests that you increase this by 1,000,000 pounds so that during the year 1942 your company's production may reach 4,000,000 pounds. This, of course, means pounds of vanadium content."

I need not have asked the question, for he answered it in the letter.

"The undersigned has been under the impression that your quickest available source of an increased supply of vanadium would be from your Peruvian property, but in our telephone conversation today you state that this is not the case. We trust, however, that you will make every effort to increase your output from Peru as much and as quickly as is humanly possible.

"Production from your properties in Colorado and from ore which you purchase in both Colorado and Utah, as we understand, is limited only by treatment facilities. We trust that you may provide without delay the necessary equipment to in-

(Testimony of Patrick J. Gibbons.)

crease your domestic production so that the total increase in production of your company may not be less than 1,000,000 pounds in 1942."

Q. Now, by "treatment facilities" what was he referring to?

A. He was referring to our leaching plant in Bridgeville, [2046] our Naturita plant, because there was no question about the reduction end of our business. It was the leaching end that would be the bottleneck.

Q. The production of oxide?

A. The production of oxide, yes.

Mr. Holland: "Because of the vital interest of this office in increasing vanadium production we are prepared to recommend to the Reconstruction Finance Corporation such financing as your own company may not be prepared to assume.

"We have made an appointment for Mr. Bransome to discuss this matter with Mr. William L. Clayton, Deputy Federal Loan Administrator, at his office in the Lafayette Building next Tuesday afternoon, August 26th, at 3:30 o'clock.

"As the undersigned will not be in Washington next week, his assistant, Mr. E. K. Jenckes, will be at your service next Tuesday, since I assume that you may wish to discuss this matter with Mr. Philip D. Reed and Mr. Jenckes before your interview with Mr. Clayton. Mr. Jenckes will be glad to accompany you when you have your conference with Mr. Clayton."

(Testimony of Patrick J. Gibbons.)

Q. Mr. Gibbons, as a result of this conference and letter was the Monticello plant built?

A. Yes. What is the date of that letter, Mr. Holland? [2047]

Q. August 21, 1941.

A. Yes. Well, in the month of December, 1941, there was an agreement drawn up between the Defense Plant Corporation and Vanadium Corporation in which Defense Plant Corporation would put up or appropriate the sum of $1,200,000 to build a plant at Monticello, which the Vanadium Corporation were to operate.

Q. What other steps did Vanadium Corporation take to meet this 4,000,000-pound quota which was set by the government?

A. Well, as I said before, we had a 25-ton leaching plant at Bridgeville. Now, a 25-ton leaching plant in the Colorado Plateau is a small plant, but at Bridgeville it was a large plant because it was taking 13 and 14% V — not V_2O_5 — but 26% V_2O_5 into the bath.

Q. That is from Peruvian ore?

A. From Peruvian ore. That is about thirteen times the value of Colorado raw ores, which means that that 25-ton plant would be the equivalent roughly at least of a 250-ton plant, because the ore will go through faster.

Q. What was your policy in respect to purchase of ores, oxides and raw materials from other people?

A. In the purchase of raw materials—vanadium-bearing raw materials—we bought practically any-

(Testimony of Patrick J. Gibbons.)

thing. I did it personally. We bought flue dust, we bought sludges from chemical plants. Anyone that would come around and said they [2048] had anything that might be as high as 10% V_2O_5 in their material we would deal with them, and we introduced into our operations at Bridgeville flue dusts, various sludges, slags, and the like, which we purchased in the open market.

Q. (By the Court): What disposition did you make of your product?

A. Our product, ferro-vanadium, was sold direct to the steelmakers to be introduced into the steel bath.

Q. Was it allocated?

A. It was during the allocation years, yes.

Q. (By Mr. Holland): Mr. Gibbons, did you ever know or hear of any agreement between Vanadium Corporation of America and Union Carbide or any of the Union Carbide group respecting the monopolization or attempt to monopolize the vanadium market?

Mr. Alioto: What period are you referring to, Mr. Holland?

Mr. Holland: During the period 1938 to 1949.

A. Of my personal knowledge, nothing. I neither knew of any such arrangements nor heard of it from any other member of our organization.

Q. Did you ever know or hear of any such agreement respecting the prices to be paid for ferro-vanadium or vanadium products of any kind?

A. I did not. I never heard of it. [2049]

(Testimony of Patrick J. Gibbons.)

Q. Did you ever hear of any such agreement respecting the division of the vanadium market between the companies in any way?

A. No, never did.

Q. Did you ever hear of any agreement or any policy on the part of the Vanadium Corporation to exclude Continental Ore Company or anyone else from the vanadium business?

A. Not to my knowledge. To my knowledge there was no such arrangement.

Q. You never heard of it?

A. Never heard of it.

Mr. Holland: That is all.

Cross-Examination

Q. (By Mr. Alioto): Mr. Gibbons, how much of the ferro-vanadium market is controlled by the two companies, V.C.A. and Electro Metallurgical Company?

Mr. Holland: Are you speaking of now or——

Mr. Alioto: Between 1938 and 1949.

The Witness: I would say the two companies controlled better than 95% of it.

Q. (By Mr. Alioto): Except for the Continental Ore Company, for the period between 1938 and 1949, you had a hundred percent of it, didn't you, of ferro-vanadium production and the ferro-vanadium sales? [2050]

A. Well, with the exception of a few little drabs like the Castleton outfit, which has been named here before, I believe that is substantially correct.

(Testimony of Patrick J. Gibbons.)

Q. Did Castleton produce ferro-vanadium?

A. They produced black.

Q. Black fused oxide?

A. Black fused oxide.

Q. Ferro-vanadium was 100%, not 99.9, was it not? A. Oh, ferro-vanadium?

Q. Yes.

A. You see, I was thinking in the line of the vanadium industry. Ferro-vanadium I would say yes.

Q. 100% between the two of you?

A. Yes. Yes, pretty close.

Q. And generally you had two-thirds of that production and Electromet about one-third, isn't that about the proportion?

A. Well, I wouldn't know that. We would try to guess what proportion we had. We knew—felt we knew from the inquiries our sales people made and investigations that we had the greater portion of it, but the exact percentage we had, that we wouldn't know, because we would lose business in one year and get it back another year. But I don't know what percentage that we could claim we had.

Q. Now, then, turning to vanadium oxide between the two companies, including what you produced and what you purchased [2051] from other sources, you had about 97 to 100% of the vanadium oxide, didn't you, in the period from 1938 to 1949?

A. I wouldn't dispute those figures, although I wouldn't say yes or no to them.

Q. That sounds about right to a man who has

(Testimony of Patrick J. Gibbons.)

been in this industry so long and knows the conditions? That is about right, isn't it?

A. I wouldn't dispute your figures.

Q. Did you say that the Government wrote you a letter in August, 1941, telling you you had to increase your production facilities? Isn't it a fact that two months prior to that time Mr. Bransome went down to Washington and told them that they did not have to increase domestic production facilities?

A. I couldn't answer to that. I wasn't with Mr. Bransome.

Q. Didn't you ever hear in the organization that Mr. Bransome went down to Washington and told the people in Washington that they did not need to increase domestic production facilities? Didn't he ever tell you that?

A. At this time the war was coming on and Mr. Bransome was in Washington almost all his time. I saw him possibly once a week, and at that time it would just be probably to put me on the pan for what I had done wrong while he was away.

Q. Then your answer is, you never knew Mr. Bransome was down in Washington in June of 1941 and told the Government representatives that there was no need to increase domestic [2052] production of vanadium?

A. Not as a general—I don't know that he ever made any such statement as that, as a general statement.

(Testimony of Patrick J. Gibbons.)

Q. Well, did he make it as a particular statement?

A. I say I don't know whether he did or not.

Q. In any event, you say there came a necessity in August, 1941, which you recognized to increase production facilities and to get all the ferro-vanadium that you could possibly get, is that it?

A. It wasn't a situation that we recognized. It was a situation that was brought to us by the O.P.M.

Q. When it was brought to you, then you recognized it?

A. Well, a war was approaching and I, if I may go beyond here, had gone through the first world war in the vanadium business.

Q. Yes.

A. And I knew exactly what would happen, and the same thing did happen.

Q. At the time that you realized that this was going to happen, and you knew exactly it was going to happen, there was a little struggling outfit in Chicago called the Apex Smelting Company that was producing ferro-vanadium, wasn't there?

A. I have heard of Apex only since this Denver suit and this one. I personally did not know Apex.

Q. You knew that that company through Continental made an [2053] offer to the Vanadium Corporation of America to put its facilities at the disposal of the Vanadium Corporation of America so that they could use their production facilities in

(Testimony of Patrick J. Gibbons.)

producing ferro-vanadium to the fullest capacity; you know that, don't you?

A. That didn't come to me. I heard that there was some correspondence to that effect, but at the time that this is supposed to have happened I had no knowledge of it.

The Court: Well, we will recess at this time until nine-thirty tomorrow morning.

(Thereupon an adjournment was taken until 9:30 o'clock a.m., Friday, June 20th, 1958.)

Friday, June 20, 1958, 9:30 a.m.

PATRICK J. GIBBONS

a witness called by and on behalf of the defendants, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination—(Continued)

Q. (By Mr. Alioto): Mr. Gibbons, yesterday afternoon you testified that in August of 1941 you had a conference and thereafter received a letter from Mr. Masters who was a government official in which he urged upon you the absolute necessity of using production facilities to the fullest.

Do you recall that general situation?

A. Yes, I do.

Q. Now then, do you recall that at or about that time you had a request from the Apex Smelting Company to farm out—that they were willing to

(Testimony of Patrick J. Gibbons.)

let you use their facilities for the purpose of producing ferro-vanadium?

A. I didn't know it at the time, but I have learned of it since that the request was made.

Q. Did you participate in the decision not to use those production facilities of the Apex Smelting Company?

A. I believe I did. They were not the facilities that we needed. Apex didn't have a leaching plant. They had a [2056] reduction plant. And we had full facilities for the reduction.

Q. Well, did your organization examine the type of ferro-vanadium that was produced by the Apex Smelting Company at the time?

A. That I don't know.

Q. Did you inquire as to whether or not its ferro-vanadium had been cleared by the government as ferro-vanadium of sufficiently good quality to be sold to the government?

A. I personally did not. It would be within my province.

Q. As a matter of fact, I take it that decision not to use those facilities was not made by you, it was made by Mr. Bransome, wasn't it?

A. I really don't know who made it. I did not participate in the decision.

Q. Now then, you were told to use these production facilities—the production facilities should be used as much as possible. In view of that, why did you go out and take the Blanding production away from Apex?

(Testimony of Patrick J. Gibbons.)

A. I can't answer anything in regard to Western operations.

Q. All right.

A. And the building up of supplies in the West.

Q. Mr. Gibbons, I show you a copy of your minutes of [2057] May 7, 1942, and ask you if you will be good enough to examine those minutes and then state whether that is your signature on those minutes.

A. (Examining.) That is my signature, as secretary of the board of directors.

Mr. Alioto: Thank you, Mr. Gibbons.

We will offer this in evidence, if your Honor please, because it sets forth some of the contract terms in connection with the Blanding transaction. You recall yesterday we couldn't get that——

Mr. Archer: This isn't being offered against the Carbide Company?

Mr. Alioto: No.

Mr. Holland: No objection.

(Minutes, May 7, 1942, received in evidence and marked Plaintiffs' Exhibit No. 160.)

[See Book of Exhibits.]

Mr. Alioto: Mr. Holland, the date of May 7, 1942, was inserted on that as a result of a telephone call with Mr. Meir, who, I think, gave us that date.

Mr. Holland: Mr. Meir, not Mr. Leir.

Mr. Alioto: Yes. Subject to any correction, I take it we can stipulate that that date set forth there in pencil is the correct.

Mr. Holland: It looks about the correct date.

(Testimony of Patrick J. Gibbons.)

Mr. Alioto: The minutes of the board of directors of the Vanadium Corporation of America at this point read as follows:

"The President reported the Corporation had entered into an agreement to acquire vanadium ore property in Blanding, Utah. He stated such agreement contemplated royalty payments of five cents per pound of contained V_2 in ore produced, with an advance royalty payment of $20,000 at time agreement was consummated. He stated it was planned to treat the ore mined from this property in the plant now under construction at Monticello, Utah."

Now, do you know, Mr. Gibbons, whether or not you actually mined quite a quantity of ore from those claims for use in your Monticello plant?

A. I believe we did.

Q. And this was the ore that you—this was the claim that you purchased under the so-called Garbutt transaction that we spoke of yesterday?

A. Yes, they were the Garbutt claims.

Q. You testified at some length yesterday, Mr. Gibbons, as to what it takes to get into the vanadium business. Isn't it a fact that an undertaker out of Pittsburgh started the Vanadium Corporation of America with $20,000?

A. I would say no, it is not a fact.

Q. Was there a Mr. Flannery who started that company? [2059]

A. I knew him for years.

Q. And——

(Testimony of Patrick J. Gibbons.)

A. He was my first boss.

Q. He was also Mr. Burwell's boss in the Standard Chemical Company, wasn't he?

A. No.

Q. Didn't he later go into the Standard Chemical Company?

A. No, that was Mr. Joseph Flannery.

Q. Well, there were two brothers?

A. Yes.

Q. All right.

A. James J. was the original vanadium man. Joseph was the Standard Chemical man.

Q. Well, his brother was also with him in the Vanadium Corporation, was he not?

A. Yes, but James J. was never with Joseph in Standard Chemical.

Q. All right. But one of the Flannery brothers who started the Vanadium Corporation of America, after he sold out, went with Standard Chemical?

A. That's right. That was——

Q. Wasn't there a deal made at that time that having left——

Mr. Holland: Your Honor, we are getting about 20 years before 1948. [2060]

Mr. Alioto: This man testified at length as to what it takes to get into the vanadium business.

The Court: I have ruled not before 1938 and I don't want to have to repeat that again.

Mr. Alioto: Well, I didn't--he testified at length as to what it took to get into the vanadium business.

(Testimony of Patrick J. Gibbons.)

and I was simply trying to show how the Vanadium Corporation started.

The Court: You are leading into something else.

Mr. Alioto: All right. I take it, without the necessity of making an offer, that I may not inquire into whether or not the Vanadium Corporation was started with $20,000 just prior to the First World War?

The Court: No. We don't—we want to know what happened in '38.

Mr. Alioto: All right.

The Court: I can't see how it would be material what happened here when your client is still in Europe at that time.

Mr. Alioto: Your Honor let this witness testify at length as to what it takes to get into the vanadium business. Now, the best evidence of what it takes——

Mr. Holland: What it took in 1938.

Mr. Alioto: The best evidence of what it takes to get into the vanadium business is what the Vanadium Corporation got in for, the $20,000 we are speaking of, but I won't argue the point further. I understand your Honor's ruling on it.

Mr. Holland: You have got an exhibit in evidence that shows it cost three million for the Vanadium——

Mr. Alioto: 20,000 is what you started it with. In any small beginning——

(Testimony of Patrick J. Gibbons.)

The Witness: But the 20,000 isn't a correct statement, if I may say so.

Mr. Alioto: Well, maybe—may we go into that? May we go into that?

The Court: What is it?

Mr. Alioto: The witness says that 20,000 isn't correct.

The Court: He just answered your question.

Mr. Alioto: All right. If your Honor please, we will go on to another subject.

Q. Now, as a matter of fact, 1938 was kind of a recession year, wasn't it, business wasn't very good in 1938?

A. Business was not as good in '38 as it had been in '39. It was not a recession. Call it a dip in business.

Q. Well, whatever we call it, 1937 was certainly a recession year, wasn't it?

A. It was a good year, '39 was a good year, but in between '38—— [2062]

Q. There was a dip? A. That's right.

Q. Now, in the light of looking back at that situation now, from what we know today, that was a very fine time to get into the vanadium business, wasn't it?

A. Well, I wouldn't say it was a good time. I wouldn't think that a recession time would be a good time. Anyone breaking in should break in on the boom, not on a recession.

Q. Anyone breaking in should break in just before the boom, isn't that the way it should be?

(Testimony of Patrick J. Gibbons.)

A. If they are bright enough to know when the boom is coming.

Q. That's right, and be carried with it?

A. Yes.

Q. Now then, actually shortly after the beginning of 1938 export prices for vanadium went to $1.70 for the vanadium acid and $3.00 for the ferro-vanadium, f.o.b. New York?

A. I couldn't say of my own knowledge, but I believe that your figures are substantially correct.

Q. And so that export market afforded a wonderful opportunity for anybody getting into the business at that time to establish himself firmly in that business, didn't it?

A. Well, you continue to use the expression "getting into the business." If "getting into the business" means purchasing and acting as a broker, I don't talk about that as getting into the business. That I would refer to as attempting to skim off the cream of the business.

Q. All right.

A. Getting into the business means building mills, ore reserves, building an organization to work with the steel companies, that would be getting into the business.

Q. Let's assume that getting into the business involved making a contract for the production of ferro-vanadium and making contracts for oxide supplies. You have no objection to anybody starting into a business in that fashion, do you, Mr. Gibbons? A. No.

(Testimony of Patrick J. Gibbons.)

Q. It happens every day in American life?

A. They are always buying from the small contractors. They must be handled.

Q. And even big business sometimes starts from very small beginnings, doesn't it?

A. Oh, yes.

Q. And that little trickle of little business then becomes big business and that's the story of America, isn't it, Mr. Gibbons?

A. That's the story of America.

Q. You have no objection to it, do you?

A. No. [2064]

Q. Now then, how long did that export remain at $1.70 for vanadium oxide and $3.70 for ferrovanadium?

A. Mr. Alioto, I know nothing about the export market. That will have to come from other members of our organization.

Q. You yourself have never participated in any transactions whereby the Vanadium Corporation of America and the Electro Metallurgical Company on the other hand worked together on export orders?

A. No, not personally.

Q. And you know nothing about that?

A. Know nothing about the workings of it.

Q. I didn't say whether you know anything about the workings of it, Mr. Gibbons. You say you know nothing about that?

A. I know that shipments were made, arrangements were made to ship abroad, but I know

(Testimony of Patrick J. Gibbons.)

nothing about the negotiations that let up to the actual production and shipment of the material.

I want to explain that never in my connections with the company was I ever in the sales department. I was the operating man.

Q. You know that Mr. Bransome arranged with Mr. Sneath to kind of split export orders, don't you, in the period from 1938 to 1940?

A. I do not. [2065]

Q. You never heard of that?

A. Not as you stated, no.

Q. Well, you say not as I stated. Do you know of any collaboration——

A. I know that shipments were made, but whether it was collaboration or agreement to split those, I must emphatically say, no, I know nothing about it.

Q. Do you know they were joint shipments, that is, where you took half and Electro Met took half, and Mr. Bransome arranged for the whole thing?

A. No, I don't. I know Mr. Bransome made arrangements, but as to whether he made them with Mr. Sneath or not, I must say I know nothing of that personally.

Q. Do you know whether he made them with anybody in Electro Met? A. I do not.

Q. Do you know a French company named Eugine, (spelling) E-u-g-i-n-e?

A. Eugine, no.

Q. Do you know a man named Painvin, (spelling) P-a-i-n-v-i-n?

(Testimony of Patrick J. Gibbons.)

A. Painvin — wasn't he with Electro-Chimie — Societe d'Electro-Chimie?

Q. Yes.

A. I knew and had met Painvin several times.

Q. And was Mr. Bransome an agent in America for Mr. Painvin?

A. I believe you are talking of the war years.

Q. I am talking about 1939.

A. We knew—let me put it, we knew Electro-Chimie, we worked with Electro-Chimie, we worked under patents acquired from Electro-Chimie.

I might say that our contact with Electro-Chimie was close. And if Mr. Bransome worked as an agent for Painvin, or for Electro-Chimie, I don't believe there was ever a contract to that effect. Mr. Bransome will have to testify to that.

Q. Does Electro-Chimie have office space in your building in New York, did it ever have?

A. They did not have when I left the company in 1952.

Q. Do they have now?

A. I have never met any Electro-Chimie people in the New York office. Now, I won't say they don't have space there, whether they rent it from Vanadium or it is separate space, there is a secretary and one man in an office on the same floor as the Vanadium in the Graybar Building.

Q. And they were there during your time?

A. No, they were not there in '52. Since '52.

Q. Did you folks at any time after 1943 start

(Testimony of Patrick J. Gibbons.)

producing a ferro-vanadium with a 70 to 80 percent content? [2067]

A. We may have. We would produce any grade of vanadium that a consumer requested. There is no trick in producing a high concentrate. Vanadium reduced is just a question of whether you increase or decrease the iron scale in your mix.

Q. Isn't it a fact that after 1945 you started producing more high-grade vanadium than low-grade vanadium, and the situation prior to that time was just the opposite?

A. It would all depend upon the demand.

Q. Well, what is the fact, forgetting about the demand, what was the fact—didn't you start producing the higher grade vanadium after 1945?

A. Our grades gradually went up from—in the '40's—until we were making a 50 to 55. That is my recollection.

Q. Yes. And you have remained with that higher grade ever since, have you not?

A. Well, I don't know what the story has been since '52 to date, but we were making the higher and the lower. We would make anything the customer requested.

Q. Has your company ever sold vanadium oxide for direct reduction to the steel bath?

A. I wouldn't like to say yes or no to that question. I would rather let——

Q. Somebody else knows that?

A. ——let somebody else answer that.

Mr. Alioto: We have no further questions.

(Testimony of Patrick J. Gibbons.)

The Court: What do you know about your relation with the Continental Ore Company, do you know anything about it?

A. I had no relationship at all. I was all the way—I was secretary, treasurer of the company, to '43, and from then on I was secretary-vice-president, and my duties were the operations of the reduction plants of the company, not the leaching plants in the West.

The Court: In any of your business—in any of your relations with your company, did you have any contact in the nature of agreements or anything with the Continental Ore Company?

A. Not——

The Court: Not that you know of?

A. Not to my knowledge. As a matter of fact, prior to 1957, I believe I met Mr. Leir once, and that was a casual meeting, because he called on another member of our organization, who was not there, and I met him through courtesy.

The Court: When was that, do you recall?

A. I don't recall whether it was in '38, '39—it has been some time ago—before the war. But it was not a business meeting in the sense that we were discussing buying or selling.

Mr. Alioto: May I ask the witness, if your Honor please, one further question about identification of initials—it looks like—— [2069]

I have here an inter-office memorandum from Mr. Laub called the special report in connection with his dealings with Mr. Christianson of the

(Testimony of Patrick J. Gibbons.)

Apex Company. It is Exhibit 62. And the document is dated April 14, 1942.

Mr. Gibbons, it has some kind of an initial as it appears to me—it's a little hard to read on the photostat. I wonder if you could tell us whose initial that is. It's a little hard to read, I admit, on that photostat.

A. Mr. Alioto, I don't think that is an initial. Someone has just drawn two lines there to indicate this is a paragraph to read. I don't think that is an initial. [2070]

Q. (By Mr. Alioto): You do not think that is an initial that you recognize?

A. It doesn't look like one I know. It isn't mine.

Q. I know it isn't yours. I think as a matter of fact the original letters went to Mr. Bransome. Thank you very much.

The Court: Is there anything further from this witness?

Mr. Holland: No more questions, your Honor.

The Court: You will be excused.

(Witness excused.)

Mr. Holland: Call Mr. Bransome.

EDWIN D. BRANSOME

a witness called by and on behalf of the defendant Vanadium Corporation of America, being first duly sworn, testified as follows:

The Clerk: Will you state your full name for the Court and Jury, please? And your address?

(Testimony of Edwin D. Bransome.)

The Witness: Edwin D. Bransome, Rumson, New Jersey.

Direct Examination

Q. (By Mr. Holland): Mr. Bransome, what is your present occupation?

A. I am in the happy situation of having none. I retired from my last position a few weeks ago.

The Court: What does a man do after he retires?

A. Well, he gets awful upset for a while, your Honor.

The Court: Pardon me for the interruption.

The Witness: I am wondering the same thing myself.

Mr. Holland: I would like to try it some time.

The Court: You would be sorry.

Q. (By Mr. Holland): Mr. Bransome, my questions will be confined to the period 1938 to 1949, unless otherwise specified. Now, in 1938, on July 1st, 1938, what position did you occupy with Vanadium Corporation of America?

A. I was president.

Q. How long did you remain as president?

A. Until 1949, when I became the president of the Mack Truck Company.

Q. And since 1949 you have not been connected with the Vanadium Corporation?

A. Not in any way, through stock ownership, association, or anything.

Q. Pension or anything else?

(Testimony of Edwin D. Bransome.)

A. Yes, I will get a pension from Mack as a contributor to the pension.

Q. From Mack, you say?

A. From Vanadium, that I contributed during my stay with Vanadium. I haven't gotten any yet, though.

The Court: That would help in retirement.

The Witness: It certainly will.

Q. (By Mr. Holland): I am not going to ask any general questions, Mr. Bransome. I will simply confine myself to certain testimony that has been given at this trial.

Mr. Burwell—do you know Mr. Burwell?

A. Yes, sir.

Q. And you knew he was connected with you at Vanadium? A. Yes, sir.

Q. ——testified that in 1940, shortly before the Naturita plant opened, he had a meeting with Mr. Van Fleet and yourself at which an agreement was made between the companies as to what price would be paid to the miners for ore on the Colorado Plateau, that price being 21 cents for two percent ore.

Was there any such agreement?

A. There was never any such agreement.

Q. Was there any conversation between you respecting the price to be paid miners for ore?

A. There was a lot of conversation within our organization, and the policy that I established was that we were not to get into any price war with an outfit that was already established in that district, whereas we had to refurbish complete a mill, go

(Testimony of Edwin D. Bransome.)

out and get claims in the wilds—and I assure you they were the wilds—to locate claims and develop those claims in order to feed that mill.

So my policy was to Mr. Kett, "Don't start any price [2073] war."

Q. Mr. Burwell testified that in 1942, I believe in May or June of 1942, he had a meeting with you in Dove Creek, Colorado, at which were present Mr. Kett, yourself and himself——

A. Who was it who said that?

Q. Mr. Burwell. A. Yes.

Q. And possibly John Hill, and at that meeting you pounded on the table and said, "Mr. Burwell, I am going to pay 31 cents for ore whether you like it or not," and he said, "I will go along with that."

Did any such meeting take place?

A. No such meeting ever took place. I never saw Mr. Burwell in Dove Creek. The report may have gotten out that I said I would pay any price I wanted for ore regardless of anything, if it was necessary to pay such prices to get the ore and keep our mills for the defense effort.

Q. But you had no such meeting in Dove Creek with Mr. Burwell? A. No, sir.

Q. There is further testimony which I wish to go into in some detail. First of all, in 1941, in June of 1941, Mr. Leir has testified that at a meeting in Washington in some government office you made the statement that you did not foresee any necessity

(Testimony of Edwin D. Bransome.)

of vanadium. Do you recall the meeting and did you make any such statement?

A. I recall the meeting. I was not representing Vanadium Corporation. I was working for the government and I was representing industry in this country and advising Mr. Sidney Hillman and General Newsome. I walked over from my office to that meeting. The statement, or any statement to the effect that I said there was an adequate supply just can't be so, because a year prior to that I had engaged in meetings with the Army and Navy Munitions Board and I am certain that the Carbide people did so, too, because it covered all alloys, and they designated vanadium sales and other alloys on the strategic and the critical materials list, so that to make a statement almost a year afterwards that there was an adequate supply is, on the face of it, ridiculous.

Q. And you made no such statement, is that correct?

A. I made no such statement.

Q. As a matter of fact, after vanadium ore was put on the critical list, were you instrumental in stopping shipments of vanadium to certain potential enemy countries?

A. Definitely. I caused an embargo to be placed on—I don't know whether you can say an embargo, but I caused licenses to be placed on shipments of all vanadium going out of this country, because I was quite sure that it was going into the hands of potential enemies of this country. [2074]

(Testimony of Edwin D. Bransome.)

Before that time, I had sent letters to the State Department telling them, and I did keep him advised of all inquiries that were considered that were large enough, if they were fulfilled, if they grew into orders—if they were large enough so that they grew into orders—to become dangerous to this country, and to come back to us in the form of shells or anything else.

Mr. Holland: In that connection I offer in evidence these two documents.

(Documents handed to Mr. Alioto.)

Mr. Holland: No objection?

Mr. Alioto: Let me see the other one first, please. We have no objection.

Mr. Holland: We offer them as defendants' Exhibits next in order.

(The documents referred to were thereupon received in evidence and marked Defendant V's Exhibit 2-P.)

Mr. Holland: The first of these documents is a memorandum in the State Department, subject "Vanadium Directive No. 86," signed by J. S. Bates, Major O.D. Res., whatever that means.

"Memorandum for Files:

"Mr. Edwin D. Bransome, President of the Vanadium Corporation of America (who is also a member of the Advisory Commission to the Council of National Defense) called on me today to discuss the control of export of vanadium as defined in the President's Proclamation of July 2, 1940, and the regulations thereunder."

(Testimony of Edwin D. Bransome.)

Q. Now, the Proclamation of July 2, 1940, was the proclamation that put vanadium on the critical list, is that correct, Mr. Bransome?

A. I think that was it. I can't recall the exact date.

Mr. Holland: "Mr. Bransome showed me several inquiries for substantial amounts of vanadium in the form of ferro-vanadium for shipment to Roumania and Russia. He was very emphatic in his opinion that these inquiries represented an entirely unsatisfactory disposition of the vanadium involved and in spite of the fact that his company stood to lose attractively priced business, he made strong recommendations that steps be taken to deny licenses for export of vanadium as represented by the inquiries referred to above.

"Directive No. 86 is the result of discussion of this matter in this office."

The Court: What is the date of that?

Mr. Holland: That is August 28th, 1940. And on August 27th, 1940, Directive No. 86 was issued by the [2076] State Department.

"Memorandum for Chief, Division of Controls, Department of State:

"Subject: Export of Vanadium to Germany, Japan and U.S.S.R.

"1. After consideration of information available in this office, it is decided to deny until further notice the issue of licenses for the export of:

"Vanadium — vanadium ores and concentrates; alloys containing in excess of 10 percent vanadium,

(Testimony of Edwin D. Bransome.)

and vanadium compounds, to Germany, Japan and the U.S.S.R.

"2. This action will be understood as applying to any territories actually occupied by the military forces of the powers named.

"3. Should any cases arise involving other territories considered by the Department of State as under the military domination of the powers named, specific instructions will be requested.

"By direction of the President: R. L. Maxwell, Lieutenant-Colonel (O.D.), Chief, Division S.C. Administrator."

Q. Now, Mr. Bransome, Mr. Burwell has given two versions of an alleged conversation he had with you in December of 1947 or January of 1948 regarding the coming production of [2077] uranium in this country, and the question of the handling of vanadium in connection with such production.

I would like to read you the two versions, the first of which is his statement from the stand, and the second of which is a letter he produced which he stated he had written to a man named Keiser of the Atomic Energy Commission.

Mr. Alioto: If your Honor please, we object to counsel's statement of two versions here.

The Court: Well, it is preliminary.

Mr. Alioto: It is argumentative, too. It is purely argumentative.

The Court: It is not argumentative.

Mr. Holland: I explained why I am doing both.

(Testimony of Edwin D. Bransome.)

The Court: Let us get along with this case. Let us cut out this maneuvering and get on with our business.

Mr. Alioto: Our objection was for the record.

The Court: You are the one who is making the argument now.

Mr. Alioto: My objection is that counsel's statement of two versions is argumentative, and I would respectfully move the Court under authority I think I have to strike the question.

The Court: The Court holds it is not argumentative.

Mr. Alioto: To strike the reference and ask the Jury to disregard it.

The Court: Overruled—overruled.

Go ahead with the question.

Q. (By Mr. Holland): First of all, Mr. Burwell was asked about whether he had a meeting with you in December of 1947 or January of 1948 and he said yes.

"Q. Where do you recall that meeting was held?

"A. At the office of the Vanadium Corporation in New York.

"Q. Who was present at that meeting?

"A. Mr. Bransome.

"Q. And yourself?

"A. That is right.

"Q. Nobody else?

"A. That's right."

Now, Mr. Bransome, did you on or about this time

(Testimony of Edwin D. Bransome.)

have any meeting in your office in the Vanadium Corporation?

A. What was that date?

Q. December 1947 or January 1948.

A. No, sir. What is more, I don't remember Mr. Burwell ever being in my office.

Q. Then asked for the substance of the conversation, Mr. Burwell testified as follows:

"I told Mr. Bransome that we had been—I had been concerned with the problem of uranium production for the atomic period we were entering, that we had prepared—that I had prepared a proposal for the building of a central plant on the Colorado Plateau near Naturita which would have a capacity of from 500 to a thousand tons per day, and I had directed and designed with the Manhattan District's pilot plant operations conducted in 1943 a process study, assisted by Union Carbide, which was a plant design."

Do you recall any such conversation with Mr. Burwell?

A. I never heard of the mill, never heard of any such process.

The Court: Did you have the conversation?

A. No, sir.

Q. (By Mr. Holland): "This plant was designed to recover the uranium first using a soda ash leaching process, the same process practically that Naturita is using today, and that the vanadium that was in the ore would be held as a residue to be marketed with or in proportion with vanadium

(Testimony of Edwin D. Bransome.)

markets, and that the respect this proposal had been made was that we would not hold back the production of uranium by forcing it to come through plants that processed for vanadium first and then for uranium, which was limiting uranium production, that this plant had [2080] been designed and prepared for the objective of meeting the future needs of the Colorado Plateau.

"This plan I discussed with Ted Bransome. I told him that I had previously talked with Mr. Marcus Hurst who was President then and is President now of the Molybdenum Corporation of America, that I had recommended to the Atomic Energy Commission, that I had recommended to the Union Carbide Company that the Molybdenum Corporation of America be given the operation of this plant independent of the Vanadium Corporation of America, of the U. S. Vanadium Corporation, in order that these warring differences and disputes over the vanadium market could be eliminated in the future, and that this plant had cost the government, the United States Government, approximately $400,000 for pilot planting in Grand Junction, Colorado, that it was fully developed, that it was the plan for the future, that General Groves and the Manhattan District had approved this plan as one means of continuing without the ups and downs in harnessing of this region in the two-way vanadium market, and the finagling that was going on with those questions that you have heard in this court."

(Testimony of Edwin D. Bransome.)

Do you recall any such statement from Mr. Burwell? A. No, sir. [2081]

Q. Either in your office or anywhere else?

A. No, sir.

Q. "Mr. Bransome questioned me about this plan in some detail. I told them that Mr. Hurst did not feel at the moment that he wanted to get into the picture unless everybody would agree that an independent alloy producer or operator was mutually desirable. I do not think Mr. Hurst was very warm to the proposal, anyway.

"Mr. Bransome said, 'I suppose these independent producers of ore had vanadium and uranium ore and brought their ore up to this central plant that you propose. The vanadium then would be turned back to them to sell or to dispose of, isn't that correct?'

"I said, 'Yes, that is correct'."

Did any such conversation take place?

A. No, sir.

Q. Either in your office or elsewhere?

A. No, sir.

Q. "'We cannot in this particular emergency deny any person the right to get his vanadium back,' that this situation had now become bigger than either the Union Carbide or the Vanadium Corporation of America in my estimation.

"Then he asked this"—that is you—"'What would happen if somebody like Continental Ore or Mr. Leir shipped some ore to this central plant? Would he get the vanadium back?'

(Testimony of Edwin D. Bransome.)

"I said, 'Surely, he would'."

Did you make any such statement, Mr. Bransome? A. No, sir.

The Court: What is your answer?

A. No, sir.

Mr. Holland: "So would anybody else who owned the ore. They would all have to have the same right.

"Mr. Bransome said, he paced back and forth in his office, he said, "That would put Mr. Leir in the vanadium business and that is what we are trying to keep him out of'."

Q. Did you ever make any such statement?

A. I never made any such statement.

Q. "And I looked at Ted and I turned around and walked out of the door."

A. No, sir.

Q. Now, in the letter which Mr. Burwell testified he wrote to Mr. Keiser, which letter is dated January 22, 1948, Mr. Burwell makes the following statement——

Mr. Alioto: Will you identify Mr. Keiser, please, Mr. Holland? [2083]

Mr. Holland: Mr. Keiser is with the Atomic Energy Commission. I have already identified him as being with them.

"In the main there does not seem to be much question as to the engineering approach to the problem of processing the carnotite ores, but most of the questions revolve about the disposal of excess vanadium. In this connection I had an inter-

(Testimony of Edwin D. Bransome.)

esting talk with Ted Bransome, as a result of a casual meeting which developed a brief discussion of the Western situation."

Q. Now, did you, from time to time, have casual meetings with Mr. Burwell in New York?

A. I don't think I had them so much in New York. I may have seen him a couple of times. Well, I met him in Washington at meetings of the Vanadium Division. I met him in Manhattan Project on meetings. I don't think he was in many Atomic Energy meetings, but I did meet him in Washington and in New York and in the West, sometimes in meetings, sometimes casually.

Q. Did you ever have a brief discussion of the Western situation with him at those meetings that you recall?

A. No, sir, I don't recall many such meetings because the year prior to that almost I had told the Atomic Energy Commission that if they wanted to get uranium, they would have to build X number of mills—I can't give you the definite [2084] figures because they are classified—X number of mills to produce ore carrying certain grades of the uranium, but unfortunately they also contained vanadium. In order to make it economically possible for the miners to sell that ore and live, they would have to get $7.00 a ton or something on that order—I may be a little wrong on the uranium content, but for the uranium content, in the order of seven or eight dollars. They would have to be paid for the vanadium at 30 cents a pound, or whatever

(Testimony of Edwin D. Bransome.)

the order was at the time, 20 to 30 cents—call it 30—they would have to be paid $12 or 40 pounds times 30 cents, $12, which would give them 18 or 19 dollars a ton. That would have to be given the miners in order for them to live, in order for them to make it attractive, for them to mine or and deliver it to mills.

Now, as far as the mills were concerned, the mills on carnotite and roscoelite ores, which were in the main in that district, had to carry or did carry vanadium far in excess of the uranium. It was in the order of two percent vanadium and one-tenth of one percent of uranium. Now, it cost the miller just as much to get that out, and so the miller would have to be paid in effect for the vanadium and the uranium, too, because it was put in solution just the same as you put sugar in tea and stir that up and put it in solution. Unless you put sugar and bicarbonate of soda [2085] in it at the same time, when it wouldn't be very attractive as tea, but you would put those in, they go in solution, they come so far through the process, and they were leached in roasters as big as this room and several stories high. They went through that and then they were quenched in a great whirling pool of water. They were dropped out in there and that went into solution.

Now, they leached the rest of it in tanks of sand that were a quarter as big as this room, and that leaching process went through—that was a water leach, and that took out the rest of it, but it put

(Testimony of Edwin D. Bransome.)

it into solution, and that went on through to a point, and when it got to the last point there it divided, you knocked it down, you used some reagent, the same as you could in tea if you found out what could precipitate sugar, what would bring the sugar down.

That went one way, the sugar came down, and the solution went another way, and the vanadium was precipitated from that. One came out in what was called the yellow cake, the other came out in what was called black cake. The miller would have to be paid for both of those before he ran a mill. They had the same experience with their own mills that they ran. When they did that, and I told the Atomic Energy Commission that they would have to pay for all of that, and then they could do with the vanadium as they pleased—excuse me—I almost talked about the number of mills and I don't want to. [2086]

But the number of mills constructed would glut the market, as far as any market was concerned, and they let the vanadium fall where it may. I believe I used that expression, that no matter what happened to the vanadium, let her go. I never said to keep anybody out of business.

Does that answer your question?

Q. That answers my question.

The Court: Did you ever, at any time, make a statement to Mr. Burwell that you wanted to keep the Continental Ore out of the vanadium business?

A. No, sir.

(Testimony of Edwin D. Bransome.)

Q. Did you ever learn of any such statement by any officer of your corporation?

A. No, sir, I never heard any officer of my corporation make such a statement.

Q. (By Mr. Holland): Mr. Bransome, there has been some testimony here about the fact that the Vanadium Corporation in the fall of 1941 attempted to purchase the claims on which Blanding Mines was operating——

A. Will you start that again, please?

Q. I say, there has been some testimony in the case to the effect that in the fall of 1941 the Vanadium Corporation wished to acquire some claims on which Blanding Mines was operating in the Cottonwood area and approached Blanding to buy those claims and was told by Blanding that they did not own them, and that Vanadium Corporation would have to take the matter up with Mr. Garbutt, is that correct? A. Yes, sir.

Q. Did Vanadium Corporation later take that matter up with Mr. Garbutt to purchase those claims from him?

A. Yes, sir, I did.

Q. Why did you purchase those claims?

A. For the sole purpose of supplying ore to the Monticello mill, which was built solely and only for the purpose of supplying vanadium pentoxide for use for the war effort.

Q. Were those claims within an area which was tributary to the Monticello plant?

A. Oh, definitely. Blanding was just down the

(Testimony of Edwin D. Bransome.)

line from us. I don't know what it was. Maybe it was 25 or 26 miles, on, as Kett said, a practically downhill haul. That was good. As a matter of fact, the government I think asked Mr. Garbutt and certainly told us about these claims, too.

Q. Mr. Bransome, have you at any time on behalf of Vanadium Corporation or in your own behalf or in any way made any agreement with anyone connected with Union Carbide organization regarding the division of the vanadium market?

A. No, sir. [2088]

Q. Have you at any time ever made an agreement with anyone at Union Carbide respecting the price at which oxide or ferro-vanadium would be sold? A. No, sir.

Q. Or the price at which ore would be purchased from miners? A. No, sir.

Q. Have you ever made any agreement with anyone at Union Carbide, or anyone else, under which it was contemplated that anybody would be eliminated from the vanadium business or kept out of the vanadium business?

A. Definitely not.

Mr. Holland: That is all.

Cross-Examination

Q. (By Mr. Alioto): Mr. Bransome, when did you join the Vanadium Corporation of America?

A. Mr. Alioto, I've got rheumatoid arthritis. Do you mind if I stand up for just a moment and stretch?

(Testimony of Edwin D. Bransome.)

Q. I have no objection at all.

A. Excuse me. This weather—I love San Francisco, but this weather has got me down.

The Court: Where do you live?

The Witness: In New Jersey—which is just about the same. [2089]

Q. (By Mr. Alioto): Mr. Bransome, when did you join the Vanadium Corporation of America, sir?

A. I believe it was in 1949, in the fall. Wait—I beg your pardon—that was Mack Truck. It was in 1935, I believe.

Q. And your first job with that company was to be its president?

A. That's right.

Q. And prior to that time you had been with a company known as the Air Reduction Company, had you not? A. That's right.

Q. And the Air Reduction Company was a substantial bond holder of Vanadium Corporation of America, was it not?

A. Yes, it was. It bought—that was not beforehand. I sold a company to the Air Reduction Company and that was long before 1938, however.

Mr. Holland: If the Court please, it seems we are getting back again.

Mr. Alioto: We are not getting back. I am simply establishing the fact that he came from the Air Reduction Company; that is all.

Q. The Air Reduction Company was in existence from 1938 to 1949, wasn't it?

(Testimony of Edwin D. Bransome.)

A. Yes, sir.

Q. And during that period of time——

A. I wasn't with them.

Q. And during that period of time was a very substantial producer of the same things that Union Carbide Carbon Division produced, was it not?

A. Yes, I think so.

Q. The two of them were the largest in their fields, were they not? A. Yes, sir.

Q. Union Carbide and Air Reduction.

A. Yes, sir.

Q. Did you retain any connection with the Air Reduction Company after you joined the Vanadium Corporation of America?

A. No, sir.

Q. What had——

A. I was connected with Air Reduction Company in electric welding, nothing else. I had sold a company to them and they insisted I come along with them, and that was the electric welding, and that was the only connection I had with them.

Q. I take it since you started as president directly, the Air Reduction Company, of course, agreed that you might go to the Vanadium Corporation of America as its president.

Mr. Holland: If the Court please, this is all pre-'38 and——

Mr. Alioto: This company was in existence—Air Reduction was in existence from '38 to '49.

Mr. Holland: What difference does it make?

Mr. Alioto: In view of the——

(Testimony of Edwin D. Bransome.)

The Court: No, you can't go back of '38. Now—

Mr. Alioto: If your Honor please——

The Court: You can ask him any condition that existed in 1938. That's when your client came to this country.

Mr. Alioto: I am simply asking whether the Air Reduction Company, which was in existence in 1938, was responsible for his going over to the Vanadium Corporation of America.

Mr. Holland: In 1935.

Mr. Alioto: Yes, in 1935.

The Court: No, you can't answer it.

Mr. Alioto: All right, your Honor.

Mr. Holland: We'll gladly go into it.

Mr. Alioto: You will gladly go into it, but you object.

Q. Now, Mr. Bransome, have you ever made any joint marketing arrangements with Union Carbide Group on vanadium? A. No, sir.

Q. How about shipments to France in 1939?

A. I don't think we ever made that arrangement. I think Electro Chimie ordered vanadium from Union Carbide and ourselves and it was a question of how much could be spared. There was no joint meeting. It was a shipment to France.

Q. You mean they ordered it separately from you and then ordered it separately from Union Carbide? Is that the way it worked out?

A. I don't remember. We were their agents——

Q. Surely.

A. ——in this country, of Electro Chimie, and

(Testimony of Edwin D. Bransome.)

they may have gone through us, as they would through—in any business.

Q. Don't you recall specifically that they did go through you and that you and Mr. Sneath——

A. Why, I can't remember——

Q. That you and Mr. Sneath of Electromet made a deal to split the French order in '39 and '40?

A. No, I never made any such deal to split any order. I followed out the instructions of Electro Chimie, our agent—now, you can put anything you want on it, but that is what actually occurred.

Q. Now, Mr. Bransome, may I show you first a telegram dated October 4, 1939, from Jaoul of Electro Chimie?

A. The name is Jaoul (Sjah-oohl).

Q. Forgive my pronunciation — Jaoul — dated October 4, 1939. Will you be good enough to read that, please, Mr. Bransome, and I will ask you, after you have read it, to state for the record whether that is a document which you received at that time. [2093]

A. (Examining.) Why, certainly. It's merely instructions for us to take care of something for them in this country.

Mr. Alioto: We will offer this in evidence, if your Honor please.

Mr. Holland: We have no objection.

Mr. Archer: I take it you are offering that only against Vanadium Corporation.

(Testimony of Edwin D. Bransome.)

Mr. Alioto: Yes, as of this time, on the assumption——

Mr. Holland: Let me see it just a second——

Mr. Alioto: ——

The Witness: May I read that again, sir?

Mr. Alioto: Yes, sir. I was going to read it out loud to the jury.

The Witness: That's fine. Thanks.

Mr. Alioto: We will read these documents and you will have an opportunity——

The Witness: Just so there is no misunderstanding.

Mr. Alioto: You will have an opportunity to say anything about it any time you want, sir.

(Telegram 10/4/39, Jaoul Electro Chimie to Bransome, received as Plaintiffs' Exhibit 161.)

Mr. Alioto: This exhibit, which is a telegram, October 4 of 1939, L. C. Bransome of Vancoram——

I take it Vancoram is a cable address for the Vanadium Corporation of America?

A. Correct.

Mr. Alioto: "New York, care of Vanadium Corporation of America."

"Further your cable twenty-seventh. Stop. Being London last week have received proposal from representatives Union Carbide for one hundred twenty thousand pounds vanadium pentoxide. Stop. Would you arrange in accord with Sneath to secure firm that quantity shipment October November. Stop. Are now arranging credit. Stop. Kindly cable confirmation.

"Jaoul Electrochimie."

(Testimony of Edwin D. Bransome.)

Q. Now, Mr. Bransome, the "Sneath" referred to here is the Mr. Sneath of the Union Carbide group or Electro Metallurgical Company?

A. That's right.

Q. And Mr. Sneath was kind of their representative on European business, was he not?

A. I don't know what Mr. Sneath was.

Q. Did you, pursuant to this telegram, then contact Mr. Sneath and work out an arrangement?

A. Yes.

Q. And that——

A. That telegram states in there that—it doesn't state that we are their agents, but we are—we were their agents in this country. They said: "Will you please go out and get 120,000 pounds from Union Carbide?" It could have been just as well Jimmie Jones—"and take care of all the shipping and so on and we will arrange credit for it."

Q. You mean that you had the power at that time to—— A. We, as agents.

Q. Yes, I understand you were agents. That is the part of the thing we are after here. And you had the power at that time to get the vanadium pentoxide from anybody else; you didn't have to get it, I take it, from Electro Metallurgical Company?

A. No. It says in there that they had received an offer of 120,000 pounds from Union Carbide.

Q. Yes.

A. I had nothing to do with what they wanted. They had an offer, a bid, a tender of 120,000 pounds

(Testimony of Edwin D. Bransome.)

from Union Carbide. They said, "It's O.K. with us; we will arrange credit for it. Will you please go ahead and take care of the detail"—because they had no office here in New York or in this country.

Q. Oh——

The Court: Were you acting as their agent at that time?

The Witness: Yes, sir.

Q. (By Mr. Alioto): And this was one of the large French ferro-vanadium companies, was it not?

A. Well, it was a ferro—they sold ferro-vanadium, and they made ferro-vanadium.

Q. Was it the largest company in France?

A. Oh, not by any chance.

Q. What were the other companies producing?

A. I don't know, but the Electro-Chimie was not a very large company.

Q. I show you——

A. It's the same as Vanadium—neither is Vanadium a very large company, nor was it then.

Q. I show you next, Mr. Bransome, a letter from the Electro Metallurgical Sales Corporation to your company, addressed to Mr. P. J. Gibbons, Secretary and Treasurer. I take it Mr. Gibbons was the Secretary and Treasurer in November of 1939?

A. Mr. Gibbons was that as long as time lasted, according to my memory.

Q. Yes.

(Testimony of Edwin D. Bransome.)

A. (Witness examining document.) Yes. I don't remember that at all, but I will accept it.

Q. But your company received that letter, did it not?

A. Well, it was written, and I assume it was received. Let's assume it was received.

Mr. Alioto: We will offer it into evidence as plaintiff's exhibit next in order, in connection with this export transaction in '39.

Mr. Holland: We don't think this has anything to do with this lawsuit, your Honor.

Mr. Alioto: It shows the combination between—

Mr. Holland: A transaction of shipping some stuff to France.

Mr. Alioto: We will get in just a minute the rest of it in here.

The Court: Go ahead and let it be admitted.

(Letter 11/3/39, Electro Metallurgical Sales to V.C.A. received as Plaintiffs' Exhibit 162.)

[See Book of Exhibits.]

Mr. Alioto: There are about three or four letters on that and then we will complete this transaction, if your Honor please.

The telegram was dated in October of '39. This is dated in November 3, 1939. It is from the Electro Metallurgical Sales Corporation of Union Carbide to the Vanadium Corporation of America:

"Gentlemen:

"As per our telephone conversation of today, we now have available the second consignment of Fused Vanadium Oxide for France.

(Testimony of Edwin D. Bransome.)

"The gross weight of the consignment is 53,830 pounds, or 51,585 pounds of Fused Vanadium Oxide net, [2098] which is equivalent to 44,999.54 pounds of Vanadium Pentoxide. This, at a value of $1.30 per pound of contained V_2O_5 equals $58,499.40. Adding to this the marine freight, consular fees, consular blanks, and marine insurance charges, we arrive at a c.i.f. Le Havre value of $59,463.20.

"As we understand the freight rate is to be increased on November 13th we suggest that you urge them to cable their credits promptly, enabling booking of the shipment prior to that date; otherwise, their credits must be increased.

"Very truly yours,

"Electro Metallurgical Sales Corporation,

"J. F. Widman, Export Department."

Q. Now, do you recall that you made this shipment to the French at $1.30 per pound?

A. I don't remember $1.30 now.

Q. Wasn't this about 40c under the export market at the time?

The Court: How does that have anything to do with this lawsuit?

Mr. Alioto: I think it has a lot to do with this lawsuit, if your Honor please. We will demonstrate in just a moment. Let us develop the story. I think it will appeal to your Honor after we get it developed. [2099]

A. I don't remember whether this is 30c below the export price.

(Testimony of Edwin D. Bransome.)

Q. Didn't you sell to the French regularly at a certain amount of money below the export price?

A. I don't—no. We sold the French ore, we sold them oxide, and we sold them various amounts. I can't recall the prices at which we sold them.

Q. I show you next a cablegram from you to Trochim in Paris. Maybe my pronunciation is bad on that, too. It is dated November 8, 1939. Would you be good enough to identify the addressee of that? Who is Trochim?

A. Trochim? I don't know; it is probably a cable address. (Witness examining.) I guess it is a telegram sent by Vancoram.

Q. Vancoram is the Vanadium Corporation of America? A. Yes.

Mr. Alioto: We will offer this in evidence as plaintiff's exhibit next in order in this series.

Mr. Archer: Again, that is being offered only against the Vanadium Corporation at this time?

Mr. Alioto: Yes.

Mr. Holland: I don't understand it, but if you want the letter in——

(Cablegram 11/8/39, Vancoram to Trochim, received in evidence as Plaintiff's Exhibit 163.)

Mr. Alioto: This cablegram on November 8, 1939, reads as follows: It is from the Vanadium Corporation of America to Trochim in Paris.

"Two additional lots pentoxide prepared for shipment. Stop. First lot gross fifty-two seven eighty-eight net forty-nine six eighty contained pentoxide forty-five thousand value fifty-nine thou-

(Testimony of Edwin D. Bransome.)

sand four hundred eight-seven dollars credit account Vancoram, second lot gross fifty-three eight hundred thirty net fifty-one five hundred eighty-five contained forty-five thousand value fifty-nine thousand four hundred sixty-four dollars credit account Electro Metallurgical Sales Corporation. Stop. Includes all charges except war risk insurance. Stop. Recommend credits be arranged earliest possible date, understand freight rate increase November thirteenth. Send paid."

Q. Now, do you recall that there was an additional order in November of 1939 which was split, as the cable indicates, between you and Electro Metallurgical?

A. I don't recall that at all, but I am willing to say that we took care of it on the same basis as we took the other.

Q. You were the man that negotiated this with Mr. Sneath, weren't you, Mr. Bransome?

A. I don't believe it was necessary for me to negotiate [2101] that at all. Anybody in our outfit could have done that.

Q. Regardless of who in your outfit did it, whether it was you——

A. It wasn't with Mr. Sneath. When that first telegram, whenever it was, mentions Sneath's name, it was just a matter—this is just a formal matter of business. When they came over to us—when they sent this offer to us, they said: "Please arrange to get it." We got it for them, and that was it. Now, anybody could have done it.

(Testimony of Edwin D. Bransome.)

Q. Now, the price that you arranged with Electro Metallurgical Company was the same price that you were charging the French, wasn't it?

A. I don't know.

Q. $1.30 a pound.

A. I don't recall. It probably was.

Q. So that in your discussions with Electro Metallurgical Company you had to discuss a price at which you would ship to the French in export; isn't that a fact? A. I beg your pardon?

Q. Necessarily you had to discuss with the Electro Metallurgical Company the price at which this export shipment would be made.

A. We had to ask them what their price was.

Q. And you had to negotiate it with them.

A. We did not have to negotiate it. They made their own [2102] prices. We never made any prices for Union Carbide or Electro Met or anybody else. We never made their prices for them. Sometimes we might have followed them; sometimes they might have followed us, which is done every day in business.

Q. Now let me show you a letter from a man in your organization who signs simply as "G.", Secretary-Treasurer, to Mr. Andre Jaoul—let me have that pronounced again.

A. Jaoul.

Q. To Mr. Andre Jaoul, dated November 9, 1939, addressed to Societe d'Electro Chimie in Paris.

(Testimony of Edwin D. Bransome.)

I take it that "G" on that letter is Mr. Gibbons, is that correct?

A. (Witness examining.) "Secretary and Treasurer"—it certainly must have been. It looks like his initial.

Q. That confirms certain cables and then adds one paragraph.

A. You want me to read it?

Q. Is that Mr. Gibbons' initial there?

A. I don't know; you will have to ask Mr. Gibbons that, if that is his initial. I don't know.

Mr. Alioto: Mr. Holland, can we stipulate that the Secretary-Treasurer of Vanadium Corporation November 9, 1939, was Mr. Gibbons?

Mr. Holland: Let me look at it first (examining). I assume. Let me show that to Mr. Gibbons.

(Exchange between Mr. Holland and Mr. Gibons.)

Mr. Holland: Is that your initial?

Mr. Gibbons: Yes.

Mr. Holland: Yes, Mr. Alioto.

Mr. Alioto: Thank you, Mr. Holland.

It sets forth certain of these cables.

Mr. Holland: Have you offered it in evidence yet?

Mr. Alioto: We will offer it.

Mr. Holland: We have no objection.

Mr. Archer: As against Vanadium Corporation only, I take it?

Mr. Alioto: At this point, yes.

(Testimony of Edwin D. Bransome.)

(Letter, V.C.A. to Societe d'Electro Chimie, 11/9/39, received in evidence as Plaintiff's Exhibit 164.)

Mr. Alioto: November 9, 1939, Mr. Gibbons writes to the French company, Societe d'Electro Chimie:

"Gentlemen:

"In connection with your cable of October 10, 1939, confirming your needs of pentoxide contained in the amount of 150,000 lbs. contained, we cabled you as follows:"

Then follows cables, one of which was read.

"As you will note from the above cables, we now have prepared and ready for shipment in our warehouse 75,000 lbs. of contained pentoxide and Electro Metallurgical Sales Corporation have the same amount prepared and in their warehouse ready for shipment.

"We were rather disappointed that the credit for the first 30,000 lot, which you advised on October 24th should be forthcoming within the week, did not come to hand and thus enable us to get this first lot off during the month of October. As we advised in the cable of November 8th, our information is that freight rates will be increased on or about November 13th. If this should take place, it will be necessary to have additional credit arranged to take care of the increased freight rate. We trust, however, that in accordance with our recommendation in our cable of November 8th, that permits and credits will be forthcoming in time for us to take

(Testimony of Edwin D. Bransome.)

advantage of the present rates in obtaining shipping space.

"We would appreciate everything that may be done to rush the required credits in order to release the 150,000 pounds of contained pentoxide which we and the Electro Metallurgical Sales Corporation have ready and jointly holding earmarked for you."

Next is a telegram from you, Mr. Bransome, to Painvin dated December 14, 1939.

Would you be good enough to examine that document and state if that is the cablegram sent you, and then if you would also be good enough to identify the name Painvin for us—if that is the right pronunciation?

A. Your French is getting much better.

Q. Yes, it is.

A. (Witness examining.) I don't remember the telegram, Mr. Alioto, but I am willing to assume that it was sent.

Q. Well, we received in connection with certain pre-trial discovery this, so I assume there is no question, then, about authenticity.

We will offer this cable into evidence as the plaintiff's exhibit next in order.

Mr. Archer: That is just against the Vanadium Corporation?

Mr. Holland: No objection.

(Cable, December 14, 1939, Vancoram-Bransome to Painvin-Trochim; received in evidence and marked Plaintiff's Exhibit 165.)

(Testimony of Edwin D. Bransome.)

Q. (By Mr. Alioto): About this time, Mr. Bransome, weren't you engaged in activities to control these exports to the extent that third parties wouldn't be exporting but just you and Electro Metallurgical would be?

A. I beg your pardon?

Mr. Alioto: Read it.

(Pending question read back to reporter.)

The Witness: Definitely not. [2106]

Q. (By Mr. Alioto): You weren't trying to keep speculators from buying domestic and selling export, were you?

A. How could I?

Mr. Alioto: This cable reads—we will come to that in a moment—this cable reads:

December 14, 1939, Mr. Bransome to Mr. Painvin——

Q. Exactly who was Painvin?

A. Painvin was the President, I believe, or Managing Director, of Electro-Chimie in Paris.

Q. Did he have an office in your New York office? A. No, sir.

Q. At any time? A. No, sir.

Q. (Reading.)

"Your cable 10th arrange credit cover 400,000 pounds pentoxide——"

This is a new order, isn't it?

A. I don't know. You asking me?

Q. Yes.

A. I don't know whether it is or not.

Q. (Reading.)

(Testimony of Edwin D. Bransome.)

"Your cable 10th arrange credit cover 400,000 pounds pentoxide contained amount about 620,000 dollars. Stop. About 310,000 account each Electro Metallurgical Sales Corporation and Vancoram. Stop. 45,000 pounds pentoxide contained due to leave New York December 26th Steamship Adamus completing Vancoram portion first order."

Now, do you have any recollection of arranging in connection with this 400,000 pounds order to have Electro Metallurgical Company take half of it?

A. No, sir. But I assume it was done as an agent. Remember this, Mr. Alioto, that Electro-Chimie was also connected with Union Carbide.

Q. How?

A. In other directions.

Q. How?

A. Why, I don't know. They sold them patents or something like that and Union Carbide would get in touch with them and say, "We offer you so much vanadium." We were their agents; we took care of that business. And we never arranged for any prices that they would pay or anything.

The Court: Well, now, at this time, at this particular time, who were the producers of vanadium in America?

The Witness: In America, the Vanadium Corporation and the Union Carbide.

The Court: Were there any other sources from which you could supply that order then?

(Testimony of Edwin D. Bransome.)

The Witness: Oh, yes, we could have supplied that order from Peru. See, we had large—— [2108]

The Court: I am talking about in the United States.

The Witness: No, sir. But we could have supplied that order from Peru.

The Court: Yes. Well, now, were there any other producers of vanadium in the United States at that time except the two you mentioned?

The Witness: Not to my knowledge, no. No one that could have fulfilled any orders like that.

Q. (By Mr. Alioto): Weren't there a number of independent mills out in the Colorado Plateau at this time, Mr. Bransome?

A. No, sir. Not any of them that could have done anything like that.

Q. You mean none that could have produced 400,000 pounds?

A. No. And there wasn't any at that date. What date is that?

Q. December of 1939.

A. 1939—I don't think there was a mill on the Plateau running, with the exception of Uravan, and there may have been some little mill running some place, but I doubt that. I think Nisley and Wilson or somebody had a mill over near Gateway, because we helped them out with equipment and ore—and bought ore from them, and bought the little oxide they produced from them, but I don't know of any other mills that were running. [2109]

(Testimony of Edwin D. Bransome.)

Q. The record independently shows he was operating at that time, Mr. Bransome.

A. Well, it would. I would be interested in hearing what they were, because I don't recall it.

Q. Mr. Bransome, you were getting $1.30 for this oxide that you were shipping to France, weren't you? A. That is right.

Q. And you were buying that oxide from the Vanadium Corporation or part of it at 80c. They sold it to you right in this period, 1939. Weren't you? A. Yes, I think they were.

Q. At this time the Apex Smelting Company had asked you for supplies of vanadium oxide, had they not, and you turned them down?

The Court: We will take a recess.

(Recess.)

Q. (By Mr. Alioto): Mr. Bransome, my associates called my attention to the fact that when I asked you just before the recess whether you were selling at $1.30 and buying at 80c that I inadvertently said buying at 80c from the Vanadium Corporation of America. Of course, I meant buying it from the United States Vanadium Company, not the Vanadium Corporation of America. You were aware of the fact, were you not, in 1938 and 1939 you were buying supplies of oxide from the United States Vanadium Company? [2110]

A. I was not aware of that at all, Mr. Alioto.

Q. Didn't you know that in 1938 you bought 130,000 pounds of vanadium oxide from U.S.V. at 80c?

(Testimony of Edwin D. Bransome.)

A. I don't know whether that came from the Maggie C. or who.

Q. The Maggie C. is 1939 and 1940.

A. We bought V_2O_5 from U.S.V. when they had stored large supplies of it, and it was good business for them to get rid of it.

Q. But in any event, a while ago when I said the Vanadium Corporation of America, I meant you bought at 80c from U.S.V.

A. We didn't in 1939.

Q. 1938?

A. Now, which are you asking me about, Mr. Alioto, 1938 or 1939?

Q. The record shows I am asking now if you remember the quantity of 130,000 pounds in 1938.

A. I don't remember that quantity. I remember buying in large quantities from the U.S.V. when they had quite a few million pounds of V_2O_5, and we had the sales organization that could sell it and they did not. So they thought it was good business to get rid of that inventory instead of having their money tied up in it. We bought it at that time. When the sales of vanadium started up, when demand for vanadium started [2111] up, they refused to sell us any more.

Q. You bought about 3,000,000 pounds from them under that arrangement?

A. I wouldn't be a bit surprised, because that was in effect when I came with the company.

Q. Mr. Bransome, at the time you were selling

(Testimony of Edwin D. Bransome.)

for $1.30 to the French, the actual export price was $1.70 for oxide, wasn't it, f.o.b. New York?

A. By whom?

Q. The general market price for oxide in export.

A. I don't know. I don't think we ever sold at $1.70. What do you mean by "the general market price"? Are you talking about the Vanadium Corporation of America? I don't believe we ever sold oxide for $1.70 in 1939.

Q. Isn't it a fact that at the end of 1939 and the beginning of 1940, when the export market went to $1.70, the local market was at $1.10, and that made a situation where an independent could purchase the oxide at $1.10 and sell in export at $1.70?

A. If the export demand was $1.70 and any sharpshooters wanted to come in and get oxide at $1.10, they could have made the intervening profit.

Q. And you engaged in activities to prevent that and stop it, didn't you?

A. I never engaged in any such activity at all. That is [2112] an imputation that just isn't so.

Q. I will show you a letter dated March 28, 1940, and ask you to look at the initials on that letter. It is a letter from you to Painvin, and state whether or not those are your initials at the bottom of that letter. Did you write that letter, sir?

A. I guess I did. Those are my initials.

Q. Are the facts therein stated true?

The Court: What is the question?

(Testimony of Edwin D. Bransome.)

Q. (By Mr. Alioto): Are the facts therein stated true?

A. I wrote the letter, and whatever is in the letter I presume to be true according to my belief. I don't know whether they are facts or not.

Mr. Alioto: I offer this,

Mr. Archer: That is against the Vanadium Corporation of America only?

Mr. Alioto: Yes.

Mr. Holland: No objection.

(The document referred to was thereupon received in evidence and marked Plaintiff's Exhibit 166.)

Q. (By Mr. Alioto): Mr. Bransome, isn't it your recollection now that Painvin or the Societe d'Electro-Chimie was not only the biggest ferro-vanadium producer then but is still today in France? [2113]

A. I think—yes, they may have been the biggest producer in France. I thought you said in Europe, on the Continent.

Mr. Alioto: This airmail letter with Mr. Bransome's initials on it, written out in his handwriting to Mr. G. J. Painvin, Societe d'Electro Chimie, 10, rue de General Foy, Paris, France:

"Your letter of February 19 finally arrived today, which is rather a record, I believe, in speedy transmission of the mails and, according to the marks on the envelope, it did not leave Paris until February 28. However, I assume these are neces-

(Testimony of Edwin D. Bransome.)

sary delays which none of us can complain of under the present circumstances.

"I am afraid that you have misunderstood my cables and letters in respect to the situation on V_2O_5.

"At no time has the situation been easy in the supplying of either Ferro or Pentoxide. Up until the present date, we have been required, in order to keep our inventories up to a reasonable figure, to refuse to sell a great many people who have had firm orders in one hand and cash in the other and were willing to pay practically any price that we asked. As a matter of fact, for domestic consumption and what we did sell for export required us at one [2114] time to ship practically hot metal.

"Our position is a little better now, but one that would speedily be uncomfortable should one large order for Ferro or Pentoxide come in from abroad or from this country."

And then down below this following paragraph—

Mr. Holland: Read the whole letter.

Mr. Atioto: All right.

"As you probably know, we are in close touch with the Government on any Critical or Strategical materials and have assured them that we would not sell abroad any quantities of our alloys that might jeopardize the position of our country in the event of an emergency.

"In respect to some materials, the only way that we could supply them would be to have the raw materials shipped from abroad and have us process

(Testimony of Edwin D. Bransome.)

in transit, thus preserving our existing stocks of such raw materials. I can't say that I am entirely in sympathy with this procedure, but, nevertheless, it is there and must be observed.

"The prices for export are still the same, namely, $3.70 per pound for Ferro and $1.70 for Oxide. These prices make for people trying to buy domestic and sell export, but I am happy to say that we seem to have this phase under very good control and if any shipments do get away from us they are very small ones. The good part of this program is that as long as we can control our shipments, speculation by individuals is prevented and, as I said before, we are only selling to our regular domestic customers.

"I am taking up your time and going into detail on this as I want you to clearly understand that it is our desire to take care of you and your requirements of any materials we have in excess of domestic requirements if you will let us know as far in advance as possible and on the same basis as our last shipments provided the export price remains the same. In short, I cannot promise that we will be in a position to ship Ferro or Oxide within a short period of time if the request comes without warning.

"I feel certain that you will understand that I am not trying to build up any business for ourselves by alarming you as to the supply of Vanadium. If we had loosened up in our policy in selling certain brokers here, our supply of Vanadium

(Testimony of Edwin D. Bransome.)

would have been taken up for months to come and I think we are still in that position. [2116]

"So much for business.

"The news we get from your side of the water is so varied that even after a lengthy study and sifting of pseudo facts we are always in the state of bewilderment. It leaves us only with the hope that things go well with you and that we will receive favorable news.

"I hope this finds you well and that same applies to your entire family.

"With my very best regards to you and Jaoul, I am

"Sincerely,

"EDB."

Q. Now, Mr. Bransome, in that portion of this letter where you say that the prices were $3.70 for ferro and $1.70 for oxide, "these prices make for people trying to buy domestic and sell export, but I am happy to say that we seem to have this phase under very good control and if any shipments do get away from us they are very small ones." Now, what did you do to keep shipments from getting away from you?

A. Mr. Alioto, I am proud of that letter. That meant that we had millions and millions of pounds requested by brokers downtown in New York, and Mr. Viles or Mr. Laub can tell you he was on the telephone constantly all the time with people who had never been in the vanadium business, never owned a [2117] claim, never owned a mill, never

(Testimony of Edwin D. Bransome.)

had a thing to do with it, but at that time they saw a chance to make a dollar. Now, those were the people that I went to Washington and had licensed so that anybody who wanted to buy vanadium had to get the Government to approve that they really were sending that to the right people, and it wasn't long after that that that went into effect, and I was talking to them down in Washington at that time just about that sort of thing. If we had sold to the brokers that asked us and that had the cash in one hand, as I say, and an order in the other, we would not have had any vanadium for the use of the country or for France, that had its back to the wall at that time and was licked just a short time later and Paris fell. When they had orders with us, the French came to us and told us would we honor their orders, and we said forget it.

Q. Was the Continental Ore Company one of the companies you were trying to keep out of this export business?

A. The Continental Ore Company — I never heard of the Continental Ore Company to any extent or hardly at all. The sales department handled all those things. I never heard of Mr. Leir who is in this case. I never saw him but once in my life, and I don't think I heard of him but three or four times.

Q. I am asking you whether the Continental Ore Company was one of the companies that you were trying to keep out of the export business at this time. [2118]

(Testimony of Edwin D. Bransome.)

The Court: What is the purpose of this line of questions?

Mr. Alioto: To show that the Continental Ore Company——

The Court: Is it your contention now that these people who had the ore were under any obligations to sell to a broker who could take that and make some money out of it?

Mr. Alioto: Within a month of this time the Apex Smelting Company made a demand for oxide and was turned down, and Apex Smelting Company was producing ferro-vanadium of a very fine quality.

The Court: Apex always had what they needed.

Mr. Alioto: That is not the evidence in the case.

The Court: That is your own testimony.

Mr. Alioto: No, I looked that up again last night.

The Court: Look it up again.

Mr. Alioto: I read it last night.

The Court: The statement of Mr. Leir himself.

Mr. Alioto: They tried to get it in March of 1940, the same month in which this letter was written, and they didn't get it. And I asked the witness, was Continental Ore Company one of the companies you meant to keep out of the export business?

The Court: He answered no.

The Witness: I said no.

Q. (By Mr. Alioto): Then you did not include

(Testimony of Edwin D. Bransome.)

the Continental Ore Company in th. broker situation you described, is that it?

A. I didn't know anything about the Continental Ore Company. I don't know whether they were included or not. I don't know whether they were brokers. I didn't know them.

Q. Your letter states that the export price was $1.70 f.o.b. New York. Well, it says $1.70 for oxide. It doesn't say f.o.b. New York. But I call your attention to that paragraph. The last paragraph says the export price is $1.70 for oxide and $3.70 for ferro——

A. "The prices for export are still the same, namely, $3.70 per pound for Ferro and $1.70 for Oxide. These prices make for people trying to buy domestic and sell export."

Q. Yes.

A. In other words, we were trying to discourage them, and the way we discouraged them finally was to get the Government to make them get licenses before they could buy any vanadium and ship it abroad, and so to be sure it would go to the right people and not to our potential enemies.

Q. Yes. And didn't the Germans get a million pounds of oxide just before the outbreak of war from the Metallurgical Company?

A. What is that?

Q. Didn't the Germans get a million pounds of oxide from [2120] the Metallurgical Company just before the outbreak of war?

A. Are you asking me——

(Testimony of Edwin D. Bransome.)

Q. Yes.

A. Are you imputing that I sold the Germans a million pounds?

Q. Do you know?

A. Wait a minute. You just said that I sold it, didn't you?

Q. The record shows Electro Metallurgical Company. I didn't say you.

A. Then why bring it in when you are talking to me? If you are impugning my patriotism, let us do it definitely.

Q. I am not impugning your patriotism. You just made a statement about where this oxide was going.

Q. (By the Court): Did you sell to Germany?

A. No, sir, but before the time we finally put up the price to where we thought they would stop, they had bought one order, your Honor, before this. I said, "Make it $5 and that will shut them up." They bought it, and from that time on we didn't sell them.

Q. When was that?

A. I can't remember that particular time.

Q. What year?

A. I think that was in 1938, if I am not mistaken.

Q. (By Mr. Alioto): Mr. Bransome, I am not saying [2121] anybody who sold to the Germans or anybody else in 1938 and 1939 was unpatriotic. That is a matter that you introduced here.

(Testimony of Edwin D. Bransome.)

The Court: Just a minute. What date does your question imply?

Mr. Alioto: There was some testimony given by Mr. Burwell that Mr. Sneath of Electro Metallurgical came out to see him in Colorado in 1939, and as a part of the program of getting rid of the oxide, a million pounds was sold to Europe through Sir Edmund Davies, who was head of the cartel in Europe, most of which went to Germany. That is the evidence in the record.

The Witness: I don't know whether a million pounds went to Germany and I doubt it very much for the record.

Q. (By Mr. Alioto): In any event, you say the export price at this time was $1.70 in your letter. Now, your sales to the French were at $1.30?

A. Wait a minute. Will you read the rest of that, Mr. Alioto? I said those prices were made for certain purposes.

The Court: Those prices according to the letter were made by the purchasers, not by the sellers.

Mr. Alioto: I do not care who made the prices. I just want to know why you were selling 40c below, you meaning the Metallurgical Company, to the French group.

The Witness: Do you know any orders that were sold at $1.70 or above? Are they in the record?

Q. (By Mr. Alioto): Mr. Bransome, my question is a rather simple one. You say the export price is $1.70.

A. I said the price was $1.70 on oxide, and that

(Testimony of Edwin D. Bransome.)

letter, if you will read that to the jury again so there is no question—read that letter.

Q. "The prices for export are still the same, namely,. $3.70 per pound for Ferro and $1.70 for Oxide. These prices make for people trying to buy domestic and sell export, but I am happy to say that we seem to have this phase under very good control." A. That is right.

Q. "And if any shipments do get away from us they are very small ones." [2123]

Q. Is there anything else you wanted me to read, Mr. Bransome?

A. No, this is all right. That shows—those we to discourage people.

Q. Now, we have the price of $1.70 for oxide at the market price of 1940, is that a fact?

A. Call it—I don't think it is a fact, but call it $1.70.

Q. Well, what do you mean, Mr. Bransome? You tell us. You read the letter and tell us what you meant by that.

A. It says here:

"The prices for export are still the same, namely, $3.70 for ferro-vanadium, and $1.70 for oxide. These prices make for people——"

"may," it should be——

"——for people trying to buy domestic and sell export."

Q. There isn't any question, then, that the price at some time had been $1.70 for oxide?

A. I can't recall that. That's——

(Testimony of Edwin D. Bransome.)

Q. All right.

A. That's 1939. This is 1958. That's 20 years ago. I can't remember that.

The Court: How is this material at all to the issues in this case?

Mr. Alioto: Because, if your Honor please, at the same time there were American companies asking for this oxide, and they sold it to the French at 40 cents below market price.

The Court: Let's just assume——

Mr. Alioto: It's a good way of keeping it out of the country and keeping it away from the domestic producers,—as good as any.

The Court: If someone wanted to buy at $1.10 and sell it abroad, is it your contention that these people were under any obligations to sell it to them?

Mr. Alioto: My contention is that they cannot jointly refuse to sell to them. Yes, that is my contention. They may not jointly, by agreement, refuse to sell to them.

And Union Carbide, with 75 percent of the production, can't singly refuse to sell to them, in my opinion, under the law.

The Court: Well,——

Mr. Alioto: The point I am trying——

The Court: That is a new law: that is a new law.

Mr. Alioto: Your Honor has read the Moore case. There was a refusal to sell by agreement. Is there any difference between the two cases?

(Testimony of Edwin D. Bransome.)

The Court: I think a producer can sell to whom he pleases.

Mr. Alioto: In agreement with another producer, when they both have 100 percent of the market? [2125]

The Court: If you will just offer some evidence, now, showing an agreement, that is what I would like to get.

Mr. Alioto: Your Honor has gone through the Griffiths case and the Moore case, and there is a lot more in this case than in the Griffiths case, and you know what the Supreme Court did there. There is a lot more evidence——

The Court: They sustained the lower court. That is what they did. I am perfectly aware of that.

Mr. Alioto: The Griffiths case? They overruled the lower court, I thought.

The Court: Well, you read it again.

The proposition here is this: You are alleging a combination, an agreement——

Mr. Alioto: Yes.

The Court: Now, I would like to have some evidence showing that there was an agreement or an understanding to do this.

Mr. Alioto: Well, here are two companies. When they build a mill—when one company, at Uravan, builds its mill, it built it with steel supplied by the other company, and——

The Court: The jury has heard the explanation of that, why it was.

(Testimony of Edwin D. Bransome.)

Mr. Alioto: I think your Honor is becoming an advocate for the defendants rather than a judge at this point, [2126] and I respectfully take exception to it.

The Court: Offer some evidence in support of your allegations, that's all.

Mr. Alioto: I do respectfully take exception to the advocacy on the part of your Honor of the defendants' cause. We think that it is error, but we, of course, will take it up at some other point.

The Court: You may have an exception to anything that the Court says.

Mr. Alioto: Thank you very much, Judge.

I want it to be known that I am being very respectful in what I say to the Court. Sometimes in a cold record it looks as though I am not. I think I am being deferential.

Now then, my question very simply, if I can get at it——

The Court: I just want to repeat that this line of questioning that you are hearing with regard to this export business has nothing to do with this lawsuit, and is merely surplusage.

Q. (By Mr. Alioto): Now, Mr. Bransome, it is a fact,—what I want to find out is this: If the export price was $1.70, why did you and Union Carbide sell to the French at the $1.30 price?

A. I don't know. I think we sold the French because their backs were against the wall, and we sold them at $1.30 because the domestic price was

(Testimony of Edwin D. Bransome.)

$1.20 and $1.10. I suppose we [2127] said $1.30 is enough under the circumstances——

Q. And you negotiated——

A. Wait a minute. I want to look at this letter.

Q. You want to read the letter, again, to the jury? I will be very happy to. A. No.

Q. If there is anything else you want to comment on, you go right ahead and do it, sir.

A. Yes, I would like to read this, if I may.

Q. You go right ahead, sir.

A. (Reading.) "At no time has the situation been easy in the supply of ferro or pentoxide. Up until the present date we have been required to keep our inventories up to a reasonable figure, to refuse to sell a great many people who have had firm orders in one hand and cash in the other and were willing to pay practically any price we asked. As a matter of fact, for domestic consumption and what we did sell for export required us at one time to ship practically hot metal."

Now, doesn't that explain our whole viewpoint? Could you have a better letter than that, than that paragraph?

The Court: Let's defer the argument. The letter speaks for itself.

Mr. Alioto: Now, without the necessity of reading the other documents on this export matter, if your Honor [2128] please, this arrangement of splitting orders goes on up to June of 1940, and I would like to put these letters in evidence and call them to the attention of the jury at a later

(Testimony of Edwin D. Bransome.)

time—these telegrams, rather. We will offer these as a group.

Mr. Archer: Are these all Vanadium Corporation exhibits?

Mr. Alioto: No. One of them is written from Mr. Gibbons to Mr. Swain of Electro Metallurgical Sales Company. Possibly I could segregate them, Mr. Archer.

Mr. Archer: Yes.

Mr. Holland: Would the Court give us the noon hour to look these over, so we can see whether we object to them or not, as long as he isn't going to read them now?

The Court: You can have them marked for identification.

And you may examine them.

Mr. Holland: I did not want to delay the trial any more by taking time to read them.

Mr. Alioto: We will offer as one group an exchange of correspondence and cables from Mr. Bransome with the Electro-Chimie of France.

The Court: This is for identification.

(The exchange of correspondence referred to was marked Plaintiffs' Exhibit No. 167 for identification.) [2129]

Mr. Alioto: We offer next for identification a single letter from Mr. Gibbons to Mr. John Swain, the vice-president of Electro Metallurgical Sales Corporation, with reference to a 30,000 pound order of V_2O_5 for the Societe de Electro-Chimie. We offer that for identification, too, at this time. We would

(Testimony of Edwin D. Bransome.)

like to offer them in evidence after the noon hour, if your Honor please.

The Court: Counsel may have an opportunity to examine them.

(The letter referred to was thereupon marked Plaintiffs' Exhibit No. 168 for identification.)

Q. (By Mr. Alioto): You saw a good deal of Mr. Burwell, didn't you, Mr. Bransome?

A. No, sir, I did not.

Q. Well, now, Mr. Burwell was at one time connected with the Metals Reserve program, I take it, and the Manhattan Project?

A. Yes, that's right.

Q. He did work with the Atomic Energy Commission? A. That's right.

Q. And in connection with those things you saw him, did you not?

A. Well, I saw him at the Manhattan Project. I don't think I saw Burwell more than once. I saw Van Fleet.

Q. Yes.

A. I don't know whether Burwell was at any of the meetings in the Atomic—in the Manhattan District, which, first-hand—they were formed to make the bomb. I don't—I don't want to bet that I didn't see him at any of those meetings, but we'll assume that I saw him once.

Q. On the Colorado Plateau, when you visited there, you saw him on several occasions, didn't you?

A. Well, over a period of three or four years, whatever it was, I think that I may have seen him

(Testimony of Edwin D. Bransome.)

several—several is probably right—three or four times.

Remember, Mr. Alioto, that I was not only president of the Vanadium Corporation; I served on the Advisory Defense Council.

Q. Yes, I know that.

A. Wait a minute—its successor, the Office of Production Management, the War Production Board. I represented the steel industry with Judge Morrow in the so-called big steel case. I served on confidential missions. And I had charge of an ammunition program.

Now, that means that most of that time, most of those years, I was in Washington, and my—Mr. Laub, who follows, or any of these people, will tell you that I got to my office on Monday morning, and when I went out to the Plateau it was very quick stuff—I would fly out and get there, and go over the lousiest roads you ever saw, and then come out of those same roads down again and fly back. And I wasn't out there buddy-buddying with anybody.

Q. (By the Court): The question is, How often did you see Mr. Burwell out there?

A. Several times.

Q. (By Mr. Alioto): Well, now, you don't deny that you discussed ore prices with both Burwell and Van Fleet, do you, Mr. Bransome?

A. Certainly—I don't know what you mean by "deny" that I discussed them.

Q. You talked about ore prices to both Burwell

(Testimony of Edwin D. Bransome.)

and Van Fleet, didn't you—your competitors, so-called?

A. Not to my recollection, no.

Q. You mean at no time did you ever discuss ore prices?

A. Oh, they may have talked about the prices that they had out there, and the prices of ore, and may—on a couple of occasions may have said, "Is the ore coming in?", and "How are the prices?" That's probably so.

Q. And you would tell them what your prices were, would you?

A. No, I don't think so.

Q. When they asked you "How are the prices?", you wouldn't answer them, is that it? [2132]

A. No; we had constant battle, through our people, between them, because we thought they weren't living up to what their listed prices were, and it was a constant war. Burwell has testified here—in the transcripts that I read—that at one time some of the people wanted to shoot them off the claim.

Q. Well, did you think that they had some obligation to live up to listed prices?

A. No.

Q. Then why——

A. They had no more obligation—look, that's common in business. They call them price-cutters.

Now, any man—I have testified that we would pay any price for ore that we saw fit to pay at any time, regardless of anything. Now, that was

(Testimony of Edwin D. Bransome.)

our policy all the time, because we had a government mill that we were trying to fill and get with ore—to get V_2O_5—not for the Vanadium Corporation, but for the defense effort. We were getting the magnificent sum of two cents a pound of V_2O_5 produced for building and running that mill and doing the whole work. Now, that's how much we were interested, as far as the selfish interests that the Vanadium Corporation had—two cents a pound of V_2O_5 on all that work.

Q. For instance—I am not talking about selfish interests, or anything else. I am simply trying to get at certain [2133] facts. Now, let's forget about Monticello for a moment.

You purchased ore before you built any mill at Monticello, didn't you?

A. I didn't purchase it.

Q. Your company.

A. I instructed our people, Mr. Viles, to buy the ore, and at Monticello I said, "I want 25,000 tons of ore in the pile when we have this mill finished in September-October."

Q. I am not talking about——

A. They said, "Yes, we will get it." And that was all. I didn't tell them what the price was to be, or anything else, or——

Q. Did you have a mill at Monticello in 1940, sir?

A. No. I think that was 1941. We were talking about Monticello in 1940, though.

(Testimony of Edwin D. Bransome.)

Q. You actually got Monticello in 1942, didn't you?

A. I don't know whether we got the water rights out there, or—I don't know what the dates were.

Q. All right. In any event, there was a time when you decided to open up your Naturita plant?

A. That's right.

Q. And that came about 1940, did it not?

A. I think that was 1940 that it was opened up. We were out there fussing around in 1939. I believe it may have been '38. [2134]

Q. And in connection with opening up your Naturita plant, you had to determine how much you were going to charge for the ore, isn't that correct? A. Oh, yes.

Mr. Holland: You mean "pay" for it.

Q. (By Mr. Alioto): Pay for the ore.

A. That's right.

Q. All right. Now then, did you not instruct your folks in 1940 that they were not to pay more for the ore than U.S.V. paid?

A. No, sir. The price of ore was arrived at backwards, from the mill in Bridgeville back, and it was somewhere around 20 cents, 20½ cents, whatever it was, and we couldn't get the ore. So we raised that price to 21.

Now, after that we paid all kinds of prices. 21 wasn't bringing in ore. We paid any amount of different prices. We loaned prospectors ore—I mean, individual miners, the small miners, we gave

(Testimony of Edwin D. Bransome.)

them equipment, we hauled their ore for them, we did everything to get ore for the defense effort.

Q. Speaking now of Naturita and the period just before the opening of your plant at Naturita, two or three months before that time, do you recall having a meeting in New York with Mr. Van Fleet and Mr. Burwell? A. No, sir. [2135]

Q. Did you ever have a meeting in New York with those two gentlemen?

A. Not that I recall. I may have met them casually.

Q. On anything relating to business, whether it is the Maggie C. or Dry Valley?

A. Not together. I don't think I ever met Burwell and Van Fleet together in New York at all.

Q. Well, did you ever meet Van Fleet in New York for the purpose of discussing business of any kind?

A. Yes. I met him in respect to the Dry Valley claims.

Q. Now, just before you opened up your plant at Naturita didn't you have a meeting at your club with Mr. Van Fleet? A. What club?

Q. Did you belong to a Union Club of some kind in New York?

A. I belong to many clubs in New York.

Q. Is there one called the Union Club, Mr. Bransome?

A. Yes, sir. But I don't belong to it.

Q. Well, did you ever go to luncheon there, at the Union Club? A. No, sir.

(Testimony of Edwin D. Bransome.)

Q. What is the name of your club in New York?

A. Oh, I have got quite a few in New York. Do you want me to go over the list?

Q. Just some of the more prominent ones.

A. I'm ashamed of some of them.

Q. Some of the more prominent ones, Mr. Bransome.

A. Well, the Uptown Club and the Cloud Club—which is a luncheon club. It is quite possible that I might have met either Burwell or Van Fleet, or both of them.

Q. At where?

A. The Uptown Club.

Q. Yes. Now, do you specifically remember meeting in the Uptown Club just before you opened up at Uravan, at which you discussed labor situations, ore prices, and general conditions on the Plateau? A. No, sir.

Q. You aren't actually in the position, are you, Mr. Bransome, to deny that such a meeting took place?

A. I wouldn't deny it. I just don't remember any such meeting of any kind. It must have been awful casual, though, if it was.

Q. Now then,——

A. Wait a minute, now. We had ore in a pile in the yard in Naturita. I guess—no, that was—they tried to buy it from us and we wouldn't sell it to them.

Q. Now then,——

A. We wanted to stay in business.

(Testimony of Edwin D. Bransome.)

Q. I don't think your counsel finished reading a letter that was written to Mr. Kaiser, and I would like to finish it [2137] and ask you about it.

There is here in evidence a letter written to Mr. H. D. Kaiser.

Now, I take it you knew Mr. Kaiser, didn't you?

A. I never knew him, never met him.

Q. Of the Atomic Energy Commission?

A. Not to the best of my knowledge.

Q. Mr. Kaiser of the Atomic Energy Commission in Washington, D. C. And that letter is dated January 22, 1948. And in that letter——

First of all, do you recall a conversation with Mr. Burwell in 1947 in which he discussed with you certain ideas under what he called the "Process 'C',"—does this "Process 'C'" ring a bell with you, Mr. Bransome? A. No, sir.

Q. Do you recall a discussion with him about a method of producing uranium that would give you a cost of 65 cents on vanadium?

A. No, sir.

Q. Well, the letter reads as follows:

"In this connection I had an interesting talk"——

The Court: Who wrote the letter?

Mr. Alioto: Mr. Burwell wrote the letter to Mr. Kaiser of the Atomic Energy Commission, in which he refers to Mr. Bransome. I want to read that letter and ask Mr. Bransome [2138] if the facts recited with respect to him——

The Court: Has the letter been admitted in evidence?

(Testimony of Edwin D. Bransome.)

Mr. Alioto: Oh, yes. This is Exhibit 58, if your Honor please.

The letter states as follows:

"In this connection I had an interesting talk with Ted Bransome as a result of a casual meeting which developed into a brief discussion of the western situation. I told Ted that I believed that vanadium could be produced at a by-product price of 65 cents per pound of V_2O_5 from a properly engineered plant with the economies of such a plant and at the same time would produce uranium for the government at a much lower price than is being considered now."

Q. (By Mr. Alioto): Now, can you say, Mr. Bransome, that you never had a discussion with Mr. Burwell in New York in 1947 at which the question of producing V_2O_5 at 65 cents was discussed? Can you deny that that happened? Or is it you just don't remember any discussion?

A. I don't remember it, and I don't remember the extent—I will deny that it ever happened, because I just testified just a little while ago that I had gone to the Atomic Energy [2139] Commission and told them to produce it in the various mills.

Q. At this point we are not talking about that; we are talking——

Q. (By the Court): Did you have this conversation with him? A. No.

Q. (By Mr. Alioto): About 65 cents?

A. No, sir, I didn't.

(Testimony of Edwin D. Bransome.)

Q. You never discussed the figure of 65 cents cost for vanadium?

A. In connection with the 500-ton mill as a certain price—I may have discussed 65 cents. 65 cents, that figure is in connection with a toll charge that they would charge us for mining our own ore.

Q. Now then—however, is it your recollection that except for this toll charge arrangement on the Maggie C. and these other claims, that you never discussed a 65-cent cost of production with Mr. Burwell? A. I did not.

Q. All right.

Then Mr. Burwell continues in this letter to Mr. Keiser of the Atomic Energy Commission:

"While the price of 65 cents per pound of V_2O_5 would be a Godsend to V.C.A., in view of [2140] their present 85-cent cost,"——

Now, did you have, in 1946, an 85-cent cost for vanadium oxide?

A. At Naturita? I would presume so. The record will show what it was. We were starting that up; we kept it going for the war effort. Our costs in Peru were around 40 cents.

Q. I am talking about the——

A. All right, using the same price, the competition that we had, we used 40-cent oxide from Peru. Now, when we had to sell oxide, we weren't at the mercy of anybody—we had 40-cent oxide. It wa sless than that; it was fifty—well, it was about 40-cent oxide completed. The ore came up from Peru——

(Testimony of Edwin D. Bransome.)

Q. In '46 you had 40-cent oxide? 1946, after the war, you had 40-cent oxide somewhere?

A. I think—I can't be sure whether 40-cent oxide——

Q. How many pounds of oxide did you need for ferro-vanadium—two?

A. Yes, approximately.

The Court: How is this material?

Mr. Alioto: If your Honor will let me develop it, I will show you how it is material.

The Court: I want you to have some basis for the development. What has this got to do with this lawsuit?

Mr. Alioto: If he had 40-cent oxide, if your Honor please, that would be a price of ferro-vanadium cost of [2141] production of about $1.30, and it was being sold at $2.70, which I think is a matter of monopoly pricing that the jury can consider. But I don't think it was 40-cent oxide in 1946, either. I think it was 85-cent oxide.

Q. (By Mr. Alioto): Do you have any recollection as to whether it was 85-cent or 40-cent oxide in '46-47?

A. No. You have all the records on that. And the records are here.

Q. Well, that record has not been admitted, on the matter of costs.

Now, let me read on:

"While the price of 65 cents per pound of V.O. would be a Godsend to V.C.A., in view of their present 85-cent cost, the principal concern of T.B.

(Testimony of Edwin D. Bransome.)

was the possibility that this material would also be available for open market sale at the same price, which might enable competition to enter the ferro-vanadium field by way of Continental Ore or other competitors."

Now, are you in a position to say that the man who wrote this letter in January, 1948, did not have this conference with you?

A. I am in a position to say he did not; that did not occur. [2142]

Q. O. K.

Q. (By the Court): At that time was Mr. Burwell connected with the company?

A. I don't remember, your Honor. I think he probably had just resigned. And I'm taking that merely from reading the transcript that I read since I came out here a couple of days ago.

Mr. Alioto: We offer the letter that the Court rejected, indicating the effective date of resignation was February 1, 1948, after this letter. The Court rejected that letter, so that is not in the record, if your Honor please.

The Court: The date of the letter is what?

Mr. Alioto: The date of the letter is January 22, 1948. The testimony is he talked with Mr. Bransome, as a result of the writing of these letters in December of January, and then wrote a report of this meeting to the Atomic Energy Commission.

Q. (By Mr. Alioto): There did come a time in 1948 when you learned the Atomic Energy Commission had made a statement that it was going to tie

(Testimony of Edwin D. Bransome.)

its uranium sales to the vanadium market, didn't you? A. I don't recall that.

Q. There has been admitted in this case as Plaintiffs' [2143] Exhibit 59-A, a statement of Mr. Gustafson. Did you know him, Mr. Bransome?

A. Yes, I knew him quite well.

Q. And you worked with Mr. Gustafson in connection with various war matters and the Atomic Energy Commission?

A. Not various war matters. John Gustafson was in the raw materials end of the Atomic Energy Commission. I never knew him otherwise.

Q. Were you an adviser of the Atomic Energy Commission? A. No, sir.

Q. Or any member of the Atomic Energy Commission?

A. No, sir. I was one of their boys that produced for them, that was all. I never advised them. They told me.

Q. His statement, Mr. Bransome,—and it is evidence in this case put in through the testimony of Mr. Burwell—is:

"The Atomic Energy Commission statement is that since the estimated annual production of the Colorado Plateau, even under an accelerated program, would be small in relation to total U. S. requirements and the supply available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market."

Did you know, sometime in 1948, that the Atomic

(Testimony of Edwin D. Bransome.)

Energy Commission had depreciated the Colorado Plateau to that extent, [2144] **and had decided to tie its uranium production to vanadium sales?**

A. No, sir.

Q. Did you know that at that time? That never came to your attention?

A. Never. To my knowledge, I don't recall. It may.

Q. Don't you recall, then, that some big fight developed in Congress, and elsewhere, in which ultimately that opinion was reversed, after Lillienthal left the Atomic Energy Commission?

Mr. Archer: I object to that, your Honor. David Lillienthal did not leave the Atomic Energy Commission. He fulfilled his term.

Mr. Alioto: After he left or fulfilled his term.

Mr. Archer: And he was asked to continue by the President, and he refused.

Q. (By Mr. Alioto): In 1949 do you remember an argument about tying uranium to vanadium sales at all?

A. No. I remember—my advice to the Commission was to go ahead and put the ore through and let the chips fall where they may.

Q. Then your testimony is, so it will be clear in the record, that up until 1949 you do not even remember that there was a highly publicized argument about tying uranium to the [2145] vanadium ore, is that it?

A. No, sir, I don't remember.

Q. Did you ever ship vanadium oxide to other

(Testimony of Edwin D. Bransome.)

manufacturers of ferro-vanadium except the French principal for which you acted as agent, as you say?

A. Shipments to whom?

Q. To any other manufacturer of ferro-vanadium. A. In the United States?

Q. Anywhere.

A. I don't recall that. You would have to show me the record on that. The sales department knows more about that than I know.

Q. Did you have any policy against shipping vanadium oxide to some firm that manufactured ferro-vanadium?

A. No. If we had sufficient oxide on hand we would sell it to anybody at the proper price. We sold oxide to anybody that wanted to buy it. We sold it to steel makers, we sold it to everybody, and we would have sold them ore if they wanted to use it in the bath. They never could use the ore or oxide in the steel bath.

Q. In connection with that, do you share the opinion of Mr. Remmers—let me go a little bit back on that.

Did your company ever offer oxide for direct reduction in the steel bath?

A. Yes, sir. [2146]

Q. It did. And it sold oxide for direct reduction in the steel bath?

A. I don't know how much we sold.

Q. Did you put anything in it beside vanadium oxide itself? A. Not to my knowledge.

Q. Do you share Mr. Remmers' view——

(Testimony of Edwin D. Bransome.)

A. I don't know what Mr. Remmers' view is.

Q. Let me ask you, in your opinion does the addition of fluorspar to vanadium oxide add anything to it on a direct reduction basis?

A. Well, it has been pretty nearly 20 years before I was metallurgically inclined, but the addition of fluorspar wouldn't sound very persuasive to me, that it would add to the value of vanadium in a tool field, or anything of that kind.

Q. Would you agree with the statement that French dressing would be more efficacious than fluorspar?

Mr. Holland: Your Honor, this witness is not a metallurgist, as Mr. Remmers was. I don't know why he is going into these technical questions.

The Court: Objection sustained.

Q. (By Mr. Alioto): Do you know a Dr. Saklatwalla?

A. No, I never knew Dr. Saklatwalla.

Q. He was a director of your company, wasn't he? [2147] A. Not while I was there.

Q. Wasn't he employed by your company?

A. Not while I was there.

Q. Did you ever meet him?

A. I never met him.

Q. Do you know his reputation as a metallurgist?

A. Well, that was open to dispute. You will find some people who thought he was pretty good and some people who thought he was lousy.

Q. Did you ever have him patent, or did you,

(Testimony of Edwin D. Bransome.)

in 1938, possess a patent on the direct reduction of oxide with the use of fluorspar in the steel bath?

A. Oh, gosh, I don't know. But I will tell you—I shouldn't say this, but in my opinion, I'll bet it didn't work.

Q. Well, if it didn't work, someone made some representations to the government that might be a little serious.

A. Through Saklatwalla?

Q. Isn't this a Vanadium Corporation of America patent that I am holding in my hand?

A. Yes, United States Patent granted to Benjamin B. Saklatwalla in 1931. I don't know what it is for.

Q. Who owns that patent?

A. I imagine it was assigned to the—I don't know. It may be Ferangi owned it. Was it assigned?

Q. Read the heading on that patent and tell us who owned [2148] the patent.

Mr. Holland: Your Honor, I do not see any materiality to this.

A. That is 1931.

Mr. Alioto: Mr. Holland spent a long time trying to establish the fact that the addition of fluorspar was some kind of unfair trade practice.

The Court: It is absolutely immaterial. Objection sustained.

Mr. Alioto: Your Honor permitted Mr. Holland to spend two hours on that subject.

The Court: The Court has ruled. This is something back in 1931.

(Testimony of Edwin D. Bransome.)

Mr. Alioto: This is a patent that was in effect in 1938, if your Honor please, and Mr. Holland implied the addition of fluorspar was an unethical practice, and your Honor let him do it. Here is a patent held by these people in which they make a representation to the United States Government that it is efficacious.

The Court: We will have no further discussion on that matter now. The Court has ruled on it and it has no apologies for its ruling.

Mr. Alioto: We think it unfair that Mr. Holland was permitted to go on for three hours examining on that subject when he had a patent in his pocket that shows the [2149] efficacy of the addition of fluorspar.

Mr. Holland: I haven't gone on any subject for three hours.

Mr. Alioto: Yes, in your examination of Mr. Leir.

The Court: Just a moment.

I do not think counsel has a right to object to the time others have taken in this case.

Mr. Alioto: Particularly when I am not given one minute on that subject.

I would like to make a record on this. It is inconceivable to me that this is not an unfair ruling. Just let me establish this for the purpose of the record.

Q. (By Mr. Alioto): You do agree with me, don't you, that this is a vanadium patent that was held by your company during the time that you

(Testimony of Edwin D. Bransome.)

were its president? You do agree with me, don't you?

A. Why, I assume that patent—1931—why, it was run out.

Q. It ran out in 1949, or 1948.

A. Was there an extension on it? Seventeen years is the life of a patent.

Q. 1931 plus 17 is what? A. 1948.

Q. So it was in effect when you were president of your company and during the entire period of time, was it not? [2150]

A. There were thousands of patents we had. I don't know whether that was one of them or not. I never saw the patent.

Q. From the title——

Q. (By the Court): Do you know anything about it? A. No, sir, not a thing.

Q. (By Mr. Alioto): From the title of the patent isn't it apparent that it belonged to Vanadium——

The Court: Let us assume it did. He says he doesn't know a thing about it.

Mr. Alioto: If he did, I offer it to show that this company made representations to the United States Government on the basis of which they secured a monopoly on the invention to the effect that vanadium oxide reduction in a steel bath was even more efficacious than the ferro-vanadium itself.

Mr. Holland: Before you read it may I see it?

Mr. Alioto: Mr. Holland had extensive examination that there was some kind of unethical prac-

(Testimony of Edwin D. Bransome.)

tice involved in putting fluorspar in vanadium oxide and selling it as a direct reduction in the steel bath——

Mr. Holland: I never made such a statement as that. I contended it was unethical to sell straight oxide at a higher ceiling price. [2151]

Mr. Alioto: I offer to prove that this patent, which I am offering for the purpose of showing that the Vanadium Corporation of America, through a vice-president and director of that company, made representations to the United States Government of the efficacy of using vanadium oxide in a steel bath with the addition of fluorspar specifically, and aluminum as well; that this patent was in existence during the entire period of time that Mr. Bransome was the president of this company; and that despite the patent, there was a supression of the use of vanadium oxide in the steel bath, because they were making more profits on their ferro-vanadium.

Your Honor, you recall Mr. Priestley wrote a letter—

The Court: Just make your offer.

Mr. Alioto: That is right.

We offer to prove this is the same position taken by Mr. Priestley, and from this I think the jury can infer that the two companies acted jointly to suppress the use of oxide in a steel bath. We offer it for that purpose, and for the purpose of showing the actual facts that the addition of fluorspar to vanadium oxide is not as inefficacious as has

(Testimony of Edwin D. Bransome.)

been contended here by the chef d'oeuvre of the vanadium industry, Mr. Remmers, who thought that French dressing was more efficacious.

The Court: Your offer is rejected. It has nothing to do with thi. lawsuit. Immaterial. And could be only [2152] prejudicial.

Mr. Alioto: May we have this marked so we will know of what we are speaking at this point in the proceedings?

(The patent referred to was thereupon marked Plaintiffs' Exhibit No. 169 for identification.)

Mr. Alioto: Is your Honor also rejecting the offer of proof to the effect that the Vanadium Corporation of America deliberately suppressed this patent after securing it?

The Court: Yes, sir. Same ruling.

Mr. Alioto: Just to complete the record in that matter, if your Honor please, I would like to offer a series of other patents issued by the United States Government.

Mr. Hollar ': May I see them?

Mr. Alioto: Yes.

Let me just have them all marked as one. They tend to prove the same thing, namely, the metallurgical efficacy of vanadium oxide with the addition of a flux such as fluorspar or other material such as aluminum, and we offer this in connection with this witness, who has information about it, according to our information.

(Testimony of Edwin D. Bransome.)

(The group of patents referred to were marked Plaintiffs' Exhibit No. 170 for identification.)

Mr. Alioto: And we offer it to rebut, specifically, the extensive examination by Mr. Holland of Mr. Leir. Mr. Remmers said he was familiar with all the literature on this [2153] when he gave his French dressing crack.

The Court: Let us not have any argument at this time.

Mr. Holland: We object to them on the ground they are not even our patents, and have no bearing on this case. We were not contending—at least the Vanadium Corporation, in its examination of Mr. Leir, that there was anything wrong with putting a little fluorspar in it. We were contending there was something wrong in putting nothing in and then charging a price over the ceiling.

The Court: The offer is denied and an exception allowed. It is immaterial.

Q. (By Mr. Alioto): Now, Mr. Bransome, there is in evidence a document dated November 1943, which was a response to the Continental Ore Company by Mr. Gustav Laub, your assistant vice-president, when the Continental Ore Company requested a regular, dependable supply of ten to fifteen thousand pounds of vanadium oxide per month. Mr. Laub rejected that in November, 1943. At the time that letter was written,—and the letter is Exhibit 41—did Mr. Laub take up that matter with you, and did you discuss it with him?

(Testimony of Edwin D. Bransome.)

A. I did not.

Q. Do you remember whether the Continental Ore Company or the Apex Smelting Company requested a regular supply of [2154] vanadic acid from you in 1939?

A. No, I wouldn't say that I recall that.

Q. In 1940? A. No, sir.

Q. 1941?

A. It is a sales department matter.

Q. Do you have any knowledge that they requested a regular supply from you in 1941?

Mr. Holland: I do not believe that there is any evidence that they did, Mr. Alioto. I think the evidence is to the contrary.

The Court: He does not know, he says.

Q. (By Mr. Alioto): Are you aware of any request by the Continental Ore Company or the Apex Smelting Company for vanadic acid——

A. That is a sales department matter, Mr. Alioto. Any chief executive lets his sales department run the sales department and the operating department run the operating department. The only reason I was in this picture around the West was I really liked to go out there.

Q. You were pretty interested in the fact when they were dismantling the Apex plant, weren't you?

A. Not a bit. I don't remember anything about it.

Q. Come, now, Mr. Bransome.

A. Don't tell me I did when I didn't. [2155]

Q. Didn't Mr. Laub write you special reports

(Testimony of Edwin D. Bransome.)

about the Apex dismantling and your special interest in it?

A. I don't know what you mean by a special report.

The Court: We will take a recess until two o'clock.

(Whereupon a recess was taken until 2:00 o'clock p.m.) [2156]

Friday, June 20, 1958, 2:00 o'clock p.m.

EDWIN D. BRANSOME

called as a witness by defendant Vanadium Corporation, being previously sworn, resumed the stand and testified further as follows:

Cross-Examination—(Continued)

Q. (By Mr. Alioto): Mr. Bransome, I want to call your attention for just a moment to the government meeting that was held in June of 1941 about which I believe you already testified on direct examination. I think your testimony was that you were sitting there as a government officer of some type rather than as a representative of the Vanadium Corporation of America.

A. That's true.

Q. Now, then, there was, however, a representative of the Vanadium Corporation of America, was there not? A. That's right.

Q. Do you recall who that was?

A. Mr. Ward Miller.

(Testimony of Edwin D. Bransome.)

Q. Ward Miller? A. Yes.

Q. What position did he hold in the Vanadium Corporation of America?

A. Vice-President in charge of sales. [2157]

Q. Was there also a representative of the Electro Metallurgical Company or Union Carbide?

A. I don't remember. I assume that there was, Mr. Alioto. It was a general meeting of—a general meeting that Ernie Whiteside called for raw materials of a strategic nature.

Q. Now, you recall at that meeting that Mr. Leir made a statement that he thought that the—made a statement at the public meeting that he thought that the oxide was in short supply and that something should be done to encourage the production of oxide by the independent mills?

A. No, sir.

Q. Do you remember in that connection that he mentioned Shattuck and Blanding and Nisley & Wilson as mills which, if properly encouraged, could produce 51,000 pounds of oxide per month?

A. No, sir.

Mr. Holland: Is this in the testimony or is that what Mr. Leir said he couldn't remember?

Mr. Alioto: I am asking the witness whether or not this statement was made by Mr. Leir, not what the witness said.

Q. Do you remember Mr. Leir making a statement about what the problem was on supplies?

A. No, sir, I do not, sir, because I was not in that [2158] meeting for a very long period of time.

(Testimony of Edwin D. Bransome.)

As I told you, I was representing the industry of the country, between General Neustadt and Mr. Hillman, and I was there for a comparatively short space of time.

Q. Well, do you remember what, if any, statements were made by the representatives of the Electro Metallurgical Company and the Vanadium Corporation of America?

A. Do I remember any of those statements?

Q. Yes.

A. No, not at all. I don't believe they were made while I was in the room.

Q. Then you have no present recollection of the substance of anything that was said by Mr. Ward Miller, for example, of the Vanadium Corporation of America?

A. No, I stopped Mr. Miller from talking.

Q. How do you mean that you stopped him from talking?

A. Well, I stopped Mr. Miller because—I had never heard of Mr. Leir in the vanadium business, I had never heard of the Continental Ore Company, and I never heard—I heard of him as having a mill or a claim only, a claim, or having a mill or producing, really producing vanadium, and he started asking question of Ward Miller that were statistical questions and I said to Ward Miller: "Now, wait a minute. I think that those questions should be addressed to Dr. Wilbur Nelson who is conducting this meeting because they are confidential [2159] figures, and let them come from the

(Testimony of Edwin D. Bransome.)

Chair and not from you, Ward. I instruct you not to answer any more questions."

Q. Well——

A. "The Government has those figures." Now that—that was my—that's my sole—as far as I recall, that was my only statement or anything that I said in that meeting.

Q. I understand that that is what you said. Now, my inquiry is, do you remember that Mr. Ward Miller, except for this exchange on statistics, do you remember whether he said anything about the nature of supply and demand as of the time of the meeting? A. I do not, because——

Q. You have no recollection?

A. No, sir. I wasn't in that meeting long enough, I don't think, to know whether he did or not. I'm quite sure he didn't.

Q. Now, you certainly knew in April of 1942 that there was a mill called Apex that had been producing ferro-vanadium, hadn't you?

A. I don't recall in 1942—it wasn't a mill. There was no mill. Apex, as I found out later, Apex wasn't a mill.

Q. Well, it was producing ferro-vanadium by the aluminum method.

A. It was buying oxide and putting it in pots and adding aluminum and something else to it and producing—they bought [2160] an intermediate product from somebody who had produced it in mills of their own and claims of their own, and he put those in his pot. Now, that's all I know about

(Testimony of Edwin D. Bransome.)

it. I knew nothing about Apex, the conduct of it, what they had or anything, except that they produced exothermic vanadium.

Q. Did you ever see the product ferro-vanadium produced by Apex? A. Never.

Q. I show you what has been placed in evidence here as Plaintiffs' Exhibit 62, Mr. Bransome. Would you be good enough to look at the document—on April 14, 1942—and I call your attention to that initial along the left-hand side. Is that your initial there? (Examining.)

A. (Examining.) No. No, mine is bad enough, but it wasn't anything like that.

Q. It wasn't that bad? A. No.

Q. O.K. Now, then, one of the documents in the report—I will read it to you—is addressed to you. It is from Mr. Gustav Laub to—and he at that time was your vice-president in charge of sales, or was he in——

A. No, he was general manager of sales at that time, not vice-president in charge of sales. He later became that.

Q. Now, then, it is addressed to you, Mr. E. D. Bransome, President, and reads as follows: [2161]

"Inasmuch as the following information has been conveyed verbally, this memorandum, therefore, is for our records.

"With reference to the writer's memorandum of February 20 advising that Mr. Christiansen, vice-president of the above company, had informed us that they were going out of the vanadium business

(Testimony of Edwin D. Bransome.)

and had offered us their stocks of vanadium, raw materials, equipment, et cetera, as I have not heard further from Mr. Christiansen in this regard, I had Larry Johnson casually contact him by phone and tell him that I have not received the information that he promised to send."

Do you know who Larry Johnson was?

A. I think Larry Johnson represented us in some—probably in Chicago.

Q. He worked for the Vanadium Corporation of America? A. That's right.

Q. (Reading.)

"As a result, Mr. Christiansen, who is the vice-president of Apex, phoned the writer (that is, Mr. Laub) and stated that in going into the matter further they had run into some legal difficulties. Mr. Leir, president of the Continental Ore Corporation, with whom Apex has an agreement to furnish their entire [2162] production of vanadium, he acting as sales agent, objected strenuously to their breaching their contract, and upon referring the matter to their counsel, Apex were advised that Mr. Leir had a strong case against them and to make the most satisfactory arrangement with Mr. Leir that they could. This resulted, Mr. Christiansen advised, in Mr. Leir putting a proposition up to them in that they would produce vanadium at full capacity for a period of three months, after which time he would take over their equipment and raw materials contracts and produce the material himself. Mr. Christiansen therefore advised that

(Testimony of Edwin D. Bransome.)

they felt they would be obligated to produce at maximum capacity for a period of three months and have decided to proceed on this basis, but that they had not come to a definite conclusion about turning over the equipment and raw materials contracts after that time. The contract with Mr. Leir, he said, extended over the balance of the calendar year. And in the event the second part of Mr. Leir's proposition does not go through, Mr. Christiansen stated that they still proposed to offer us such raw materials as they had available, as well as plant equipment.

"The above information, at your suggestion, was conveyed by phone to Mr. E. K. Jenckes, Assistant Chief, Vanadium Branch, War Production Board."

Now, you remember having this discussion with Mr. Laub, don't you, Mr. Bransome?

A. That recalls a discussion—I don't remember it; it has been so long ago, and that one paragraph about E. K. Jenckes is the thing that brought it back to my memory—was that in line with our usual program with the Government, when they said they were going out of business, we got in touch with Jenckes—Laub got in touch with Jenckes and said: "A producer is going out of business. We want to report that to you." So he said he has offered the stock to us for sale. When the man came to us and told us that he couldn't sell us his equipment, I don't know whether we wanted the equipment or not—that would have to be determined by the mill at Bridgeville—but when the

(Testimony of Edwin D. Bransome.)

man—oh, Mr. Whatever his name is—Mr. Christiansen—said to Laub, "That deal is off," we were interested—we never said we would take it—we said we would consider it, but he said, "The deal is off," and he told me about it—he reported that to me because I was interested in all sources of supply. I said, "Don't forget to call up Jenekes and tell him that they are not going out of production; they are in production."

Q. And that is why you had him call Mr. Jenekes, is that it?

A. Definitely. There could be no other reason.

Q. Now, you knew at the time that Christiansen had dropped the matter and that Laub, through Larry Johnson, had resurrected these conversations, didn't you?

A. I think that we might have been interested in magnesite or something that they had, if they were going out of business. I don't think we were particularly interested in their equipment, but magnesite was hard to get in those days, and if he had magnesite to sell, that was probably—that is why—well, they turned it right over to the purchasing department and the purchasing department said that if they have magnesite or whatever was on the list, why, we are interested in buying it, because it came from Austria and it was difficult to procure, and I think that they might have been interested in buying that. As for the equipment, my best judgment tells me that they wouldn't have

(Testimony of Edwin D. Bransome.)

bought any more than possible. We had all we wanted.

Q. Now, then, the next ——

A. We might have bought the oxide because we were looking for oxide.

Q. The next special report, this paragraph that is underlined, and I asked you whether that was your signature, and the next special report from Mr. Laub, dated April 14, 1942, states, among other things:

"That Christiansen further stated that he would furnish us with the name of all of their suppliers of ores and oxides, the principal ones apparently being the Shattuck Chemical Company and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the vanadium business."

Now, at that time that was brought to your attention, wasn't it?

A. I don't know what Mr. Christiansen's ideas were about Mr. Leir. He was his partner at one time, wasn't he, and I don't know why he should be interested in keeping him out of the business, if he had been his partner and working with him.

Q. Weren't you folks interested in the same thing and isn't this why he made the same proposal to you, Mr. Bransome?

A. Not a bit. Not a bit. We were in their—that letter does not say so. Those are not my initials and

(Testimony of Edwin D. Bransome.)

I don't believe they are initials or anybody's initials. They look like a couple of scratches.

Q. There is no doubt that Mr. Laub wrote that report, is there?

A. Well, it says "G.L." on the bottom of it. I assume that he did write it.

Q. All right, there is no doubt that Mr. Laub was the man who had contacted you about this problem just prior to [2166] this time, as you testified?

A. That would be his duty, to contact me as the chief executive of the company, to say that certain assets of another company are offered to the company. Mr. Laub couldn't buy them. He had to come to me and ask me whether I wanted to buy or recommend to the Board that the assets of a company be purchased by the corporation. I couldn't buy it myself; that had to go to the Board of Directors. I could make a recommendation. If it was in excess of ten thousand bucks, that all had to go to the Board and be decided upon by them. That was routine. This stuff is not heinous about him discussing the thing with me. He just made it a matter of record, the discussion he had with me, and I told him, "Now, don't forget to tell Jenckes." That is what this letter says. Jenckes was in charge of vanadium at the time.

Q. He is working for you folks now, isn't he?

A. No.

Q. Has he ever worked for you?

A. No, never worked for us.

(Testimony of Edwin D. Bransome.)

Q. Or for Union Carbide?

A. I have no idea.

Q. And, the final paragraph:

"We had an interesting discussion concerning low copper grained aluminum which they produce and release with necessary priority approval and I therefore turned [2167] him over to our purchasing department with regard to this item."

A. Low grained copper—low grained aluminum was used by us in reduction of vanadium in the exothermic process, and it was just procurement, and if he had any or was in a continuous business, the business of continuous supply of that, we were only too glad to get it, and if he wanted to become a supplier of ours—Mr. Laub didn't say anything to him, I didn't say anything to him—he just said: "Go and see the purchasing department, and if they are interested, and I am sure they will be, you can probably do business with them." That is what I assumed Laub said. I can't think of anything else.

Q. So then you bought 200,000 pounds of this from him?

A. We bought—we would have bought it from anybody.

Q. At 13½c.

A. I don't recall if we even bought it. I don't recall the price of it. That is the purchasing department, the manufacturing department did that, but if we could have gotten this grained aluminum from him, we certainly would have bought it from him

(Testimony of Edwin D. Bransome.)

because we would have bought it from anybody. It was hard to get and we did not have a graining machine ourselves at the time and graining aluminum with a paddle is a little difficult to do. I don't know whether you realize it or you know the process or not, but it was difficult to [2168] procure at that time, and our purchasing department, as Mr. Laub said, "Take it up with the purchasing department" and, if they could have got it, they would have done it, because we were constantly in need of it.

Q. Wasn't the price of fine aluminum at that time about 15c?

A. I don't know.

Q. You don't recall?

A. That might—I don't think—I don't know enough about it to know whether grained aluminum was secondary aluminum or not.

Q. Why is it you didn't try to buy any aluminum before this time from this company? You knew it existed, didn't you?

A. As far as I am personally concerned, I didn't. The purchasing department may have.

Q. Wasn't this the start of commercial relations with the Apex Smelting Company and your company?

A. I don't know. As far as that goes——

Q. All right.

A. Wait a minute now, I would like to finish that up.

(Testimony of Edwin D. Bransome.)

Q. You go ahead and say anything you want about anything.

A. If they sold us for 13c when the price was 15c, I don't understand that at all. Our purchasing agent must have been pretty good.

Q. I asked if fine aluminum was 15c. This is a low [2169] copper grained aluminum.

A. Well, if it is a secondary aluminum, 13c might have been the going price for it.

Q. You don't know that it was, do you?

A. I certainly do not. I don't know anything about the transaction.

Q. Now, then, just about the same time you personally were out there negotiating to take the Blanding supply away from Apex, weren't you?

A. I never negotiated with anybody to take the supply of the Blanding—Blanding—what, Blanding's oxide?

Q. Yes. A. Never.

Q. Did you go out to Los Angeles and meet with a man named Garbutt about this time?

Q. Who did you go with?

A. Myself.

Q. Did anybody accompany you on that trip, Mr. Bransome? A. No, sir.

Q. And you talked to Mr. Garbutt alone?

A. Yes, sir.

Q. Can you fix the approximate time of this? Was it about January 1942?

A. I don't know what date it was. I am sure that it is in the record some place, and that could

(Testimony of Edwin D. Bransome.)

be done. You can fix it for me. I will take whatever you say.

Q. I think the record indicates that the contract was dated about May of 1942, but didn't you contact him before the contract was drawn up?

A. Oh, yes.

Q. About four or five months before?

A. I would think so. An amusing thing was they told me Mr. Garbutt was a lone wolf and a hermit. Nobody could get near him. I said, "Let's see who he is." I picked up "Who's Who" and found he was president of the Los Angeles Athletic Club. There were 10,000 members there and I couldn't see that he was a recluse. I remember that.

Q. In any event, you did buy those Garbutt claims? A. Definitely.

Q. In January 1942 your company did buy the vanadium oxide [2171] from the Blanding Mines, didn't it?

A. I don't know whether it did. I assume it did. Let's say they did.

Q. And you knew at the time you were negotiating with Garbutt, didn't you, that the Blanding Mines was one of the suppliers of Apex?

A. No, sir. I didn't know whether it was Apex or anybody else. They were sporadically making oxide. Now, to whom they sold that, I don't know.

Q. Mr. Bransome, from 1930 on, Apex aside, from 1938 on, you and the Electro Metallurgical

(Testimony of Edwin D. Bransome.)

Company were the only producers of ferro-vanadium in the country, weren't you?

A. I don't know. I believe so.

Q. That is something you would know, isn't it, Mr. Bransome? A. No, it is not.

Q. Just the two companies?

A. Mr. Alioto, if you can get hold of vanadium oxide, a pot, and some grain aluminum, and something with which you can light it, you can produce ferro-vanadium of a grade that will be saleable.

Q. It is not difficult to do that, is it?

A. I don't think so.

Q. And it does not require an awful lot of money to get into that, does it? [2172]

A. I don't know what the investment is.

Q. You just said it wasn't very hard, you just get a pot and throw something in it. Would you say about $25,000 to do it?

A. I have no idea. The grinding machinery and all that stuff would cost. I don't know what it would cost to be in business. Mr. Alioto, I want to repeat, I didn't know anything about Apex and I don't know anything about Apex today. I don't remember anything about it.

Q. You do not remember anything perhaps. It is true that you were the only two producers of aluminum from 1938 on to 1949 exclusive of this Apex production, is it not? Will you agree that that is true?

A. We would be very big millionaires and not

(Testimony of Edwin D. Bransome.)

fussing around with what we are fussing around with.

Q. That was true, wasn't it? You were the only producers of ferro-vanadium?

A. You didn't say that. You said aluminum.

Q. That is a slip. I am sorry.

You were the only producers of ferro-vanadium, weren't you?

A. Yes, I think we were.

Q. You had 100 percent of that business?

A. I don't know, sir. From what time on?

Q. From 1938 through 1949. [2173]

A. I don't know. I can't recall. But I will take any record that anybody gives me that says that Apex or anybody else produced ferro-vanadium.

Q. And the only competition that grew up in the whole period was the Apex Smelting Company, so far as the production of ferro-vanadium was concerned?

A. They were not competition as far as I was concerned because I didn't know anything about them, and they had been competition, I would have regarded them as such.

Q. Now, Mr. Bransome, I don't want to be argumentative, but if you received this memorandum from Mr. Laub that he was in Apex to buy this business, how can you say that you do not know anything about it?

A. I said as a competitor. I didn't recognize them as competitors because I didn't know anything about them. This memorandum was written.

(Testimony of Edwin D. Bransome.)

which Laub brought in to me and stated that there was certain stuff for sale.

Q. (By the Court): Did you know up to that time anything about Apex?

A. Not a thing that I can remember. I can't remember anything about Apex.

Q. (By Mr. Alioto): Mr. Bransome, you were in a government meeting in June of 1941 when Apex was represented there by Mr. Leir——

A. I didn't know who Mr. Leir represented in that meeting. [2174] I asked who Mr. Leir was and whether he was accredited in the meeting.

Q. All right, and you found out who he was, didn't you?

A. I did not. I said "Mr. Nelson will answer those questions, Mr. Leir, and not you."

Q. You want your testimony to say that in 1941 and 1942 you did not even know there was a producer in Chicago of ferro-vanadium who was the only other one in the business?

A. I would say as far as I was concerned, they were of no moment to me at all, and not enough for me to remember them.

Q. Not enough, and yet your vice-president and general sales manager writes personal inter-office memoranda to you?

A. The vice-president and general sales manager discussed with me the fact that somebody was going out of business and had certain equipment for sale. He couldn't buy it, Mr. Alioto. He had to come to me, as I went through a long discourse

(Testimony of Edwin D. Bransome.)

with you to tell you that it had to come up to me and then to the board.

Q. This Monticello plant was built for you with the help of government funds, wasn't it?

A. That is right.

Q. And then you operated the Monticello plant for a while and then there came a time when you tried to operate buy the Monticello plant from the government? [2175]

A. When did we try to buy it?

Q. Didn't there come a time when you tried to buy it after the Metals Reserve and the government program had come to an end?

A. I don't know whether we did or not.

Q. In any event, you did get the Monticello plant? You definitely went to the Atomic Energy Commission?

A. That is a fine plant, by the way.

Q. And then thereafter the United States Vanadium Corporation sold to you the Durango plant, didn't it?

A. I would say Vanadium didn't sell us the Durango plant. We bought the United States Durango plant from the Metals Reserve—from the Defense Plant Corporation, as I recall it.

Q. How much did you pay for it, do you recall?

A. I don't know, but it must be a matter of record.

Q. Was it about $75,000 or less?

A. I don't know. It was in lousy shape. Some

(Testimony of Edwin D. Bransome.)

idiot tried to put acid through the roaster—I think it was Mr. Burwell—in some experiment that he ran through. He put acid through the top of the roaster so it was completely out——

Q. It was the same roaster from which you were getting vanadium oxide to the tune of three million pounds, wasn't it?

Mr. Archer: I take it this "idiot" testimony is not being offered against Union Carbide?

Q. (By Mr. Alioto): There wasn't too much damage [2176] involved if they were getting three million pounds when they were in trouble?

A. We were not in trouble. They were in trouble.

Q. As a matter of fact, when they gave you that oxide in 1939, at the beginning of the war there, you were very short of oxide, weren't you, because you were closed down in Peru for two months before that?

A. In 1938 and 1939 we were bringing ore up from Peru, and I think you have figures there that show you—I think those are the figures, aren't they?

Q. I hate to waste time on it.

A. You aren't wasting time because you just made a statement there that we didn't have any vanadium, and we brought up three and a half million pounds, four million pounds, millions of pounds from Peru.

Q. Do you know Mr. Kett?

A. Very well.

(Testimony of Edwin D. Bransome.)

Q. A very good man? Does he know what he is talking about?

A. On certain subjects he does.

Q. On September 12th, 1939, Mr. Kett writes, according to Plaintiffs' Exhibit 56:

"Due to the dry season just closing in Peru, and the consequent two months annual shutdown of plant, our stocks of oxide in Bridgeville must be immediately supplemented. Our position is particularly [2177] acute on account of the war. We have already received a quantity of oxide from the U.S.V. which they claim exceeds any amount which they are likely to get off Maggie C. Hence a delivery of ore to them and the storage in mill yard which will release immediately to us a certain additional quantity of oxide."

The Court: What is the date of that?

Mr. Alioto: September 12, 1939, if your Honor please.

The Witness: Where was the storage?

Q. (By Mr. Alioto): Do you think Mr. Kett knew what he was talking about in that first paragraph, Mr. Bransome?

A. Before you talk about Peru, there were dumps of ore down there by certainly a great many thousands of tons that ran something like six to seven percent better than anything out on the plateau. That was ore that could be brought up at any time and was brought up.

Q. Read that first paragraph and then tell me

(Testimony of Edwin D. Bransome.)

whether it was ore that could be brought up at any time.

A. "Due to the dry season just closing in Peru, and the consequent two months annual shutdown of plant, our stocks of oxide in Bridgeville must be immediately supplemented. Our position is particularly acute on account of the war. We have already received a quantity of oxide from the U.S.V. which they claim exceeds any amount which they are likely to get off the Maggie C. Hence a delivery of ore to them and the storage in mill yard which will release immediately to us a certain additional quantity of oxide."

Q. Was his statement that your position was acute correct?

A. Yes, they wanted ore and we gave them ore.

Q. And you overdrew your account by 300,000 pounds from the Maggie C., didn't you?

A. Well, we fulfilled it from other claims on the same basis. That was a toll arrangement.

Q. Here is one letter, Mr. Bransome, written by you marked "Personal and Confidential" to Mr. Viles, the mine superintendent in Monticello. Will you be good enough to examine that document and then just tell us what your recollection of that transaction was, if you remember?

Mr. Holland: May I see it?

Mr. Alioto: Sure.

Q. Before answering, Mr. Bransome, I would like to show that document to your counsel.

(Testimony of Edwin D. Bransome.)

A. That is all right. I would like to read it again.

Mr. Alioto: We will offer this in evidence, if your Honor please. [2179]

Q. Do you recall what that transaction was about, Mr. Bransome?

(The document referred to was thereupon received in evidence and marked Plaintiffs' Exhibit 171.)

A. I don't recall that specific transaction, but the memorandum, upon reading, brings back what it was—what in all probability it was.

Q. Let me read it first and then we will get it. This was from Mr. Bransome on May 25th, 1943, to Mr. D. W. Viles, Mine Superintendent, Monticello, Utah.

Subject, under that "Personal and Confidential":

"It occurred to me the thing we want to do is to have our trial on the 1400 tons of roscoelite made as quickly as possible at Durango and I cannot recall how long you said it would take to make delivery, that is, provided we discussed that point."

Who was operating Durango at that time?

A. We were, must have been.

Q. In 1943? Wasn't U.S.V. operating at Durango during that period?

A. I don't know.

Q. "With the above objective in view, it seems to me that you might be able to arrange with Johnny Hill and Paige Edwards the shipment of some of their roscoelite ore at Naturita, even

(Testimony of Edwin D. Bransome.)

though we have to absorb the trucking, inasmuch as if it is desired to move the Naturita pile, the sooner we do it, the better.

"If trucks are going back empty for Fall Creek and Omega, it would seem that the main expense ve would be subject to would be the loading.

"You probably have already thought of this, but if not, I think it might be arranged with Johnny and Paige in such a manner that would not prejudice any future price that we might get from Naturita.

"Will you let me hear from you as to what you think of this idea?"

Now, the Johnny and Paige referred to was John Hill of the U.S.V. Company, was it not?

A. No. That was M.R.S.

Q. He was with U.S.V. as agent for M.R.S., was he not? In any event, his name was John Hill. We already know who he was.

A. That is right.

Q. And the Paige was Paige Edwards?

A. Yes, and he was working for M.R.S.

Q. What was so personal and confidential about this matter? A. I don't know. [2181]

Q. You wrote the letter.

A. How can I remember what was personal and confidential 20 years ago? That was roscoelite ore which would not run through the Naturita plant. Roscoelite ore is different entirely from carnotite and it was adapted—it was not adapted to the process at Naturita and we did not run it and

(Testimony of Edwin D. Bransome.)

couldn't blend it, and didn't want to run it through, and we would rather have shipped that 1400 tons to Durango where they could use it and were using roscoelite ore because they were taking a lot of it from Placerville, and there was one big mine down there—I forgot what it was—I don't remember—we bought it later.

Q. When was the first time that you realized that the uranium content in this ore had a value more than anybody had previously imagined?

Mr. Holland: I object to that question. It has nothing to do with the case.

Mr. Alioto: I think it has, if your Honor please. We had a lot of discussion about uranium.

The Court: You may answer. I have a curiosity, too.

A. You see—may I go into a little detail on it? It will only take a couple of minutes.

Q. Yes.

A. U_3O_8, the yellow oxide, was never taken out of the [2182] ore except where it occurred in trees.

Now, a tree was something where the igneous intrusion had come up, the hot metal, and displaced a tree, so that when we cut it out, you could see actually the twigs. You could see the branches, the twigs and everything else in the trunk of that tree, and it was really where a tree had been displaced.

That was red oxide and yellow oxide. We took that out and we took the V_2O_5, red oxide, for ourselves, and we put on the side the other U_3O_8, the yellow oxide, the uranium, and sold it to a man by the name of Balsley, and who sold it in turn to

(Testimony of Edwin D. Bransome.)

companies like Vitro or those that used it for ceramics.

Q. Yes, but that was known for some time.

A. That was always known, as long as I was in the business.

Q. When was it you realized the uranium had a value other than that?

A. When the Manhattan District came to us.

Q. Didn't you know this prior to 1941?

A. No, sir. The first time I knew it, regardless of dates, is when the Manhattan District came to us and wanted uranium and we, of course, our scientific people immediately said, "Oh, oh, it looks like they are after this. It looks like they are fishing some place." [2183]

But they kept us in the dark for two months before they would admit that it was to be used for war purposes, and they still would never admit that it was to be used for an atomic bomb.

The Court: What was the Manhattan District?

A. The Manhattan District was a group of officers under General Groves.

Q. Was it a war agency?

A. It was. General Groves got this group of officers and they were given the job and two billion dollars to produce the atomic bomb and it was the greatest secret ever kept. We never knew what the next fellow was doing, and the next fellow didn't know what anybody else was doing, just General Groves and a few of his staff knew what was going on in the whole picture, and for several months, to answer you, Mr. Alioto, they concealed the fact

(Testimony of Edwin D. Bransome.)

from us that it was for the war effort, but we certainly could not believe it was not, because here there were these uniformed officers coming into our business and talking about uranium and holding things secret.

Q. You knew uranium then had a value even though you did not realize what the value was, is that right?

A. I surmised it had a value if the government was going to buy it. The Manhattan District wanted to buy it. It was very secret. [2184]

Q. When that was bought, was there a corresponding increase in the price that you paid to the miner?

A. I don't recall the dates, but the increase certainly came on.

Q. Isn't it a fact that for two years or so the miners were not being paid for the uranium content of the ore?

Mr. Holland: If your Honor please, Mr. Alioto has filed a suit in Salt Lake City against these same defendants. This has nothing to do with this case, but he is trying to get some information for the other case. That is what this is all about.

Mr. Alioto: I submit, if your Honor please, here are two companies that had meetings in connection with the fixing of the ore price.

The Court: Now, that is not a fair statement to this Jury. There is no evidence that has been introduced yet that there was an agreement to fix prices.

(Testimony of Edwin D. Bransome.)

Mr. Alioto: If your Honor please, there is evidence from which the Jury can infer that there was an agreement to fix the price.

The Court: I don't know how much imagination the Jury has, but they may.

Mr. Alioto: I submit that again, that there again your Honor is being an advocate for the defendant.

The Court: No, I am not. [2185]

Mr. Alioto: Instead of an impartial judge. When the president of one company meets with the president of another company to discuss ore prices, your Honor?

The Court: This Court simply wants absolute justice done and I do not want inferences drawn from inferences. If you have something that you can base an inference on, that is all right, then you can infer.

Mr. Alioto: I think your Honor knows the cases on price fixing, and that is quite an unfair statement on price fixing, with which your Honor is very familiar.

Mr. Holland: If your Honor please, I object to this line of testimony on the ground it is immaterial in this case.

Mr. Alioto: We offer to prove at this point, so there is no question about it, that both companies for at least two years did not pay the miners for the uranium contained in that ore when they knew the value and were getting money for it themselves.

The Court: Objection sustained.

Mr. Holland: We didn't get paid for it, either.

(Testimony of Edwin D. Bransome.)

Mr. Alioto: I can't develop it apparently. We have no further questions, Judge.

The Court: Anything further?

Mr. Holland: I have nothing further.

Mr. Archer: I have no questions. [2186]

Mr. Holland: May Mr. Bransome be excused?

Mr. Alioto: Yes.

The Witness: What is that?

Mr. Holland: You may be excused, Mr. Bransome.

(Witness excused.)

The Court: May I ask, Mr. Holland, how many more witnesses you have?

Mr. Holland: One. This is our last witness.

Mr. Alioto: I think we can conclude this afternoon without question. I know that is a consummation devoutly to be wished by your Honor and the Jury and the rest of us.

The Court: The reason I ask the question is, as you know, I have been assigned for a definite time.

Mr. Alioto: We expect to conclude this afternoon, Judge. We discussed that earlier and I think we can go on schedule.

GUSTAF LAUB

a witness called by and on behalf of the defendant Vanadium Corporation of America, and being first duly sworn, testified as follows:

The Clerk: Will you state your name and address?

(Testimony of Gustaf Laub.)

The Witness: My name is Gustaf Laub. My address is Wellwyn, Riverside, Connecticut.

The Court: That is not Irish, is it?

The Witness: It wasn't this afternoon, up until this afternoon. [2187]

Q. Mr. Laub, during the period '38-'39 were you employed by Vanadium Corporation of America?

A. Yes, sir, I was.

Q. And how long had you worked for them prior to that time?

A. Since 1919 when the Vanadium Corporation first formed. I had been with its predecessor, the American Vanadium Company, since 1916.

Q. What position did you hold in the Vanadium Company of America on July 1, 1938?

A. I was assistant vice-president and general manager of sales.

Q. And what positions did you hold with the company after that date?

A. I was assistant vice-president, general manager of sales, until 1949, when I became general manager—when I became vice-president in charge of sales, and in 1952 I was elected a director of the corporation. I held those two titles, vice-president in charges of sales and director, if director is a title, until I retired last December.

Q. Mr. Laub, in 1938 and 1939 you were general manager of sales, is that correct?

A. Yes, sir.

Q. There is in evidence some correspondence relating to a request by Continental Ore Corpora-

(Testimony of Gustaf Laub.)

tion dated July 28, 1939, to buy vanadium oxide from Vanadium Corporation of America. Do you recall that incident? A. Yes, I do.

Q. Will you tell the jury what happened since most of it was by telephone conversation, and what the result was, and why?

A. Yes. During that period there were rumblings of war on the other side and a great deal of speculation going on, and we received a great many telephone calls, visits and letters from persons and companies and brokers of whom we had never heard before. Some of them didn't even know how to spell the name "vanadium."

Well, about that time we heard from the Continental Ore Company, and they had inquired for quantities, small quantities, I believe, of vanadium oxide for shipment domestically, and we told them what our policy was, that we sold—I think at that time they were inquiring for ferro-vanadium, also. We told them that our organization had its own selling department, and that it was our policy to sell our products through our own sales organization, due to the technical aspects of the subject.

Q. And on that basis you refused their request?

A. I refused to quote them for domestic.

Q. Did you quote them for foreign?

A. I believe I did. I quoted them foreign—I don't [2188] know whether it was just at that time or not, but it was within a short time I quoted them for export. I think the price I quoted them then was $1.30.

(Testimony of Gustaf Laub.)

Q. I refer to your pencil memorandum (handing document to the witness).

A. Yes, this is it. This pencilled memorandum that I wrote, it says——

Do you want me to read it?

Q. All right.

A. (Reading.) "Phone Mr. Hirschland, quoted $1.30 f.a.s. New York, freight and insurance. Today's rates allowed——"

I guess that is insurance rates—they were fluctuating up and down (continuing reading):

"— Stated Buffalo delivery requested——"

Gee, I wish I had written better (continuing reading):——

"——Advised of price too high and wanted domestic price quotation. Advised we had our own sales organization and did not sell domestically through brokers."

I wrote that on August 8, 1939.

Q. There is in evidence some letters, which I will read—they are very short.

On November 16, 1943, Vanadium Corporation received a letter from Continental Ore, Mr. Leir (reading): [2189]

"Would appreciate your offering us 10,000 to 15,000 pounds of V_2O_5 contained in vanadic acid per month. We would be ready to sign a contract with you for a fixed length of time."

On November 19th you replied (reading):

"In response to your inquiry of November 16 requesting quotation on ten to fifteen thousand

(Testimony of Gustaf Laub.)

pounds monthly of V_2O_5 contained in vanadic acid, we regret very much that due to our present commitments we are not in position to take on this additional tonnage at the present time.

"Perhaps if you were still interested at a later date and our situation changes we will be glad to look into the matter further at that time.

"Regretting our inability to be of serve to you at this time, we are

"Yours very truly."

Will you please state what the facts were in respect to——. In other words, you refused to quote on the basis that you were not in a position to take on the additional tonnage. Why were you not in a position?

A. What is the date of that, please?

Q. November 16, 1943.

A. I think vanadium was still under control at that time by the government. The situation was such that our reserves [2190] of vanadium were low and we had a rule of thumb within our own organization that if the stocks or inventories of vanadium pentoxide got below one month's supply we were in very dangerous and very short supply. We endeavored at that time, I believe, to maintain inventories of black oxide, or vanadium pentoxide, as it has been referred to, up to three months, in order to feel safe and sure that we would have enough intermediate product to make ferro-vanadium to supply our domestic customers principally.

(Testimony of Gustaf Laub.)

Q. Well, do you know how much you had on hand on that date?

A. Well, we had about—at that time we had about a month's supply of oxide.

Q. How much was a month's supply?

A. Well, at that time we were selling, oh, I would say an average of 250,000 pounds of contained V in ferro-vanadium, or anywheres from 150 to 250 thousand pounds. That would be in terms of vanadium oxide required to produce that 150,000, would be 300,000 pounds of contained V_2O_5 in oxide.

Q. (By the Court): That is by the month? Per month?

A. Per month, yes, sir.

Q. (By Mr. Holland): Well, now, you made an examination of your figures for the case in Denver and determined how much supply you had on [2191] hand at that time. Do you recall what that figure was? A. This is 1943?

Q. That's right.

A. That figure was, I believe, somewhere around 103,000 pounds of oxide. At that particular time we had less than one week's supply of V_2O_5 on hand for the production of ferro-vanadium. When I referred to it that way, I mean the black oxide.

Q. In your letter you state (reading):

"Perhaps if you were still interested at a later date and our situation changes, we will be glad to look into the matter further."

(Testimony of Gustaf Laub.)

As far as you know, did Continental Ore ever come back and ask you to quote again?

A. Not anywhere near that time, no. It must have been much later if they did.

Q. Now, 1940, there is evidence here—in April of 1940 I believe it was—that you refused to quote Apex Smelting Company. Do you know the basis on which you refused to quote Apex Smelting Company?

A. The same reason. We were short of oxide by our regular policy.

Q. Do you know what your oxide inventory was on that occasion?

A. On that occasion, I don't recall exactly on that date, [2192] but around that time I do know we had not more than a month's supply of oxide.

Q. There are two letters in evidence, Mr. Laub, which I will read. One directed to you from Continental Ore (reading):

"Gentlemen:

"As you know, the Apex Smelting Company of Chicago has been in the aluminum smelting business for more than 20 years. Last year they entered into the production of certain ferro alloys by the alumino thermic process and have created good facilities for this particular manufacture which, if necessary, could be easily enlarged. Would you be interested in farming out a certain quantity of vanadic acid and allow us to convert it for your account to a low-carbon ferro-vanadium? We shall be awaiting the pleasure of your reply to the above

(Testimony of Gustaf Laub.)

suggestion and hold ourselves at your disposal for any personal discussion you might like to have on the subject."

To that you replied, on June 18th (reading):

"In response to your letter of June 16th, wish to advise you that we would not be interested in your proposition of furnishing you vanadic acid for conversion into ferro-vanadium, as all of our production is consumed in the manufacture of our own products. We thank you, however, for having referred this matter to us."

And then on the 21st there is a further letter from Mr. Leir to you (reading):

"We have received your letter of June 18th. Just for the record, may we state again that we did not ask you to furnish us with your vanadic acid for our own use. We offered you our facilities in Chicago for the purpose of converting your material for your account on a toll basis. In other words, we would return the finished ferro-vanadium to you."

Now, will you state what was involved in your making a decision not to farm out this ferro-vanadium?

A. Yes. We never had any difficulty in refining the final product of ferro-vanadium. We had ample facilities to take care of that. Our principal difficulty was in keeping abreast of our requirements, raw materials, of which we considered vanadium pentoxide one.

Does that answer your question?

(Testimony of Gustaf Laub.)

Q. In other words, you had ample facilities for converting oxide into ferro-vanadium?

A. That is right, sir.

Q. There is in evidence and has been frequently referred to, and was again with Mr. Bransome, certain memoranda from you to—written by you in connection with a call which a Mr. [2194] Christiansen, vice-president of the Apex Smelting Company, made on you originally on February 20, 1942. On that occasion you wrote a special report.

What is a special report?

A. We had different types of reporting. The general report, that went to as many as 20 people throughout the organization. A special report was one that would probably get into the hands of only persons that were required to have the information. That was more for the benefit of the stenographer, the secretary writing the report, so that she wouldn't make too many copies for circulation. So the special report went only to possibly four, five or six people, whereas the general report was circulated all over the organization.

Q. Mr. Laub, did you know Mr. Peterson prior to the time he called on you on this occasion?

A. Mr. who?

Q. Mr. Peterson.

Mr. Alioto: Christiansen.

Mr. Holland: Christiansen. Pardon me.

A. I only met him very slightly, oh, somewhere around in the trade, probably, probably a metal show or convention somewhere. About all I knew

(Testimony of Gustaf Laub.)

was a Mr. Christiansen when he called. I didn't know just exactly what company he was connected with at the time, until his card was sent in to me, and it showed that he was vice-president. [2195]

Q. (By Mr. Holland): Of Apex?

A. Of Apex, yes, sir.

Q. Did you know a Mr. Singer or Mr. Lippa of that company at that time? A. No, sir.

Q. Did you know anyone at Apex other than Mr. Christiansen?

A. No one else except Mr. Christiansen. He came in out of the cold.

Q. Had you ever done any business with him before? A. None whatever.

Q. Had you ever discussed in any way with anyone at Apex their entry into the ferro-vanadium business? A. Not at all.

Q. Did you know anything at that time—prior to the time Mr. Christiansen came in—about their decision to go out of business?

A. Never heard of it.

Q. Did you in any way, when you were talking with Mr. Christiansen, try to influence him to go out of the business?

A. I listened to his story.

Q. Is that about what it amounted to?

A. That is so. I reported it the best that I recalled.

Q. Now, several times in these memos the fact is referred to that they are going to tell you what the vanadium oxide [2196] sources that they have

(Testimony of Gustaf Laub.)

been drawing on, who their suppliers were. There is a statement in the last memorandum which Mr. Alioto recently read (reading):

"——; that he further stated he would furnish us with the names of all of their suppliers of ores and oxide, the principal ones apparently being Shattuck Chemical Company and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the vanadium business."

Did you in any way—did you ask him for these?

A. I did not. He was trying to make a sale, and he was throwing forward all the inducements he could, thinking that might be one.

Q. Did he indicate to you why he didn't want Mr. Leir to get this oxide, or——

A. No; he seemed to be sore at Mr. Leir about something, but I didn't know what it was at the time, except what he told me.

Q. Mr. Laub, have you ever made any agreement with anyone in the Union Carbide organization—— A. I have not.

Q. ——concerning—let me finish.

A. Oh, pardon me.

Q. You never made any agreement of any kind, is that [2197] correct? A. That's right.

Mr. Alioto: He knows the script.

Mr. Holland: Well, he knows he hasn't made any agreement, if that is what you mean.

(Testimony of Gustaf Laub.)

The Witness: I have heard that question asked so many times, your Honor.

Q. (By Mr. Holland): You were a witness in the Denver case, weren't you, Mr. Laub?

A. Yes.

Q. You have heard this a good many times. Have you ever made an agreement with anyone in the Union Carbide organization respecting the sale, marketing, distribution of vanadium products of any kind, or the prices to be set thereon?

A. Have you finished?

Q. Yes.

A. I never did.

Q. Have you ever heard of any such agreement being made——

A. I never heard of——

Q. —— between Union Carbide and Vanadium Corporation of America?

A. I never did.

Mr. Holland: That is all. [2198]

Q. (By the Court): When did you first learn that you were charged with that?

A. In Denver. In Denver, when the Denver trial came up.

The Court: We will take a recess at this time.

(Short recess.)

Cross-Examination

Q. (By Mr. Alioto): Mr. Laub, on your direct examination I think you indicated that the first call from Mr. Christianson was a personal call

(Testimony of Gustaf Laub.)

rather than a telephone call, is that right? You said something about the presentation of a card.

A. No, he presented a card in our outside office.

Q. Yes.

A. And that was sent in to me, that a Mr. Christianson was calling. On that card I noticed he was vice-president of a company.

Q. I take it he had made no advance telephone appointment with you; he just walked in, is that it?

A. That I don't recall.

Q. In any event, during the conference he told you they were going out of the vanadium business and he had certain equipment and some small stock of oxide that he wanted to sell, is that it?

A. I think there was some magnesium.

Q. Magnesite bricks, were they?

A. Yes.

Q. Did you know at the time what the magnesite bricks were used for in the vanadium process?

A. I don't think he said bricks, I think he said magnesite. Oh, yes, I had known for years that magnesite was [2199] used to line pots.

Q. To make the crucible?

A. Refractory.

Q. Did he tell you at that time he had approximately 50,000 pounds of vanadium oxide on hand?

A. That is what I reported and that is what he must have told me.

Q. Was 50,000 pounds an amount of vanadium pentoxide in February, 1942, you felt it essential to get your hands on?

(Testimony of Gustaf Laub.)

A. I didn't feel it essential. I reported that. I knew we were looking for oxide.

Q. Then he came in and tried to make a sales pitch to you, is that what happened?

A. I didn't know at the time what kind of a picture he was painting. It appeared to me that he was trying to sell something.

Q. When he left, did you care whether he got in touch with you again or not?

A. Well, that is a strange way to put it, I believe, but when he left—yes, I wanted him to get in touch with us, or we in touch with him, because I knew at that time we were looking for oxide. We were getting all the oxide we could. I knew we were short of raw materials of one kind or another of which magnesite was a very important one.

Q. As a matter of fact, he dropped it, didn't he? You [2200] didn't hear from him, and then you initiated a move to get him in touch with you, isn't that what happened?

A. I told my district manager in Chicago, I said, "Get hold of Apex. They were in here. They were going to give me some information. Don't make too much about it, but see what the answer is."

Q. (By the Court): What did he tell you about giving you information when he left you?

A. When he left me he said he would furnish me with a list of how much magnesite they had on hand, exactly how much vanadium pentoxide, and

(Testimony of Gustaf Laub.)

the equipment that they wanted to sell. He didn't know what the equipment was.

Q. You did not hear from him for about two or three weeks, isn't that what happened?

A. It could be.

Q. And then you initiated a move to keep the contact alive?

A. I asked our Chicago district office to call him up.

Q. At that time was there any discussion that he would give you information he had about his supply contracts with Nisley & Wilson out in Colorado, with Shattuck, and others?

A. I don't know just how he put it. Those contracts were sort of Greek to me, the supply contracts, but I reported exactly. The way he put it to me is the way I understood it. [2201]

Q. You were interested in getting that information, weren't you? A. Which information?

Q. The information about his supply contracts, where his source of supply was.

A. He promised to give me further information, or he said he would. He volunteered that, and I asked him—I followed it up through our Chicago office and told him we hadn't heard from him.

Q. Why would you write a special report of this kind to the president of the company?

A. That was a regular report. We called it special merely for the stenographer's purpose of circulating it to a limited few people, rather than to the whole organization.

(Testimony of Gustaf Laub.)

Q. Why would you take a matter involving 50,000 pounds of oxide and some magnesite——

The Court: Isn't that an office matter, now—why they would do it, if they did it?

Mr. Alioto: I want to know why he takes up a matter like this with the president of the company, in view of the somewhat casual interpretation he is putting on it now, if your Honor please.

The Court: I think you are going too far in your questions. That was a matter that you handled in your own office. [2202]

The Witness: Yes, your Honor.

Q. (By Mr. Alioto): You took it up with the president of the company?

A. With everyone else in the company of any consequence that might be interested in such a proposition. The purchasing agent probably got a copy, the vice-president in charge of sales probably got a copy, the production manager probably got a copy, and the key people in the organization there got copies.

Q. Isn't it a fact that you knew Mr. Bransome would be interested in the fact that the Continental Ore Company and the Apex Smelting Company would be going out of the ferro-vanadium business?

A. I wouldn't have known of it except it was such an unusual thing, a small producer that we had heard of only indirectly was going out of the vanadium business and offering its facilities and materials that they wanted us to purchase and take off their hands.

(Testimony of Gustaf Laub.)

Q. What do you mean you only heard about them indirectly? Didn't you make it your business to keep in touch with what they were doing?

A. Whenever we heard from them in the trade we did. We didn't follow Continental Ore or Apex any more than we followed any other person—broker, producer or prospective producer. We didn't single them out at all. [2203]

Q. You were interested in their activities because they were competitors of your company, weren't you?

A. I wouldn't say they were highly competitive in any manner, because the amount of material that they offered us—we heard of, the information we heard, it was just spasmodic, here, there and a few other places, and we were out, naturally, to get all the information we could about them, or any other company that might have been offering vanadium on the market.

Q. Isn't it a fact that during this period of time you were aware of the fact that it was the only competitor in the business, the only producer of ferro-vanadium in the business, outside of the Electro Metallurgical Company and yourselves?

A. We would never compare the two.

Q. I am not asking you to compare the two. I am asking you whether you knew it was the only competitor in the ferro-vanadium business that had arisen since 1938.

A. There was so little material offered by them, or we heard there was so little material offered by

(Testimony of Gustaf Laub.)

them, that, while we were interested, we didn't go out of our way too much, about them or about anyone else.

Q. Mr. Laub, why would you write this language in a special report on April 14th:

"With reference to the writer's previous report of February 20th, Mr. Christiansen of the above [2204] company called again yesterday stating that they had now gotten their vanadium situation straightened out,"——

And then you say, in the second to the last paragraph:

"He further stated he would furnish us with the names of all their suppliers of ores and oxide, the principal ones being Shattuck Chemical Company and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them to continue in the vanadium business."

Why would you make a special report like that?

A. Would you please read the first sentence there?

Q. Yes, the first sentence of the letter reads:

"With reference to the writer's previous report of February 20th, Mr. Christiansen of the above company called again yesterday stating that they had now gotten their vanadium situation straightened out, and that they had definitely concluded to dismantle their vanadium plant at once and go out of the vanadium business permanently."

A. That is sufficient.

(Testimony of Gustaf Laub.)

Q. If you were not interested in those folks at that time——

A. They were merely following up the other report he had made, that is all. [2205]

Q. You had not dealt with this company commercially, had you—the Apex Smelting Company—before this time? A. I, personally? No.

Q. Your company, the Vanadium Corporation of America. A. I don't think so.

Q. You had not bought anything from them?

A. I wouldn't know that, because if there were any purchases—they were purchasers of secondary aluminum, and we were users of aluminum, some secondary, but mostly primary aluminum.

Q. What is secondary aluminum? Scrap?

A. Scrap aluminum remelted.

Q. The primary aluminum at that time was selling at about 15 cents a pound?

A. I don't know.

Q. You don't recall that? A. No.

Q. You paid a pretty high price for this scrap aluminum you bought from them, didn't you?

A. I don't know if we bought any from them. Scrap aluminum?

Q. Yes. Didn't you make a purchase from them shortly after these interviews, Mr. Laub?

A. I wouldn't know that. I turned Mr. Christiansen over [2206] to our purchasing department when he was talking to me about things we might want to buy.

Q. You heard Mr. Bayer testify there was a

(Testimony of Gustaf Laub.)

sale of about 200,000 pounds of aluminum, didn't you?

A. Yes, but that was the first I heard about it.

Q. That was the first you heard about it?

A. Yes.

Q. But you turned him over to your purchasing department at this time, didn't you?

A. Yes, sir.

Q. You say:

"We had an interesting discussion concerning low copper grained aluminum, which they produced and released."

A. That is why I turned him over to the purchasing department, because low copper aluminum was desirable.

Q. Was it customary for you to report to Mr. Bransome purchases of aluminum, 50,000 pounds of oxide? A. Oh, yes; yes.

Q. Mr. Laub, isn't it perfectly clear from this correspondence that the most important thing you were interested in was the fact that they were going out of the vanadium business?

A. I reported the whole conversation.

Q. Your company also produces—in addition to vanadium, [2207] your company sells ferro-chrome, doesn't it? A. Yes.

Q. And sold it for many years? A. Yes.

Q. What is the approximate proportion between your sales of ferro-chrome and your sales of vanadium? A. Now?

Q. No; during the 1940's.

(Testimony of Gustaf Laub.)

Mr. Holland: Your Honor, I do not believe this is material.

The Court: I don't see its materiality, but he can answer if he knows.

A. I can't give you the tonnages that were produced, or their ratio, because I can't compare ferro-chrome with ferro-vanadium.

Q. (By Mr. Alioto): Did you sell more ferro-vanadium than ferro-chrome?

A. I don't think so at that time. What do you mean, per ton, or what?

Q. Per pound.

A. Per ton or per pound? Per pound, we sold more ferro-chrome than ferro-vanadium — a lot more.

Q. When did you get into the ferro-chrome business?

A. We got into the ferro-chrome business in 1923, I believe. [2208]

Q. Did Union Carbide have anything to do with getting you in that business?

A. Not at all, no sir. We bought out an organization, the U. S. Ferro-Alloys Company, with which Union Carbide had no connection, so far as I know.

Mr. Alioto: We have nothing further, if your Honor please.

Mr. Holland: Nothing further.

This defendant rests.

(Defendant Vanadium Rests Case in Chief.)

Mr. Archer: I have just one or two things, but nothing of this witness.

The Court: Very well, you may step down.

(Witness excused.)

The Court: The Court is a little interested in what these retired men are going to do over the week-end.

A Witness: I am going home, your Honor.

Another Witness: My wife is with me.

Mr. Archer: Your Honor, the first is a small matter. In yesterday's testimony Mr. Bigler—and I do not mean to be criticizing the reporters—but occasionally, instead of the name "Garbutt," which, you will remember, was the owner of those claims, the name "Carbide" appears. I thought that might refer to us. And the only pages that I [2209] could find it was on page 1994, 2004, and 2007.

Mr. Alioto: We have no objection to that being physically changed, Mr. Archer. There is no problem about that.

Mr. Archer: The other thing I forgot, I took the deposition of Mr. Gifford of the Atomic Energy Commission showing the amount of vanadium oxide by month that we produced for them, and I won't offer the whole deposition, but I will just offer his statement of what it was.

Mr. Alioto: I have no objection to that.

Mr. Archer: I can't find the original in the file. It came in this way: It was put in the flat file, instead of separate.

(The deposition referred to was marked Defendant U Exhibit 5-T in evidence.)

[See Book of Exhibits.]

Mr. Alioto: If your Honor please, we have no testimony by way of rebuttal. However, solely for

the purpose of completing this record, it is the belief of this plaintiff that the testimony of the chief officers of the Union Carbide and of the Vanadium Corporation, in connection with the presentation of their defense, has made relevant those documents prior to 1938 which show the nature of the 1938 agreement. I recognize it is only a formal gesture. I know your Honor's attitude on it. But solely for the purpose of completing my record and as a matter of rebuttal we now re-offer all the [2210] documents dated prior to 1938, including the MacGuigg Report, which the Court, up to this point, has excluded. I anticipate the Court's ruling, but I am making it as a technical matter.

Mr. Holland: Same objection.

Mr. Archer: Same objection.

The Court: The motion will be overruled—I mean sustained, and the Court is adhering to its former ruling.

Mr. Alioto: Except for that offer of proof, at this point, if your Honor please, we have no further evidence to present.

I do not know how your Honor handles the motion to apply the evidence in this case, but we have submitted certain instructions on the co-conspiracy rule. I take it that will be handled by the Court as a matter of instruction?

The Court: If you gentlemen will come into my chambers as soon as we adjourn we will discuss those matters.

The jury may be excused until Monday morning at ten o'clock.

(Whereupon the jury were excused until Monday, June 23, 1958, at 10:00 o'clock a.m.)

(The following in chambers, outside the presence of the jury.)

(Informal discussion as to proposed instructions.)

Mr. Alioto: The language I would propose is that there has been reference to this case of a prior proceeding by the Government of the United States in Denver. I instruct you that this case has absolutely nothing to do with your deliberations, and you are free to arrive at a verdict without reference to the result in that case.

Mr. Holland: I am sure we had a statement at the beginning to be submitted to the jury and I think it points out the difference between the proof beyond a reasonable doubt and upon which——

Mr. Neaher: We discussed that.

Mr. Alioto: Why do we need anything more than this? This is a correct statement of the law.

Mr. Holland: Let's see if we can't agree on something by Monday morning.

Mr. Alioto: How about that language? We don't have too much time between now and Monday morning.

Mr. Holland: We have got it all written out. We can give it to you Monday—we can give it to you tomorrow.

Mr. Archer: The only thing I would suggest, if you are putting in a statement with regard to the Denver case, that there also has been reference to a

government indictment [2212] and that indictment was dismissed by the government.

The Court: Do you want any reference made to the final judgment in that case?

Mr. Alioto: Well, reference has already been made to that final judgment. I think the Court should simply say the result there has no probative value in this case.

The Court: I didn't understand that any statement had been made as to the final judgment.

Mr. Holland: Yes. I made that in my opening statement.

Mr. Alioto: And we objected strenuously to that.

Mr. Holland: I made that in my opening statement, and your Honor let me do it because you had given Mr. Alioto a free rein to say whatever he wanted, and I didn't remember that Mr. Alioto objected.

Mr. Alioto: Oh, I objected all right, objected on the ground that the measure of proof was different and the jury might be led to believe, because there was an acquittal in the government case, there ought to be an acquittal here.

Mr. Holland: As I recall, you said: "Well, if Mr. Holland is allowed to say that, I think the Court should tell the jury the difference in the quality of proof." That is my recollection. [2213]

Mr. Alioto: I objected to it being said.

The Court: Well, I will let you deliberate over that until Monday morning and see if you can't agree on a proper instruction or to eliminate any instruction.

Mr. Holland: We will give you our proposed language.

Mr. Alioto: Tomorrow?

Mr. Holland: Yes.

Mr. Alioto: Fine.

(General discussion.)

Mr. Archer: I will make a motion for the defendants I represent and for each of them, a motion for a directed verdict on the same grounds that I had previously stated at the close of the plaintiffs' case, and I will also make a motion for dismissal on the ground that upon the facts and the law the plaintiff has shown no right to relief, again on the same grounds as I stated at the close of the plaintiffs' case, and as I stated in a memorandum which I filed.

Mr. Neaher: On behalf of the defendant Vanadium Corporation of America, I, too, renew the motion for a directed verdict on the entire case upon the same grounds as stated before the Court at the end of the plaintiffs' case.

The Court: And the Court will reserve any ruling on the motions.

Mr. Alioto: If your Honor please, I think there [2214] is a technical matter. I want to be sure there is no problem about waiver here, that before that motion, in connection with the conspiracy charges, some cases say that you have to make a motion to apply. Before that motion is made, that is, to apply the evidence offered against one defendant against all the defendants, under the instructions of the Court, under the co-conspiracy rule—

and I take it the Court proposes to give those instructions on the co-conspiracy rule. I do not know whether the Court wants me to make that motion to apply or simply assume our proposed instructions on the co-conspiracy rule sufficiently constitutes a motion to apply.

The Court:

Mr. Alioto: I would think so, too, but I don't want anybody saying later on in an appellate court that they do not and there should have been a formal motion to apply all the evidence.

The Court: I do not know of anybody in connection with this case who is indicating any desire to waive anything.

Mr. Alioto: That is about right, Judge, and that is why I do not want to start now. I think formally I should make the customary motion in connection with these cases.

I would move at this time, if your Honor please, that the evidence heretofore offered as against one defendant and not the other be made to apply to the other defendant as well [2215] under instructions to be given by the Court on the co-conspiracy rule, that such declarations are not receivable or such acts or evidence are not receivable against the defendant against which they were not offered until the jury is satisfied that there is prima facie evidence of combination and conspiracy.

I would point out to the Court in connection with that rule that the cases of Standard Oil against Moore and the Flintkote case, to which reference has been made before, indicate the somewhat broad

scope the Ninth Circuit has given to what constitutes prima facie evidence of conspiracy, joint action or joint refusals, uniform prices over a long series of time in the light of economic factors with respect to cost of production, and so I would at this time make that motion to apply all the evidence in the light of the Court giving an instruction under the co-conspiracy rule. I think we ought to submit such an instruction and we will do that sometime tomorrow, if the Court will be available to receive that proposed instruction.

The Court: You can submit it at the office tomorrow at 10:00 o'clock. I do not see how that is really necessary in the face of the instructions.

Mr. Alioto: All right.

The Court: I think this, that after you have read the instructions, if you deem it necessary, then you can make that as an additional requested instruction. [2216]

Mr. Alioto: Fine. Then do I understand from counsel that they are making no point that the motion has to be acted on at this time?

Mr. Archer: No, I am making no point of that. The only thing I object to is that you keep citing the Moore case and the Flintkote case and those cases the defendants want.

Mr. Alioto: I will tell you what those decisions are. Those decisions have been described here as decisions for the plaintiff for the first 21 pages and then on the 22nd page the judgment is reversed.

Mr. Archer: I will be glad to settle for that kind of decision. In any event, Mr. Holland, I take it,

the attorneys for the Vanadium Corporation of America are making no point that the motion to apply should be acted upon at this point?

Mr. Holland: I would say so.

Mr. Archer: Just so the record shows we oppose the motion on the ground that no prima facie evidence of conspiracy has been shown.

Mr. Holland: We likewise oppose such a motion.

Mr. Alioto: It will be understood that the motion will be in effect ruled upon by the nature of the instruction given by the Court under the co-conspiracy rule.

Mr. Archer: Yes. [2217]

Mr. Holland: Yes.

Mr. Alioto: Is there any objection to our withdrawing the exhibits over the week-end so we both have access to them, so we won't have to be shifting papers before the jury?

The Court: Whatever arrangement you make among yourselves will be satisfactory.

Mr. Archer: We will take the plaintiffs' exhibits and you take the defendants' exhibits

Mr. Alioto: That is as good an arrangement as any.

The Court: Of course, if you read all those exhibits there won't be too much time for argument.

Mr. Alioto: No. We do have a problem. Your Honor remembers the statistical exhibits, the first eight or ten statistical exhibits; we have statistics running from 1933 up to 1949, and the Court admitted those exhibits only so far as they relate to statistics after January 1, 1938. How do you want

to handle that? Do you want to cover them up or do you folks want to retype the exhibits and leave out the 1933 to 1938 years?

Mr. Archer: I do not want to retype the exhibits.

Mr. Alioto: Suppose we physically cover up the years in question. Would that be agreeable?

Mr. Archer: Just so when they go to the jury [2218] the prior years are not visible.

Mr. Alioto: And that is the only thing that I think has to be done physically with the exhibits. We will do that on that basis. We will get some kind of paper and paste it over, some kind of plastic transparent paper.

Mr. Archer: I will tell you something that is easy that I use. That is Mystic Tape.

(Thereupon an adjournment was taken until Monday morning at 10:00 o'clock) [2219]

* * * * *

Mr. Alioto: If your Honor please, on behalf of the plaintiff, we have had an opportunity to look over the Court's instructions, and we honestly do not feel that under the somewhat stringent decisions of this Court we would be making our record complete here simply by writing certain things in the margin, because the Courts, as I view the decisions, enjoin upon us the necessity of calling specific objections to the attention of the Trial Court before the instructions are given. I think I can very hurriedly go through these and make a record of the objections which the plaintiff has to the instructions.

I also take it, gentlemen, that it will be deemed

that these objections are being made after the instructions, in fact, have been given?

Mr. Neaher: That is satisfactory.

Mr. Archer: That is satisfactory.

Mr. Alioto: Do all counsel agree on that?

Mr. Neaher: We agree.

Mr. Archer: Yes. [2221]

Mr. Alioto: Therefore we shall not be in technical violation of the rule that apparently requires it to be done at that time.

With respect to the Court's proposed instructions, our first objection is to some of the language in connection with Instruction 3, in which it states —and perhaps we may be partially responsible for this—in the last two lines of page 4:

"Plaintiffs were eliminated from the vanadium industry by this alleged violation of law."

Actually, I think the evidence shows that the plaintiff always kept intact their organization, which dealt very extensively in other ferro alloys and other ores and other minerals. So to the extent that they have an organization available to operate in the business, I do not assume that they were totally eliminated. And I just wonder if the addition of the words "virtually eliminated" would cover that factual difference between this language and what I think the record discloses.

The Court: I do not see any objection to that—"virtually eliminated."

Mr. Alioto: If your Honor please, with respect to Instruction No. 4, the first paragraph of that instruction, we have a serious objection to the Court

characterizing this as a brokerage and jobbing business only. We think in the light of [2222] this record, when a man comes to an organization and makes a joint venture with that organization, such as the Apex Company, under which he gives that organization a certain know-how in connection with the production of ferro-vanadium, and he gives them certain process secrets, which apparently are so good that they are ultimately imitated in America—they were not secrets in Europe; they were well known in Europe, where most of our steel art comes from, anyway—when that man goes out and undertakes to get the material supplied by the extensive effort the plaintiff here made, and encouraging the independent mills, and paying for the materials on the basis of advanced deposits in banks, that that kind of activity I do not think is properly characterized as a brokerage and jobbing business. The Court did eliminate from the evidence the proper testimony with respect to the exact nature of the plaintiff's business, which is reflected in its profits and losses for each of the years in its total mineral alloy and ore business, and those statements reflected on their face something like five percent of the plaintiff's entire business is commission business, so-called, and we think in view of that, the Court having excluded that testimony, it should not characterize the plaintiff's business as a brokerage or a jobbing business.

The Court: Isn't that what you stated in your complaint? [2223]

Mr. Alioto: No.

Mr. Neaher: We would agree to the elimination of the words "brokerage and jobbing," so it would read that part of their business concern was vanadium products.

Is that agreeable, Mr. Alioto?

The Court: How is that, now?

Mr. Neaher: Strike out the words "brokerage and jobbing of."

Mr. Alioto: It is line 2 of page 5. Eliminate the words "brokerage and jobbing of."

Mr. Neaher: Is that agreeable, Mr. Archer?

Mr. Archer: Yes.

Mr. Alioto: As I indicated, we may well, in some of our earlier pleadings, have led the Court into this langauge, but we think the record having been made, our proposed instruction was as follows:

"The plaintiff is and has been engaged in the business of arranging for the manufacture and distribution of ferro alloys."

The defendants added the brokerage and jobbing.

Mr. Holland: If we can agree on that change, why don't we do it that way?

Mr. Alioto: Let the jury determine what the present business is.

Mr. Holland: That is correct. [2224]

Your Honor, we have agreed on this.

The Court: What it is you would strike out?

Mr. Alioto: Strike out "brokerage and jobbing of."

The Court: Just strike out the words "brokerage and jobbing of."

Mr. Neaher: If Mr. Alioto will permit interrup-

tion, with respect to Instruction No. 4, it would be our belief here that under the ruling of the Court with regard to the immateriality of the Atlas Steel's evidence in this case, and, indeed, with regard to the failure of the proper basis for the proof under 5, that Paragraph 4 and 5 should come out.

The Court: The only reason I included them is because that is part of the allegation in the complaint, and No. 4 is merely a brief recitation of the allegations of the complaint. I have covered 4 in No. 4 by specific instruction.

Mr. Neaher: We recognize that. We thought possibly, if your Honor agreed with your view, that the complaint has virtually been amended by your Honor's ruling, that that later instruction would be unnecessary. I think it is Instruction 42.

Mr. Alioto: The state of the record on that is there is some testimony about Atlas Steel, and some testimony that they had Atlas as a customer, and they did not have them as a customer, but the hiatus is our alleged reason why they lost the customer. But there is evidence in the record on [2225] Atlas —a good deal of it.

The Court: I believe it would be safer, gentlemen, to leave this in, and then have the specific instruction.

Mr. Neaher: Very well.

Mr. Alioto: In connection with that same paragraph, if your Honor please, we are also alleging that the plaintiff bought certain oxide and certain ferro-vanadium from the defendants at prices which were fixed by agreement, and we feel there is

an item lost in that evidence. We had a purchase in 1943, for example—in June of 1943—of 10,000 pounds of oxide, which was sold to us by the Electro Metallurgical Company. That price was $1.10. Your Honor may remember the dispute about price, the $1.10 and $1.15. It is our contention that the $1.10 price was fixed by agreement, and the market price should have been the same price that they charged the Vanadium Corporation of America three or four years before when the price was still $1.10. There was no change in the price structure during that period.

The Court: That is a matter of evidence.

Mr. Alioto: We do make that claim, that we are entitled to that difference, and also that claim in connection with the $75,000 purchase of vanadium at a later period of time, that we purchased that at a price which was fixed by agreement.

The Court: That is a matter of evidence. [2226]

Mr. Alioto: So long as we are not inhibited.

Mr. Archer: There is no evidence of price at which you purchased.

Mr. Alioto: Yes, there is. We have your price list, what you charged everybody, and we have the final amount, and we think we can take one-fifth of that final amount, claiming that the market price should have been one-fifth lower, according to the evidence given by Mr. Remmers, Mr. Priestley, and Mr. Burwell.

In any event, the big item of damages is not mentioned in this Instruction No. 4, and that is the joint refusal of both defendants to deal with us.

The Court: That is a matter of evidence.

Mr. Alioto: All right, so long as it is the understanding this statement of claims is not exclusive, then we may argue to the jury.

The Court: Yes, that is right.

Mr. Alioto: We would further object, if your Honor please, to the last paragraph of Instruction No. 8, which is on page 8.

The Court: What is your objection?

Mr. Alioto: Our objection is that the Court should go further in connection with its statement that it not consider certain evidence against certain of the defendants, and go on to say: [2227]

"* * *, subject to the rule on declarations and acts of co-conspirators as I shall hereinafter give it to you."

The Court: The Court has stricken out evidence previously on the matter—"You are instructed you are not to consider such evidence for any matter or for any purpose."

Mr. Alioto: No objection to that sentence.

The Court: "Where the Court has advised you certain evidence is to be considered with relation to a particular defendant, you may not, of course, consider the evidence in relation to any other defendant."

Well, now, you couldn't consider, unless they were a part of the conspiracy.

Mr. Alioto: Subject to the co-conspiracy rule as you later give it to them.

The Court: That is later covered fully.

Mr. Alioto: We object to the last paragraph of Instruction 10 on page 9.

The Court: "Each defendant is entitled to individual consideration of the evidence as applied to it and determine whether that particular defendant participated in any combination or conspiracy."

Mr. Alioto: Yes. We think the statement should also be made "subject to the co-conspiracy rules hereinafter stated."

The Court: I think that is covered. [2228]

Mr. Alioto: Perhaps it is covered in that fashion, although we think it ought to be made clear at that point.

With respect to Instruction 20 on page 15, this paragraph in general does not permit the jury to find, in our view of it, that the Defendant Union Carbide, or that the Union Carbide group of defendants standing alone may have violated both Section 1 and Section 2. We think that a 75-percent control of the oxide production plus elimination of independent mills pursuant to a policy of elimination, that that, standing alone, under the Alcoa decision, constitutes a violation of Section 2, regardless of what the Vanadium Corporation may or may not have done.

The Court: Suppose Union Carbide owned all of them?

Mr. Alioto: Union Carbide might, if it owned it all, not necessarily, but might be found guilty to have monopolized by itself, regardless of V.C.A. But as I read this instruction——

The Court: Let us read the instruction:

"The plaintiff's complaint is brought under the anti-trust laws, in so far as this action is concerned —unless there has been agreement, combination or conspiracy among two or more parties"——

Mr. Alioto: That is our objection, right there—among two or more persons. I think the U. S. Vanadium [2229] Corporation, standing alone, can be found to have violated the anti-trust laws.

The Court: I can't agree with you.

Mr. Alioto: That is our objection. In 22 the Court implies one defendant alone, namely, the United States Vanadium Corporation, cannot be found to have violated Section 2. It seems to me to require an agreement between U. S. Vanadium Corporation and somebody else. It is our view that one company which has 75 percent of the oxide and has excluded independent sources, and has excluded that pursuant to a policy to control the Plateau, and has available 90 percent of the available accessible ore deposits on the Plateau, that one company can be guilty of monopolization standing alone.

The Court: "It is in no respect a violation of the law that a number of individuals or corporations, each acting for himself or itself, may own or control a large part, or even of a particular commodity, or all of the business in a particular commodity."

Is that objectionable?

Mr. Alioto: Yes, because then you couple it with the idea that you have to have at least two people to constitute a violation of Section 2.

The Court: That instruction is taken verbatim

from the instruction that was approved by the Supreme Court in the divider case. [2230]

Mr. Alioto: Yes, I understand, if your Honor please, that it is possible for somebody to have 100 percent under certain circumstances. If there are two factories, one factory having 50 percent and another factory having 50 percent, and one factory burns down, the factory with the 50 percent has a monopoly.

But, your Honor, it goes on to say that the essential element of monopoly is the existence of a combination or conspiracy, which implies there must be two people.

The Court: That instruction is taken from that case.

Mr. Alioto: In that case you had four or five tobacco companies, any one of which constituted a monopoly standing alone. That is not the case here. You think the United States Vanadium Company, standing alone——

The Court: I can't agree with you. Are you objecting?

Mr. Alioto: I object. The instruction does not permit the jury to find the United States Vanadium Corporation, standing alone, could have violated Section 2, if other things had happened.

The Court: You are objecting to what part?

Mr. Alioto: The whole instruction, in so far as it comprehends that U.S.V., standing alone, could not have violated Section 2 of the Sherman Act. We think it did. We [2231] think the evidence in this case discloses such a violation.

In that connection, if your Honor please, we have our Instruction No. 8, which is also taken from the tobacco company case, and which recognizes that a single corporation can violate Section 2, and we believe that is the proper instruction.

The Court: I have given you an exception to that.

Mr. Alioto: Yes, I understand, if your Honor please. I wanted to make this record clear.

With respect to Instruction No. 24, your Honor stated that the law recognizes the right of any trader or manufacturer in a private business freely to exercise his own independent discretion as to the parties with whom he will deal or refuse to deal.

We think under the decisions of the Supreme Court, if your Honor please, that the jury could well find that the United States Vanadium Corporation, standing alone, with 75 percent of the domestic oxide production and 90 percent of the control of the Colorado Plateau, must supply independents.

The Court: Why should it be?

Mr. Alioto: Because it constitutes a monopoly standing alone.

The Court: No.

Mr. Alioto: That is the reason for it.

The Court: Do you want an exception to that?

Mr. Alioto: Yes.

With respect to Instruction No. 26——

The Court: "The Court instructs you if the defendant acted on the basis of his own best judgment, no inference of conspiracy can be drawn

against that defendant, even though, after weighing all the circumstances, your personal opinion might be that the defendant's judgment was incorrect. You cannot find that the defendant entered into unlawful agreement or conspiracy because you disagree with their business judgment."

Mr. Alioto: My objection to that, if your Honor please, is that if business judgment, as has been testified in this case, led to the exclusion of competition and the prevention of competition, that that business judgment will not immunize these defendants. That is my objection.

The Court: Exception to 26.

Mr. Alioto: Your Honor may recall a few times the witness answered that "This was our sound business judgment."

I said, "What was the reason for the business judgment?"

He said, "To exclude competition."

And that is the evidence we are referring to.

The Court: All right.

Mr. Alioto: Your Honor, in connection with [2233] Instruction No. 32 on page 22, in connection with that instruction, your Honor gives an instruction which comes out of certain cases about a standardized product. We do not think there is any standardized product here, nor is there any standardized cost of production in connection with that product. We think the evidence is just to the contrary. That is a factual matter, however.

The Court: All right.

Mr. Alioto: We have already made our point, I

think, in connection with 36, page 25, the last paragraph of that instruction. In fact, the whole of that instruction implies that acting under an agency of the United States Government, it is impossible to violate the anti-trust laws.

The Court: Absolutely.

Mr. Alioto: Our view is, your Honor, for example, you will recall the testimony of Mr. Hill, which is uncontradicted in this record, that they had a discretion of fixing a price up to 50 cents. Your Honor will recall that.

Now, let us assume this happened: that they met with Mr. Bransome and they decided, "Look, we can fix a price up to 50 cents, but for our own purposes we will fix the price at 10 cents a pound"—to take an extreme example.

Even if they go out and pay 10 cents to the miners for Metals Reserve——

The Court: What was your evidence on that?

Mr. Alioto: Our evidence was there were two actual meetings.

The Court: Who testified to that?

Mr. Alioto: Burwell testified, and Mr. Bransome testified, and Mr. Kett testified to actual meetings with the competitors at which prices were discussed. Whether those resulted in agreement is a matter for the jury. But I am afraid if the jury hears this instruction and says, "Well, they agreed on prices they were going to charge for Metals Reserve," the jury can say that conduct is immunized because they are acting for the government.

The Court: There is a conflict in the testimony

as to who was present at the meeting and what took place.

Mr. Alioto: Yes, there is, if your Honor please. That is the point I am making.

The Court: You are objecting to the last part of 36?

Mr. Alioto: That is right.

Now, with respect to Instruction 37, we have a serious objection to this, if your Honor please. We do not believe the question is whether or not you can pick up a batch here or a batch there of vanadium oxide. We think the question is whether you can get a steady, dependable source of vanadium oxide upon which to mount a manufacturing operation. I will give an example of that. [2235]

There is some evidence in this case that the Blanding Mines was a supplier of Mr. Leir.

The Court: Not Blanding Mines. The testimony on Blanding Mines is pretty clear, the whole thing.

Mr. Alioto: I use that as an example in connection with 37, if your Honor please.

Then there is testimony that in January, 1942, the Blanding Mines stated on the advice or recommendation of their landlord, who was at that time negotiating with the Vanadium Corporation of America, they would not further supply Apex. Then they stopped supplying them. Later on, two years later, they made an offer to supply them with certain products.

The Court: Are you objecting to 37?

Mr. Alioto: Yes, if your Honor please. We think you ought to add the language, "some steady,

dependable source," instead of indicating perhaps flue dust on the high seas somewhere.

Mr. Neaher: May I note a correction in Instruction 38, page 26, in the fifth line there? The word "inter-action" should be "inaction." It was our mistake. It should have read "inaction,"—"Plaintiffs are not entitled to increase their damages through inaction," not "inter-action."

Mr. Alioto: Then with respect to Instruction 39, if your Honor please, the second paragraph of that Instruction 39, beginning: [2236]

"In this case plaintiff's claim for damages based upon the claim that they lost profits as a result of the alleged unlawful activities of the defendants"——

we also have the second claim that they paid more for goods actually purchased from them. That is perhaps the same thing.

Mr. Archer: I do not think that is in the complaint.

Mr. Alioto: I think if you take the last paragraph of the complaint it says something about the cost of their doing business having been increased. In any event, we are claiming something more than that.

The Court: You object to 39?

Mr. Alioto: Unless we understand loss of profits includes such loss of profits as are incurred by reason of higher costs.

The Court: It would include any loss.

Mr. Alioto: We object to Instruction 40. We

think the Ninth Circuit is out of harmony with the Radovich decision in the Supreme Court.

The Court: They have lots of company.

Mr. Alioto: This public injury doctrine is an interesting doctrine. It comes out of the Tenth Circuit. Our Courts went for it hook, line and sinker, and the Supreme Court has decided otherwise. Our opinion is a combination to get plaintiff is, itself, a violation of the anti-trust laws, [2237] because that necessarily affects the price structure. This is like the Moore case, if your Honor please, which was not overruled.

I think the gentlemen on the other side will probably join with me in respect to Instruction 41, that while it is true the complaint alleges there was damage over the period July, 1938, to July 15, 1949, we think the jury cannot award damage except for the period beginning October 10, 1939.

Mr. Neaher: We do agree with that, your Honor.

Mr. Alioto: I thought you might add that after the second sentence.

Mr. Neaher: I have some suggested language:

"However, in determining the amount of damage, if you reach this point, you may not allow plaintiffs' recovery of damages for any losses which may have been sustained by them prior to October 10, 1939."

Is that all right?

Mr. Alioto: That is all right.

The Court: We will insert that.

Mr. Alioto: We, of course, object to Instruction 42 on the same ground, that even pursuing a gov-

ernmental agency, it is possible to use agency powers for the purpose of assisting a violation of the anti-trust laws, and I think I cited the distinguished decision in the Fifth Circuit to your Honor on that. [2238]

The Court: I do not think I can go along with you on that. The Canadian Government does it, regardless of what the influences were that induced it to do it. It is the act of the Canadian Government. I do not think we would have any jurisdiction in that matter whatever.

Mr. Alioto: With respect to Instruction No. 43, we think there are some cases holding that the Court ought not to instruct the jury that the damages will be trebled. Since, as a matter of law, the trebling is automatic upon the judgment, there might be a disposition of the jurors——

The Court: I hesitated to put that in, but it is a part of the Act itself.

Mr. Alioto: There are cases both ways, if your Honor please.

The Court: Do you want that left out?

Mr. Alioto: That would be our request, that the jury not be told that the damages ought to be trebled. But perhaps the defendants have another view of that.

Mr. Neaher: That was your instruction. You proposed it, didn't you?

Mr. Alioto: Yes, but in one of the recent motion picture cases it says the Court ought not to tell the jury that the damages ought to be trebled. However, there is a difference of view, and my view is

that if you tell the jury that, they will start fixing their award based upon that. [2239]

Mr. Neaher: I think we would agree to leave it out. Stop with "the previous instructions given you." Leave out the rest.

Mr. Archer: Is there anything else in Instruction 43 that adds anything?

Mr. Alioto: Yes. I think we can put a period after "you":

"* * *, then you may assess the damage in accordance with the previous instructions given you."

a period there; and the attorneys' fees and costs of suit are matters for the Court.

The Court: I suppose there is no objection to the next one.

Mr. Alioto: I have no objection to the reference to "tedious" in so far as my activities are concerned, but a distinguished play actor like Mr. Holland may take exception that any of his performance was tedious.

Mr. Holland: Where is it?

Mr. Alioto: We have one basic objection, if your Honor please, with respect to the whole matter of damages. I think the jury should be told implicitly under the Bigelow decision and the Flintkote decision that once they have determined that there was an injurious impact of a violation, if they find a violation on the part of the defendants, that thereafter there is no rule of certainty, or even reasonable [2240] certainty, with respect to fixing the measurement of damages, and the Court allows

very liberal inferences to be taken from relevant data. I say the language of the Bigelow decision should be given.

The Court: Wouldn't that somewhat invade the area of speculation?

Mr. Alioto: I would suggest this, if your Honor please; it has been done in other cases, and we have done it pretty usually in our proposed instructions: Just take that instruction from the Bigelow case and give it directly and verbatim. No one can object to the language of Justice Stone, who is a pretty good stylist, too, like Mr. Neaher.

The Court: Yes. But somebody has to start reversing the Supreme Court.

Mr. Alioto: These jurors have been sitting, if your Honor please, in other types of cases where the law requires a more stringent application of the rule of certainty on damages, and they may have in their minds, and I think they ought to be told, that that rule of common law certainly does not apply to the measurement of damages under the anti-trust laws once they have determined there has been an injurious impact.

The Court: My opinion is the rule is under the Clayton Act, which requires even stronger evidence than it would in the ordinary case. You are alleging a conspiracy, [2241] and that you were damaged because of the acts of conspirators. Now, that can't be just inferred. There must be some basic evidence. And that is why I could not follow your requested instruction on that point.

Is there anything else?

Mr. Alioto: Finally, if your Honor please, we would respectfully except to the failure of the Court to give those instructions proposed by the plaintiff on these various subject matters that I have mentioned.

The Court: I would note now on your requested instructions my ruling on them, and they will be filed. That is a part of the record.

Mr. Alioto: In other words, the record will show our proposed instructions were rejected, modified, or given. And we would except to the failure to give those instructions which the Court marks are not given.

The Court: I will note an exception on each one of them.

Mr. Alioto: Thank you very much.

Mr. Holland: We have no exceptions, your Honor. We just have one question.

I know that Mr. Alioto's address is going to be interesting, and I want to listen to it with enjoyment and not interrupt it. I assume it is understood by everybody that they can't go into the period prior to July 1, 1938, in the [2242] argument.

Mr. Alioto: There is reason to believe that that is understood. It has been made very evident in this case. Actually, there are still a few references in that regard which I noted last night—discussions in 1945 about the MacQuigg Report. But since the report itself is not in evidence there is no point in mentioning it.

Mr. Holland: You are not going to waive it around.

The Court: How much time do you want in your argument? It is 10:30.

Mr. Alioto: Your Honor, earlier we talked about a couple of hours covering it. I think that general estimate is still correct, but I would like to feel that I am not going to be chopped off on the nose. I think you will find that two hours is a fairly good estimate, without actually holding us down.

The Court: The Court will not be unreasonable on that.

Mr. Holland: I think the Court wanted to know how long you will take on your opening.

Mr. Alioto: I would figure the opening will take approximately three-quarters of an hour total time.

The Court: Then you will have time this forenoon to make your opening?

Mr. Alioto: I think so. I think we should start [2243] now.

Mr. Holland: Do you think, in view of the fact that there are two defendants to argue, and then a rebuttal argument on behalf of the plaintiff, that maybe we ought to take a little less time than two hours for lunch?

Mr. Alioto: I have no objection.

Mr. Holland: Whatever the Court wants.

The Court: How is that?

Mr. Holland: I just wondered if we might take an hour, or an hour and a half, for lunch, instead of two hours, which would not require the jury to be kept here as late as five o'clock to hear the arguments. Whatever the Court wants.

The Court: I have been requested by one of the

judges to have lunch with him, and I do not know how good a lunch he will have. But we can do this: There is no reason to hurry this matter. I doubt if you can finish the argument.

Mr. Holland: I think we can, and I think the argument ought to be finished up so your Honor can instruct tomorrow. I think it would be very unfortunate, for example, if Mr. Alioto's rebuttal were left until tomorrow.

The Court: I have no objection to extending beyond four o'clock if necessary in order to finish your argument.

Mr. Holland: I believe I will be very short.

The Court: If we can finish the argument today, [2244] it would be satisfactory to have the instructions in the morning.

(Whereupon the Court, counsel for the respective parties and the court reporter entered the courtroom and the following proceedings were had within the presence and hearing of the jury:) [2245]

* * * * *

Instructions of the Court

The Court: Members of the jury, you have heard the evidence in this case and the argument of counsel, and it now becomes the duty of the Court to instruct you as to the law of the case. The jury is the sole and exclusive judge of the facts, but the Court is the judge of the law and it is your duty to accept the law as given you by the Court.

The plaintiffs in this action are Continental Ore

Company, a partnership composed of Henry J. Leir, Ernad D. Leir and Lina Schloss, and said parties as individuals and as partners. This partnership is a successor in interest to the Continental Ore Corporation which was incorporated under the laws of the State of New York on June 16, 1939. On May 5, 1942, these parties formed a partnership doing business as Continental Ore Company.

The defendants in this action are Union Carbide and Carbon Corporation, sometimes referred to as Union Carbide, a New York corporation. This corporation directly controls and operates the following subsidiary corporations which have certain specified functions and duties. They are called units of Union Carbide and Carbon Corporation.

United States Vanadium Corporation, sometimes referred to as U.S.V., is a New York corporation and is the unit of Union Carbide which acquires and produces vanadium-bearing ore and vanadium oxide. [2459]

Electro Metallurgical Company, sometimes referred to as Electromet, is a unit of Union Carbide in the alloys and metal division. From June 16, 1939, to February 23, 1949, Electromet was engaged in the production of ferro-vanadium and vanadium oxide, among other activities.

Electro Metallurgical Sales Corporation, sometimes referred to as Electromet Sales, is also a corporation in the alloy and metals group of Union Carbide. In March, 1949, it was merged into Union Carbide.

Electro Metallurgical Company of Canada, Limited, is a Canadian corporation.

Also named as a defendant is Vanadium Corporation of America, sometimes referred to as V.C.A., which is not owned by Union Carbide or a subsidiary or affiliate of it. It is a Delaware corporation with its principal place of business in New York City.

It is admitted, however, that no service was had upon Electro Metallurgical Company, Electro Metallurgical Sales Corporation and Electro Metallurgical Company of Canada, and that the only defendants served, and therefore involved in this case, are Union Carbide and Carbon Corporation, its subsidiary, United States Vanadium Corporation, and Vanadium Corporation of America.

This action is brought under the Sherman and Clayton Acts. The plaintiffs bring this case on the specific [2460] enactment of Congress known as Section 4 of the Clayton Act, which provides as follows:

"Any person who shall be injured in his business or property by reason of anything forbidden in the anti-trust laws may sue therefor in any District Court of the United States in the District in which the defendant resides or is found or has an agent, without respect to the amount in controversy and shall recover three-fold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee."

It is alleged by plaintiffs that the defendants

have violated Sections 1 and 2 of the Sherman Act. Section 1 states in part as follows:

"Every contract, combination in the form of a trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal."

Section 2:

"Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be [2461] punished by a fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

This action was brought to recover damages claimed to have been suffered by the plaintiffs by reason of alleged violation of the anti-trust laws of the United States. That is to say, plaintiffs contend that the defendants have violated the anti-trust laws and that plaintiffs were virtually eliminated from the vanadium industry by this alleged violation of law.

The gist of plaintiffs' complaint is that the part of their business concerned with vanadium products which they began in July, 1938, was damaged and finally virtually eliminated after 1944 as the alleged result of an alleged unlawful combination and con-

spiracy among defendants to control the vanadium industry. No. 4

Plaintiffs specify that the alleged acts and practices of the defendants which directly and proximately affected them were:

First, Apex Smelting Company of Chicago, Illinois, with which plaintiffs had an exclusive brokerage contract to sell its ferro-vanadium production, and under which operations commenced in the Spring of 1940, was compelled *the* cease the manufacture of ferro-vanadium in the Spring of 1942 because it was unable to operate profitably for the reason that it was [2462] unable to obtain vanadium oxide.

Two, the failure of plaintiffs' own operation on Long Island, New York, begun in August, 1942, because of the difficulty of securing raw materials which made it commercially impossible to operate profitably.

Third, Imperial Paper and Color Corporation of Glen Falls, New York, was forced to abandon in 1944 a contract made in that year with plaintiffs, under which plaintiffs were to act as sales agent for Imperial's entire output of ferro-vanadium and vanadium oxide. This is alleged to have been due to Imperial's and plaintiffs' inability to secure vanadium oxide or vanadium-bearing ores.

Fourth, the loss in 1943 of a Canadian customer, Atlas Steels, Limited, and plaintiffs' elimination from the Canadian market as a result of activities of Electro Metallurgical Company of Canada, then the agent of the Canadian Government in the war-

time allocation of ferro-vanadium to Canadian steel firms. Plaintiffs further allege that these activities embraced an agreement by defendants to divide the Canadian market among themselves and exclude plaintiffs.

Fifth, either plaintiffs, Climax Molybdenum Corporation, or both, were deterred in June, 1943, from concluding negotiations for Climax to manufacture ferro-vanadium for plaintiffs' account by threats of reprisal by an alleged official of defendant Union Carbide. [2463]

In their answers all of the defendants and each of them specifically denies the material allegations of plaintiffs' complaint which the Court has just summarized for you and each and every one of the claims made by the plaintiffs in their complaint.

For reasons deemed sufficient by the Court certain issues have been withdrawn from this case. You are instructed that in your deliberations you are to disregard any issues which have been withdrawn from your consideration and any comments of counsel about such issues.

Counsel, in arguing this case to you, have commented upon and argued upon the facts, as is their privilege and their duty. If you find any variance between the facts testified to by the witness or as shown by the documentary evidence, and what has been stated to you by counsel to be the facts, to the extent of such variance you must consider only the facts testified to by the witnesses or as shown by the documentary evidence.

At times throughout the trial the Court has been

called upon to pass on the question whether or not certain offered evidence might properly be admitted. With such rulings and the reasons for them you are not concerned. Whether offered evidence is admissible is purely a question of law, and from a ruling on such a question you are not to draw any inference as to what weight should be given the evidence or as [2464] to the credibility of a witness. In admitting evidence to which an objection is made the Court does not determine what weight should be given such evidence. As to any offer of evidence that was rejected by the Court you, of course, must not consider the same. As to any question to which an objection was sustained, you must not conjecture as to what the answer might have been or as to the reason for the objection.

When the Court has struck out evidence previously admitted, you are instructed that you are not to consider such evidence on any matter or for any purpose. When the Court has advised you that certain evidence is to be considered with relation to a particular defendant, you may not, of course, consider such evidence in relation to any other defendant.

You may not presume that the defendants, or any of them, are liable to plaintiffs simply because plaintiffs have sued them and filed a complaint alleging a conspiracy and the resulting damages. Neither may you presume that the defendants are not liable simply because they have in their answers denied the allegations made in plaintiffs' complaint.

The mere fact that plaintiffs have seen fit to join

a number of parties as defendants does not mean that all or any of them are liable. Plaintiffs' claim must be judged separately as to each defendant, and the position of each defendant should be judged on its own merits. This is especially true wherever the facts, circumstances or nature of the charges made or [2465] defenses asserted differ with regard to one defendant from those regarding all or some of the remaining defendants.

Each defendant is entitled to individual consideration of the evidence as applied to it to determine whether that particular defendant participated in any combination or conspiracy. No defendant should be prejudiced in the minds of the jurors merely because it has been named by the plaintiffs with others as a defendant in this case.

All of the parties defendant are corporations. In that connection the Court instructs you that a corporation is held to the same measure of liability as an individual. A corporation acts through its officers, directors and agents and may through one or more of them conspire with another corporation or with other individuals. Any act of an officer, director or agent of a corporation which is done within the scope of his duties or authority you may consider to be an act of the corporation itself. The parent corporation named as a defendant in the parent case is not chargeable with the acts of its subsidiary corporations solely because it is the parent corporation, but if you should find that the parent corporation used its ownership of the subsidiaries to cause such subsidiaries to act in its behalf,

then such parent corporation is liable for the resulting acts of its subsidiaries.

The Court now instructs you as to how you shall evaluate the testimony and the exhibits which have been [2466] tendered to you. It is basic to your consideration of the evidence that you bear firmly in mind that the plaintiffs have the burden of proof regarding all the issues which the Court has just outlined to you.

This means that on each of these issues plaintiffs must prove their contentions by what is called a preponderance of the evidence. The fair preponderance of the evidence does not necessarily mean the greater number of witnesses, but it means the greater weight of the evidence taken althogether.

It is said by the courts that the preponderance of the evidence means the evidence of greater convincing force. It means evidence which satisfies the conscience and brings conviction to an intelligent mind.

You must weigh the evidence as though it were placed on a scale. If the scale is weighted in favor of the plaintiffs, that is to say, if they have produced evidence of the greater convincing force, they have sustained their burden of proof. If it is weighted in favor of the defendants, or if it is evenly balanced, the plaintiffs have failed to sustain their burden. Unless you are satisfied that plaintiffs have met their burden of proof, you must return a verdict for the defendants.

You will in no event make any finding in this case which is based on speculation and conjecture

rather than competent evidence and the inferences reasonably to be drawn [2467] therefrom. It is not enough that there has been created in your minds some doubt or suspicion as to the conduct of the defendants. The plaintiffs must produce proof of such a nature as carries a conviction to your minds such as would influence you in the conduct of your own business or daily affairs. The character of the proof must be such as you would be willing to act upon and base a judgment upon in the disposal of important matters.

There are two kinds of evidence, direct and circumstantial. Direct evidence is that kind of evidence by which a fact is proved directly and without inference from other facts. Circumstantial evidence is that kind of evidence by which an inference of an unknown fact is drawn from the existence of known facts. In arriving at such verdict you are to consider all of the evidence, both direct and circumstantial.

Before a fact can be said to have been proved by circumstantial evidence alone it is necessary not only that the circumstances proved by the evidence shall reasonably give rise to an inference of such fact but also that no other equally reasonable inference may be drawn from the same circumstances. If two equally reasonable inferences can be drawn from circumstances proved by the evidence, one consistent with the fact sought to be proved and the other inconsistent therewith, you should not infer the fact sought to be proved from such circumstances alone. [2468]

In evaluating the testimony to decide whether the plaintiffs have sustained their burden of proof you will have to decide what credibility is to be attached to the testimony of the various witnesses. Whether you believe or do not believe the witnesses, and the weight to be attached to their testimony, is a matter for your sole and exclusive judgment.

In passing upon the credibility of the various witnesses it is your right to accept the whole or any part of their testimony or to discard or reject the whole or any part.

It is your over-all duty to scrutinize carefully the testimony given and in so doing you are to consider the following:

The circumstances under which the witness testified, his demeanor and manner on the witness stand; his intelligence; the extent to which his testimony is contradicted or corroborated by other evidence, if at all; the reasonableness or unreasonableness of his story; his apparent candor and fairness or the lack thereof; his interest or lack of interest, if any, in the result of the case, and in any other matter which reasonably sheds light upon his reliability as a witness.

There are several modes of impeaching or discrediting a witness. He may be impeached by evidence that he has made at other times statements inconsistent with his present testimony, by contradictory evidence, or by evidence that he is biased against or hostile toward the party against [2469] whom he testifies.

If it is shown that a witness has testified falsely

at one part of his testimony, you are at liberty to disregard the testimony of that witness entirely or in part.

The purpose of the anti-trust laws is to prevent and declare unlawful contracts, combinations and conspiracies designed to unduly restrain competition, or to monopolize or to unduly obstruct the free course of trade among the different States and with foreign countries. The restrictions imposed by this law were intended to frustrate unreasonable restraints, but not to prevent the use of reasonable means to protect interstate commerce from injurious or destructive practices or the promotion of competition upon a sound basis.

The plaintiffs' complaint is brought under the anti-trust laws. Insofar as this action is concerned, unless there has been agreement, combination or conspiracy among two or more persons, the anti-trust laws are not applicable. While the agreement, combination or conspiracy can be established by circumstantial evidence without direct proof, still when all is said and done, it is the true and ultimate fact which must prevail. Either there is some agreement, combination or conspiracy or there is not. Unless you find by a preponderance of the evidence that two or more defendants joined together in an agreement, combination or conspiracy by reason of which plaintiffs were injured, you must find for the defendants. [2470] Moreover, you cannot find against any defendant who was not a party to an agreement, combination or conspiracy by reason of which plaintiff were injured.

In this type of action the burden is upon the plaintiffs to prove the four basic elements of their claim:

First, they must prove that the defendants did in fact engage in an unlawful agreement or conspiracy.

Second, they must prove that overt acts were committed or performed by defendants pursuant to the unlawful agreement or conspiracy.

Third, they must prove that these acts injured them and were the direct, immediate and proximate cause of such injury.

Fourth, they must prove their damages.

An unlawful conspiracy is an agreement or understanding, express or implied, between two or more persons, to do an illegal act, or to do a legal act in an illegal manner. The essence of the conspiracy is the unlawful agreement or combination. A conspiracy is sometimes defined by the courts as a partnership in an illegal enterprise.

The term "monopolize" as used in Section 2 of the Sherman Act means the joint acquisition or maintenance by the members of the conspiracy formed for that purpose, or the power to control and dominate interstate trade and commerce in a commodity to such an extent that they are able, as a group, [2471] to exclude actual or potential competitors from the field, accompanied with the intention and purpose to exercise such power.

The phrase "attempt to monopolize" means the employment of methods, means and practices which would, if successful, accomplish monopolization, and

which, though falling short, nevertheless approach so close as to create a dangerous probability of it, which methods, means and practices are so employed by the members of and pursuant to a combination or conspiracy formed for the purpose of such accomplishment.

It is in no respect a violation of the law that a number of individuals or corporations, each acting for himself or itself, may own or control a large part, or even all, of their particular commodity, or all the business in a particular commodity.

An essential element of the illegal monopoly or monopolization is the existence of a combination or conspiracy to acquire and maintain the power to exclude competitors to a substantial extent.

In this case the claim is that the defendants entered into an agreement or combination to restrain and monopolize interstate and foreign trade in vanadium products. The burden is on the plaintiffs to establish the existence of such a conspiracy during the time plaintiffs were in business. If you find that the plaintiffs have not proved that there was [2472] such a conspiracy between the defendants, you should not consider any other issues in the case and you must return a verdict for the defendants.

The Continental Ore Company, in order to prove the existence of a conspiracy, need not show you an express or formal agreement to do so. You are allowed to infer the existence of a conspiracy from a course of dealings or through an exchange of words and from acts done. An unlawful conspir-

acy is often formed without simultaneous action or agreement on the part of the conspirators. Plaintiffs are seldom capable by direct testimony or evidence to prove a conspiracy. Therefore the law allows you as members of the jury to infer the existence of a conspiracy from things actually done, taking into consideration all of the facts and circumstances surrounding the conduct of the parties who are charged with the conspiracy. Proof of conspiracy, however, requires more than mere suspicion or conjecture, and there must be either direct proof of conspiracy or circumstantial evidence sufficiently strong to give rise to an inference of a conspiracy. It is sufficient, however, if the plaintiffs establish by a preponderance of the evidence or the greater weight of the evidence that two or more parties in any manner came to a mutual understanding to establish a common or unlawful design.

The law recognizes the right of any trader or manufacturer engaged in a private business freely to exercise [2473] his own judgment, his own independent discretion as to the parties with whom he will deal or refuse to deal.

If a prospective buyer indicates to a seller in advance that he would not buy at the seller's current price for similar sales, the seller's failure to offer goods at that price does not evidence a refusal to deal.

The Court instructs you that if any defendant acted on the basis of its own business judgment, no inference of conspiracy can be drawn against that

defendant, even though after weighing all of the circumstances your own personal opinion might be that the defendant's judgment was incorrect. You cannot find that the defendants entered into an unlawful agreement or conspiracy because you disagree with their business judgment.

It is unlawful per se for two or more competitors by agreement to fix prices, and any scheme or plan which fixes prices is unlawful under the anti-trust laws.

The existence of uniformity of prices between two or more competitors is a circumstance which the jury may consider in determining whether or not a conspiracy to fix prices existed.

You are instructed, however, that mere uniformity of price in the sale of commodities such as vanadium products are not in themselves sufficient evidence of an unlawful agreement or conspiracy, since uniformity in price may result [2474] solely from economic forces.

You may consider diversity of business practices among defendants as tending to show the absence of any unlawful agreement or conspiracy among them.

In reaching a conclusion as to the existence of the conspiracy as charged, and whether such defendant was a member, you must do so without regard to, and independent of, the acts and declarations and statements of the others.

The existence of the conspiracy cannot be established against any co-defendant by the acts or declarations of his alleged co-conspirators done or made

in his absence. The existence of the conspiracy and each defendant's connection with it must be established by independent proof based upon the reasonable inferences to be drawn from such defendant's own acts, his own declarations and his conduct.

The acts or statements of employees, agents or officers of a corporation can only be considered as acts or statements of that corporation if the evidence shows that the corporation through its shareholders, board of directors or authorized management officers vouched for part or all of an employee's, agent's or officer's statement.

It is not necessary to show that the statement was expressly vouched for. If authorized management officers direct that business be conducted and relies upon a particular intramural statement or report, and it is so conducted without [2475] reservation, the corporation has, by implication, adopted the statement or report, and is chargeable with it as an admission.

Evidence of acts and declaration of agents or employees of each of the defendants are not to be considered as evidence against other alleged members unless you find from circumstantial evidence, independent of such acts or declarations, that there was a conspiracy between the defendants.

If you find that any defendant adopted a business practice similar to that of another defendant, this is circumstantial evidence from which various inferences may be drawn. It is plaintiffs' contention that such similar business practice, if any you find,

is reasonably consistent only with unlawful agreement or conspiracy among defendants. It is defendants' contention that such similar business practices as you may find are either the result of the standardized nature of their products or of other economic factors confronting all defendants alike, or the result of the necessity upon each defendant to meet its competition, or the result of a belief independently arrived at by each defendant that such business practice was least expensive, most efficient or otherwise the best course for it to follow.

Plaintiffs have the burden of proof on this issue. You must find for the defendants unless you find that the inference suggested by plaintiffs is the only conclusion that can fairly and reasonably be drawn from the similarity of [2476] business practices of any of the defendants.

Not only must the plaintiffs prove a conspiracy in violation of the anti-trust laws, they must, in addition, show that the defendants committed or performed overt acts in furtherance of that unlawful conspiracy. Plaintiffs are private parties suing for damages. This is not a governmental suit. Private parties, unlike the Government, must prove more than a public wrong; they must prove that the public wrong is a private wrong to them. Private civil anti-trust actions are founded not upon the mere existence of a conspiracy, but upon injuries which result from the commission of forbidden overt acts by the conspirators. Therefore, no private action accrues from the mere agreement or conspiracy itself, because standing alone a conspir-

acy does not invade any private right. The plaintiffs must accordingly prove that in carrying out the conspiracy which they claimed existed, the defendants performed overt acts which have had a direct detrimental impact upon their business. The burden is on the plaintiffs to establish such overt acts.

In determining whether or not the plaintiffs have been injured and damaged by reason of the defendants' alleged unlawful conspiracy, you must determine whether or not plaintiffs have established with reasonable certainty that but for the conspiracy they would have had vanadium products to sell and would have sold them at a profit. [2477]

The damages which you may properly award to plaintiffs, if you find that plaintiffs have any right to recover damages, are limited to those actual damages which can be determined from the evidence, and do not include claimed damages which are merely speculative, remote or uncertain. Actual damages must be proved by facts from which their existence is logically inferable and cannot be supplied by conjecture.

In determining whether plaintiffs were injured or damaged as a result of the alleged unlawful activities of the defendants, you may consider the conditions of business prevailing at the time, including abnormal shortages in vanadium products caused by war, the effect of Government controls upon the maximum sale prices of vanadium products, Government purchasing policies for both vanadium ore and finished products, export embargoes,

and Government priority and allocation regulations upon domestic distribution.

The evidence discloses that immediately after the Pearl Harbor disaster in December, 1941, and the subsequent declaration of war by the United States against Japan and Germany, the United States Government, through its various agencies, ordered controls of all materials, including ores and metals which might be used in national defense. These orders gave the United States Government the power to control the production, sale and allocation of all such war materials and [2478] under such orders, priorities were instituted which were in effect from January, 1942, through February 29, 1944.

The Court instructs you that to the extent that any defendant acted on behalf of the Government of the United States or on behalf of one of its agencies or services, and in the scope of its duties in that regard, any such actions cannot be violations of the anti-trust laws. No such actions may form any proper part of plaintiffs' proof of conspiracy to monopolize or to restrain trade in the present case, nor may plaintiffs recover any damages which may have resulted from such actions.

If you find that plaintiffs stopped such business as they may have in ferro-vanadium or vanadium oxide at a time when they were able to buy vanadium oxide from any supplier, whether that supplier might have been either of the defendants or any other person or Government agency, at prices which would have enabled the plaintiffs to make a

profit, then you cannot find that plaintiffs lacked supplies of vanadium products to sell as a result of the activities of the defendants or any of them.

138

You are instructed that plaintiffs are not entitled to recover an element of damages which could have been avoided through the exercise of reasonable efforts on their part. Plaintiffs are not entitled to increase their damages through inaction, but must take all reasonable steps to mitigate their [2479] damage and reduce their loss. In determining whether plaintiffs have discharged their duty to mitigate damages, you may consider whether reasonable men in plaintiffs' position would have accepted offers made to them either before or after they ceased their vanadium business to supply them with vanadium oxide at prices which would have permitted them to operate at a profit. You may consider whether reasonable men in plaintiffs' position could have made arrangements to process ferro-vanadium, and whether reasonable men in their position would have made additional efforts to find other suppliers of vanadium oxide or processors of ferro-vanadium.

If you find that by any of these means plaintiffs could reasonably have avoided the cessation of their Canadian business or could have recommended it at any later time, you must limit plaintiffs' damages to those losses which they would have suffered had they taken such advice.

If you find that plaintiffs suffered damage by reason of the alleged unlawful activities of the de-

fendants, you are to proceed to determine the amount of damages so caused to plaintiffs.

In this case plaintiffs' claim for damages is based upon the claim that they lost profits as a result of the alleged unlawful activities of the defendants. Plaintiffs must prove the amount of such lost profits, if any, only by evidence from which a just and reasonable inference can be [2480] drawn. You may not speculate as to the amount. Your determination must be based on evidence as to the persons from or through whom plaintiffs would probably have been able to obtain vanadium products, persons to whom plaintiffs would probably have been able to sell the vanadium products they so obtained, and the net profit which plaintiffs would probably have obtained on any such transactions.

Plaintiffs must satisfy you by a preponderance of the evidence that they would in fact have made net profits in addition to any net profits they actually made and they must furnish you with a fair and reasonably accurate standard for measuring just what that additional net profit would have been. If they have not furnished you with such a standard and if you have no means of ascertaining what their damages may be other than by speculation and guesswork, in such event you must return a verdict for the defendants.

In the event you find by a preponderance of the evidence that plaintiffs were injured by the acts of the defendants, you are instructed that this alone is not sufficient to permit you to award damages to the plaintiffs. Injury to the plaintiffs individu-

ally is not sufficient to warrant recovery by plaintiffs in a civil action under the anti-trust laws. Plaintiffs, in addition, must establish by a preponderance of the evidence that the acts which caused them injury were part of an illegal agreement or conspiracy which was reasonably [2481] calculated to prejudice the public interest by unduly restricting the free flow of interstate commerce. In other words, even if you should find that there were acts of the defendants directed at plaintiff alone, this is not sufficient. You must find that defendants were engaged in a conspiracy to injure the general public by restraining the free flow of interstate commerce, and that it was by reason of this general conspiracy that plaintiffs' business was destroyed.

Under plaintiffs' complaint it is alleged that the defendants' acts were in violation of the anti-trust laws and resulted in damage to the plaintiffs from July, 1938, to July 15, 1949.

You are instructed, however, that in determining the amount of damage, if you reach this point, you may not allow plaintiffs recovery of damages for any losses which may have been sustained by them prior to October 10, 1939.

Electro Metallurgical Company of Canada, Limited, a Canadian corporation, whose stock is owned by Union Carbide, is a corporation operating in Canada and during the period in controversy was designated by the Government of Canada as its purchasing and sales agent of war materials. You are instructed that any act of said corporation, per-

formed as an agent of the Canadian Government even though it resulted in injury to the plaintiffs, would not be a basis for liability on the part of Union Carbide, as said acts would be wholly [2482] within the jurisdiction of the Canadian Government.

If from a preponderance of the evidence you are satisfied that the defendants did enter into an unlawful conspiracy to restrain trade and as a direct and proximate result of said acts of the defendants, that plaintiffs have suffered damage, then you may assess the damage in accordance with the provisions of the instructions given you.

You have heard during the course of this trial references to a Government case against the defendants in Denver, Colorado. The Court instructs you that in your deliberations about this case you are to decide this case on its own merits without regard to the Denver case.

The Court realizes that this has been a long and somewhat tedious case so far as the jury is concerned, but in the foregoing instructions the Court has limited the instructions to questions of law, and it is not its purpose or intention to comment in any manner upon the evidence. You have heard the evidence and you are the sole judges of the evidence and the Court is content to leave that matter for your consideration.

The Court apologizes for the length of these instructions, but as you may observe, they are intended to state definite propositions of law. Both plaintiffs and the defendants have submitted re-

quested instructions, and while many of them may appear repetitious, yet in the Court's [2483] judgment they are not conflicting and the foregoing instructions have been given to you in order that the theories of the law of both plaintiffs and defendants may be presented to the jury.

The instructions of the Court constitute the law of this case which are to govern your deliberations. You must be governed by them as a whole and are not to single out one instruction to the exclusion of all the others.

When you retire you will select one of your number as foreman, who will preside over your deliberations and sign the verdict when you have arrived at a verdict. It is necessary for you all to agree as there are no majority verdicts in this court.

Forms of verdict will be submitted.

Now, in this case it was anticipated that it would take some time to try it, and frequently during trials some member of the jury may be incapacitated and have to be excused, but in order that we may have a full jury of twelve we have selected an additional juror to sit during the trial of this case, so that that juror may take the place of anyone who might be disqualified to act. At this time the last juror selected may be excused. The jury may retire to deliberate on your verdict.

(Thereupon at 2:57 P.M. the jury retired from the courtroom, and in their absence the following occurred:) [2484]

Mr. Alioto: Before the Court leaves I wonder if I can take up one matter with the Court. In

going over the instructions I thought there were others that were excepted to that do not appear on the list as instructions to which we took exception, and I think the reason for it is that in making my objections I made them in connection with certain propositions of law, and those propositions of law may have appeared in one, two or three instructions and I may have mentioned them in only one. But in addition to the objections to the instructions noted on the copy which I have received, I wish to note an exception to Instruction No. 8 insofar as it does not incorporate in its last paragraph the rule with respect to declarations of co-conspirators.

I also wish to note an exception to No. 10 for the same reason.

I also wish to note an exception to Instruction No. 19 as well as an exception to No. 20. These cover the general propositions of law that were mentioned in chambers the other day to the effect that it is our belief that the Union Carbide defendants, or that the Union Carbide alone, or that U.S.V. alone can be found to have violated Section 2 of the anti-trust laws, and that the Vanadium Corporation of America alone can be found to have violated Section 2 of the anti-trust laws with respect to ferro-vanadium.

The same thing would apply to the second to the [2485] last paragraph of Instruction No. 22. I take it where the Court has noted an exception allowed plaintiffs, it covers the entire instruction and not just the paragraph at which the "exception" appears?

The Court: Do you reserve an exception to Instruction 22?

Mr. Alioto: Yes. The "exception" is up at the top. That covers all the paragraphs, I take it. Thank you.

The Court: About these others——

Mr. Alioto: There are a few others and I will be finished in just a moment, if your Honor please. We would also respectfully except to the giving of Instruction No. 30 as being too extreme in connection with the adoption by the corporation.

We respectfully except to the giving of Instruction No. 33.

We except to Instruction No. 34, Instruction No. 35, we have already objected to Instruction No. 36, we would except to Instruction No. 38, Instruction 39—that already appears on 39—we except to Instruction No. 38 and we respectfully except to Instruction No. 42.

We would respectfully except to the instruction in which the Court tells the jury that in its view there was no conflict between the instructions of the plaintiff, the proposed instructions of the plaintiff and the defendants. We [2486] believe on some issues that there was rather extreme conflict.

The Court: No, I didn't mean that. I meant the ones that I have given.

Mr. Alioto: I thought it may carry the implication that in those proposals there was no conflict. Now, I take it it will be deemed, gentlemen, that the exceptions to the instructions again were taken

before the jury was sent to its room for deliberations?

Mr. Neaher: That is agreeable.

Mr. Archer: That is agreeable.

The Court: Is there any objection on the part of the plaintiff's attorney to allow an exception to these instructions as suggested?

Mr. Archer: No, your Honor.

Mr. Neaher: No, your Honor.

The Court: They will be noted.

Mr. Alioto: One final matter, if your Honor please. I take it before the exhibits are sent in to the jury room there will be a stipulation of counsel that the exhibits are in such form that there is no objection to their being sent in?

The Court: If they call for them.

Mr. Alioto: Yes. But I have in mind there are a few exhibits, if your Honor please, which were admitted that contain statistical data, for example for the years 1933 to [2487] 1945, and the Court said, "We will admit that only insofar as it pertains to the years 1938 to 1945." I think if those exhibits are called they can be physically covered.

The Court: If they are called for. It isn't my custom to send the exhibits to the jury room unless the jury calls for some specific exhibit. What is your practice here?

Mr. Archer: That is satisfactory, your Honor.

Mr. Neaher: That is satisfactory.

Mr. Alioto: We think the practice is probably to the contrary.

Mr. Archer: If you want to get these exhibits

fixed up—the exhibits are not in shape to go to the jury right now.

Mr. Alioto: There are just a few. They can be covered in a minute or so. That is no insurmountable problem.

The Court: If they call for them we can take it up.

Mr. Archer: With the Court's permission, I will erase Mr. Alioto's argument from the blackboard with the idea the jury may be back here on some question. Is that satisfactory?

The Court: What is that?

Mr. Archer: I think I ought to erase the blackboard.

Mr. Alioto: I do not know why that should be [2488] done, if your Honor please.

Mr. Archer: It is not evidence in the case. They may be back on some other question.

Mr. Alioto: That would involve a trespass upon private property.

The Court: What is your custom about holding the jury later than four o'clock?

The Clerk: They hold them and send them out to dinner, and some of the judges let them deliberate until a reasonable hour. Some of the judges will send them home in a civil matter.

The Court: What is your attitude on that? I have a good deal of sympathy for a jury, and I think this jury has endured quite a little punishment here. Is there any reason that they could not be excused at the usual time to return tomorrow morning and resume their deliberations?

Mr. Holland: No, I think they would like to get a dinner out of it, don't they?

Mr. Neaher: They may also prefer to work on rather than to come back tomorrow.

Mr. Archer: Whatever their desire would be would be satisfactory to us, or the Court's desire would be satisfactory to us.

Mr. Holland: After a certain time would your Honor have them return a sealed verdict, go home and come back [2489] the next day?

Mr. Alioto: Return a sealed verdict?

Mr. Archer: I think Mr. Holland was thinking that if we kept them late, that they could return a sealed verdict so we don't have to get everybody out here.

Mr. Alioto: I think our practice here, and there is much to commend it, is to be here at the time the jury returns its verdict.

The Court: Suppose we do this. I can remain in my chambers until five o'clock, and if they have not arrived at a verdict then, they may be excused until tomorrow morning.

Mr. Archer: That is satisfactory.

Mr. Alioto: That is satisfactory.

Mr. Neaher: That is satisfactory.

(At 3:35 p.m. approximately counsel for the respective parties were called into the Court's chambers and the following occurred:)

Mr. Alioto: If your Honor please, your Honor has been good enough to hear us in chambers in connection with the request made by the plaintiff. It has come to our attention the jury has sent out a

request for some of the exhibits, the request being, as we understand it, the requirements contract tendered to the plaintiff by the defendant Union Carbide. I do not know what your Honor's practice is with respect to this matter, but I would respectfully request, first of all, that [2490] the request from the jury be read into the record, and therefore I would respectfully move the Court that all of the evidence which has been, all the documentary evidence which has been admitted in this case be sent in to the jury so that they would have all of that evidence before them rather than just one isolated piece of evidence that went in. We think it prejudicial that the jury not have before it all the documentary evidence that has been admitted.

The Court: It is the ruling of the Court that the jury is entitled to any portion of the exhibits that they request. This is a specific request and it has been complied with. The objection will be overruled.

Mr. Archer: I would like to point out for the record, too, that there are a great many of those statistical exhibits which were going to be corrected or have part of them eliminated, and on some of those I know that has not been done as yet, so we couldn't send them in right now.

Mr. Alioto: Is that the specific basis on which the objection is being ruled upon? I do not want anything collateral that we can fix up in five minutes given as the reason for not sending in the exhibits.

The Court: The Court will not send in any exhibits except those asked for by the jury.

Mr. Alioto: And not because of any reasons suggested by Mr. Archer which can be remedied in five minutes, [2491] is that correct?

Mr. Archer: I do not think it can be remedied in five minutes. There were some of those accounting exhibits that had to have things written on them. It has not been done yet.

The Court: I think it would simply add confusion to confusion to send all the exhibits in there.

Mr. Alioto: Yes, but we have a confused record at the moment now because Mr. Archer has introduced a ground of objection and I do not feel I can leave it on that ground.

Mr. Holland: I think the Court ruled before Mr. Archer said anything.

Mr. Alioto: Yes, but now we have a confused record. It is not clear, in my view. I suggest we send in the exhibits now and I will physically——

The Court: Which exhibits?

Mr. Alioto: All of the exhibits, and I will physically take off those portions of the statistical exhibits before 1938.

The Court: The Court is not going to do that.

Mr. Alioto: And not for the reason that the exhibits are not in shape to go in?

The Court: No. I am just stating that any exhibit the jury requests will be supplied and they will not be sent any exhibits that they have not requested them. [2492]

Mr. Neaher: I think I would like to point out during the course of this trial practically every exhibit in evidence was read to the jury.

The Court: Not once but many times.

Mr. Alioto: We have one further request, if your Honor please, and that is that any message from the jury be physically incorporated into the record here so we know exactly what it is the jury requested.

Mr. Neaher: We have no objection to that.

The Court: I see no objection to that.

Mr. Alioto: Who has the slip of paper?

Mr. Holland: The Clerk.

The Court: Do you have that request?

The Secretary to the Court: This is another one. The request I sent back in.

The Court: "May we see the USV contracts Mr. Archer referred to yesterday afternoon." What contracts were those, the USV contracts?

Mr. Archer: Oh, I think they are contracts to produce uranium and vanadium for the United States Government.

Mr. Alioto: You see, that is the problem here and I think this demonstrates it. I think they have reference to this alleged contract to supply in 1939, which are contracts running to a man named Poliakoft.

The Court: "May we see the USV contracts Mr. [2493] Archer referred to yesterday afternoon." Now, which contracts did you refer to?

Mr. Archer: U.S.V. has no contracts with Poliakoff. The only U.S.V. contracts referred to that I can think of are the contracts we had with Uravan in Grand Junction and Durango for the production of vanadium oxide.

Mr. Holland: Why don't we ask the jury as to that?

Mr. Alioto: I think in view of this request all the exhibits should be sent in.

The Court: I am not going to do that at all. I wouldn't think of it.

Mr. Holland: Perhaps the jury could be asked to specify a little more clearly with reference to subject matter so they could be identified.

The Court: Ask the foreman of the jury if he can be a little more specific in stating just what he wants.

Mr. Alioto: I take it before the second message came in the Court was asking for the first message. Who has that?

Mr. Neaher: I think this young lady sent it back in.

The Secretary to the Court: I sent it back in to the foreman with the contract.

The Clerk: This is the first note, your Honor. (Handing document to the Court.) [2494]

The Crier: The foreman says he thinks they have what they want in there.

Mr. Alioto: That is the only thing we want to do, your Honor, is to make the request and to request that all messages from the jury be physically attached to the record as a part of the record and marked by the shorthand reporter to identify the messages. Nothing further at this time.

Mr. Holland: No objection to that.

(The messages received from the jury were as follows: First message: "May we see USV

requirement contracts offered to Continental Ore." Second message: "Does control of 95% of the sources of supply by defendants of itself constitute evidence of restraint of trade in violation of the law?")

(At 4:23 p.m. the jury assembled in the courtroom and took their places in the jury box. In the presence of the Court and the counsel for the respective parties the following occurred:)

The Court: Mr. Foreman, you have asked for certain information. The question you asked is this: "Does control of 95% of the sources of supply by the defendants of itself constitute evidence of restraint of trade in violation of the law?" [2495]

Now, the instruction that covers conspiracy and monopolization and attempt to monopolize is as follows. I will read you Instruction No. 22:

"An unlawful conspiracy is an agreement or understanding, express or implied, between two or more persons, to do an illegal act, or to do a legal act in an illegal manner. The essence of the conspiracy is the unlawful agreement or combination. A conspiracy is sometimes defined by the courts as a partnership in an illegal enterprise."

The term "monopolize" as used in Section 2 of the Sherman Act means the joint acquisition or maintenance by the members of the conspiracy formed for that purpose, of the power to control and dominate interstate trade and commerce in a commodity to such an extent that they are able, as a group, to exclude actual or potential competitors

from the field, accompanied with the intention and purpose to exercise such power.

The phrase "attempt to monopolize" means the employment of methods, means and practices which would, if successful, accomplish monopolization, and which, though falling short, nevertheless approach so close as to create a dangerous probability of it, which methods, means and practices are so employed by the members of and pursuant to a combination or conspiracy formed for the purpose of such accomplishment. [2496]

It is in no respect a violation of the law that a number of individuals or corporations, each voting for himself or itself, may own or control a large part, or even all, of a particular commodity, or all the business in a particular commodity.

An essential element of the illegal monopoly or monopolization is the existence of a combination or conspiracy to acquire and maintain the power to exclude competitors to a substantial extent.

In this case the claim is that the defendants entered into an agreement or combination to restrain and monopolize interstate and foreign trade in vanadium products. The burden is on the plaintiffs to establish the existence of such conspiracy during the time plaintiffs were in business. If you find that the plaintiffs have not proved that there was such a conspiracy between the defendants, you should not consider any other issue in the case and you must return a verdict for the defendants.

As the Court has instructed you, there are certain facts which you may take into consideration. That

was one of the reasons why this case was submitted to the jury, and the fact that one of the defendants or two of them own 95% of the sources of supply that would—that is a matter that you can take into consideration, but that within itself is not a conspiracy. It is an indication or evidence that you may take [2497] into consideration in determining whether or not there was a conspiracy. Does that answer your question?

The Foreman: Thank you, your Honor.

The Court: Anything further now that the jury would like to know?

(No juror indicated a desire to make a further statement.)

The Court: You may retire.

(Thereupon at 4:25 p.m. the jury retired from the courtroom to deliberate further upon its verdict.)

(The following proceedings took place immediately after the jury left the courtroom:)

Mr. Alioto: If your Honor please, the plaintiff would respectfully except to the instruction given by the Court to the jury. Of course, we think it plain, particularly from United States against the Aluminum Company of America, 144 fed. 2d, that if 95% is acquired as part of a plan to seek control, that that in itself is a violation of Section 2 of the Sherman Act.

The Court: The case you cited to the Court was the tobacco case in 348 U.S.

Mr. Alioto: Yes, and even under that case.

The Court: This instruction to which you have

excepted was the instruction in that case and it was approved by the Supreme Court. [2498]

Mr. Alioto: Yes, if your Honor please, but now this jury has asked a specific question saying does control of 95% of the raw materials in itself constitute evidence of a violation of the law. I think the jury should be plainly told if 95% was acquired pursuant to a plan to control, that that standing alone is a violation of the anti-trust laws.

The Court: That is exactly what the Court told them.

Mr. Alioto: We do not think so. Furthermore we would respectfully except to the giving of the instruction in isolation from the other instructions, which tended to unduly emphasize this instruction, and we would like the Court to note an exception.

The Court: Exception is allowed. Anything further, gentlemen? We will stand recessed.

(At 4:50 p.m. the jury returned to the courtroom, and in their presence, the presence of the Court and counsel for the respective parties, the following took place:)

The Court: Have you arrived at a verdict?

The Foreman: We have, your Honor.

The Court: Pass it to the Clerk, please.

(A sheet of paper was handed to the Clerk.)

The Court: Read the verdict, Mr. Clerk.

The Clerk: Ladies and gentlemen, listen to your verdict as you have rendered it. Omitting the title of the [2499] case, verdict, "We the jury find in favor of the defendants." Signed "John S. Dodds, Jr., Foreman."

The Court: Is this your verdict, one and all?

The Jury: Yes.

The Court: The Court concurs in your verdict. Is there anything further?

Mr. Alioto: Yes, if your Honor please. We respectfully move that the Court poll the jury as to this verdict.

The Court: All right. Is this your verdict?

(Each of the twelve jurors responded it was his or her verdict.)

The Court: Anything further, gentlemen?

Mr. Archer: Would the Court desire a formal judgment prepared for entry and filing?

Mr. Alioto: I was going to inquire about the same thing, whether the Court was going to enter a judgment on the verdict, on the basis of the minute order, or what it proposed to do. We have a notice of appeal to file, and I was just wondering what the practice of the Court would be.

The Court: I think it would be well for you to file one.

Mr. Archer: I will prepare it and have it for your Honor tomorrow morning.

Mr. Alioto: The judgment then will not be entered [2500] until tomorrow morning, is that correct?

The Court: Very well. The Court desires to express his appreciation of the very careful attention this jury has given to this case. It has been a hard case to try. It is difficult to consider all the facts that have been submitted, and the Court has admired the patience with which you have done your

work. The jury will be excused from further consideration of this case and you can report to the Clerk.

(The jury thereupon retired from the courtroom and the following took place in their absence:)

The Court: I assume, of course, that you will make a motion for a new trial. It isn't necessary.

Mr. Alioto: I am sorry. I didn't hear the Court's remarks. There was a little noise.

The Court: Do you desire to file a motion for a new trial?

Mr. Alioto: We want to look into that problem, if your Honor please. At the time the judgment is entered we would like an opportunity to do that. Realistically I think we have made the points that we desire to make throughout the trial, and we may conclude it would be academic to file a motion. On the other hand, in view of the development of the question as asked by the juror, the last question, about the 95% monopolization and our somewhat strong views that that is specifically covered by the Alcoa case, among others, we may [2501] want to argue that point before your Honor. If in advance we know it is not going to do any good to argue the point, we would not want to inconvenience the Court, frankly, because the Court is here on a visiting basis.

The Court: What I have in mind is, whatever you want to do, anything that it is necessary for the Court to do in this case, I would like to do it by Monday of next week, because my reservations

are for Tuesday morning and I will leave Tuesday morning. Then we might have this agreement, that any orders that are necessary for this Court to make it can make in its home district.

Mr. Archer: That is satisfactory.

Mr. Alioto: We have no objection to that, if your Honor please. Let me ask whether the Court, say, could reserve this Friday for argument. In other words, as I understand it, the Court wants it done before Monday.

The Court: No, Friday is all right. I would prefer Friday.

Mr. Holland: I was hoping to leave tomorrow, Judge. Is there any possibility of that? I have been here a month now.

The Court: This is a pretty good place to stay.

Mr. Archer: I think we ought to convenience the Court, as long as the Court is here; we ought to meet his convenience on that. [2502]

The Court: We may find it necessary to make a return trip here on this case.

Mr. Alioto: I do not think that will be necessary. As far as we are concerned, we are prepared to get whatever motions we want to bring before the Court, we will be prepared to bring them before the Court on Friday. Of course, that would require presumably the defendants to waive the matter of notice.

Mr. Archer: That is satisfactory.

Mr. Alioto: It will require them to waive their having any points and authorities for a new trial

served on them any time before Thursday evening or Friday morning.

Mr. Archer: I think we have covered all the law points in the briefs we have filed.

The Court: I think in the Federal court a motion for a new trial is not absolutely necessary. Of course, in the State courts in our State it is. They appeal from that. But you appeal from the verdict of the jury in this case. If you want to file a motion for a new trial, it might be well as part of your record.

Mr. Alioto: That is all I have in mind, if your Honor please. I want a chance to think about it, particularly in the light of the last instruction given by the Court, which obviously brought about a verdict in a hurry, and we think we would like to bring certain authorities before your Honor on [2503] that. We think the simple answer to that question should have been "Yes," and I would like to present certain authorities to the Court on that point. If, on the other hand, it appears that it is not going to make too much difference with the Court, or if the Court already has an opinion on that, an opinion that is not likely to be changed, I have no desire to inconvenience anybody in staying here. It may be that tomorrow we will decide not to file a motion for a new trial but to file our appeal instead of a motion for a new trial. We will decide that sometime within the next twenty-four hours, if your Honor please, and then take it up with counsel for the defendants so they won't be inconvenienced so far as we are concerned.

Mr. Archer: Anything Mr. Alioto decides to do will be satisfactory with me.

The Court: Whatever you gentlemen agree on. We will recess, then, subject to call. [2504]

[Title of Court of Appeals and Cause.]

APPELLANTS' STATEMENT OF POINTS ON APPEAL AND DESIGNATION OF THE RECORD FOR PRINTING

Pursuant to Rule 17 (6) of the Rules of the above-entitled Court, the following is a concise statement of the points on which appellants intend to rely on their appeal herein:

I. The Court erroneously excluded evidence offered to prove that the appellees violated the Sherman Act.

1. It excluded evidence shortly predating July, 1938 which tended directly and positively to prove the existence of a domestic cartel between the appellees, and the nature and extent of their agreement in violation of the Sherman Act which was in existence during the statutory period of October, 1939 to July, 1948.

2. It excluded evidence that the appellees destroyed and then appropriated appellants' business in the Canadian market.

3. It excluded evidence that agents of the appellee Union Carbide told appellants that they

should not be in the vanadium industry and that appellants should not undertake to do business with the Climax Molybdenum Company, although such matters were expressly set forth in appellants' complaint.

4. It excluded evidence that the appellee Union Carbide's officer secreted documents which the officers believed reflected violations of the Sherman Act.

5. It excluded evidence of conversations with the chief managing agents of Union Carbide in 1939 admitting the appellees' violation of the Sherman Act and setting forth the relationship between the appellees' violations of the Sherman Act in the vanadium industry and their violations of the Sherman Act in low carbon ferrochrome.

6. It excluded evidence disclosing each appellee's cost of doing business and its profits.

7. It excluded evidence of the suppression of patents by appellee Vanadium Corporation of America.

8. It excluded evidence of prior consistent statements of an ex-officer of Union Carbide although his bias and interest were directly attacked by the appellees.

9. It excluded the business records of the appellants and their damage calculations.

10. It excluded the expert opinion of witnesses for appellants on the subject of damages.

II. The Court erred in over-examining appellants' witnesses, commenting on the evidence and

interrupting examination and cross-examination with statements and comments and interrogation which were prejudicial to appellants' case.

III. The Court erred in its instructions to the jury as follows:

1. That it is not a violation of the Sherman Act that one or more firms may own or control all of a particular product or all the business in a particular commodity. (Tr. 2472)

2. That the law recognizes the right of any trader or manufacturer engaged in a private business to refuse to deal. (Tr. 2473-2474)

3. That if any defendant acted on the basis of its own business judgment, no inference of conspiracy can be drawn against that defendant, even though after weighing all of the circumstances the juror's personal opinion might be that the defendant's judgment was incorrect. (Tr. 2474)

4. That the defendants were entitled to a verdict if the jury decided that the evidence of similar business practices did not lead to the conclusion that there was a conspiracy between the defendants. (Tr. 2476-2477)

5. That the plaintiffs had to prove the existence of a public wrong. (Tr. 2477)

6. That the acts of any defendant while acting as agent for the Government of the United States or Canada could not form any proof of conspiracy to monopolize or restrain trade. (Tr. 2479, 2482-2483)

7. That the plaintiffs could not recover damages

if they stopped their business at a time when they could buy vanadium from any supplier. (Tr. 2479)

8. That the plaintiffs had to prove damages based on evidence of actual suppliers, actual sales and net profits. (Tr. 2481)

9. That the instructions of the Court considered as a whole failed to clearly inform the jury that an agreement to acquire control of an industry, together with the acquisition of control, was in itself a violation of the Sherman Act; that individual refusals to deal are neither absolute nor exempt from regulations; that the jury should consider all the evidence in determining all of the issues involved; that the plaintiffs did not have to prove damages with certainty; and that the plaintiffs were not under a burden to return to the industry if they should find that the defendants excluded them and controlled the industry.

IV. The Court erred in refusing the following instructions of appellants:

1. That each individual appellee could be found to have violated the Sherman Act; that Union Carbide could be found to have violated the Sherman Act by the finding of a conspiracy between it and its affiliates (Pltf's Instructions Nos. 5, 8, 9 and 12); and that United States Vanadium Corporation could be, in itself, in violation of the Sherman Act. (Tr. 2232)

2. That the existence of over 90 percent control of an industry by two firms who have conspired together is sufficient of itself to violate the Sherman Act. (Pltf's Instruction No. 7, Tr. 2498-2499.)

3. That if 95 percent of the vanadium industry was acquired by defendants as the result of a plan to monopolize, the defendants violated Section 2 of the Sherman Act. (Tr. 2498)

4. That an agreement to refuse to deal is a per se violation of the antitrust laws. (Pltf's Instruction No. 10.)

5. That the antitrust laws contemplate that the wrongdoer shall bear the risk of uncertainty which his own wrong has created in accordance with the Supreme Court opinion in Bigelow vs. R.K.O., 327 U.S. 359. (Pltf's Instructions Nos. 15, 16.)

6. That the jury could award damages based on the increased costs occasioned by a price-fixing combination. (Pltf's Instruction Nos. 17, 24.)

7. That the jury should consider all the relevant data and estimates of damages offered by expert witnesses in arriving at an award of damages. (Pltf's Instruction No. 19.)

8. That the jury could consider the success of appellant in other lines of businesses in arriving at an award of damages. (Pltf's Instruction No. 21.)

9. That the jury should not consider the wealth of the parties in arriving at their determination. (Pltf's Instruction No. 22.)

10. That the jury should consider whether an appellee used its power as an agent of the United States for the purpose of carrying out or assisting

any combination or conspiracy to restrain trade or monopolize trade in the vanadium industry, and the fact that an appellee might have been an agent of a governmental department does not immunize its conduct from such considerations. (Pltf's Instruction No. 23.)

V. The Court erred in allowing counsel for the Vanadium Corporation of America to inform the jury that the appellees were acquitted by a jury in a prior government criminal action in his opening statement.

In support of the above-mentioned points on appeal, appellant herein designates the following for printing:

1. The Complaint;

2. The Answer of defendant Union Carbide and Carbon Corporation, et al.;

3. The Answer of defendant Vanadium Corporation of America;

4. Plaintiffs' Proposed Instructions to the Jury;

5. Each defendant's Proposed Instructions to the Jury;

6. The verdict for the defendants;

7. The judgment for the defendants;

8. Plaintiffs' Notice of Appeal;

9. This Statement of Points on Appeal and Designation.

[Title of Court of Appeals and Cause.]

DESIGNATION BY APPELLEES UNION CARBIDE CORPORATION (SUED HEREIN AS UNION CARBIDE AND CARBON CORPORATION), UNITED STATES VANADIUM CORPORATION, AND VANADIUM CORPORATION OF AMERICA OF PORTIONS OF RECORD, PROCEEDINGS, AND EVIDENCE TO BE PRINTED

To the Clerk of the United States Court of Appeals for the Ninth Circuit:

Appellees Union Carbide Corporation (sued herein as Union Carbide and Carbon Corporation), United States Vanadium Corporation and Vana-

dium Corporation of America hereby designate the following additional parts of the record, proceedings, and evidence to be printed:

1. The following portions of the Reporter's Transcript of the trial:

* * * * *

2. The following Plaintiffs' Exhibits: 11, 12, 22, 23, 34, 35 (only the following extracts: page 1, first paragraph, page 3, signatures on page 7), 39, 45, 55, 55-A, 56, 68, 69, 70, 71, 72, 73, 74 (page 1, to and including paragraph 7 on page 5, page 8), 75, 76, 79, 118, 122, 127, 129, 131, 149, 150, 157, 158, 159, 160, 161, 163.

3. The following exhibits introduced by Union Carbide and Carbon Corporation and United States Vanadium Corporation, as indicated by the prefix "U": F, G, H, I, J, L, M, N, O, Q (only the following extracts: pages 1 to 4, being the letter agreement of May 11, 1943; of Contract No. W-7405 eng-78: the cover page; pages 1, 2 and 3; Article IV-J on page 23; that portion of page 27 beginning with the words "In witness whereof * * * " and all of page 28 of contract number W-7405, eng-78), R (only the following extracts: letter dated December 20, 1943, from John W. Hill to Metals Reserve Company and first four pages of report dated November 30, 1943), S, T, 2-B, 2-C, 2-F, 2-G, 2-H, 2-I, 2-N, 2-P, 2-R, 2-S, 2-U, 2-V, 2-W, 2-X, 2-Y, 2-Z, 3-A, 3-B, 3-C, 3-D, 3-E, 3-Q, 3-R, 3-W, 3-X, 3-Y, 3-Z, 4-A, 4-B, 4-R, 4-T, 4-U, 4-V, 5-D, 5-E, 5-F, 5-J, 5-K, 5-M, 5-R, 5-T.

4. The following exhibits introduced by the defendant Vanadium Corporation of America, as indicated by the prefix "V": 1-A, 1-B, 1-D, 1-E, V1-F, V1-G, V1-H, V1-I, 1-J, 1-K, V1-L, V1-M, 1-N, V1-O, 1-P, 1-Q, 1-R, 1-S, 1-T, 1-U, 1-V, 1-W, 1-X, 1-Y, 1-Z, 2-A, 2-B, 2-C, 2-D, 2-E, 2-F, 2-G, 2-H, 2-I, 2-J, 2-K, 2-L, 2-M, 2-N, 2-O, 2-P.

5. This designation.

[Title of Court of Appeals and Cause.]

SUPPLEMENTAL DESIGNATION BY APPELLEES UNION CARBIDE CORPORATION (SUED HEREIN AS UNION CARBIDE AND CARBON CORPORATION), UNITED STATES VANADIUM CORPORATION, AND VANADIUM CORPORATION OF AMERICA OF PORTIONS OF RECORD, PROCEEDINGS, AND EVIDENCE TO BE PRINTED

To the Clerk of the United States Court of Appeals for the Ninth Circuit:

Appellees Union Carbide Corporation (sued herein as Union Carbide and Carbon Corporation), United States Vanadium Corporation and Vanadium Corporation of America hereby designate the following additional parts of the record, proceedings, and evidence to be printed:

1. The following Plaintiffs' Exhibits: 6, 7, 8, 33, 37, 38, 40, 41, 44, 46, 58, 62, 63 (omitting last page, being a memorandum dated 2/14/47), 64, 77, 78, 110, 111, 113, 114, 115, 117, 119, 120, 130, 132, 144, 145, 146, 162, 166; Exhibits 136, 137 and 138 to be reduced in size by photostat.

2. The following exhibits introduced by the defendants Union Carbide and Carbon Corporation and United States Vanadium Corporation, as indicated by the prefix "U": B, C, D, E, K, P, U, Z, 2A, 4C, 4D, 4E, 4H, 4I, 4J, 4K, 4L, 4M, 4N, 4O,

4P, 4Q, 4R, 4S, 4T, 4U, 4V, 4W, 4X, 4Y, 4Z, 5A, 5B, 5H.

3. This designation.

Dated: San Francisco, December 8, 1958.

Supreme Court of the United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, ET AL.,
PETITIONERS,

vs.

UNION CARBIDE AND CARBON
CORPORATION, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

PETITION FOR CERTIORARI FILED AUGUST 11, 1961
CERTIORARI GRANTED OCTOBER 23, 1961

No. 16149

United States
Court of Appeals
for the Ninth Circuit

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as partners under the trade name and style of CONTINENTAL ORE COMPANY,

Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL COMPANY; ELECTRA METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA,

Appellees.

Book of Exhibits

(Pages 2069 to 2310, inclusive)

Appeal from the United States District Court
for the Northern District of California,
Southern Division

Exhibits for Plaintiffs:

6—Location of Mills, VCA and USVC 2069
Admitted in Evidence 116
7—Answer to Interrogatory No. 7 2072
Admitted in Evidence 116
8—Answer to Interrogatory No. 17 2073
Admitted in Evidence 117
11—Pricing Formula, September, 1944. Robison to Burwell 2075
Admitted in Evidence 120
Excerpts Read 361-364
12—Mining Claims on Vanadium Bearing Ore Owned by USVC 2088
Admitted in Evidence 122
22—Bureau of Mines Certificate, USVC, 5/28/58 2111
Admitted in Evidence 132
23—Bureau of Mines Certificate, VCA, 5/28/58 2112
Admitted in Evidence 132
35—Letter, 11/2/41, Warren to Haldane, et al 2114
Excerpts Read 219-220
38—Memo and Letter, 3/6/44, Haldane to Rafferty 2117
Excerpts Read 244
39—Letter, 3/21/44, Viles to Kett 2121
Excerpts Read 248
44—Contract, 6/30/39, VCA and USVC ... 2122
Admitted in Evidence 282

Exhibits for Plaintiffs—(Continued):

45—Letter, 4/7/42, Burwell to VCA 2125
Admitted in Evidence 283
46—Letter and Agreement, 9/26/41, USVC and VCA 2126
Admitted in Evidence 294
Excerpts Read 548
55—Interoffice Memo, Sterling to Kett, 10/22/39 and Memo, Kett to Bransome, 10/3/38 2133
Admitted in Evidence 325
56—Memos, Kett to Sterling, 9/12/39 and 6/26/40 2135
Admitted in Evidence 326
58—Letter, 1/22/48, Burwell to Kaiser 2141
Excerpts Read 532-534, 553
62—Special Report, 2/20/42, Laub 672, 1331
Letter, 3/14/42, Laub to Bransome, ...673, 1333, 1941
Spec. Report, 4/14/42, Laub ..675, 1334, 1945
Letter, 4/22/42, Sterling to Kett ...676, 2144
64—Agreement, 5/15/40, Anaconda and USVC 2147
Letter 12/1/42, USVC to Anaconda ... 2149
Excerpts Read 591-592
68—Letter, 9/1/38, Haldane from Van Fleet 2151
Excerpts Read 628-629, 1438-1441
69—Letter, 6/26/41, Kett to Bransome 2154
Admitted in Evidence 630
70—Letter, 8/31/41, Kett to Bransome 2156
Admitted in Evidence 630

Exhibits for Plaintiffs—(Continued):
71—Letter, 6/13/40, Sterling to Kett 2157
Admitted in Evidence 631
72—Letter, 12/27/41, Weston to Haldane .. 2159
Admitted in Evidence 631
73—Letter, 5/10/44, Priestley to Du Dot, Remmers et al 2160
Excerpts Read 632
74—Toll Agreement, 1/26/43, USVC and Nisley & Wilson 2162
Admitted in Evidence 677
79—Sales Data of Continental, 1940-1944 ... 2169
Admitted in Evidence 797
110—Letter-Contract, 1/4/44, Imperial P & C and Henry J. Leir et al 2175
Excerpts Read 1014
115—Letter, 4/9/45, Imperial to Continental . 2179
Letter, 4/13/45, Imperial to Continental 2180
Letter, 5/11/45, Imperial to Continental 2181
Excerpts Read 1024
117—Letter, 9/4/40, Continental to Apex ... 2182
Letter, 9/9/40, Apex to Continental ... 2184
Letter, 5/24/41, Apex to Continental .. 2186
Copy of Agreement, 5/41, Apex and Continental 2187
Agreement, 7/1/38, Apex and Societe D'Electro-Chimie de Brignoud 2190
Excerpts Read 1051
118—Two Documents Showing Source of Continental Supply 2202
Admitted in Evidence 1066

Exhibits for Plaintiffs—(Continued):
119—Two Documents Showing Continental Sales of Vanadium 2212
Admitted in Evidence 1090
120—Statement of Continental Costs, Sales, Etc. 2213
Admitted in Evidence 1094
122—Correspondence re Termination of Apex Contract, February-March, 1942 2215
Excerpts Read 1188
Admitted in Evidence 1096
127—Letter, 1/13/42, Continental to Apex ... 2222
Admitted in Evidence 1240
129—Letter, 10/27/41, Continental to Apex .. 2223
Letter, 12/19/41, Continental to Apex .. 2223
Letter, 12/22/41, Lippa to Continental . 2224
Admitted in Evidence 1240
130—Exchange of Correspondence, April, 1942, Apex and Continental re Sale of Equipment 2225
Admitted in Evidence 1241
131—Exchange of Correspondence re Blanding Mines, 1940-1942,..... 2229
Admitted in Evidence 1242
Excerpts Read 1752, 1756-1758, 1759-1760, 1801
132—Correspondence re Vanadium 1939-1941 —VCA 2252
Admitted in Evidence 1245
144—Apex Correspondence re Defense Plant Corp., 1941 2266
Excerpts Read 1310-1312

Exhibits for Plaintiffs—(Continued):

146—Exchange of Correspondence, Apex and OPM, 1941 2270
Excerpts Read 1317-1318

149—File of Documents, Maggie "C" 1939-1941 2276
Excerpts Read 1573

150—Computation, USVC-VCA Business Maggie "C" 2322
Admitted in Evidence 1583
Excerpts Read 1584

157—Agreement, 6/12/42, VCA and Blanding 2341
Excerpts Read 1792-1793

158—Letter, 3/17/44, Continental to Milenski 1787, 2353
Letter, 3/17/44, Continental to Milenski 2354

160—Excerpt from Minutes of 5/7/42, Board of Directors of VCA 2355
Excerpts Read 1850

162—Letter, 11/3/39, Electro Met to VCA ... 2356
Excerpts Read 1885

Exhibits for Defendant Union Carbide and Carbon Co.:

B—Agreement, 2/25/42, USVC and Metals Reserve 2358
Excerpts Read 368-369

C—Agreement, 4/9/42, USVC and Metals Reserve 2363
Excerpts Read 371-373

Exhibits for Union Carbide—(Continued):

D—Agreement, 5/9/42, USVC and Metals Reserve 2369
Excerpts Read 374-375

I—Letter, 10/22/42, Hill to Smith 2381
Admitted in Evidence 393

J—Letter, 11/19/42, Bridgman to USVC 2385
Admitted in Evidence 394

K—Letter, 11/25/42, Bridgman to USVC 2387
Excerpts Read 395-396

L—Telegram, 1/7/43, Burwell to Masters . 2390
Excerpts Read 398

O—Letter, 10/12/43, Emigh to Hill, w/ enc. 2391
Excerpts Read 404-406

Q—Letter Agreement, May 11, 1943, Union Mines Development Corp. and United States of America 2397
Excerpts Read 418-421, 438-441

R—Report of Operations of USVC of 11/30/43 and Letter of 12/20/43 2410
Admitted in Evidence 437

T—Letter, 10/4/44, Burwell to Smith 2417
Excerpts Read 450

U—Agreement, 10/13/44, U. S. Vanadium Corp. and Metals Reserve Co. 2418
Admitted in Evidence 452

Z—Letter, 7/3/44, Metals Reserve to Union Mines 2430
Excerpts Read 466

Exhibits for Union Carbide—(Continued):

2-A—Letter, 5/20/47, Metals Reserve to Union Mines 2433
Excerpts Read 467-468

2-I—Contract, 12/10/46, Electro Metal Sales and Continental Ore 2434
Admitted in Evidence 619

2-R—Letter, 7/9/43, Nisley to Paige Edwards with Enclosures 2437
Excerpts Read 712-713

2-U—Letter, 12/13/43, Nisley to Leir 2440
Excerpts Read 729-730

3-C—Letter, 10/8/44, Nisley to Leir 2444
Excerpts Read 742

3-Q—Letter, 7/14/42, Wolf to North Continent Mines 2446
Excerpts Read 912-913

4-A—Letter, 8/3/42, Wolf to Nisley & Wilson 2449
Excerpts Read 934

4-H—Letter, 5/4/43 Continental to Electro Met 2451
Admitted in Evidence 948

4-R—Letter, 8/4/44, Metals Reserve to Continental 2452
Letter, 9/20/44, Metals Reserve to Continental 2453
Contract, 9/26/44, Metals Reserve and Continental 2454
Excerpts Read 964

Exhibits for Union Carbide—(Continued):
4-T—Letter, 11/1/44, Wolf to Imperial P & C 2457
Excerpts Read 969
4-X—Contract, 1/29/46, Continental and Electro Met 2459
Excerpts Read 977
4-Z—Letter, 1/29/46, Electro Met Sales to Continental and Enclosed Contract ... 2461
Excerpts Read 982
5-D—General Price Control, OPA, 11/2/43 2462
Excerpts Read 987
5-E—Invoice, 5/24/46, Continental to Sulzer Bros. 2467
Admitted in Evidence 991
5-F—Letter, 3/21/46, Continental to Electro Met Sales 2468
Excerpts Read 993
5-H—Contract, 9/10/48, Electro Met-Continental 2469
Admitted in Evidence 997
5-J—Letter, 10/15/43, Nisley to Continental 2471
Letter, 10/28/43, Leir to Nisley 2472
Excerpts Read 1209
5-K—Exchange of Correspondence 1939, Continental-Vitro 2474
Excerpts Read 1219
5-T—Manhattan Engineers District—USEO—Warehouse, Grand Junction, Colorado "Summary of Material Balance Statements, Vanadium Oxide (V_2O_5) in Pounds, Dec. 1, 1943 thru Feb. 1956" 2485
Admitted in Evidence 1985

Exhibits for Vanadium Corp.

1-A—Letter, 11/5/41, Leir to Apex 2487
Excerpts Read 1003, 1159
1-D—Agreement, 7/14/38, Apex-Societe, etc. 2489
Admitted in Evidence 1115
1-E—Letter, 7/27/40, Leir to Milenski 2490
Admitted in Evidence 1117
1-F—Letter, 8/10/40, Leir to Milenski 2492
Excerpts Read 1118
1-G—Letter, 8/16/40, Milenski to Continental 2495
Excerpts Read 1121
1-H—Letter, 8/19/40, Continental to Blanding 2496
Excerpts Read 1122
1-J—Letter, 8/20/40, Leir to Apex 2498
Excerpts Read 1127
1-K—Letter, 12/16/40, Continental to Apex 2501
Excerpts Read 1133
1-L—Letter, 11/6/40, Continental to Apex . 2505
Excerpts Read 1136
1-N—Letter, 10/17/40, Leir to Apex 2506
Excerpts Read 1139
1-Q—Exchange Correspondence, 1941, National Vanadium, Apex and Continental 2507
Excerpts Read 1146-1150
1-R—Letter, 9/26/41, Continental to Natl. Vanadium 2514
Excerpts Read 1151

Exhibits for Vanadium Corp.—(Continued):
1-T—Leir Office Memo 11/27/41 and Letter 11/27/41, Leir to Apex 2515
Excerpts Read 1163
1-U—Letter, 12/3/41, Continental to Apex . 2518
Excerpts Read 1164
1-Y—Memo, 1/27/42, Continental to Apex .. 2519
Excerpts Read 1173
2-B—Letter, Apex to Leir, 6/2/42, ...1188, 1293
Balance Sheet 2520
Admitted in Evidence 1192
2-C—Letter, 1/28/43, Leir to Lippa 2524
Letter, 2/1/43, Lippa to Leir 2523
Excerpts Read 1194
2-G—Letter, 1/13/42, Apex to Continental . 2529
Letter, 1/19/42, Lippa to Leir 2528
Excerpts Read 1291
2-H—Letter, 4/23/42, Apex to Vanadium Corp. 2530
Excerpts Read 1359
2-J—Letter, 3/16/42, Leir to Blanding ... 2532
Excerpts Read 1711
2-K—Exchange of Correspondence, 1944, re Reopening Blanding Mill 2533
Excerpts Read 1715-1723, 1799
2-L—Wire 3/24, Continental from Milenski . 2554
Excerpts Read 1724, 1777
2-M—Price Regulations 2555
Admitted in Evidence 1728

PLAINTIFFS' EXHIBIT No. 6

VANADIUM PLANTS

Item 4—Information pertaining to vanadium mills, owned, leased and operated.

Under date of Sept. 16, 1919 the Corporation purchased the physical assets of the American Vanadium Company for a price of $3,000,000. Included in such assets was a Reduction Plant for treatment of vanadium ores at Bridgeville, Allegheny Co., Penna. This plant has been in operation since date of acquisition to present date.

The Corporation under date of Jan. 1, 1920 purchased certain assets of the Primos Chemical Co. for an amount approximating $2,000,000. Included in this purchase was a Reduction Plant at Primos, Penna. and a vanadium mill at Vanadium, Colorado. Operations at both the above mills ceased in the latter part of 1920 due to economic conditions in business at that time. These operations were never resumed and the properties at Primos, Penna. were sold. The Vanadium, Colorado mill has been dismantled and most of equipment moved and installed at other operations of the Corporation in Western, U.S.A.

Through purchase at a foreclosure sale, the Corporation acquired the assets of Rare Metals Corporation for an amount of $428,000. which was the amount of a judgment Vanadium Corporation of America held against Rare Metals Corporation. The sale was confirmed as of Jan. 25, 1932. Included in the assets acquired was a vanadium mill at Natu-

Plaintiffs' Exhibit No. 6—(Continued)

rita, Colorado. Due to economic conditions in the vanadium industry, this mill was idle until late in 1939 when rehabilitation work was started. Regular operations have been carried on since about the middle of 1940 to date.

The Monticello, Utah plant, which is Government owned, was operated by Vanadium Corporation of America from Sept. 1, 1942 until Feb. 29, 1944, under an Agency Agreement with the Metals Reserve Corporation, a United States Government Agency.

This plant was further operated by Vanadium Corporation of America from Feb. 15, 1945 to April 30, 1946, under lease with Defense Plant Corporation, a United States Government Agency.

/s/ P. J. GIBBONS,
6/14/50.

Interrogatory No. 7

United States Vanadium Corporation was the owner of a mill for the processing of vanadium-bearing ores at Rifle, Colorado, from 1927 to 1932. In 1932 the mill was shut down and sometime later was dismantled.

United States Vanadium Corporation is the owner of a mill for the processing of vanadium-bearing ores erected in 1936 at Uravan, Colorado.

United States Vanadium Corporation is the owner of a mill for the processing of vanadium-bearing ores erected in 1942 at Rifle, Colorado.

Plaintiffs' Exhibit No. 6—(Continued)

United States Vanadium Corporation was the owner of a mill for the processing of vanadium-bearing ores at Durango, Colorado, from July 31, 1944 to June 2, 1948.

United States Vanadium Corporation was the owner of a plant for the manufacture of ferrovanadium at Columbiana, Ohio, from 1927 to July 31, 1942, when the plant was transferred to Electro Metallurgical Company. On November 30, 1948, Electro Metallurgical Company was liquidated and Union Carbide and Carbon Corporation became the owner of the plant, which is now operated by its Electro Metallurgical Division.

Electro Metallurgical Company was the owner of a plant at Niagara Falls, N. Y., from 1908 to November 30, 1948, in which Ferrovanadium was produced after 1935. On November 30, 1948, Electro Metallurgical Company was liquidated and Union Carbide and Carbon Corporation became the owner of the plant, which is now operated by its Electro Metallurgical Division.

Electro Metallurgical Company was the owner of a plant erected in 1934 at Alloy, West Virginia, in which ferrovanadium was produced after 1940. On November 30, 1948, Electro Metallurgical Company was liquidated and Union Carbide and Carbon Corporation became the owner of the plant, which is now operated by its Electro Metallurgical Division.

PLAINTIFFS' EXHIBIT No. 7

Interrogatory No. 7

State the location of any mills and refineries for the processing of vanadium-bearing materials or for the manufacture of ferrovanadium owned, operated or leased by you or your subsidiaries and the length of time each has been under ownership or lease.

Answer

The following is a list of the mills and refineries for the processing of vanadium-bearing materials and for the manufacture of ferrovanadium owned, operated or leased by Vanadium Corporation of America between January 1, 1933 and August 8, 1949, and, with respect to each, the length of time under ownership or lease:

Mina Ragra, Peru, Leaching Mill, owned since September 16, 1919.

Naturita, Colorado, Leaching Mill, owned since January 25, 1932.

Durango, Colorado, Leaching Mill, leased since October 7, 1948.

Monticello, Utah, Leaching Mill, operated for the Government by Vanadium Corporation of America between September 1, 1942 and February 29, 1944, and leased by Vanadium Corporation of America between February 15, 1945 and April 30, 1946.

Bridgeville, Pennsylvania, Refinery, owned since September 16, 1919.

PLAINTIFFS' EXHIBIT No. 8

Interrogatory No. 17

"State the volume by years of vanadium oxide purchased or sold by Union Carbide or any of its subsidiaries from or to the Vanadium Corporation of America and any of its subsidiaries, and the prices paid therefor."

Answer

The following is a tabulation of the volume by years of vanadium-oxide purchased by Vanadium Corporation of America from Electro Metallurgical Sales Corporation, a subsidiary of Union Carbide, and the prices paid therefor:

1933	216,412	lbs. at	$0.80	lb. V_2O_5 contained
1934	786,686	lbs. at	$0.80	lb. V_2O_5 contained
1935	495,423	lbs. at	$0.80	lb. V_2O_5 contained
1936	360,401.2	lbs. at	$0.80	lb. V_2O_5 contained
1937	540,784.72	lbs. at	$0.80	lb. V_2O_5 contained
1938	130,052.27	lbs. at	$0.80	lb. V_2O_5 contained
	17,500.18	lbs. at	$1.10	lb. V_2O_5 contained
1939	46,000	lbs. at	$0.80	lb. V_2O_5 contained
	14,000	lbs. at	$1.18	lb. V_2O_5 contained
1940	None			
1941	None			
1942	None

Plaintiffs' Exhibit No. 8—(Continued)

1948 None
1949 None

Vanadium Corporation of America did not sell any vanadium-oxide to Union Carbide or any of its subsidiaries during this period.

Under an agreement between Vanadium Corporation of America and United States Vanadium Corporation dated June 30, 1939,* United States Vanadium Corporation milled vanadium ore belonging to Vanadium Corporation of America and delivered to Vanadium Corporation of America 75% of the vanadium-oxide content of such ore. United States Vanadium Corporation made a processing charge to Vanadium Corporation of America for this service of $0.65 per lb., vanadium-oxide contained, on all amounts delivered in 1939 and $0.75 per lb., vanadium-oxide contained, for all amounts delivered during 1940. 517,847 lbs. were delivered under this contract in 1939 and 200,000 lbs. in 1940.

PLAINTIFFS' EXHIBIT No. 11

Inter-Company Correspondence

[Handwritten Note: Ore purchases, general.]

Date: September 25, 1944
Answering Letter Date: September 14, 1944

Company: United States Vanadium Corp. Location: Grand Junction, Colorado.

To: Mr. Blair Burwell, Vice-President, United States Vanadium Corporation.

Location: Room 1425, 30 East 42nd Street, New York 17, New York.

Attention, Copy to: Mr. W. G. Haldane.

Subject: Past Procedure—Ore Prices, Etc.

Dear Blair:

In reviewing the ore purchase records at Uravan VP Plant and checking with Joe Weston, we submit the following information concerning ore purchases at Uravan:

1. The earliest ore settlement found on record was for October, 1938. From October, 1938 to September, 1939, the purchase of ore was in most cases by special arrangement for individual purchases. Ore purchased on V_2O_5 contained was 17c per lb. for 2% V_2O_5 ore, increasing 1c per lb. for each percent increase above 2%. At the same time there was a rate for mined ore paid at $14 per ton for ore which assayed from 3% V_2O_5 to 5% V_2O_5. Ore which was produced from the Company mines was

Plaintiffs' Exhibit No. 11—(Continued)

paid for at the varying scale of 9c per lb. V_2O_5 to 15c per lb. V_2O_5 contained. During this time the ore which was being offered for sale was not considered greatly important due to the fact that the stockpiles were being increased by Company mining operations.

2. By September, 1939, more ore was offered for sale and it seemed necessary to establish a regular market price. Attachment No. I lists the prices which were paid at this time.

3. On January 1, 1941, we increased the amount paid to the sellers by paying 5c per ton mile in addition to the price schedule shown on Attachment I. In order to encourage production from mines located at such a distance from the plant transportation allowances were necessary for the continuance of these operations.

4. In June, 1942, an additional allowance of $1.50 per ton on ore delivered was added to the schedule Attachment No. I in order to meet competition with plants more favorably located to receive ore from south and southwest areas.

5. In 1941, to meet individual conditions, some special contracts were made for purchase of ore by the ton. One instance was that Harold Stone was paid $7 per ton F.O.B. Uravan for 1,000 tons of ore acceptable only at a minimum average grade of 1.75% V_2O_5. Another instance is the case of the Mesa Vanadium contract with George McKee which

Plaintiffs' Exhibit No. 11—(Continued)

was taken over by us at the following prices F.O.B. Uravan for 3,000 tons:

From 2% to 3% V_2O_5, $8.95 per dry ton.
From 3% to 4% V_2O_5, 16.31 per dry ton.
From 4% to 5% V_2O_5, 22.69 per dry ton.
From 5% to 6% V_2O_5, 34.06 per dry ton.
For Ore Over 6% V_2O_5, .25 per pound V_2O_5.

6. On June 1, 1942, the price schedule was changed as per Attachment No. II which increased the price 10c per lb. for 2% V_2O_5 ore. The raise in price at this time was made to the various number of producers who were delivering ore to Uravan because they were so unfavorably located for delivering ore to Metals Reserve Company ore buying stations.

7. On May 1. 1944, the schedule shown on Attachment No. III was put into effect. This change was the deleting of the transportation allowance of 5c per ton mile and $1.50 per ton and a discontinuance of acceptance of ore which analyzed less than 2% V_2O_5. This price schedule was affected due to the fact that Metals Reserve Company had discontinued purchase of ore and a schedule for present and future prices was necessary to be maintained.

Yours very truly,

/s/ J. L. ROBISON.

F.O.B. Uravan—Carload Lots Thompson, Utah.

Buyer will accept no ore less than 2.0%.

Average over payment period.

May 20, 1944

Mr. Simeon Nash, Secy.
Utah Alloy Ores, Inc.
209 South High Street
Columbus, Ohio

Dear Mr. Nash:

Mr. Blair Burwell has instructed me to answer your inquiry of May 17, 1944, concerning the sale of vanadium ore from your Yellow Cat property near Thompsons, Utah. Enclosed please find a

Plaintiffs' Exhibit No. 11—(Continued)

schedule of purchased ore prices effective May 1, 1944. You will note that no ores will be accepted that average less than 2% V_2O_5. The basic price for 2% ore is 31c, and the rate increases 1c for each ½% gain in V_2O_5. For ores containing 6.25% V_2O_5 or more, the price is 40c per pound of V_2O_5, being the maximum price paid for ores.

The ore will be accepted in carload lots, loaded by the seller at Thompsons, Utah, and sampled by the buyer at Rifle, Colorado, railroad transportation to be paid by the buyer at Rifle, Colorado, the minimum carload being 100,000 pounds, the seller to be penalized in a proportionate amount of railroad charges if the car is loaded light. The car will be ordered by the seller and billed out to the buyer by the seller to the buyer's plant at Rifle, Colorado.

A carload of ore will be considered as one lot, thus eliminating the possibility that you requested of loading several grades of ore into one car to be sampled in various lots. Mr. Burwell recommends that the ores containing 4% V_2O_5 or more be shipped to Rifle by truck, the buyer allowing the seller $5.00 per ton on this type of ore. No payment of transportation will be made on ores containing less than 4% V_2O_5. Railroad weights will be used as a basis of settlement on carload lots.

The standard sampling procedure established throughout this area will govern. I am sure that you are familiar with this procedure, the principal points being that the seller has a right to be repre-

Plaintiffs' Exhibit No. 11—(Continued)

sented at the sampling and has a right to request an umpire analysis of the sample.

Payments can be arranged on a semi-monthly basis, that is on the first and fifteenth day of the month. Payments will be made for ores received five days prior to that time.

The United States Vanadium Corporation reserves the right to terminate any and all ore purchase agreements between these parties by giving the other party thirty days notice in writing.

Very truly yours,

UNITED STATES VANADIUM CORPORATION,

/s/ JOHN W. HILL, f.r.,
John W. Hill.

Past Procedure—Ore Prices, etc.

Dear Jack:

We have recently been asked for a review of ore prices and ore buying arrangements since 1926 in Colorado.

I wish you and Joe Weston would go over this and give me a summary of our past procedure in this connection. Joe can probably supply a great deal of information from his memory as to Uravan ore purchases beginning in 1936.

It would be of value to make a running story of

Plaintiffs' Exhibit No. 11—(Continued)

what range of prices existed and when changes occurred and the reasons for these changes of price.

Yours very truly,

/s/ BLAIR BURWELL.

PLAINTIFFS' EXHIBIT No. 35

Inter-Company Correspondence
[Handwritten Note: Reports-Progress.]

Company: United States Vanadium Corp. Location: Uravan, Colorado.
To: United States Vanadium Corp.
Location: New York City, New York.
Date: November 2, 1941.
Attention: Mr. W. G. Haldane.
Copy to: Mr. Blair Burwell.

Dear King,

I am sending this letter to you in New York with a copy to you at the Brown Palace in Denver, as you may leave New York before it can reach you, and I do want you to be acquainted with what we are doing, as soon as possible. Blair just left here, and left us with his usual amount of good suggestions, most of which have been under consideration by you men for some time.

* * * * *

We have been fortunate in finding a jaw crusher at Morse Brothers, which has an opening 8" x 24", and which can be closed down to deliver ¾" material. This will give us a very good sample.

In connection with this sampling plant, and with the necessity for good samples, I feel I have run on to an interesting condition which may or may not exist, but which I will call to your attention, and await your suggestions. As you well know, the Vanadium Corporation of America have been having

Plaintiffs' Exhibit No. 35—(Continued)

a hard time getting ore. When they first came into the district, or rather when I first arrived here, there was plenty of evidence that they were increasing the price paid for outside ore. Blair's trip in here and his discussion with Blitz remedied that matter. I feel it is now breaking out in another, but more subtle manner. If you would ride past and estimate the Vanadium Corporation of America stockpile, and then look at our own, it would be easy to see who is getting the purchased ore. Their scheme, as I see it, is this. We have reliable shippers, wanting to continue doing business with us, who are hearing stories of better treatment given them by Vanadium Corporation of America. They have shipped alternate loads from the same ore pile to us and to Vanadium Corporation of America. Joe Weston has seen several settlement sheets in the hands of our former shippers, which seem to indicate either, that our sampling is wrong, or that Vanadium Corporation of America sampling is wrong, or that some motive is behind the fact that their assays are from ½ to ¾% over what our samples show.

It seems rather ridiculous to make this statement until you analyze it. Vanadium Corporation of America needs ore, or they cannot stay in business, as the production from their Company owned mines is not sufficient. Any propaganda instituted by them that could influence a shipper to sell to them, and at the same time insinuate that our treatment

Plaintiffs' Exhibit No. 35—(Continued)

of these shippers was unfair, such as increasing assays, would certainly be to their advantage. If we then consider what it costs them to do that, we find that the price is not too high. For example, if we have a lot of ore that assays 2.01% V_2O_5, we would pay the shipper $8.44 a ton. If instead of using the correct assay, we announce that the value was 2.5% V_2O_5, thus raising the actual assay ½%, we would pay the shipper $10.75 a ton. In other words we would be paying $2.39 more than our schedule calls for, which is equal to a difference of 6c a pound of contained V_2O_5. This is a small amount when considered further from the standpoint of the fact that we can say that 40 pounds of V_2O_5 times 70% mill recovery, will return us $28.00. In other words this margin of profit, with a well run operation, is great enough to offset this extra cost of 6c a pound, and is justified when it is considered that such a practice will disparage a competitor and secure the larger portion of the independent production. This thought may not be in line, and I perhaps ought to be censured for being suspicious. However, once we get our sampling plant in working order, we, ourselves, can be very sure of our assays and if the Vanadium Corporation of America practice continues, we can feel that the suggestion made herein is a possibility.

Staff House, Club Ranch, Office Extension

These items were taken up with Blair, and were given his approval, naturally with certain reserva-

Plaintiffs' Exhibit No. 35—(Continued)

tions. They will be started as soon as possible, but not prior to such necessities as the dryer, the new coal mine, and other changes which have to do with the main operation.

* * * * *

Yours sincerely,

S. POWER WARREN.

PLAINTIFFS' EXHIBIT No. 38

United States Vanadium Corp.
New York City

March 6th, 1944

Mr. J. A. Rafferty
Room 1626
Building

Mr. Blair Burwell, Durango Plant

Dear Mr. Rafferty:

I am attaching hereto a memorandum summarizing the situation at Durango.

The "Right to Purchase" clause, copy of which I am also enclosing, is a little involved since it covers only the "buildings, machinery and equipment"; however, it is our feeling that AS&R will be willing to sell the site (exclusive of a small portion on which a slag pile is located) for $4,000.00-$5,000.00. Aside from this pile, which has some gold, silver and lead values in the form of shots of base bullion

Plaintiffs' Exhibit No. 38—(Continued)

and copper matte, the AS&R has withdrawn completely from the Durango field and would be interested in disposing of its last holding, namely, the plant site, exclusive of this slag pile.

It is my understanding, too, that at about the turn of the year, the Army indicated to Metals Reserve Company that it (Army) was not interested in taking Durango over.

If I can be of further service, please do not hesitate to let me know.

Yours very truly,

hi/W. G. Haldane
IC
Att.

Memorandum
Durango Plant

In the Vanadium Agency Agreement with Metals Reserve Company, among other provisions, United States Vanadium Corporation agreed to build and operate for Metals Reserve Account, a vanadium plant at Durango, Colorado, to have a capacity of approximately 100 tons of sandstone ore per day and at a construction cost not to exceed $100,000.00 (total cost actually was $101,000.00). The plant is located on the site of the old lead smelter of the American Smelting and Refining Company under a 5 year lease to Metals Reserve Company at an annual rental of $100.00 per year.

Plaintiffs' Exhibit No. 38—(Continued)

The contract further provides that upon its termination, United States Vanadium Corporation shall be granted for a period of 90 days the right and option to purchase the buildings, equipment and machinery constituting the plant at actual cost to Metals Reserve Company less depreciation, obsolescence, etc. at the rate of 12½% per annum. At the present time, the plant is subject to the maximum depreciation allowable, namely, 25%. Cost, therefore, is approximately $75,000.00+.

At the date of closing down the plant, February 29th, there exists at the plant, and entirely distinct therefrom, a stockpile of crude ore of approximately 14,000 tons of a V_2O_5 tenor averaging better than 1.85% or roughly 500,000 lbs. of contained V_2O_5.

United States Vanadium Corporation considers it highly essential that it acquire this plant for the following reasons:

1. To maintain its position in the vanadium industry of the southwest. Repeated reports have reached this Company of plans of outsiders to acquire the plant in the event United States Vanadium Corporation decides not to exercise its option. The injection of additional operators in this field would undoubtedly seriously disturb conditions in the vanadium industry in the post-war period.

2. Acquisition of the plant facilities would place the Company in a strategic position with regard to either the purchase of the stockpiled ore, or a deal

Plaintiffs' Exhibit No. 38—(Continued)

with Metals Reserve Company to process it for them. Similar stockpiles have recently been offered for sale by Metals Reserve Company at 35c per lb. V_2O_5 contained. In either event, processing of the stockpile would more than pay for the plant.

3. You are aware of the discussions now going on between United States Vanadium Corporation and Army officials covering the application of an alkaline leach to crude carnotite ores. Tests to date indicate a 90% extraction of the U content and approximately 20% of the V. Arrangements are now being studied for the installation of a 50-ton unit embodying such a flow sheet. The Durango site has much to commend it over Uravan in that it is free from many of the accessory and auxiliary departments peculiar to Uravan. Power, fuel, water are readily available, as well as housing, commissary and hospital and other facilities. The labor market at Durango is very definitely better. Durango would, furthermore, be the logical place to treat the Uranium ores of the Navajo Indian reservation, as well as those from the McIntyre Canon sector.

In conclusion, it has been our definite feeling that we should arrange to take over this plant within the option period.

hi/W. G. Haldane
3/6/44

PLAINTIFFS' EXHIBIT No. 39

Vanadium Corporation of America
Inter-Office Communication

Date: March 21, 1944.

To: F. F. Kett, Gen. Mgr., Mining Division, 420 Lexington Avenue, New York.

From: D. W. Viles, Ass't. Manager, Western Division, Naturita, Colorado.

Subject: Purchase of Dry Valley.

In regard to the purchase of the Dry Valley property belonging to the Moly Corporation, there is considerable low grade ore in the Frisco and Water Falls Group and this property, in my mind, if it could be purchased, say for $2000.00, would be a good investment if only to prevent some outsider getting ideas in regard to the Monticello Plant.

So far as the assessment work is concerned, there is no doubt we will drop some of the claims in this group and as the ones held would probably be continuous, our assessment work will be taken care of with what mining was done on any one claim. We could start doing a little leasing on some of this property as soon as the deal was completed.

I am enclosing monthly composite for six months on the U308 for the complete Reservation ores. These assays were run by Metals Reserve in Grand Junction.

D. W. VILES.

DWV/er

PLAINTIFFS' EXHIBIT No. 44

(Copy)

Memorandum

U.S.V.C. agrees to mine the ore from the Maggie C Claim situated in Lower Park, near Uravan, Colorado, owned by V.C. and such other claims now owned by V.C. in the vicinity of Uravan, Colorado, as the parties from time to time agree upon, to mill such ore and produce therefrom fused V_2O_5 analyzing 85% V_2O_5 minimum (hereinafter called oxide) and to deliver thirty thousand (30,000) pounds per month of oxide so produced to V.C., f.o.b. its Bridgeville, Pa. Plant. Additional quantities of oxide may be delivered in any month by agreement of the parties as advance deliveries of oxide from ore to be mined and milled hereunder. During the period covered by this agreement U.S.V.C. shall have the sole right to mine and mill the ore from the aforesaid claim or claims.

The ore shall be mined and milled by the standard methods then being used by U.S.V.C. on its own production. U.S.V.C. shall not be required to mine and mill the ore separately from its own production but may mix the ore with its own ore. Accurate records shall be kept by U.S.V.C. of all of the weights and analysis of all ore mined and milled in accordance with methods to be mutually agreed upon and U.S.V.C. shall deliver to V.C. seventy-five percent (75%) of the V_2O_5 content of the ore of V.C. mined by it.

Plaintiffs' Exhibit No. 44—(Continued)

In addition to records of weights and analysis, U.S.V.C. will make available upon request of V.C. the diamond drill records and other development data that may accrue during the course of ordinary development and mining of the aforesaid claim or claims.

If V.C. does not require the oxide produced from the ore in the aforesaid claim or claims V.C. may require all shipments of oxide hereunder to be suspended upon three (3) months' written notice to U.S.V.C. and may cause shipments to be resumed upon thirty (30) days' written notice to U.S.V.C. During the time that shipments are suspended U.S.V.C. shall have the right, but shall not be obligated, to continue mining ore and producing fused V_2O_5 therefrom, retaining such ore for future milling and any oxide derived therefrom for future shipments to V.C. The suspension of shipments in any month shall not give V.C. the right to require shipments to be increased in any subsequent month over thirty thousand (30,000) pounds except with the consent of U.S.V.C.

V.C. will pay to U.S.V.C. for mining and milling ore hereunder on the following basis: Sixty-five (65c) cents per pound of V_2O_5 contained as delivered f.o.b. at Bridgeville Plant of V.C.

If the cost to U.S.V.C. of labor, fuel or supplies used in mining ore or producing oxide hereunder should be increased U.S.V.C. may increase the price

Plaintiffs' Exhibit No. 44—(Continued)

to be paid by V.C. hereunder by the amount of such increased cost, by giving three (3) months' prior written notice to V.C. If such increased price is not acceptable to V.C. it may terminate this agreement at the time such increased price is to become effective by giving not less than sixty (60) days' prior written notice of such termination to U.S.V.C.

If at any time U.S.V.C. has not mined sufficient ore belonging to V.C. to produce the oxide required to be delivered to V.C. hereunder, it may deliver such oxide produced from other ore at 65c per pound V_2O_5 as aforesaid, and in such event U.S.V.C. may take title to a quantity of ore subsequently mined by it from the aforesaid claim or claims of V.C. sufficient to produce a quantity of oxide equivalent to the quantity produced from such other ore.

This agreement shall continue for a period of five (5) years from the date hereof unless sooner terminated as herein provided. After termination of this agreement U.S.V.C. shall have the right to produce and deliver oxides to V.C. from any ore mined by U.S.V.C. from the aforesaid claim or claims of V.C. prior to termination. Such deliveries, however, to be taken by V.C. in as nearly equal monthly amounts as possible. If at the time of termination U.S.V.C. has delivered to V.C. any oxide produced from ore other than the ore mined by it from the aforesaid claim or claims of V.C. and has not taken

Plaintiffs' Exhibit No. 44—(Continued)

title to an equivalent amount of ore mined by it from the aforesaid claim or claims of V.C., U.S.V.C., after the termination of this agreement, may mine for itself, and take title to, a quantity of ore from the aforesaid claim or claims of V.C. sufficient to produce a quantity of oxide equivalent to such quantity produced from such other ore and delivered to V.C. V.C. may, at its option, upon giving prior written notice to U.S.V.C., mine such ore itself and deliver such ore to U.S.V.C.

Dated: 6/30/39.

PLAINTIFFS' EXHIBIT No. 45

April 7, 1942

Vanadium Corporation of America
420 Lexington Avenue
New York, N. Y.

Gentlemen:

Please find attached the final statement covering the Maggie "C"—Dry Valley production.

This statement shows that the production of ore

Plaintiffs' Exhibit No. 45—(Continued)

in Dry Valley and Maggie "C" has been completed, and the account has been closed and settled.

Yours very truly,

/s/ BLAIR BURWELL,
General Superintendent.

AF/Blair Burwell

bc: Mr. J. R. Van Fleet, Mr. W. G. Haldane, Mr. S. P. Warren.

PLAINTIFFS' EXHIBIT No. 46

[Letterhead of United States Vanadium Corporation.]

September 26, 1941

Vanadium Corporation of America,
No. 420 Lexington Avenue,
New York, New York.

Gentlemen:

In connection with and as part of the delivery of the contract being made between us this date, with respect to the so-called Dry Valley mining claims; we agree that such Agreement settles all claims of ours against you for oxide, and that we will remove all the ore referred to in Paragraph 2 of said Agreement not later than June 1, 1942, subject to delays caused by Acts of God, strikes, labor trou-

Plaintiffs' Exhibit No. 46—(Continued)

bles, accidents, Governmental regulations, or other causes of a similar or different nature beyond our reasonable control, or forfeit all right on that date to remove any more of such ore.

The record of the Custom Milling Account as of September 1, 1941, shows a deficiency of ore from which to recover 294,447 pounds of V_2O_5. We have extracted ore from the Dry Valley property up to September 1, 1941, amounting to 4,177.82 tons containing approximately 120,823 pounds recoverable V_2O_5. The deficit in V_2O_5, therefore, would be 173,624 pounds as of September 1, 1941.

The adjustment of the cost of permanent improvements left on the Dry Valley property had best remain open until the ore to make up the deficiency in V_2O_5 has been extracted. Up to the present time the cost of permanent improvements such as ore bins, roads, etc., has amounted to less than $1,000 and it is not certain just which of these improvements will be of value after the allotted ore has been extracted.

We have discontinued working the Republican, Donald L. and Maggie C. claims, and are turning them back to you for occupancy. We have no further mining rights on these claims.

The total amount of money to be returned to us upon delivery of the Dry Valley agreement is—$41,785.39 made up as follows:

Plaintiffs' Exhibit No. 46—(Continued)

Advance to Leverett Davis, March 31, 1941	$25,000.00
Molybdenum Corporation of America, July 1, 1941	15,000.00
Molybdenum Corporation of America, royalties, September 17, 1941	1,785.39
Total	$41,785.39

The royalty payment to Molybdenum Corporation of America is, of course, an advance on the next payment due under their Agreement dated June 26, 1939.

Very truly yours,

/s/ J. R. VAN FLEET,
Vice President.

EW/J. R. Van Fleet
USVC
O.K. E. D. Burwell.

Agreement made this 26th day of September, 1941, by and between United States Vanadium Corporation, a corporation of the State of Delaware, having an office at No. 30 East 42nd Street, New York, N. Y. (hereinafter called "United States"), party of the first part, and Vanadium Corporation of America, a corporation of the State of Delaware, having an office at No. 420 Lexington Avenue, New York, N. Y. (hereinafter called "Vanadium"), party of the second part:

Plaintiffs' Exhibit No. 46—(Continued)

Witnesseth:

Whereas, by agreement dated March 31, 1941, by and between Leverett Davis, United States and The Vanadium Products Corporation, a copy of which has been delivered to Vanadium, United States acquired from Leverett Davis certain rights in mining claims located in San Juan County, Utah, and in Mesa County, Colorado, described therein, theretofore acquired by The Vanadium Products Corporation from Molybdenum Corporation of America under agreement between said parties dated June 26, 1939, and assigned by said The Vanadium Products Corporation to said Leverett Davis, in consideration of certain payments therefor to be made by United States to said Leverett Davis, as set forth in said agreement; and

Whereas, Vanadium desires to obtain a larger supply of Vanadium ore to enable it to produce Vanadium for National Defense and in view of the needs of Vanadium and of the present emergency United States is willing to transfer to Vanadium its rights in said mining claims upon the terms and conditions hereinafter contained.

Now, Therefore, the parties hereto have agreed and do hereby agree as follows:

1. United States agrees to assign, transfer and set over and does hereby assign, transfer and set over to Vanadium, its successors and assigns, all of the rights acquired by United States under and pursuant to said agreement dated March 31, 1941,

Plaintiffs' Exhibit No. 46—(Continued)

by and between Leverett Davis, United States and The Vanadium Products Corporation in and to the mining claims located in San Juan County, Utah, and in Mesa County, Colorado, described in said agreement, subject to the reservation hereinafter made.

2. United States reserves the right to mine, extract and remove from said mining claims in San Juan County, Utah, sufficient crude ore, which, together with the crude ore heretofore mined by United States from said mining claims, will produce 300,000 pounds of V_2O_5 based on a 75% recovery and to make use of the mill and machinery located on said mining claims for milling such ore, without the payment of any royalty or other charge to Molybdenum Corporation of America or to said Leverett Davis or to Vanadium or to any other person, firm or corporation.

3. United States, its agents, representatives and employees, shall have full right of access to said mining claims and the use of any roads, buildings and other facilities located thereon for the purpose of mining, extracting, milling and removing said ore.

4. Any equipment and machinery heretofore placed on said mining claims by United States may remain thereon and be used by United States until said ore is mined, extracted and removed. All such equipment and machinery heretofore placed on said mining claims by United States shall remain the

Plaintiffs' Exhibit No. 46—(Continued)

property of United States and may be removed by United States from the premises within ninety (90) days after the completion of the removal of said ore.

5. Until the full amount of such crude ore hereby reserved to United States has been mined, extracted and removed by United States from said mining claims Vanadium as assignee of the rights of The Vanadium Products Corporation will permit no default to occur in the obligations of The Vanadium Products Corporation under said agreement dated June 26, 1939, between Molybdenum Corporation of America and The Vanadium Products Corporation.

6. United States agrees to conduct such mining and milling operations in such manner only as is usual and customary in the skillful and proper conduct of work and mining operations of a similar character and in strict accordance with good engineering and mining practice.

7. Within thirty (30) days after the date of the execution of this agreement United States will furnish to Vanadium a statement showing the mineral content and amount of ore heretofore mined by United States from said mining claims and on or before the tenth day of the next calendar month after the execution of this agreement and of each calendar month thereafter United States shall furnish to Vanadium an appropriate statement showing the mineral content and amount of ore mined

Plaintiffs' Exhibit No. 46—(Continued)

from said mining claims and the sales price of such ore sold since the date of execution of this agreement with respect to the first statement and during the next preceding calendar month with respect to subsequent statements.

8. In consideration of the aforesaid assignment Vanadium agrees to pay to United States upon the execution of this agreement the sum of Forty Thousand Dollars ($40,000) representing payments heretofore made by United States to said Leverett Davis under said agreement dated March 31, 1940, and to Molybdenum Corporation of America under said agreement dated June 26, 1939, and to assume, perform and observe all of the obligations and conditions required to be performed or observed by United States and to make all of the payments now due or hereafter required to be made by United States under the terms of said agreement dated March 31, 1941, and to pay to Molybdenum Corporation of America all royalties and other charges payable under the terms of said agreement dated June 26, 1939 with respect to all ore heretofore or hereafter mined by United States from said mining claims pursuant to the reservation herein made and not heretofore paid for by United States. Vanadium further agrees to pay to United States a sum equivalent to the amount heretofore paid or incurred by United States in constructing roads, buildings and other permanent improvements on said mining claims.

9. Each and all of the terms and conditions of

Plaintiffs' Exhibit No. 46—(Continued)

this agreement shall be binding upon and enure to the benefit of the respective parties hereto, their successors and assigns.

In Witness Whereof the parties have executed this agreement as of the day and year first above written.

UNITED STATES VANADIUM CORPORATION

PLAINTIFFS' EXHIBIT No. 55

Vanadium Corporation of America
Inter-Office Communication

Boulder, Colorado. Date: October 22, 1939.

To: Mr. Frederick F. Kett, Gen. Mgr. Mining Division, New York.

From: Robert Sterling.

Subject: H. L. Brown-Gateway Mill.

Your letter of October 18th, 1939.

I note that Brown has sent you a sample of his red cake, which you are going to have analyzed.

Like you, I doubt whether he will want to sell his claims—at least until he finds he cannot make a go of it

Plaintiffs' Exhibit No. 55—(Continued)

I should say that the "rough" people he refers to are probably the ones he sold his red cake to. I hardly think the USV would make him any offer. They would rather just break him and run him out of business, though they might want his claims. At that, as far as I know the Calamity group are all they own, and the Gateway Alloys don't own even them. They were bought by one Bowen who seems to have put up the money for them, and who has some money invested in the mill.

I understand that the outfit that is building a mill at Cedar is going to treat the ore by simply dumping the ore-salt mix into a furnace along with coal and then extract the vanadium from the ashes. They have moved the old mill Thurber started to build down at Disappointment, near the Dolores.

S. R. S.

Vanadium Corporation of America
Inter-Office Communication

Date: October 3, 1938.

To: Mr. E. D. Bransome, President.

From: Frederick F. Kett, General Mgr., Mining Division.

Subject: Conversation with Mr. Van Fleet on Friday, September 30, 1938, re Vanadium Plant being built at Gateway, Colorado.

Mr. Van Fleet said that young Brown worked as a draftsman for Burwell at Urvan for a couple of years, up to the end of 1937 more or less.

Plaintiffs' Exhibit No. 55—(Continued)

The idea of a mill at Gateway is something that Brown, Jr. has evolved, as far as Van Fleet knows, without any testing work to speak of. He got his father interested and Brown, Sr. raised $25,000 for the project.

They have no mining property of their own. They figure on buying ore, some of it from Polar Mesa, although not necessarily from Hardinson, since there are several other outfits producing or capable of producing ore at Polar Mesa. Polar Mesa is only some 12 miles airline from Gateway, possibly twice as much by road.

We agreed that the chances for a purely custom mill being a success were not good, also that the process as described by Mr. Sterling sounded exotic.

Mr. Van Fleet was glad to get our information and said he was passing it along to Dr. Haldane.

PLAINTIFFS' EXHIBIT No. 56

Vanadium Corporation of America
Inter-Office Communication

Date: September 12, 1939.

To: Mr. Robert Sterling, Sr. or Jr., c/o Frank Wilson, Naturita, Colo.

From: Frederick F. Kett, Gen. Mgr., Mining Div. (Air Mail)

We wired you today as per copy enclosed.

Plaintiffs' Exhibit No. 56—(Continued)

Due to the dry season just closing in Peru and the consequent two months annual shutdown of plant, our stocks of oxide in Bridgeville must be immediately supplemented. Our position is particularly acute on account of the war. We have already received a quantity of oxide from the U. S. V., which they claim exceeds any amount which they are likely to get off the Maggie C. Hence the delivery to them of the ore in storage in mill yard, which will release immediately to us a certain additional quantity of oxide.

A further quantity of oxide is still desired by us from the U. S. V., and in order to get this at an early date we will have to turn over something in the way of ore reserves. We may have to allow them to mine a minor amount of the ore from the Buckeye in case we fail to develop in other claims sufficient ore to cover our immediate oxide requirements. We hope that we will not have to do this and that this ore can be developed in some one of our claims at Long Park. In our opinion, the Donold L presents the best prospect for this development, as well as being easily accessible to the U.S.V. through their Cripple Creek workings. We are therefore asking you to drill this claim as quickly as you can and to send drill logs and samples, if any, forward as soon as each hole is finished.

FFK:DR

(Enclos.)

CC Boulder, Colorado.

Plaintiffs' Exhibit No. 56—(Continued)

P. S. All the above does not alter our general policy as regards operations at Naturita.

FFK

Vanadium Corporation of America
Inter-Office Communication

Date: June 26, 1940.
To: Mr. Robert Sterling, Mgr., Boulder.
From: F. F. Kett, Gen. Mgr., Mining Div.
Subject: Naturita—General.
(Air Mail)

The matter of getting back our claims from the USV has not been definitely settled yet; I will advise you immediately as soon as we know one way or the other. In the meanwhile there is nothing we can do about John Blake's lease on the Republican, unless the USV would be willing to let him continue mining on this claim and delivering ore to us. While we have every reason to believe that the sudden drop in values of the ore mined by Blake during May, which drop was coincident with the return of Joe Weston from Utah, was not due to natural causes, still a close study of the drill holes will show that the amount of mill ore is limited and pretty well confined to three patches. We may find that the ore actually has dropped off in value. Anyway we cannot be absolutely positive until we ourselves have received and sampled a quantity of this ore. For the moment just let this whole matter ride until we can clear it up at this end. I fore-

Plaintiffs' Exhibit No. 56—(Continued)

saw that Blake's lease would be cancelled as soon as it was known that he had contracted to us his ore in Little Gypsum Valley. Please note that we do not refer to this area as Silvey's Pocket, which actually it is not.

In case we get these claims back and allow Blake to continue mining on the Republican, I do not think we should give Blake a written lease. I believe he would be perfectly happy to continue mining on the Republican on the same basis that he was mining for the USV and it could be that we ourselves might want to mine that claim, on a somewhat bigger scale than John is prepared to do.

In the last paragraph of Renner's report for week ending June 15, 1940, he asks about the advisability of establishing a stock-pile near Egnar, with installation of a weigh scale. We discussed this question when I was in Naturita and agreed that this question contained considerable dynamite. It would be tantamount to increasing our purchase price schedule of ore delivered to our mill. We agreed that the one thing which we do not want to do is to start on competitive bidding for ore, since there is no question but what we could be outbid, due to the lower processing costs in the USV plant. Also, we would have to put in a sampling plant at the stock-pile, quarters for the sampler, etc. I figure that our investment for all this would be in the neighborhood of $3,500, which of course is not much if spread over a considerable tonnage. I think

Plaintiffs' Exhibit No. 56—(Continued)

we should wait a month or two before making a decision on this, and in any case I cannot see why such a stock-pile should be on the west side of the Dolores River; if it were located on the road anywhere east of Joe Davis Canyon it seems to me we would still be able to pick up the ore that is now going to the USV stock-pile. However, it seems to me that we can think of something better than this: it does not make sense to me to haul this ore part way, dump it, sample it, and then pick it up again and run it to our mill. Even buying our ore mine side would beat this and at the same time not lay us open to the charge of having raised prices.

With regard to detachable bits, we are not going any further in that matter here. Get any bits you like from wherever you like.

Until the USV are prepared to give us quit claim deeds on the Vanadate, Radium King #2 and Radium King #3, I would not give them the drill logs for the drilling on the East Media. Burwell told me in Renner's presence that he had these quit claim deeds with him on his visit to Uravan when I was out there last time.

Bonker says that part of our Bagger workings are over on the Great Western. Please advise whether this trespass is serious or not, or if there is a real trespass. Also, what are the indications for there being any tonnage of milling ore on our side of the line.

Plaintiffs' Exhibit No. 56—(Continued)

What was the final outcome of our dealings with the Gramlichs? The last I heard was that they were continuing to find places where the "shoe pinched."

I hope you are right about being able to hold ground on the basis of tunnel sites. It would be rather embarrassing to pay Scott & Robinett $10,000 for the property and then have somebody take it away from us.

Regarding the 34 claims belonging to Snyder, which are said to be under option to the International Vanadium Co. (Dripping Springs, Arizona). The two men controlling the International Vanadium Co. are Harold S. Lyon and Justin Haynes, both located here in New York. These gentlemen assured me that the International Vanadium Co., to the best of their knowledge, has no interest in these claims. They never heard of them and say that there has not been $750 in the treasury for the purchase of anything much less additional vanadium claims in Colorado, for a long while. They think it is just possible that Hertz may be trying to promote something with some other money obtained from other sources, using the name of the International Vanadium Co. They are investigating this angle and will advise me what they find. Maybe Renner might be able to run this down a little closer at his end; at the moment it looks very much like Snyder was lying about this option.

FFK:DR

PLAINTIFFS' EXHIBIT No. 58

Mr. H. D. Keiser January 22, 1948
Atomic Energy Commission
1901 Constitution Avenue, N. W.
Washington, D. C.

Dear Hugh:

Following our brief but interesting meeting in Washington, I met with John Gustafson in New York on the following day. We covered again in a somewhat brief fashion the subjects which you and I discussed in Washington. John Gustafson did not have a copy of my memorandum, and the talk was limited to the "high spots" of the general Colorado situation. I did have the feeling after this talk that John Gustafson would approach the problem on a sound engineering basis.

Walter Remmers of our Corporation had passed me on his way west, and I found that he was in Grand Junction conferring with Dave Baker and Bob Ridgway as to their pending proposal to the Commission. While in New York I had the opportunity of talking with Jim Rafferty (Vice-President and Director of Carbide) whom you probably remember and other officials of the Carbide Corporation. In particular, I found Mr. Rafferty intensely interested in the situation out West, and I discussed with him the possibility of following out new processing plans for the region. In 1943 this subject was first discussed with Jim Rafferty and General Groves, and Mr. Rafferty is keenly interested in the regional situation today.

Plaintiffs' Exhibit No. 58—(Continued)

Incidentally, I found a strong effort to dissuade me in my intention of leaving Carbide by February, but stuck fast to my original plans to be relieved by February 1.

With Jim Rafferty was arranged a meeting in Niagara Falls on January 15 to discuss the engineering approach to the regional problems. Walter Remmers returned from the West for this meeting which included Dr. Kinzel (Vice-President of Union Carbide & Carbon Research); Joe Brennan, Chief Metallurgist; and Bob Briney, E. Doom and Andy Gailey. This group in general believed that the Process "C" of my chart gave the most favorable answer to the problem of uranium production, as is covered in the attached copy of a letter from Joe Brennan to Walter Remmers.

In the main, there does not seem to be much question as to the engineering approach to the problem of processing the carnotite ores, but most of the questions revolved about the disposal of excess vanadium. In this connection I had an interesting talk with Ted Bransome as a result of a casual meeting which developed into a brief discussion of the western situation. I told Ted that I believe that vanadium could be produced at a by-product price of 65 cents per pound of V_2O_5 from a properly engineered plant with the economies of such a plant and at the same time would produce uranium for the Government at a much lower price than is being considered now. While the price of 65 cents per pound of V_2O_5 would be a God-send

Plaintiffs' Exhibit No. 58—(Continued)

to V. C. A., in view of their present 85-cent cost, the principal concern of T. B. was the possibility that this material would also be available for open market sale at the same price, which might enable competition to enter the ferrovanadium field by way of Continental Ores or other competitors. The price which I had suggested on my chart of 65 cents is a price better than the more favored cost of either of the two companies when producing at their present sales rate. I think it is going to be difficult to compose the warring interests of the vanadium industry and that it is going to take a diplomat of the first water to take care of the reasonable interests of the vanadium industry and yet avoid the ever-present monopoly question which is sited in the present monopoly suit. I have a feeling that John Gustafson will be equal to the job.

One point of interest here is the apparent feeling among those of our Corporation that we should lean backwards if possible in assisting the Commission in its development of the district, rather than crowd the ills and needs of the vanadium industry into the picture at this time.

King Haldane sends his best regards to you with the hope that he will see you out in this country soon.

With personal regards, I am

Sincerely yours,

BLAIR BURWELL.

PLAINTIFFS' EXHIBIT No. 62

[Note: Special Report dated February 20, 1942, Inter-Office Communication dated March 14, 1942 and Special Report dated April 14, 1942 are all read in evidence at pages 672-676 of this printed record.]

Vanadium Corporation of America
Inter-Office Communication

Date: Boulder, Colorado, April 22, 1942.
To: Mr. Frederick F. Kett, Gen'l Manager Mining Division N. Y.
From: Robert Sterling, Manager.
Subject: Your Letter of April 20th.

Kimmerle Report—As long as this matter has come up in the way it has, I think Kimmer*ly* should be put on the spot to prove his statements. Such things do go on, whether at our plants or not, and it generally involves collusion between someone in the plant and some outsider. It would really go hard with them, if anything could be proved. However, all that can be *be* left until you come out.

Sale of Ore to Balsley—There was some doubt in my mind about selling small lots to Balsley except on a cash-on-the-barrel-head basis. Even then, no matter what he promised, I think there would be interminable delay in getting the cash—as, always, in the past. I assume that if any high grade comes into Monticello, it should be held and eventually transferred to Naturita for shipment

Plaintiffs' Exhibit No. 62—(Continued)

from there with any carload of slimes that may be accumulated? In fact any high grade produced at the Yellow Bird may as well go direct to Naturita, and so save transferring it later on? They might run into another "Tree" at any time.

Dry Valley Claims—I have no doubt that the matter of the whereabouts of all the claims in Dry Valley will be cleared up in the course of time, and that there is really nothing to worry about, except to see that the Affidavits of Annual Assessment Work are filed. That is, of course, up to the Moly Corporation, or U.S.V. and can, as you say, be checked up at the Monticello (not Moab) court house. The claims are all in San Juan County.

Ore Prices—Your decision on that matter is definite, so no price changes will be conceded without first getting authority from you. It's rather hard to know how to decide, when the producers tell us these stories about U.S.V. offering more, and then U.S.V. denying it. It is difficult to learn who is lying. Personally, I am inclined to believe the "honest miner."

Property Deal—It is my intention, of course, to advise and consult with you on any property deals. It seems to me the present arrangement should save you a lot of grief and letter writing, as I imagine you have plenty to do without being bothered with something that can be handled perfectly well out here without troubling you.

That $100.00 was paid on an option on the so-

Plaintiffs' Exhibit No. 62—(Continued)

called Hyde claims belonging to Mrs. Hyde and two of her nephews, and which we have been trying to line up ever since last fall. These claims join the Happy Jack, the workings of which are getting pretty close to them. The $100.00 was for 90 day option then $1,000 down, then $500.00 in 90 days, and the balance on a 10% royalty — total price $6,000.00, I have asked Garard for copies of the option.

I have just received from Blitz, copies of the contract he has negotiated with the Waggoners on 15 claims on Carpenter mesa. You have a copy of his letter of April 20th, on the subject. In case he did not send you a copy of the contract, one is enclosed herewith. I shall sign and return them today.

Blitz is very sure there is $3,000.00 worth of positive ore and that we are more than safe in buying them on the terms set out in the contract.

Apex Smelting Co.—It is nice to know that we won't have to worry about them after July 1st.

Norwood Bridge—As you know, the needed steel is to be rolled this month. However, there isn't a chance of the bridge being in place before the high water comes and goes; so we shall just have to pray for the best. The Highway Department seems to be prepared to replace the old one, if necessary.

Moab Bridge—Garard went to Salt Lake and got the Highway Department there to allow a 20-ton load over this bridge. As most of the heavier

Plaintiffs' Exhibit No. 62—(Continued)

stuff has already passed over, the 20-ton load should see us through, until the bridge is strengthened. One would think they could get the necessary priority for the needed steel.

Navajo Indian Reservation—I agree with you, as I said in my letter of April 17th, that there would be no need of tying up more ground on the reservation, until we have found something worth getting. I think then, we could get anything within reason. Garard has established a camp at Tee-nes-pah, having in some way secured the CCC Camp for nothing, and has three or four men prospecting.

ROBT. STERLING.

PLAINTIFFS' EXHIBIT No. 64

Seller--Buyer: Agreement dated the 15th day of May 1940 between Anaconda Copper Mining Company, a corporation of the State of Montana, having an office at 616 Hennessy Building, Butte, Montana, (hereinafter called the "Seller"), and United States Vanadium Corporation, a corporation of the State of Delaware, having an office at No. 30 East 42nd Street, New York, N. Y. (hereinafter called the "Buyer");

Witnesseth:

The parties hereto have agreed and do hereby agree as follows:

That the Buyer has contracted to purchase from

Plaintiffs' Exhibit No. 64—(Continued)

the Seller and the Seller has contracted to sell to the Buyer at the price and upon and subject to the terms and conditions following, viz.:

Material: Vanadium Pentoxide in the form of red cake precipitate.

Specifications: Approximately 94% Vanadium Pentoxide (V_2O_5); not over .02% Phosphorus (P); not over .01% Arsenic (As); not over .005% Lead (Pb); approximately 8.00% Soda; not over .25% Sulphur (S).

Quantity: The entire production of said material of Seller's plant at Anaconda, Montana, for a period of two years beginning January 1, 1941 and ending December 31, 1942. The Buyer shall have no obligation to purchase in excess of 200,000 pounds in each calendar year, but shall have an option to purchase any part or all of Seller's production in excess of 200,000 pounds in each calendar year.

Price: Seventy cents (70c) per pound of contained Vanadium Pentoxide (V_2O_5).

Mode of Delivery: F.o.b. cars at Columbiana, Ohio, or Grand Junction, Colorado, at Buyer's option, in carload lots.

Terms of Payment: Payment shall be made on or before the 15th day of each calendar month for all material delivered during the preceding calendar month.

In Witness Whereof the parties have executed

Plaintiffs' Exhibit No. 64—(Continued)

this agreement as of the day and year first above written.

Signed at Butte, Montana.

Carbide and Carbon Building
30 East Forty-Second Street, New York

December 1, 1942

Anaconda Copper Mining Company,
616 Hennessy Building,
Butte, Montana.

Dear Sirs:

We desire to confirm the arrangement made with your Mr. F. O. Case, as follows:

Plaintiffs' Exhibit No. 64—(Continued)

The agreement between us dated the 15th day of May, 1940, relating to the sale by you and the purchase by us of vanadium pentoxide in the form of red cake precipitate, is hereby amended by striking out the first sentence of paragraph captioned "Quantity" and by substituting for said sentence the following words—"The entire production of said material of Seller's plant at Anaconda, Montana, for a period of six years beginning January 1, 1941 and ending December 31, 1946".

All other conditions of said agreement of May 15, 1940, shall remain in full force and effect as though set forth at length herein.

If the foregoing meets with your approval, will you kindly signify your acceptance on one copy of this letter and return the same to us and the said agreement will be deemed amended accordingly.

Yours very truly,

UNITED STATES VANADIUM CORPORATION,

/s/ By J. R. VAN FLEET,
Vice President.

Accepted:

PLAINTIFFS' EXHIBIT No. 68

Inter-Company Correspondence

Company: United States Vanadium Corp.
Location: New York City.
Date: September 1, 1938.
To: Mr. W. G. Haldane, Supt.
Location: United States Vanadium Corp., Uravan, Colorado.
Copy to: Mr. Blair Burwell, Uravan.
Subject: Sludge, Vanadium.
Air Mail.
Confidential.

Dear King:

Electro Metallurgical Company has developed a a new alloy containing mostly vanadium and silicon, which is used in reducing or cleaning steel. The practice now in some of the steel manufacture is to use about two (2) pounds of aluminum metal per ton of steel, which controls the grain size in the steel. Vanadium will do this job a great deal better with no ill effects if the control is not absolute, and coupled with metallic silicon it does an admirable job. Some of this alloy has already been made and a great deal of interest has been shown.

You will recall, or at least I recall talking with Blair, about the possibility of preparing a vanadium product containing silica, alumina and iron, which could be very cheaply done. I had in mind somewhere around 25c to 30c per pound for the contained V_2O_5. A vanadium product such as this,

Plaintiffs' Exhibit No. 68—(Continued)

could be reduced directly in the electric furnace with the proper fluxing, resulting in the desired alloy. Fused V_2O_5 can also be used with the proper additions of quartzite, alumina, etc., but for the present at least, we will not be able to use*d* fused oxide, because we cannot charge the regular price for vanadium in the alloy. It is considered that this condition will not last over a great period of time, and that we ultimately can use the fused oxide and charge the regular price for vanadium in the alloy.

I am very anxious to supply such a material and it looks like the sludge "B" would answer the purpose. It seems to have rather an excess of alumina, but this can be balanced by the addition of quartzite and, possibly, a little more vanadium in some more concentrated form. The alloy should contain 5% V. This business could, probably, be worked into sales amounting to 1,000,000 to 2,000,000 pounds V_2O_5 annually, and is worth going after.

In looking over the notes on the sludge, I note that it costs approximately $3.00 per ton to treat one (1) ton of the old tailings. If we allow 50c per pound for the seven (7) pounds of U_3O_8 recovered from the "A" sludge, it would appear that the U_3O_8 recovered would pay for the operation and we could afford to foster this business and supply the "B" sludge for as little as 25c or 30c per pound V_2O_5, making an additional profit on the sale of uranium.

Plaintiffs' Exhibit No. 68—(Continued)

I would like to know what the cost of removing most of the uranium from the "A" sludge is, and I wish you would sharpen your pencil and see what you can figure out in producing something to fill this bill. I realize that the amount of tailings are limited and that we are not getting much return, but we would not have to continue furnishing this sludge for this purpose for any great length of time and, eventually, fused oxide will be used.

Confidentially, the reason why we must use some product other than fused oxide in this alloy to start with, is that we cannot sell vanadium for less than the market price, unless we can show that we do not use fused oxide and that we are using an impure by-product which cannot be used in any other way. For several years I have been trying to have the sales price of vanadium considerably reduced, and this would be an entering wedge. It has always been my opinion that if we were able to reduce the sales price of vanadium, it would encourage its use.

Very truly yours,

/s/ J. R. VAN FLEET.

EW/J. R. Van Fleet
IC

PLAINTIFFS' EXHIBIT No. 69

Vanadium Corporation of America
Inter-Office Communication

Date: June 26, 1941.
To: Mr. E. D. Bransome, President.
From: F. F. Kett, Gen. Mgr., Mining Div.
Subject: Dry Valley Ore—USV.

I called on Mr. Van Fleet at his office yesterday. Mr. Burwell was also there.

Burwell seemed quite surprised that there had been any talk about division of the Dry Valley ore; he claimed that that was the first he had heard of it. He said that his report on the possibility of rehabilitation of their old plant at Rifle, Colorado, had counted on the Dry Valley ore, in connection with some ore which remained in the old Rifle deposits, as the ore supply for this rehabilitated plant.

I said that I had understood our conference was not for the purpose of deciding whether we would get half of the Dry Valley ore or not; that I thought this question had been decided and that I was there simply to arrange the details of stockpiling and payment. Van Fleet then told Burwell that there was no question at all about his having definitely promised us half of the ore, and that if we insisted we would have to get it. However, Van Fleet did say that delivery to us of half of this tonnage would no doubt put a serious kink in their Rifle operations.

Van Fleet wanted to know if our operations at

Plaintiffs' Exhibit No. 69—(Continued)

Naturita would be seriously hampered right now if we did not get this ore. I told him that this was not the case and that we intended to stock-pile the ore for the moment until such time as it was convenient for us to haul it. I did not say where we might haul it, but he naturally assumed that our idea was to haul it to Naturita.

Van Fleet said that the overall picture as regards their vanadium production was very different now to what it was at the time he promised us delivery of half of this Dry Valley ore, that they were being pressed very hard for production and that this ore had now become a vital necessity for them for immediate use. He suggested that we let the question remain open for the moment since he wanted to confer with his officials. He was to get in touch with you today or tomorrow before I left for Colorado, if possible.

/s/ F. F. KETT.

CC PJG

PLAINTIFFS' EXHIBIT No. 70

Vanadium Corporation of America
Inter-Office Communication

Date: Boulder, Aug. 31st, 1941.
To: Mr. E. D. Bransome, Pres.
From: F. F. Kett, Gen. Mgr. Mining Div.
Subject: Utah Vanadium.

It is possible that Van Fleet may present some sort of concrete proposal on the subject of the Dry Valley contract assignment, before my return to N. Y. from Colorado.

It occurs to me that it may be that Dry Valley possibly is looking very sick right now and that the probability of getting even 10,000 tons from it may be very slim. This is probably not so, but it could happen.

Therefore, I think that either you or Mr. Gibbons should phone Van and suggest that his proposal embody the following:

(1) The 10,000 tons (or rather 300,000# of recoverable V_2O_5) to be taken from the property before June 1st, 1942. If this amount is not taken from the property before that date, than our obligations to return them any further ore in liquidation of the 300,000# of oxide are cancelled.

(2) The claims now held by them at Long Park (Maggie C, Donald L and Republican) to be turned back to us in any case, immediately upon assignment to us of the Dry Valley contract.

I am afraid that if we do not specifically men-

Plaintiffs' Exhibit No. 70—(Continued)

tion the above two points, they may drag the work and at the end of a year claim that there is no more profitable ore in sight, or if there is that it will take additional time to get it out. In which case we will have to pay another $15,000 to Moly to protect our investment, whether we like it or not.

In they really think there is at least 10,000 tons in sight and that they will get it out in the next 8 months, they should have no objection to turning back the Long Park claims at once.

We should make the date June 30th, as above, so we will have 30 days to make up our minds what to do, before having to make the payment to Moly.

Conger is looking pretty good, also the Spider Leg; Double Header looks like a flop. We will be leaving here tonight for Montecello.

/s/ F. F. KETT.

PLAINTIFFS' EXHIBIT No. 71

Vanadium Corporation of America
Inter-Office Communication

Date: Boulder, Colorado, June 13, 1940.
To: Mr. Frederick F. Kett, New York Office.
From: Robert Sterling.
Subject: Naturita—Oscar Krabbe Properties.

I have forwarded your letter of June 11th to Renner. If he has not arranged for Krebbe to

Plaintiffs' Exhibit No. 71—(Continued)

come over to Naturita by the time I get down there next week, I will get in touch with him. Since he used to work for me at Fall Creek, I may be able to get a better deal out of him.

I agree with you that this matter should be closed as soon as possible — before someone puts other ideas in his head.

We may be up against the USV ore stockpiling at the Mesa Vanadium mill, in which case, we shall have to make some concession on the truck haul.

Garard was in yesterday and said USV "says" they are paying only $2.00 haul from that area, which means, of course, that they are making an allowance somewhere along the line to make up the difference. Why should we attempt to work with that outfit at all?

If we can enter into Krabbe's picture by furnishing help in some way on a road, as you suggest, or otherwise, we can sew up his ground and output. His original proposition to me, you will remember, was to help him develop it by diamond drilling; perhaps we can work out something along those lines. Unless we should greatly increase our own trucking facilities, so we can haul this far away ore ourselves, it looks like we will have to stockpile ourselves, somewhere in that area, even if it raises the cost of oxide 5c a pound.

S. /s/ W. B.

PLAINTIFFS' EXHIBIT No. 72

Inter-Company Correspondence

Company: U. S. Vanadium Corporation.
Location: Uravan, Colorado.
Date: December 27th, 1941.
To: Mr. W. G. Haldane.
Location: New York City.

Dear King:

I have yours of the 24th regarding Mr. Kett's protest against my bidding on a Mr. Lyen's ore.

This is evidently only an attempt by Lyen to push the V.C.A. up on their price for the ore. I have never met Lyen, nor had any correspondence with him. I do, however, know something of his record. He worked for the North Continent, and Slim Lundquist advised me he was a trouble-maker and was discharged. Later, he had a lease on the Martin-Coefield property which resulted in trouble, and he was removed by Luther Watt. At present he has a lease on the Mucho Grande claim in the Mae Williams group.

John Hill advises that Lyen called at this office recently while I was in Dry Valley, and stated that he would like to sell us some ore and that he was furnished with our regular list prices, and definitely was not offered $2.00 per ton over these established rates.

Yours very truly,

/s/ J. E. WESTON (MC).

[Handwritten note: O.K. on going into Dry Valley provided does not interfere.]

PLAINTIFFS' EXHIBIT No. 73

E. M. Company—New York

Mr. S. C. DuTot
E. M. Sales Corporation
Pittsburgh, Pa.

May 10, 1944

Messrs: P. S. Lewis, W. E. Remmers, R. J. Portmann.

Confidential.

Dear Baldy:

We were discussing this morning the follow up work Carl de Laval has been doing on calcium tungstate briquets, with and without a combined reducing agent, in accordance with your letter of April 13 and my reply of April 17. It was decided that for the present we should discourage making briquets with any form of reducing agent, and not push the sale of calcium tungstate nuggets beyond the sale of our present stock of 13,000 to 14,000 pounds of contained tungsten in nugget form.

We are, however, anxious to sell the stock we have on hand.

There are several reasons for our having made this decision. We are selling ferrotungsten and tungsten metal powder far in excess of our own supplies of tungsten ore, and to meet this demand we are purchasing large amounts of ore from Metals Reserve. We are fearful that the trend in supplying ores with combined reducing agents will lead to direct reduction of other metals such as

Plaintiffs' Exhibit No. 73—(Continued)

vanadium, columbium, and chromium. As a matter of fact, we have recently refused to supply vanadium oxide and columbite with combined reducing agents on the ground that we are primarily in the ferro-alloy business and are not interested in the sale of ores, especially when we can make use of our large smelting facilities. You can readily understand that we do not want to promote any practice in steel making that would be in competition with our own ferro-alloy business, which we would be doing if we encouraged the reduction of metals from ores by steel makers.

We may have to sacrifice some business which would go to the people who sell ore in any event, but we will not be breaking down our own business which is smelting ores into ferro-alloys. It will be our task to convince our customers that the most practical and economical way to make steel is to use ferro-alloys.

I have written you at length on this subject so you will understand the reason for making this policy.

Very truly yours,

/s/ W. J. P.

WJP/MHB

PLAINTIFFS' EXHIBIT No. 74

TOLL AGREEMENT

This Agreement, made and entered into as of the 26th day of January, 1943, by and between United States Vanadium Corporation, a corporation duly organized under the laws of the State of Delaware and having an office at 30 East 42nd Street, New York, New York, as Agent for Metals Reserve Company (hereinafter sometimes called "Agent"), and Frank Nisley, Grand Junction, Colorado, and Hays C. Wilson, Rifle, Colorado, a partnership doing business as Nisley & Wilson, as Lessees of the vanadium ore treatment plant at Gateway, Colorado, formerly owned by Gateway Alloys, Inc. (hereinafter called "Lessees"):

Witnesseth:

Whereas, Metals Reserve Company was duly organized as an agency of the Government of the United States to assist in the National Defense Program by producing, acquiring, carrying, selling or otherwise dealing in critical and strategic materials, such as vanadium; and

Whereas, by that certain Vanadium Agency Agreement, dated as of May 9, 1942, between United States Vanadium Corporation and Metals Reserve Company, Metals Reserve Company appointed United States Vanadium Corporation as its Agent to purchase vanadium ores suitable for treatment in, and to supply such ores to, such vanadium ore treatment plants as Metals Reserve Company should designate; and

Plaintiffs' Exhibit No. 74—(Continued)

Whereas, Metals Reserve Company has designated the vanadium ore treatment plant at Gateway, Colorado, formerly owned by Gateway Alloys, Inc. (hereinafter called the "Gateway Plant"), and under lease to Lessees from the present owner, H. I. Gardner, as one of the vanadium ore treatment plants to be supplied with vanadium ore by Agent under said Agency Agreement, and has authorized Agent to enter into this Agreement; and

Whereas, Lessees are willing to treat vanadium ore supplied by Agent and to return to Agent all fused vanadium oxides and tailings produced therefrom, upon the terms and conditions hereinafter set forth;

Now, Therefore, in order to make possible the continued production at the Gateway Plant of fused vanadium oxides necessary for war effort, and in consideration of the mutual promises and agreements herein mutually covenanted and agreed by and between Agent and Lessees, the parties have agreed and do hereby agree as follows:

1. Definitions. Wherever used in this Contract unless otherwise specifically defined,

(a) The term "ton" means a dry short ton of 2,000 pounds, avoirdupois;

(b) The term "pound" means a pound avoirdupois;

(c) The term "ore" means vanadium ore purchased by Agent pursuant to said Agency Agreement dated as of May 9, 1942, and containing not

Plaintiffs' Exhibit No. 74—(Continued)

less than 1.50% V_2O_5 as calculated by weighted averages during any one settlement period.

(d) The term "vanadium oxide" means fused vanadium oxides produced by Lessees at said Gateway Plant from ore delivered hereunder by Agent.

2. Term. This Agreement shall commence on the day when sufficient ore to commence milling operations shall be delivered by the Agent to Lessees, and shall continue for a period of ninety (90) days from that day, or until this Agreement is cancelled, but in no event beyond July 28, 1943, unless a subsequent agreement is entered into between the parties.

3. Material. All ore treated by Lessees during the term of this Agreement shall be ore delivered by Agent to Lessees for treatment hereunder. Nothing herein contained shall ever be construed as passing to Lessees any title or interest in the ore delivered to them, or to the vanadium oxide to be delivered by them, to Agent.

4. Delivery of Ore and Quantity. Agent agrees to use its best endeavors to deliver to Lessees, at their Gateway plant, quantities of ore sufficient to operate said plant at full capacity during the term hereof, and it is estimated that the quantity of ore required for this purpose will be approximately 20 tons each 24 hours.

5. Weighing, Sampling and Analysis of Ore. Ore shall be delivered by Agent at Agent's Sampling Plant at Lessees' Mill in lots of approximately 20

Plaintiffs' Exhibit No. 74—(Continued)

tons each. Each lot shall be weighed and sampled at Lessees' expense promptly after delivery in accordance with standard practice and in the presence of a representative of Agent, whose services shall be paid for by Agent. Lessees may accept Agent's weights and samples, in which event Lessees will be furnished weight tickets and sample pulp. It is agreed that when Lessees do not desire to accept Agent's samples, the samples so taken by the parties hereto shall be divided into three (3) parts, one to be retained by Lessees, one to be retained by Agent and one to be sealed and held by Agent as the umpire sample. Lessees' sample shall be assayed promptly by Lessees' analyst and copies of the resulting analysis shall be furnished promptly to the Agent. Such analysis shall be binding upon the parties and shall be taken as the basis for the treatment charges hereunder, unless within five (5) days after receipt of such analysis, Agent shall deliver to the Lessee a written request for analysis of the umpire sample. In such event, the umpire sample shall immediately be delivered by Agent to the umpires as specified and directed on the attached umpire list, as mutually agreed upon, for assay, and the umpire assay shall be taken as correct in carrying out the provisions of this agreement. The cost of the umpire assay shall be borne by the party whose assay is furtherest from the umpire.

6. Treatment of Ore, and Delivery of Vanadium

Plaintiffs' Exhibit No. 74—(Continued)

Oxide and Tailings. Lessees agree to operate the Gateway Plant at full capacity during the term hereof, to receive and treat at said Plant all ore delivered hereinunder by Agent and thereafter to return to Agent, suitably sacked in bags properly and legibly marked and securely fastened at said Plant, without cost to Agent, and to be delivered as hereinafter set forth, all vanadium oxide produced from such ore, the vanadium pentoxide (V_2O_5) content of which shall not, in the aggregate, be less than 70% of the vanadium pentoxide content of the ore so treated, determined as provided in Paragraph 5 hereof. In addition, Lessees agree to store at the Plant, in a suitable storage area, all tailings resulting from the treatment of ore hereunder, without charge to the Agent, and to hold such tailings for disposal by the Agent as the Agent may specify in writing. Lessees shall deliver to Agent in respect to all tailings so stored, Storage and Ownership Certificates in the form hereto attached and marked Exhibit A.

7. Treatment Charges and Payment. The treatment charges for ores treated by Lessees hereunder shall be based upon the vanadium pentoxide recovered from the ore and delivered to the Agent and shall be as follows:

85c per pound of vanadium pentoxide contained in the vanadium pentoxide produced from ores having a vanadium pentoxide content of 1.50% with a reduction of 0.1c per pound for each 0.01% in-

Plaintiffs' Exhibit No. 74—(Continued)

crease in vanadium pentoxide content in said ore up to 2.00%.

80c per pound of vanadium pentoxide contained in the vanadium pentoxide produced from ores having a vanadium pentoxide content of 2.00% or more, with a reduction of 0.2c per pound for each 0.01% increase in vanadium pentoxide content over 2.00%.

On the 15th day and the 30th day of each and every month hereafter during the term of this Toll Agreement, or any subsequent Toll Agreement, the Agent will pay to the Lessees 90% of the treatment charges for vanadium oxide produced during the preceding half month period. On or before the 10th day of each and every month hereafter during the existence of this Toll Agreement, or any subsequent Toll Agreement which may be made by the parties, final settlement for treatment charges for the preceding month shall be made, and shall be based upon the weighted average vanadium pentoxide content of vanadium oxide delivered hereunder during such month. Within 10 days after the end of each such period, Lessees shall deliver to Agent a statement showing in detail the tonnage and vanadium pentoxide content of ore treated hereunder during such period, the weighted average grade thereof, the vanadium pentoxide produced and delivered, and the total treatment charge in accordance with the foregoing. After verification of such statement, Agent shall promptly pay to

Plaintiffs' Exhibit No. 74—(Continued)

Lessees the total treatment charges set forth therein.

* * * * *

13. Standard Provisions. The parties agree that the provisions set forth in Exhibit B attached hereto are made a part of this Contract with the same force and effect as if fully set forth herein; Lessees being referred to in said Exhibit B as "Contractor" and Agent being referred to therein as "Metals Reserve".

In Witness Whereof, the parties hereto have caused this Agreement to be executed in triplicate in their names as of the day and year first above written.

Executed in Triplicate.

PLAINTIFFS' EXHIBIT No. 110

This Agreement made the 4th day of January, 1944 by and between Imperial Paper and Color Corporation, a domestic corporation having its principal place of business in the Town of Queensbury, Warren County, New York, (hereinafter called Imperial) party of the first part, and Henry J. Leir, E. D. Leir and L. Schloss, co-partners doing business under the style and firm name of Continental Ore Company, 500 Fifth Avenue, New York, N. Y. (hereinafter called the Ore Company) party of the second part, Witnesseth:

Whereas Imperial is or may be engaged in the manufacture of vanadium products as a principal, and desires to arrange for the cooperation of the Ore Company as selling agent, and

Whereas the Ore Company is willing to accept such undertaking,

Now Therefore, in consideration of the premises and the mutual covenants contained herein, the parties agree as follows, to wit:

1. The Ore Company agrees to cooperate with Imperial in connection with the manufacture of vanadium products including but not limited to vanadium oxide and ferro vanadium, and to put at its disposal all technical and engineering information and data in the possession of the Ore Company, and to consult with Imperial with reference to the availability of raw material, the metallurgical or chemical processes to be employed, and as to the extent of the market for the finished products. The Ore Company further agrees that it will re-

Plaintiffs' Exhibit No. 110—(Continued)

port to Imperial all changes in market conditions and the development of new sources of supply for raw material etc. both in the domestic and foreign markets.

2. Imperial hereby appoints the Ore Company its exclusive sales agent for all the products mentioned above and produced by it during the term of this contract and authorizes the Ore Company to sell the entire output of these materials, subject to the then existing governmental regulations, at the market price as fixed by Imperial. If the Ore Company shall procure an order from a customer whose credit standing is not satisfactory to Imperial, Imperial shall give notice that it does not approve the credit and Imperial shall not be obligated to accept and ship any such order, unless the Ore Company shall guarantee the payment for any material shipped upon such order. All sales will be made in the name of Imperial and will be invoiced by Imperial direct to the various customers to whom shipment is made. Copies of all orders and important correspondence passing between the Ore Company and the customers will be supplied promptly to Imperial.

3. It is agreed that in consideration of the information hereto supplied and hereafter to be supplied and of the services heretofore rendered and hereafter to be rendered, that Imperial will pay to the Ore Company a sales commission of two and one-half (2½%) percent on the net price of the products, after all discounts, sold to domestic cus-

Plaintiffs' Exhibit No. 110—(Continued)

tomers and five (5%) percent on the net price of the product, after all discounts, sold to foreign consumers. The net sales price in each case shall be the price F. O. B. Glens Falls, New York, or such other point of production as shall be selected by Imperial. On sales to foreign consumers, the sales agent shall not be entitled to receive the increase of two and one-half (2½%) percent commission over domestic sales unless the net sales price F. O. B. point of production after all discounts shall exceed by at least two and one-half (2½%) percent the then current price to domestic consumers. Such commissions will be paid monthly on or before the 10th day of the month following the month in which payment for shipments shall have been made.

4. Imperial agrees to install the equipment necessary to manufacture the vanadium products above mentioned, and will use its best efforts to make the business of manufacturing and selling such products a success.

5. It is agreed that the term of this contract shall commence on the 31st day of December, 1943 and continue for a period of five (5) years thereafter.

6. Imperial covenants and agrees that all conditions being equal, that Imperial will give to the Ore Company the first opportunity of supplying Imperial's total requirements for vanadium bearing raw material including flue dust, vanadium ores or concentrates.

Plaintiffs' Exhibit No. 110—(Continued)

7. If at any time during the term of this contract Imperial accumulates a quantity of any product equal to a four (4) months production by Imperial and which the Ore Company has been unable to sell, Imperial may, without payment of any commission to the Ore Company, sell such product, so accumulated, directly or through agents, but not for a price less nor upon terms less favorable than as the Ore Company shall have submitted as bids from its customers.

8. It is agreed that this contract is contingent upon the decision of Imperial to manufacture vanadium from other raw materials than chromite and/or to make ferro vanadium. If Imperial decides not to enter this new field of production, then in that event this agreement is null and void.

In Witness Whereof Imperial has caused these presents to be executed by its officers thereunto duly authorized and the Ore Company has caused the same to be executed by a general partner.

IMPERIAL PAPER AND COLOR CORPORATION.

/s/ By K. R. McBRIDE,
President.

PLAINTIFFS' EXHIBIT No. 115

Imperial Paper and Color Corporation
Pigment Color Division
Glens Falls, N. Y.

Mr. M. Wolf, Manager, April 9, 1945
Continental Ore Company,
500 Fifth Avenue, New York 18, N. Y.

Dear Mr. Wolf:

Replying to your letter of April 6th regarding Peruvian Vanadium Ashes, we are writing to advise you that we did not find these worked too well in our process, though we believe that if we spent enough time on the project that we possibly could have made some changes that would have resulted in higher yields. However, we do not feel justified under present conditions in spending the time and money which would be involved to eliminate all the possibilities in these types of samples, because until there is a source of supply uncovered that represents enough material to operate a plant at a reasonable volume, we do not feel that we can afford to build a plant.

The viewpoint we have now is that this whole production of Vanadium Oxide is dependent largely upon having a satisfactory source of supply of raw material in sufficient volume.

Yours very truly,

IMPERIAL PAPER AND COLOR CORPORATION.

s/ A. F. BROWN,
General Manager, Pigment Color Division.

Plaintiffs' Exhibit No. 115—(Continued)

Imperial Paper and Color Corporation
Pigment Color Division
Glens Falls, N. Y.

April 13, 1945

Mr. M. Wolf,
Continental Ore Company,
500 Fifth Avenue,
New York 18, N. Y.

Dear Mr. Wolf:

Replying to your letter of April 12th regarding the Peruvian Vanadium Ashes, we wish to advise that our analysis on the material only indicated 13.77% V_2O_5 rather than the figure shown in your letter. We did not make any analysis for nickel.

So far as price is concerned, we are not accustomed to making bids for material but rather our way of doing business is to expect the company having the material to offer to name the price at which they are willing to sell, and then if this price is of interest we go into the matter further. We did enough work on these Peruvian Ashes to know that the processing cost per pound of V_2O_5 obtained would be considerably higher on these ashes than it would be on the Otavi Ore, but exactly how much more, we are not prepared to state, because we did not feel justified in going to the expense of finding this out, as this would involve considerable research. Assuming that the price was of interest, 30 tons a month, while it is an appreciable quantity, would still not be enough raw material to justify the erec-

Plaintiffs' Exhibit No. 115—(Continued)

tion of a plant, and it still seems to us that the fundamental problem is to find a reliable source of V_2O_5 in sufficient quantities to justify the erection of a plant, the price of the material to be such that we can afford to process it.

Yours very truly,

IMPERIAL PAPER AND COLOR CORPORATION,

/s/ A. F. BROWN,
General Manager, Pigment Color Division.

Imperial Paper and Color Corporation
Pigment Color Division
Glens Falls, N. Y.

May 11, 1945

Continental Ore Company,
500 Fifth Avenue,
New York 18, N. Y.

Gentlemen:

Referring to our conversation yesterday regarding the feasibility of us making Ferro Vanadium at a satisfactory cost from purchased V_2O_5, we would like to explore this matter, using material that you feel would be entirely representative of what we could regularly buy.

We are writing, therefore, to request that you purchase for us 200 pounds of fused V_2O_5 that will

Plaintiffs' Exhibit No. 115—(Continued)

be absolutely typical of what we can obtain in larger quantities, if our experiments look interesting, shipping this to us as promptly as possible by freight. It is our understanding that the market price of this material will be $1.10 per pound of V_2O_5 contained, and we, of course, desire to work with material that represents the same kind and approximate percentages of impurities that we would encounter in later shipments.

After we have done some work on this material, we may wish to avail ourselves of your kind offer to have the individual from Apex who has made Ferro Vanadium visit us as you suggested.

Yours very truly,

IMPERIAL PAPER AND COLOR CORPORATION,

/s/ A. F. BROWN,
General Manager, Pigment Color Division.

AFB:AEG

PLAINTIFFS' EXHIBIT No. 117

September 4, 1940

Apex Smelting Company
2537 West Taylor Street
Chicago, Illinois

Gentlemen:

re: Ferro Alloys

We received your letter of September 3d and we

Plaintiffs' Exhibit No. 117—(Continued)

ourselves also prefer to come to a quick understanding.

It is obvious that you must have full control of the business (sales and purchases) but, on the other hand, we do not want to be eliminated after we have established some new connections through our own efforts which entailed considerable expenditure of time and money on our part. This remark refers to our relations with Blanding which you certainly want to respect.

If you can assure us that you will conduct all negotiations pertaining to purchases from them through us (and such assurance must apply to all new sources of supply of raw materials which we may discover in the future), we, in turn, will agree to give you all these materials without any profit for ourselves, wherever we are the sellers of your finished products. In cases where you are the direct seller, we accept your proposition to make special arrangements at the proper time regarding our compensation for the purchasing.

In turn, we would definitely agree to the following:

1. You keep Indiana, Illinois, Wisconsin and California as your own sales territory

2. We are to deal with the rest of the country on the basis of a commission of 2½% on the net price, fob Chicago

3. Mr. Leir relinquishes the bonus of 10%

4. The above arrangements will be in effect for

Plaintiffs' Exhibit No. 117—(Continued)

all shipments to be made until the end of next year, December 31, 1941

5. Both parties will keep each other informed currently about all market conditions and the results of contacts with customers, even if there are no actual sales.

In Paragraph #4, we have put "end of next year" because we cannot avoid making contracts for the entire year 1941. However, if you prefer to replace "shipments until the end of next year" by the term "sales until September 1941," we would quite agree.

We hope this reply satisfies you in every respect.

Very truly yours,

CONTINENTAL ORE
CORPORATION,

.....,
President.

Henry John Leir

Re: Ferro Alloys

Gentlemen:

I take pleasure in referring to the Agreement, which has been concluded between you and the Continental Ore Corporation according to exchange of letters under date of Sept. 4/9, 1940.

I confirm herewith that I relinquish the ten percent (10%) bonus, which has been reserved for me personally by Agreement of July 14, 1938 for such time as your above Agreement with the Continental Ore Corporation is effective.

Yours very truly,

.....

Henry John Leir:k

Plaintiffs' Exhibit No. 117—(Continued)

[Letterhead of Apex Smelting Co.]
2537 W. Taylor Street, Chicago, Ill.

May 24, 1941

Mr. Henry J. Leir
c/o Continental Ore Corp.
500 Fifth Avenue
New York City

Dear Mr. Leir:

With reference to our contract dated July 1, 1938, made with the Societe d'Electro-Chimie de Brignoud, we are enclosing two copies of an agreement with the Continental Ore Corporation making them the exclusive sales agent* for our Thermit Department, in consideration for which they agree to reduce the portion of the royalty due them as owner of one-half of the royalty payable to the Societe under the terms of the above contract to 8⅓% of the profits of the Thermit Department.

Our attorneys advise us that in their opinion the power of attorney granted you by the Societe gives you power only to collect the monies due the Societe on the contract, and does not grant you the power to alter the contract; therefore, the enclosed agreement was drawn in a form which covers the points in your memorandum, giving Apex two-thirds of the profits and the Societe and the Continental Ore Corp., together, one-third. However, any payment of royalties will be made as follows: 8⅓% to the

* Crayon Underscore.

Plaintiffs' Exhibit No. 117—(Continued)

Continental Ore Corporation, and 25% to yourself, personally, as attorney for the Societe.

We trust that the enclosed contract is satisfactory, and would appreciate your returning a signed copy for our files.

Very truly yours,

APEX SMELTING CO.,
/s/ WILLIAM R. BAYER,
William R. Bayer.

This Agreement made and entered into this .... day of May, 1941, by and between Apex Smelting Company, an Illinois corporation (hereinafter referred to as "Apex"), and Continental Ore Corporation, a New York corporation (hereinafter referred to as "Continental").

Witnesseth:

Whereas, Apex heretofore entered into a certain contract, dated July 1, 1938, with Societe d'Electro-Chimie de Brignoud, a corporation of France (hereinafter referred to as the "Society"), a copy of which, marked Exhibit A, is attached hereto and hereby made a part hereof; and

Whereas, Continental is now the owner of one-half of the royalty payable to the Society under the terms of said contract;

Now, Therefore, it is mutually agreed as follows:

Plaintiffs' Exhibit No. 117—(Continued)

1. Continental is hereby appointed as the exclusive sales agent for the products of the Thermit Department of Apex throughout the United States (except the States of Indiana, Illinois, Wisconsin and California) and its possessions and all foreign countries during the life of this agreement. Apex agrees to pay to Continental a commission equal to two and one-half per cent (2½%) of the net selling price, f.o.b. Chicago, Illinois, (less returns and allowances) of all products of the Thermit Department of Apex sold in the aforesaid territory during the life of this agreement. Apex shall, from time to time, fix the sales price of said products. All orders shall be subject to the written approval of Apex which may refuse to accept any order with or without cause. Commissions due hereunder shall be paid in monthly installments on or before the tenth day of the succeeding month.

2. Continental agrees to use its best efforts to promote the sale of products of the Thermit Department of Apex within the aforesaid territory.

3. Continental agrees to furnish to Apex, at Continental's cost, all raw material (with the exception of such material as Apex may purchase) required in the operation of the Thermit Department, all purchases, however, to be subject to the written approval of Apex.

4. From and after the date hereof, the royalty payable by Apex under the attached contract shall

Plaintiffs' Exhibit No. 117—(Continued)

be reduced from fifty per cent (50%) to thirty-three and one-third per cent (33⅓%) of the net receipts, if any, as defined in said contract, of said Thermit Department, payable as follows: twenty-five per cent (25%) of said net receipts to the Society and eight and one-third per cent (8⅓%) of said net receipts to Continental.

5. This agreement shall continue in full force and effect until the termination of the attached contract. This agreement shall be binding upon and inure to the benefit of the respective successors and assigns of the parties hereto.

In Witness Whereof, the parties have caused this agreement to be duly executed the day and year first above written.

Plaintiffs' Exhibit No. 117—(Continued)

Exhibit "A"

This Agreement, made and entered into this 1st day of July, 1938, by and between Apex Smelting Company, an Illinois corporation (hereinafter referred to as the "Company"), and Societe D'Electro-Chimie de Brignoud, a corporation of France (hereinafter referred to as the "Society"),

Witnesseth:

Whereas, the Company is in the business of producing aluminum and zinc base and other non-ferrous alloys; and

Whereas, the Society represents that it owns and controls certain secret processes for the production of a complete line of ferro-alloys made by alumino-thermit process, including, without limiting the foregoing, ferro titanium, ferro tungsten, ferro vanadium, ferro chromium, chromium metal, manganese metal and welding powders, for the production of alumino-thermit stainless steel, and other alloying elements used in the manufacture of steel and iron (hereinafter referred to as the "Secret Processes"), but not including aluminum, zinc and copper magnesium and other products manufactured by the Company in the past; and

Whereas, the Company desires to acquire the Secret Processes and to create and operate a separate department to employ the same;

Now, Therefore, in consideration of the premises

Plaintiffs' Exhibit No. 117—(Continued)

and the mutual agreements herein contained, it is covenanted and agreed as follows:

1. The Society hereby sells, transfers and assigns the Secret Processes, all uses thereof, all inventions and discoveries included therein, all patents that may issue thereon, and all of its right, title and interest therein, throughout the United States and the territories thereof and the Dominion of Canada, to the Company and agrees to disclose the same to such person or persons as the Company may in writing designate. The Society further agrees to disclose to such person or persons as the Company may in writing designate and to transfer and assign to the Company all of its right, title and interest, throughout the United States and the territories thereof and the Dominion of Canada, in and to any and all improvements on the Secret Processes, or any one or more of them, and in and to any and all inventions, discoveries, processes and formulae useful or adaptable to the production of thermit process metals, or alumino-thermit stainless steel, or other steel alloying elements (other than the products heretofore manufactured by the Company), which, during the period of this agreement, the Society may make, discover or conceive. The Society further agrees, without charge to the Company but at the Company's expense, to execute, acknowledge and deliver all such further instruments, including applications for United States and Canadian patents and assignments of patents, and such assign-

Plaintiffs' Exhibit No. 117—(Continued)

ments or authorizations of applications for patents, as may be necessary to obtain patents for such inventions in the United States and Canada, and any and all reissues and extensions thereof, and to transfer title thereto and to vest the entire right, title and interest in any and all inventions, improvements, applications and patents, as aforesaid, in the Company. The Society further agrees to assist to the fullest extent of its ability, but not at its expense, the prosecution or defense of all interferences or court proceedings involving said inventions, as may reasonably be requested or demanded by the Company.

2. If, within 120 days after a full disclosure of the Secret Processes to the Company in manner aforesaid, the Company shall be advised by competent patent counsel (who may be counsel for the Company) that the Secret Processes, or any one or more of them, infringe or interfere with any claim included in outstanding Letters Patent of the United States, then the Company shall have the right, at its election, to terminate and cancel this agreement by notice in writing given to the Society within thirty days after the receipt of such advice. In the event of any cancellation pursuant hereto, the Company shall forthwith reassign and retransfer to the Society all of its right, title and interest in and to the Secret Processes, and thereupon this agreement shall be of no further force or effect.

3. If this agreement be not cancelled as herein-

Plaintiffs' Exhibit No. 117—(Continued)

before provided, then the Company agrees to establish and equip, in such manner as it deems proper, a separate department of its business to be known as the Thermit Department. The Thermit Department shall be devoted exclusively to the production and sale of a complete line of thermit process metals, alumino-thermit stainless steel and other nonferrous metals for steel and iron alloying (but not including products heretofore manufactured by the Company) and to trading in minerals and ores necessary to the aforesaid production. The Company further agrees to operate the Thermit Department throughout the term of this agreement; provided, however, that if any person, firm or corporation shall claim that the Secret Processes, or any one or more of them, infringe or interfere with any United States or Canadian patent or patent application or any prior invention, then the Company may, in whole or in part, suspend the operation of the Thermit Department until the validity or invalidity of such claim shall be determined or established by a court of competent jurisdiction.

4. The Company hereby agrees to pay to the Society a royalty equal to fifty per centum (50%) of the net receipts, if any, as hereinafter defined, received by the Company from its operation of the Thermit Department during the term of this agreement. All royalties hereunder shall be paid in annual installments within 45 days after the close of each calendar year. All payments to the Society

Plaintiffs' Exhibit No. 117—(Continued)

hereunder shall be made in lawful money of the United States, shall be remitted to it by Chicago or New York draft, and shall be subject to all applicable laws of the United States or the State of Illinois relating to the withholding of taxes at the source.

5. The term "net receipts" as used herein shall, for all purposes of this agreement (but for no other purpose), mean the amount which shall be ascertained by deducting from the gross revenues and income of the Thermit Department during each calendar year, the following:

(a) All direct charges against the Thermit Department for such calendar year, including, without limiting the foregoing, (1) the cost of raw materials and fluxes, (2) the cost of direct labor, (3) the cost of fuel and power, (4) the cost of compensation insurance, (5) the cost of packing material, (6) the cost of publicity advertising products of the Thermit Department exclusively, (7) the cost of freight and drayage, (8) the salary or compensation of the Production Consultant of the Thermit Department, (9) rental on the space occupied by the Thermit Department at the rate of thirty cents (30c) per square foot, (10) depreciation on equipment at the rate of seven and sixty-nine hundredths per centum (7.69%), per year, (11) losses in the collection of accounts receivable, (12) inventory losses, and (13) all direct taxes such as sales, manufacturer's, license and social security taxes. All

Plaintiffs' Exhibit No. 117—(Continued)

aluminum metal required by the Thermit Department shall be furnished by the Company and charged to the Thermit Department at its cost to the Company plus one-half cent (½c) per pound.

(b) An amount equal to that proportion of the indirect expenses of the Company for such calendar year which the sales of the Thermit Department bear to the total sales of the Company during such calendar year. Indirect expenses shall include sales expense, administration expense, such manufacturing expenses as are not included in the direct charges, income and property taxes and such other taxes as are not included in the direct charges.

(c) All net losses of the Thermit Department for prior calendar years which have not been charged against the net receipts of the Thermit Department in subsequent years.

The net receipts of the Thermit Department shall at the end of each calendar year be determined by certified public accountants, to be employed by the Company, in accordance with the foregoing provisions of this Paragraph and, to the extent only that the disposition of any item is not herein specifically directed, in accordance with standard accounting practice. If said certified public accountants shall be of the opinion that the foregoing allocation of indirect expenses of the Company does not in fact correctly reflect the net receipts of the Thermit Department, said accountants shall recommend to

Plaintiffs' Exhibit No. 117—(Continued)

the parties hereto a more accurate method of allocating the same.

6. The Company shall keep true and accurate records and accounts of all operations of the Thermit Department and of all sales, administration and manufacturing expenses and taxes of the Company, which records and accounts shall be open during business hours to the inspection of the Society, or its nominee, with the right to make copies.

7. The Society hereby agrees that it will not, directly or indirectly, engage in the business of producing or selling thermit process metals or alumino-thermit stainless steel or other non-ferrous metals employed in alloying steel or iron within the United States or any territory thereof or within the Dominion of Canada, during the term of this agreement, nor will it permit any corporation or association affiliated with it so to do. The Company agrees that it will not, directly or indirectly, engage in the business of producing or selling thermit process metals or alumino-thermit stainless steel or other non-ferrous metals employed in alloying steel or iron (but not including products heretofore manufactured by the Company) within the United States or any territory thereof or within the Dominion of Canada, during the term of this agreement, except by means of the Thermit Department, nor will it permit any corporation or association affiliated with it so to do.

8. The Society agrees that it will, at all times

Plaintiffs' Exhibit No. 117—(Continued)

during the installation and completion of all equipment required in the Thermit Department and until satisfactory production has been obtained in the Thermit Department, furnish to the Company the services of a skilled technician, without cost to the Company other than the payment of his necessary travelling expenses.

9. The Society agrees that it will not do or omit, or suffer to be done or omitted, any act or thing whereby the Secret Processes, or any one or more of them, may become known to any unauthorized person.

10. All notices shall be given by registered mail, postage prepaid. All notices to the Company shall be addressed to the Company at 2554 Fillmore Street, Chicago, Illinois, or to such other address as the Company shall have previously designated in writing. All notices to the Society shall be addressed to the Society at 66, Rue de Miromesnil, Paris, France, or to such other address as the Society shall have designated in writing.

11. The term of this agreement shall commence at the date hereof and continue until (a) the expiration of fourteen (14) years from the date hereof, (b) the operation of the Thermit Department for two (2) successive calendar years without an average annual net profit of at least Seventy-five Hundred Dollars ($7500.00), or (c) the issuance by a court of competent jurisdiction of an injunction

Plaintiffs' Exhibit No. 117—(Continued)

restraining the Company from using any one or more of the Secret Processes by reason of patent infringement, which ever shall happen the earliest.

12. This agreement shall be binding upon and inure to the benefit of the respective heirs, legal representatives, successors and assigns of the parties hereto, and shall be construed in accordance with the laws of the State of Illinois.

In Witness Whereof the parties hereto have caused these presents to be duly executed the day and year first above written.

Title L'Administrateur Directeur General.

Know All Men By These Presents, that

Whereas, heretofore on the 1st day of July, 1938, Societe d'Electro-Chimie de Brignoud, a corporation organized and existing under and by virtue of the laws of the Republic of France, and the Apex

Plaintiffs' Exhibit No. 117—(Continued)

Smelting Company, a corporation organized and existing under and by virtue of the laws of the State of Illinois, entered into a contract wherein and whereby the Apex Smelting Company agreed to organize a Ferro Alloy Department in the Apex Smelting Company, and after the deduction of certain expenses as in said agreement more particularly provided, to divide the profits therefrom in such manner that one-half thereof would be paid to the Apex Smelting Company and one-half thereof would be paid to Societe d'Electro-Chimie de Brignoud, and

Whereas, by an instrument of April 26, 1939, a photostatic copy of which is annexed hereto, the Societe d'Electro-Chimie de Brignoud set over, transferred and assigned to Societe Anonyme des Minerais, a corporation organized and existing under and by virtue of the laws of the Dutchy of Luxemburg, an undivided half interest in any amounts due or payable to Societe d'Electro Chimie de Brignoud under and pursuant to said contract with the Apex Smelting Company, and

Whereas, Societe Anonyme des Minerais thereafter, to wit, on or about the 15th day of April, 1939, set over, transferred and assigned to Henry John Leir as trustee for a corporation to be organized, the interest so received by them from Societe d'Electro-Chimie de Brignoud, and

Whereas, Henry John Leir thereafter transferred

Plaintiffs' Exhibit No. 117—(Continued)

the interest so received by him as trustee to the Continental Ore Corporation, a New York Corporation, and

Whereas, Societe Anonyme des Minerais undertook to execute such instrument for the further assurance of the title of Henry John Leir or his assignee in and to said interest as Henry John Leir should request, and

Whereas, Henry John Leir has requested that a direct assignment for further assurance be executed by Societe Anonyme des Minerais to the Continental Ore Corporation.

Now, Therefore, in consideration of the premises and the sum of One ($1.00) Dollar in hand paid by the Continental Ore Corporation, and of other good and valuable consideration, receipt whereof is hereby acknowledged, Societe Anonyme des Minerais hereby sets over, transfers and assigns to the Continental Ore Corporation an undivided twenty-five (25%) percent interest in the profits arising under the contract between the Apex Smelting Company and Societe d'Electro-Chimie de Brignoud, dated July 1, 1938, the same being an undivided one-half of the amount which the Societe d'Electro-Chimie de Brignoud was entitled to receive under the terms of said contract.

In Witness Whereof, Societe Anonyme des Minerais has caused these presents to be executed by

Plaintiffs' Exhibit No. 117—(Continued)

an administrateur and a Directeur acting on their behalf.

PLAINTIFFS' EXHIBIT No. 122

February 27, 1942

To: Apex Smelting Company, Attention: Mr. Lippa
Re: Ferro Alloys

This is to confirm yesterday's conversation in Washington, during the course of which we discussed the situation and came to the following conclusions:

1. You definitely prefer to withdraw from the production of Ferro Alloys and we want to continue this business either alone or with associates. You will do everything in your power to facilitate the transfer of the business.

2. You will continue the Ferro Department for a period of three months, (March, April, May, 1942), and you will run it at capacity. That means you will convert all the quantities of vanadic acid we can secure from:

Blanding Mines
Nisley & Wilson
Shattuck

3. You will produce either Ferro-Vanadium or Van-Ex, at our option. If we choose Van-Ex, then it is understood that you will pack it for our account at cost, so that you will take no profit and also have no responsibility for this business.

4. You offered us the equipment of the Ferro Department, with the exception of the skull cracker and the hammer screen. If we decide to take it for our own account, the transfer will be made at cost less depreciation. Should we sell the equip-

Plaintiffs' Exhibit No. 122—(Continued)

ment to a third party, you will be entitled to a sales price leaving you a profit if possible. In any case, the prices for the equipment will have to be determined by mutual agreement.

5. You are prepared to put Mr. Starmann Jr. at our disposal for the organization of the production in another place, his salary to be borne by us of course.

6. You declared your readiness to supply us with the aluminum at the new place of production, if necessary.

We hope that the above covers the subject.

Upon your suggestion we wrote to Mr. Frost as per copy enclosed, but wish to inform you that we are also in negotiations with another party regarding this business.

CONTINENTAL ORE CORPORATION.

cc Mr. W. A. Singer

Inter-Office Correspondence
Apex Smelting Co.

March 2, 1942

From: Chicago
To: Continental Ore Corperation
Attention: Mr. H. J. Leir

Gentlemen:

We are in receipt of your letter of February 27th, and in principle it is correct except that it is under-

Plaintiffs' Exhibit No. 122—(Continued)

stood that we will produce as much as we possibly can in those three months.

The reason we bring this up is that you state that we should convert all the quantities that we can secure from the three companies you name. Not knowing how those quantities may be increased, it is difficult for us to make a commitment with the limited capacity that we have.

However, we believe that we understand each other in this particular. One other item with reference to Mr. Starmann, Jr. You realize, of course, that there will be some expense in addition to his salary, which, of course, would have to be straightened out between the two of you.

The other matter is that you, of course, will hold us harmless for any damage on the contract.

We are certain that all of the above will meet with your approval, but as a matter of record, we would appreciate it greatly if you would be good enough to let us have your acknowledgment.

Regards.

Very truly yours,

L. LIPPA.

LL:FS

Apex Smelting Company
Ferro Department

3/4/42

Attention: Mr. L. Lippa

We received your letter of March 2nd, and take

Plaintiffs' Exhibit No. 122—(Continued)

pleasure in confirming to you that we fully agree with the remarks contained therein.

CONTINENTAL ORE CORPORATION.

Henry J. Leir/rk

P. S. With regard to the damage you mention, we assume that this refers to your relations with F. K. Brignoud.

Apex Smelting Company
Ferro Vanadium Production

3/30/42

Attention: Mr. L. Lippa

We received your letter of March 27th and we gather from it that you would like to close-down the Ferro Department promptly.

We may be able to make arrangements with Latrole whereby we would not have to continue shipments of Ferro. However, before taking this matter up with the customer, we would like to have your opinion on the following point: In case we authorize you to dismantle the Ferro Plant (after the completion of the next 5000 lbs. of V) would you be ready to continue making Van-Ex for a correspondingly extended period, that is, until the end of July.

Please let us have your prompt reaction.

CONTINENTAL ORE CORPORATION.

Henry J. Leir/lm

Plaintiffs' Exhibit No. 122—(Continued)

Apex Smelting Co.
2537 W. Taylor Street
Chicago, Ill.

April 1, 1942

Continental Ore Corporation
500 Fifth Avenue
New York City, New York

Att: Mr. Henry J. Leir

Gentlemen:

In response to your letter of March 30th, the writer had the pleasure of speaking with Mr. Leir today, at which time we advised that we would be very glad to continue handling the Van-Ex for your account until the end of July,* providing you would agree that we could dismantle the Ferro Department within the next several days.

It was also understood that we would continue the purchase of the vanadic acid as heretofore, and that you would immediately furnish us with shipping instructions.

Should you at any time be unable to submit prompt shipping instructions, it is understood that we would, in that event, bill you for the vanadic acid and hold it in our warehouse for your account.

As advised you, we have completed March shipments to Latrobe, and the 5,000# for April will be completed by the end of this week.

---

* Crayon underscore.

Plaintiffs' Exhibit No. 122—(Continued)

Therefore, if you could give us permission to dismantle, we would very much like getting started on it the first of next week.

The writer understood from our conversation that you would advise us definitely by Saturday of this week.

Awaiting this advice, we remain

Very truly yours,

APEX SMELTING CO.,
L. LIPPA.

LL:L

4/3/42

Apex Smelting Company
Ferro Department

Attention: Mr. L. Lippa

We received your letter of April 1st and agree to these conditions.

You are, therefore, free to dismantle the Ferro Department after having completed the 5,000 lbs. of V for April delivery to Latrobe. You will continue to handle Van-Ex for our account until the end of July, as set forth in our letter of February 27th and yours of April 1st.

CONTINENTAL ORE CORPORATION.

April 6th, 1942

Continental Ore Corporation
500 Fifth Avenue
New York City, N. Y.

Att: Mr. Henry J. Leir

Gentlemen:

We thank you very kindly for your letter of April 3rd., and in accordance with same, we will dismantle the Ferro Department.

In order to know just how to dispose of the equipment, we ask that you please be good enough to advise us whether you are going to be interested in the purchase of this. If not, we will attempt to dispose of it otherwise.

Please be good enough also to advise us regarding this property, and in the meantime we will prepare the regular release papers from this department, and will forward them on to you for your signature.

Very truly yours,

APEX SMELTING CO.,
L. LIPPA.

PLAINTIFFS' EXHIBIT No. 127

Continental Ore Corporation

1/13/42

To: Apex Smelting Company

Subject: Re: Nisley & Wilson Vanadium/Shattuck

Attention: Mr. L. Lippa

We are very sorry to learn from your correspondence that Blanding has sold its output to Vanadium Corp.

This makes it even more imperative that you promptly write to Nisley & Wilson to ship the material now ready to you without further delay.

We also want to stress the necessity of sending the proposed letter out to the Vanadium Corp. It becomes more and more necessary every day to obtain a share from them, of the output of the new Government plant in Monticello, and we cannot pave the way for this too early.

Regarding Shattuck, we suggest that you approach them and offer them a contract for larger monthly quantities than they have at present from you, in order to induce them to increase their output.

We consider this most important, since they are now the only regular source of Vanadium we have.

CONTINENTAL ORE CORPORATION.
HENRY J. LEIR, R.K.

Henry J. Leir/rk

PLAINTIFFS' EXHIBIT No. 129

October 27, 1941

Apex Smelting Company
2537 West Taylor Street
Chicago, Illinois

Attention: Mr. William R. Bayer

Gentlemen:

Re: Ferro Alloys

We have your letter of October 25th, and confirm our telephone conversation with Mr. Singer, according to which we shall be in Chicago on Saturday morning, November 1st, in order to discuss the entire situation.

As arranged, you will not* notify the various suppliers of raw materials to stop shipments, especially since all the raw material received can be easily disposed of under present circumstances.

We look forward to seeing you.

Very truly yours.

CONTINENTAL ORE CORPORATION.
President.

Henry J. Leir/rk

---

* Pen underscore.

12/19/41

Apex Smelting Company
Latrobe

Attention: Mr. Lippa

Some time ago we promised you that we would not sell any more Ferro-Vanadium below $2.80,

Plaintiffs' Exhibit No. 129—(Continued)

which is the price of Vanadium Corp. of America Electrical Metallurgical Corp.

We are glad to inform you that Mr. Zenk today accepted our proposal for 1942 at $2.80.

He is full of praise for your 70-80% Ferro-Vanadium, which they are using for certain types of steel. He went so far as to admit they they cannot produce those steels unless they have your Ferro.

He told us of his wire to you, and your answer with regard to the 5000 pounds which are still due him. We informed him that he would receive this backlog of 5000 pounds by the end of the month.

CONTINENTAL ORE CORPORATION.

Henry J. Leir/rk

Inter-Office Correspondence

Apex Smelting Co.

From Chicago Dec. 22, 1941

To Continental Ore Corp.

Attention: Mr. H. J. Leir

Gentlemen:

We have your letter of December 19th, and we are pleased to note that the new basis to Latrobe will be $2.80. We are also delighted to hear that they have praised the material.

We note, however, that you informed them that the order of 5000 lbs. would be delivered to them by the end of this month. As you will note from our telegrams, it will not be possible to do this as we do not expect the department to be ready until sometime during the first week of January, and

Plaintiffs' Exhibit No. 129—(Continued)

with good luck, we hope to make shipment the second week of January.

You may rest assured that we will do everything we possibly can to expedite this.

Very truly yours,

L. Lippa.

Chicago, Ill.

April 23, 1942

Vanadium Corporation of America
420 Lexington Avenue
New York City, N. Y.

Att: Mr. Gustave Laub, Vice President

Gentlemen:

In accordance with conversation our Mr. Christiansen had with you, we are pleased to enclose an equipment inventory of our Ferro Alloy Department which we desire to sell.

This list does not include all the equipment used in that department, since we find use for the rest of it in our aluminum production.

We would appreciate very much if you will advise us by return mail whether this will be of any interest to you.

We are greatly in need of the space and there-

Plaintiffs' Exhibit No. 131—(Continued)

ing Mr. Milenski, please be advised that we have arranged to pay them $1.50 * Chicago.

Also please be advised that he went back west from Chicago without going further east.

Very truly yours,

L. Lippa.

January 6, 1942

Blanding Mines, Inc.
Cortez, Colorado

Attention: Mr. H. L. Bigler

Gentlemen:

We understand that your Blanding mill and your mining claims (or perhaps only one or the other) are at present under option to the Vanadium Corp. of America. We should very much appreciate your informing us frankly as to whether this information is correct. We hope you will not hesitate to tell us your position in that respect, in view of our long and pleasant relations, and the complete cooperation we have always given you.

In any case, we wish to say that it is of course the tendency of the U. S. Vanadium Corp. and the Vanadium Corp. of America to firmly establish their monopoly by getting hold of all sources of vanadic acid, so as to impede the operations of their sole competitor, the Apex Smelting Company.

Plaintiffs' Exhibit No. 131—(Continued)

However, we do not see any advantage to you in lending your facilities to this project. If you will sell out to the Vanadium Corp. at this time, you will only have to pay a lot of taxes, instead of holding on to a continuous business which, in cooperation with us, will be profitable for you for years to come.

During the war we can pay you a satisfactory price for the acid, and once the war is over, we can again obtain for you the higher prices which govern the foreign markets. This would not be the case if you sold out now, or tied up your production with the Vanadium Corp., because it would be they who would profit by these interesting foreign markets.

This situation may arise much more quickly than most people think. We do not believe the war will last for years and years, as is often anticipated. We think that conditions in Europe, and especially in Germany, are such that the end may come within this year.

For all these reasons, we think it is much more to your advantage to stay independent, and we should like to hear from you in this respect.

Very truly yours,

CONTINENTAL ORE
CORPORATION,

.....,
President.

PLAINTIFFS' EXHIBIT No. 131

Daniel Milenski
Attorney-at-Law
Cortez, Colorado

Mr. Paul M. Hirschland — June 19, 1940
The Continental Ore Company
500 5th Ave.
New York, New York

Dear Sir:

The vanadium mines at Blanding, formerly operated by H. J. Kimmerle, and later by Bigler & Usher, will soon be producing fused vanadic acid. The mill has been rebuilt and greater production is anticipated. It will be operated by a group, the principal member being Mr. Bigler.

It is expected that by July 15, 1940 that a fair sized shipment will be ready, and if you are interested in purchasing the finished product, we would appreciate hearing from you. We believe that an arrangement similar to that of the past, that is you would maintain a balance in the Bank here to guarantee payment and also to draw advances against on bills of lading if necessary.

May we hear from you?

Very truly yours,

Dan Milenski.

Mr. Daniel Milenski, — July 2, 1940
Cortez, Colorado.

Dear Sir:

We received Mr. Bigler's letter of June 27th and note with pleasure that you expect to have an out-

Plaintiffs' Exhibit No. 131—(Continued)

put of 10,000 lbs. of V205 per month. We are also glad to hear that you are prepared to cooperate with us, so that our existing pleasant relationship will be continued.

As a matter of fact, we specialize only in a few materials, but particularly in Ferro Alloys like Ferro Vanadium, Vanadic Acid, Lead-Vanadium ores, and other Vanadium bearing materials.

You will be aware of the fact that the export prices for Vanadic Acid are higher than those paid on the domestic market. For your information the present prices are as follows (for first-class Vanadic Acid with about 90% V_2O_5):

Domestic—$1.05-$1.10 delivered at points of consumption.

Foreign—$1.30-$1.35 f.o.b. New York, including ocean packing (steel drums).

As in the past we would buy your material "for export". However, the situation this year is different from that which existed last year, and it might be that

a) Washington bans exports of Vanadium which is considered a "critical" material for the national defense.

b) The situation abroad might develop in such a direction that exports will practically cease.

We are also buying Vanadium raw-materials which we convert into Ferro Vanadium in this country; in other words, if the export business would stop, we could nevertheless continue to buy from you for our domestic needs.

Plaintiffs' Exhibit No. 131—(Continued)

We would therefore like to put the following proposal before you, for your approval:

1) Every week you will ship your total output of fused Vanadic Acid with about 90% V_2O_5 (otherwise also of first-class quality) to Messrs. Ledoux & Company, New York City.

2) You will present the B/L to your bank in Cortez who will pay you an advance of 75c per lb. Vanadic Acid (not V_2O_5), for our account.

3) As long as we can export and until further notice we will pay you $1.30 per lb. V_2O_5 f.o.b. Thompson, Utah.

Sampling, analysis, packing expenses of Ledoux & Company to be equally divided between us, as in the past.

4) If export possibilities cease, we will

a) make new arrangements with you regarding the use of any material with Ledoux or in transit for the domestic market, at a price to be agreed upon.

b) if no agreement as to price is possible, we will be obliged to put the merchandise at your disposal, and you will return our advance.

On going through the above conditions you will find that they protect the interests of both parties, which, after all, is the purpose of a contract.

We strongly recommend you to bring down your production cost, so that you will make a profit even

Plaintiffs' Exhibit No. 131—(Continued)

if you are limited to the lower domestic prices, should general conditions develop that way.

Very truly yours,

CONTINENTAL ORE CORPORATION.
Henry John Leir.

HJL/LL.

Blanding Mines Company
(Of Utah)

November 18, 1940

Continental Ore Corporation
500 Fifth Ave.
New York, New York

Gentlemen:

This morning we shipped gross weight of 7290 to Apex, for which invoice is enclosed.

Of this shipment 2465 net weight has a content of 86.7% and 4700 net weight has a content of 80.6% V_2O_5.

We were not certain until this date as to form that calcium had taken, and our chemist and engineer informs us that approximately 90% of all calcium in the sample was in the form of vanadate; 0.86% is insoluble.

Our laboratory facilities have been improved and have employed a very capable chemist. However, in view of the fact that we are not grinding the product as finely as should be in order to accurately determine the content, we would appreciate it, if in the future, you would send us a sample that has

Plaintiffs' Exhibit No. 131—(Continued)

been ground finely, and we will have our chemist analyze it. We request that this be done instead of referring it to Ledoux, as we are convinced that our analysis will not vary from the correct analysis which you will also obtain, providing that we have a representative sample of the entire shipment.

We have made some changes in the mill and we expect in the future to make more changes and improvements and we will include in the future improvements a crusher for the finished product. If we hold to our present output we will have between 12,000 and 15,000 monthly; and by spring it will probably be up to 20,000 lbs. We will endeavor to hold quality to 85% or better.

It might be of interest to you to state that our new chemist and metallurgist, Arnold J. Guerber, has over 25 years experience with rare metals, and worked for United States Vanadium and Standard Chemical Company as chief chemist, and he states that in his experience he has never seen the vanadium deposits that we have on our claims, which he states to be practically unlimited. At the present time our mill heads are averaging approximately 4% V_2O_5 equivalent after mixing 25% tailings with the ore as taken from the mine. We are finding the services of Mr. Guerber extremely valuable in solving some of our problems.

Very truly yours,

Blanding Mines Company,
Dan Milenski, Secretary.

Cortez, Colorado

re: Vanadic Acid

Gentlemen:

You are certainly aware of the fact that during these last weeks efforts are being made to substitute molybdenum for other alloys, especially tungsten and vanadium.

The reason for this is that a large proportion of tungsten, as well as vanadium, is being imported into the United States, whereas there exist huge quantities of molybdenum in this country.

The policy of the Apex Smelting Company is to satisfy every demand of their ferro vanadium customers, because if Apex were to decline their orders, they would certainly follow the general tendency and switch over to molybdenum. Then, in view of the difference in price, which is also in favor of molybdenum, it would be quite hard to win them back again.

Our other suppliers of Vanadic Acid—in order to make this policy of Apex a success—have greatly increased their output, and it is also in your interest to try to resume production at the earliest possible time, so that Apex can turn out increasing quantities of Ferro.

If you should only start again later in the Summer, it may be that Apex has reached the limit of their production, based on other sources of supply.

We therefore suggest that you resume at the

Plaintiffs' Exhibit No. 131—(Continued)

earliest moment the good relations which exist between you and Apex, in sending them as soon as possible further quantities of your material. Of course, do not ship in lots of less than 5,000 pounds at a time, as smaller quantities would cause too much trouble and Apex has to save all unnecessary handling at the present time.

It is certainly in the interest of all parties concerned to cooperate closely in order to satisfy the demands for vanadium at this time and to conserve a clientele for the time when conditions are normal again.

Very truly yours,

CONTINENTAL ORE CORPORATION,
President.

(Copy)

Oct. 31, 1941

Apex Smelting Co.
2537 Taylor St.
Chicago, Illinois

In response to request of Mr. Henry J. Leir we wired you as follows:—"We are in no hurry to start shipments. We are producing approximately 2500 lbs. per week. Production undoubtedly will double in 1942. Letter follows"

Plaintiffs' Exhibit No. 131—(Continued)

Our mill has been completely rebuilt and we have centralized power plant. The "bugs" have been removed much better than expected. As yet we are not trying to crowd the mill, or even put it up to the production that it will take. We have gathered considerable data and are positive that we will soon be producing over 5000 lbs. per week. Our product is over 85% pure, i.e. V_2O_5.

Your quotation of $1.02 Chicago is below other offers which we have received and we are not disposed to sell for that price with better offers available. We suggest that if you desire that you submit new offer. We might be agreeable, if price is satisfactory, to contract for shipments at stated intervals of certain size.

The writer plans on being in Chicago sometime around No. 10th and will endeavor to call on you and discuss the situation.

Very truly yours,

Dan Milenski.

Gentlemen:

We have your wire of February 14 and letter confirming the wire. No report was made at an earlier date for the reason that we were endeavoring to become more familiar with the situation.

As we take the letter we received from the War Department, we are not directed to sell our product to you, and as previously advised, other arrangements have been made for the sale of our product and we have informed the War Production Board that we desire to continue with our present sales arrangement.

We regret that we are unable to sell our product to you, however, you are aware of our set-up and the fact that we are merely operating under a lease. We are producing now under somewhat of a handi-

Plaintiffs' Exhibit No. 131—(Continued)

cap, for the reason of adverse climatic conditions with result of poor roads.

Very truly yours,

BLANDING MINES COMPANY,
By L. EATON,
Ass't. Secretary.

March 5, 1942

Mr. Dan Milenski
P. O. Box 895
Cortez, Colorado

Dear Mr. Milenski:

This is to confirm the telephone conversation I had with you last night, and in order to avoid any misunderstandings, I prefer to write this letter to you personally, rather than to the company.

If I understood you correctly, Mr. Garbutt, the owner of your claims, has 100 tons of ore available daily, and the Vanadium Corporation wants to buy his ore only if and when Mr. Garbutt exercises his influence on you to the effect that you give your output to the Vanadium Corporation.

This is a reversal of the entire situation, because:

A. Vanadium ore is scarce, and is becoming more and more scarce every day.

B. The Vanadium Corporation will be only too glad to have every pound from Mr. Garbutt, particularly in view of the completion of the new plant in Monticello.

Plaintiffs' Exhibit No. 131—(Continued)

Frankly speaking, it is ridiculous for Mr. Garbutt to think that he could not sell his ore to the Vanadium Corporation without including your Vanadium Pentoxide.

Garbutt himself should be convinced that the Vanadium Corporation needs him very badly, and that he could sell his output anywhere.

The fact exists that the Government is putting up the money at Monticello, and if the Vanadium Corporation is not very reasonable, Mr. Garbutt can go right to the Defense Plant Corporation in Washington, and make his deal with them directly.

The country needs Vanadium, and there is a tremendous scarcity at the present time, so that you too should consider increasing your output by all means.

It is a pity that in recent months we have had no personal contact. You will remember that whatever information we gave you proved to be correct, and if you will cooperate with us now, we will not forget it.

We repeat that, in the long run, it will be to your own advantage to keep yourself absolutely independent, and to cooperate with us as independent producers of Vanadium, rather than reduce our business now, during the emergency, which in turn means that our business after the emergency will necessarily have to suffer.

Please remember always the excellent prices you received for the export business we brought you,

Plaintiffs' Exhibit No. 131—(Continued)

and which no Vanadium Corporation will ever pay you.

With regard to the price to be applied just now, we suggested over the phone $1.125 FOB Blanding, or $1.15 FOB Chicago. If you think however that you must have $1.15 FOB Blanding, we will not object. The main thing is that you must help us to stay in business now, for your own sake as well as ours.

I think it would be relatively simple for us to intervene with the WPB. We know all the men there, and they are all trying to help our business survive against the monopoly.

However, we of course will not discuss the situation in Washington until you authorize us to make use of the remarks you made yesterday over the phone, as repeated above.

Kind personal regards.

Sincerely yours,

HENRY J. LEIR.

Plaintiffs' Exhibit No. 131—(Continued)

May 4, 1942

Mr. Dan Milenski

I telephoned Mr. Milenski from Denver on April 21st.

They are producing 12,000 pounds of concentrates regularly per month, equal to about 9000 pounds of V_2O_5.

They have 20-25,000 pounds on hand, and if this figure is correct, it seems that they did not sell too much of their material.

I offered:

$1.17½ for lumps
$1.20 for flakes

They do not want to grind the material at all.

He promised me that he would send me a wire in Albuquerque, but I did not hear from him.

Your letter of May 11th was for some unknown reason delayed in reaching the writer.

Plaintiffs' Exhibit No. 132—(Continued)

With regard to quoting you on monthly quantities of Fused Vanadium Pentoxide containing about 90% V_2O_5 until the end of the year for delivery at Le Havre, France, wish to state that at present we are not quoting for extended deliveries on this material. Should you be in the market for any specific quantities for delivery within the next month or six weeks, we would be pleased to entertain your inquiries.

While, until we have this information, we will not be in position to quote you firm, our present price for this material is $1.30 per pound of contained V_2O_5 F.A.S. New York, with present freight rates allowed to Le Havre.

Should you be interested in this material we would be pleased to hear from you either by mail or cable.

Yours very truly,

Gustav Laub,
Assistant Vice President.

May 30, 1939

Per SS "Queen Mary"

Messrs. Vanadium Company of America
420 Lexington Avenue
New York City
N. Y.—U.S.A.

Attention Mr. Laub
Asst. Vice President.

Gentlemen:

Vanadic Acid

Our General-Manager, Mr. Henry John Leipziger, informs us about your telephone conversation which you had with him regarding the sale of Vanadic Acid.

We duly noted your idea of price, but before taking any decision, we would need a complete analysis of your stuff as well as a sample of about 1 lb. in order to submit it to our friends.

We therefore should be glad if you would kindly give this matter your prompt attention and awaiting to hear soon from you, we are, Gentlemen,

Yours very truly,

Soc. An. Des Minerais
Administrateur-Directeur.

Plaintiffs' Exhibit No. 132—(Continued)

(Copy) June 8th, 1939

Societe Anonyme des Minerais
Luxembourg
Europe

Gentlemen:

We have your favor of May 20th which apparently crossed ours of the 23rd in transit. In accordance with your letter we are pleased to give you herewith a typical analysis of our standard Vanadium Pentoxide, Technical grade, Fused, as follows:

V_2O_5	90.10%	A1203	.21%	Ni0	none
Si02	.33	S03	.24	P205	.004%
Fe203	.18	Na20	5.84	Cu0	none

We are also, in accordance with your request, having our works forward you promptly a one-pound sample of this material for your examination.

At the present time our demands for Vanadium Pentoxide (Vanadic Acid) are rather heavy and it is requested, if you are interested, that you let us know as much in advance as possible as to your possible requirements. Just at this time we would be unable to say whether or not we could book any additional tonnage for immediate shipment but after the sample has been received and examined if you will let us know the specific quantity in which you are interested we will advise you promptly by cable as to our ability to meet your requirements.

Plaintiffs' Exhibit No. 132—(Continued)

We will be very much interested in having your comments with regard to the sample after it has been received and examined.

Yours very truly,

GUSTAV LAUB, IL,
Assistant Vice President.

Mr. Henry J. Leipziger June 20th, 1939
Hotel Mayflower
New York City

Dear Mr. Leipziger:

Since missing you last week I have endeavored on various occasions to reach you by phone at the Mayflower Hotel but have been unsuccessful.

Just want to let you know that the sample of Vanadic Acid (Vanadium Pentoxide) has been forwarded to the Societe Anonyme des Minerais at Luxembourg, as per my letter of June 8th, and we shall be pleased to hear from them further just as soon as they have examined the sample.

As explained to you previously our commitments are very heavy at the present time and we would

Plaintiffs' Exhibit No. 132—(Continued)

ask that you kindly have your principals anticipate their needs and requirements as much as possible.

Should you again be in this vicinity would be pleased to have you drop in. Inasmuch as I am out of the office a great deal, however, would appreciate your telephoning so that a definite appointment can be made.

Yours very truly,

/s/ GUSTAV LAUB,
Assistant Vice President.

June 16, 1941

Vanadium Corporation of America
420 Lexington Avenue
New York City

Attention: Mr. Gustav Laub, Vice President.

Gentlemen:

As you know, the Apex Smelting Company of Chicago has been in the aluminum smelting business for more than 20 years.

Last year they entered into the production of certain ferro alloys by the alumino-thermic process, and have created good facilities for this particular manufacture which, if necessary, could be easily enlarged.

Would you be interested in "farming out" a certain quantity of vanadic acid, and allow us to convert it for your account into low carbon ferro vanadium?

We shall be awaiting the pleasure of your reply to the above suggestion, and hold ourselves at your disposal for any personal discussion you might like to have on this subject.

Yours very truly,

CONTINENTAL ORE CORPORATION,
/s/ HENRY J. LEIR,
President.

Attention: Mr. Henry J. Leir

Subject: Vanadium

Dear Mr. Leir:

Your favor dated July 7th, addressed to Mr. A. D. Whiteside, has been referred for attention to the undersigned.

I regret to advise that I am informed by the Vanadium Corporation of America and also the U. S. Vanadium Corporation that they have no vanadic acid for disposal since they are themselves using all of the acid they produce either in their production of ferro-vanadium or to supply their own customers using vanadium for defense and essential purposes.

Very truly yours,

/s/ H. K. MASTERS,
H. K. MASTERS,
Chief Vanadium Section.

PLAINTIFFS' EXHIBIT No. 144

Defense Plant Corporation — Dec. 13, 1941
RFC Subsidiary
Washington, D. C.

Gentlemen:

We understand that you are erecting a new plant near Monticello, Utah for the production of Vanadium Pentoxide.

To the best of our knowledge, outside of the U. S. Vanadium Corporation of America, (and Vanadium Corp.)*, we are the only producer of Ferro Vanadium in this country.

Our plant for the production of ferro alloys was built in 1930, and since then, we have been producing an excellent quality of Ferro Vanadium, which is being well received.

However, we cannot make use of all of our production facilities due to the lack of raw material which is fused vanadium pentoxide, and therefore, we would appreciate greatly if you would make it possible for us to secure from the new plant a reasonable tonnage of the Vanadium Pentoxide for conversion into Ferro Vanadium.

We shall welcome advice from you as to whether this would be possible.

Very truly yours,

APEX SMELTING CO.
L. Lippa.

LL:FS
CC: Continental Ore Corp.
Floyd B. Odlum.

*Pencil note.

Plaintiffs' Exhibit No. 144—(Continued)

Continental Ore Corporation

Date: 12/8/41.

To: Apex Smelting Company.

You probably read, about 4 weeks ago, that the:

Defense Plant Corp.
RFC Subsidiary

has made an agreement with the Vanadium Corp. of America for the construction of a new vanadic acid plant at Monticello, Utah.

In order to avoid any misunderstandings, this plant is the property of the Defense Plant Corp., and will only be managed by the Vanadium Corp.

Therefore, it is probable that you can secure certain quantities of vanadic acid from this plant, and we recommend that you send a letter to Washington as per the copy herewith enclosed.

A copy of your letter should also be sent to the office of:

Mr. Floyd B. Odlum, Director
Division of Contract Distribution
OPM
Washington, D. C.

CONTINENTAL ORE CORPORATION,
/s/ HENRY J. LEIR.

Henry J. Leir/rk

[Pencil Note: Wrote to Defense Plant Corp. also Odlum. Copies to Cont'l.]

Plaintiffs' Exhibit No. 144—(Continued)

Continental Ore Corporation

Date: 12/9/41.

To: Apex Smelting Company.

Subject: Defense Plant Corporation.

We refer to your letter of yesterday, and want to remind you of the letter which the Division of Contract Distribution sent to us on September 19th.

For your convenience, we are enclosing another copy.

It might be a good idea for you to refer to this letter, when sending them the copy of yours to the Defense Plant Corp.

There is no question but that you are entitled to some of this vanadic acid for conversion.

You will agree with us that it would be very desirable to receive material from the Defense Plant Corp., because it certainly would arrive in full carloads, and everything would be very simple.

In any case, we hope that your new ferro department will be able to handle easily 50-100,000 pounds per month.

CONTINENTAL ORE CORPORATION,
/s/ HENRY J. LEIR.

PLAINTIFFS' EXHIBIT No. 146

[Pencil Note]

Date: 1/3/42.
Name: Vanadium Dept. OPM.
City: Wash. D. C.
Interviewed: Mr. Jenckes.

Our Call—Vanadium on strictly allocation basis both as to purchase and sales. At present other

Plaintiffs' Exhibit No. 146—(Continued)

producers have received permission to shy up to 50% of orders. We are to write a letter stating inventory and unfilled orders for January. He will mail us order & regulations. Turned him over to Mr. Lippa for further telephone conversation.

[Pencil Notes: Jenckes. Up to 50% of orders. Letters stating orders on book for Jan. del. Inventory as of today.]

Mr. H. K. Masters, December 26, 1941
Vanadium Div.,
Office of Production Management,
New Social Security Building,
Washington, D. C.

Dear Mr. Masters:

We are writing this letter at the suggestion of Mr. John W. Snyder, Executive Vice-President, of the Defense Plant Corporation, requesting permission to continue the purchasing of Vanadic Pentoxide for our Ferro Vanadium Department.

This material is used by us in the production of Ferro Vanadium and Vanadium compound, which we sell to steel mills throughout the country.

Our production of Ferro Vanadium is in a special low carbon form with the following general characteristics:

V	70 to 80%
C	0.2%

Our capacity for the production of this material

Plaintiffs' Exhibit No. 146—(Continued)

is about 50,000 to 60,000# of V contained per month, but at the present time we are producing only a fraction of this capacity due to lack of raw material.

Our present sources of supply are—

Blanding Mines Co., P. O. Box 895, Cortez, Colo.

Nisley & Wilson Vanadium Mills, Gateway, Colo.

S. W. Shattuck Chemical Co., 231 S. LaSalle St., Chicago, Ill. (North Continental Mining Co. of Montrose, Colo.)

We would appreciate receiving permission from you to continue the purchasing of Vanadic Pentoxide from these sources, and wish to place our facilities at the disposal of your Department for the conversion of any additional quantities of Vanadic Pentoxide that you might see fit to allocate to us.

We, of course, will ship Vanadium to the steel mills only upon authorization from your Department.

Very truly yours,

APEX SMELTING CO.

WRB/r

Pencil Note: For Vanadium Allocation. H. K. Masters, OPM, SS Bldg., Wash. At suggestion of Mr. John W. Snyder, Exec. V.P., Defense Plant Corp.

Plaintiffs' Exhibit No. 146—(Continued)

Continental Ore Corporation

Date: 12/24/41.

To: Apex Smelting Company.

Subject: General Preference Order M-23-a—Vanadium.

Now that we have come to the point where our business might be running smoothly, the new regulations come into effect. We must, of course, adhere to them.

Enclosed please find copies of the letters we sent out today to:

Atlas Steels
Dominion Foundries
Latrobe Electric Steel
Braeburn

With regard to your own position (receiving raw material, which is also under allocation now) we recommend that you write a letter to Washington similar to the enclosed draft . . . addressed to:

Vanadium Branch
Office of Production Management
Social Security Building
Washington, D. C.

as designated at the end of the General Preference Order.

CONTINENTAL ORE CORPORATION
/s/ HENRY J. LEIR.

Henry J. Leir/rk

Plaintiffs' Exhibit No. 146—(Continued)

Vanadium Branch
Office of Production Management
Social Security Building
Washington, D. C.

Gentlemen:

Re: General Preference Order M-23-a—Vanadium.

We have read the above preference order. As you know, we are producing Ferro-Vanadium, and have bought our Vanadic Acid (Vanadium Pentoxide) in the past from the following:

1. Blanding Mines Co., P. O. Box 895, Cortez, Colorado.

2. Nisley & Wilson Vanadium Mills, Gateway, Colorado.

3. S. W. Shattuck Chemical Co., 251 S. La Salle St., Chicago (North Continental Mining Co. of Montrose, Colo.).

We think it would simplify matters if you were to authorize us to continue receiving Vanadium Pentoxide from those sources.

It is understood of course that we will make no shipments of either Vanadium Oxide or Ferro Vanadium from here, unless specifically authorized by you, according to the text of the Order.

We cannot close this letter without calling your attention to the following: We started production of Ferro Vanadium in 1939, and our specialty is a low-carbon Ferro Vanadium with the following characteristics:

Plaintiffs' Exhibit No. 146—(Continued)

V 70-80%
C max. 0.2%

This Ferro Vanadium has received an excellent reception from leading steel mills.

Our capacity is about 50-60,000 pounds V per month, but we are producing only a fraction of it, because of lack of raw material.

We should very much appreciate your taking steps to allocate to us some more Vanadium Oxide for the purpose of converting it into this high grade Ferro Vanadium.

As far as we can see, the production of Ferro Vanadium has been mainly localized to two very big outfits in the country, and we think we are not asking too much if we apply to you for a better distribution of the available Vanadium Oxide, all the more as the Government is spending a lot of money for new production facilities and road construction out West.

We hope to hear from you favorably and assure you of our desire to cooperate with you to the fullest extent.

Very truly yours,

P.S. With new alloy steel plants being erected in Chicago, for instance, and Granite City, we think it is only logical for our little smelting plant in Chicago to be favored, which will help to eliminate unnecessary traffic back and forth.

PLAINTIFFS' EXHIBIT No. 149

[Penciled date: July 6, 1939.]

The Secretary submitted Appropriation Request No. SMP-3, dated July 6, 1939, in the amount of $7,000 to cover the estimated cost of Air Separator Table Installation at the Piney River plant of the Southern Mineral Products Corporation. After discussion, on motion regularly moved, seconded and carried, it was unanimously

Resolved, that Request for Appropriation No. SMP-3, in the amount of $7,000 covering the estimated cost of Air Separator Table Installation at the Piney River, Va. plant of the Southern Mineral Products Corporation, be and is hereby approved, as recommended by the President.

The President advised that certain claims of the Vanadium Corporation of America located in Colorado were adjacent to claims of the United States Vanadium Corporation and that in view of the present mining operations of the United States Vanadium Corporation, said corporation is willing to mine and mill the ore on one particular claim, namely, the "Maggie C", or any other claim or claims that might later be agreed upon, delivering the product therefrom (oxide containing a minimum V_2O_5 content of 85%) to our Bridgeville, Pa. plant at a delivered price to be accepted if satisfactory to the Vanadium Corporation of America. He requested authority to enter into an agreement

Plaintiffs' Exhibit No. 149—(Continued)

that would provide for the delivery of such ore at an agreed upon price. After a general discussion, on motion regularly moved, seconded and unanimously carried, the President was authorized to entered into an agreement, as outlined above, with the United States Vanadium Corporation.

After a general discussion of the affairs of the Corporation and business conditions, on motion regularly moved, seconded and carried, the meeting thereupon adjourned.

/s/ P. J. GIBBONS,
Secretary.

(Copy)

Memorandum

U.S.V.C. agrees to mine the ore from the Maggie C Claim situated in Lower Park, near Uravan, Colorado, owned by V.C. and such other claims now owned by V.C. in the vicinity of Uravan, Colorado, as the parties from time to time agree upon, to mill such ore and produce therefrom fused V_2O_5 analyzing 85% V_2O_5 minimum (hereinafter called oxide) and to deliver thirty thousand (30,000) pounds per month of oxide so produced to V.C., f.o.b. its Bridgeville, Pa. Plant. Additional quantities of oxide may be delivered in any month by agreement of the parties as advance deliveries of oxide from ore to be mined and milled hereunder. During the period covered by this agreement U.S.

Plaintiffs' Exhibit No. 149—(Continued)

V.C. shall have the sole right to mine and mill the ore from the aforesaid claim or claims.

The ore shall be mined and milled by the standard methods then being used by U.S.V.C. on its own production. U.S.V.C. shall not be required to mine and mill the ore separately from its own production but may mix the ore with its own ore. Accurate records shall be kept by U.S.V.C. of all of the weights and analysis of all ore mined and milled in accordance with methods to be mutually agreed upon and U.S.V.C. shall deliver to V.C. seventy-five per cent (75%) of the V_2O_5 content of the ore of V.C. mined by it.

In addition to records of weights and analysis, U.S.V.C. will make available upon request of V.C. the diamond drill records and other development data that may accrue during the course of ordinary development and mining of the aforesaid claim or claims.

If V.C. does not require the oxide produced from the ore in the aforesaid claim or claims V.C. may require all shipments of oxide hereunder to be suspended upon three (3) months' written notice to U.S.V.C. and may cause shipments to be resumed upon thirty (30) days' written notice to U.S.V.C. During the time that shipments are suspended U.S. V.C. shall have the right, but shall not be obligated, to continue mining ore and producing fused V_2O_5 therefrom, retaining such ore for future milling

Plaintiffs' Exhibit No. 149—(Continued)

and any oxide derived therefrom for future shipments to V.C. The suspension of shipments in any month shall not give V.C. the right to require shipments to be increased in any subsequent month over thirty thousand (30,000 pounds) except with the consent of U.S.V.C.

V.C. will pay to U.S.V.C. for mining and milling ore hereunder on the following basis: Sixty-five (65c) cents per pound of V_2O_5 contained as delivered f.o.b. at Bridgeville Plant of V.C.

If the cost to U.S.V.C. of labor, fuel or supplies used in mining ore or producing oxide hereunder should be increased U.S.V.C. may increase the price to be paid by V.C. hereunder by the amount of such increased cost, by giving three (3) months' prior written notice to V.C. If such increased price is not acceptable to V.C. it may terminate this agreement at the time such increased price is to become effective by giving not less than sixty (60) days' prior written notice of such termination to U.S.V.C.

If at any time U.S.V.C. has not mined sufficient ore belonging to V.C. to produce the oxide required to be delivered to V.C. hereunder, it may deliver such oxide produced from other ore at 65c per pound V_2O_5 as aforesaid, and in such event U.S. V.C. may take title to a quantity of ore subsequently mined by it from the aforesaid claim or claims of V.C. sufficient to produce a quantity of

Plaintiffs' Exhibit No. 149—(Continued)

oxide equivalent to the quantity produced from such other ore.

This agreement shall continue for a period of five (5) years from the date hereof unless sooner terminated as herein provided. After termination of this agreement U.S.V.C. shall have the right to produce and deliver oxides to V.C. from any ore mined by U.S.V.C. from the aforesaid claim or claims of V.C. prior to termination. Such deliveries, however, to be taken by V.C. in as nearly equal monthly amounts as possible. If at the time of termination U.S.V.C. has delivered to V.C. any oxide produced from ore other than the ore mined by it from the aforesaid claim or claims of V.C. and has not taken title to an equivalent amount of ore mined by it from the aforesaid claim or claims of V.C., U.S.VC., after termination of this agreement, may mine for itself, and take title to, a quantity of ore from the aforesaid claim or claims of V.C. sufficient to produce a quantity of oxide equivalent to such quantity produced from such other ore and delivered to V.C. V.C. may, at its option, upon giving prior written notice to U.S.V.C., mine such ore itself and deliver such ore to U.S.V.C.

Dated: 6/30/39.

/s/ E. D. BRANSOME,
Pres., Vanadium Corp. of America.

/s/ J. R. VAN FLEET,
V. P., U. S. Vanadium Corp.

Plaintiffs' Exhibit No. 149—(Continued)

[Letterhead United States Vanadium Corporation]

[Handwritten: R. B. note and return. R. B., 10/8/41.]

September 26, 1941

Vanadium Corporation of America,
No. 420 Lexington Avenue,
New York, New York.

Gentlemen:

In connection with and as part of the delivery of the contract being made between us this date, with respect to the so-called Dry Valley mining claims; we agree that such Agreement settles all claims of ours against you for oxide, and that we will remove all the ore referred to in Paragraph 2 of said Agreement not later than June 1, 1942, subject to delays caused by Acts of God, strikes, labor troubles, accidents, Governmental regulations, or other causes of a similar or different nature beyond our reasonable control, or forfeit all right on that date to remove any more of such ore.

The record of the Custom Milling Account as of September 1, 1941, shows a deficiency of ore from which to recover 294,447 pounds of V_2O_5. We have extracted ore from the Dry Valley property up to September 1, 1941, amounting to 4,177.82 tons containing approximately 120,823 pounds recoverable V_2O_5. The deficit in V_2O_5, therefore, would be 173,624 pounds as of September 1, 1941.

The adjustment of the cost of permanent im-

Plaintiffs' Exhibit No. 149—(Continued)

provements left on the Dry Valley property had best remain open until the ore to make up the deficiency in V_2O_5 has been extracted. Up to the present time the cost of permanent improvements such as ore bins, roads, etc., has amounted to less than $1,000 and it is not certain just which of these improvements will be of value after the allotted ore has been extracted.

We have discontinued working the Republican, Donald L. and Maggie C. claims, and are turning them back to you for occupancy. We have no further mining rights on those claims.

The total amount of money to be returned to us upon delivery of the Dry Valley agreement is—$41,785.39 made up as follows:

Advance to Leverett Davis, March 31, 1941	$25,000.00
Molybdenum Corporation of America, July 1, 1941	15,000.00
Molybdenum Corporation of America, royalties, September 17, 1941	1,785.39
Total	$41,785.39

The royalty payment to Molybdenum Corporation of America is, of course, an advance on the next

Plaintiffs' Exhibit No. 149—(Continued)

payment due under their Agreement dated June 26, 1939.

Very truly yours,

/s/ J. R. VAN FLEET,
Vice President.

EM/J. R. Van Fleet
USVC

[Handwritten: O.K., E. D. Burwell.]

Mr. John R. Van Fleet September 1, 1939
Vice-President & General Manager
United States Vanadium Corporation
30 East 42nd Street
New York, N. Y.

Dear Mr. Van Fleet:

In reference to the working of the Maggie C claim at Long Park, and before any ore is extracted from that claim underground, we would like to survey the workings from the Coloradium incline which are on the Maggie C, and that part of the workings on claims contiguous to the Maggie C and Donald L claims which are closest to those claims. Mr. Sterling, Sr. will be at Long Park some time this month, and we would appreciate it if you will arrange for permission for him to make this survey. Of course, so as not to inconvenience you, we

Plaintiffs' Exhibit No. 149—(Continued)

would expect to do this work either at night or on a weekend when no mining operations were being carried on.

We have instructed Robert Sterling, Jr., who is looking after our diamond drilling at Long Park, to send us monthly reports covering current operations on the Maggie C, including your figures as to tonnage and grade of ore mined from that claim. We assume that this information is available to him at Uravan.

Yours very truly,

FREDERICK F. KETT,
General Manager, Mining Division.

FFK:S

[Letterhead United States Vanadium Corporation]

Mr. Frederick F. Kett September 6, 1939
General Manager, Mining Division
Vanadium Corporation of America
420 Lexington Avenue
New York, N. Y.

Dear Kett:

I wish to acknowledge your letter of September 1 in reference to making an inspection of the Maggie C through the Coloradium and Donald L workings.

There can be no possible objection to this, and

Plaintiffs' Exhibit No. 149—(Continued)

I have written to Mr. Haldane to assist Mr. Sterling in every way possible on such an inspection.

Very truly yours,

/s/ J. R. VAN FLEET,
Vice President & General Manager.

J. R. Van Fleet/mm

September 22, 1939

Mr. J. R. Van Fleet, Vice President,
United States Vanadium Corporation,
30 East 42nd Street,
New York, N. Y.

Dear Mr. Van Fleet:

This is to advise you that I have notified our people to authorize United States Vanadium Corporation to enter on our claims of the Donald L and Republican located in Long Park, of which we have spoken in a recent meeting.

I understand that there has been some dispute as to location of claims in respect to the Republican claim. In accordance with our telephone conversation of today, it is agreed that the above authorization will not prejudice our position in respect to the Republican claim in any manner.

Very truly yours,

EDB/C

TRANSCRIPT OF RECORD

Supreme Court of the United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, ET AL.,
PETITIONERS,

vs.

UNION CARBIDE AND CARBON
CORPORATION, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

PETITION FOR CERTIORARI FILED AUGUST 11, 1961
CERTIORARI GRANTED OCTOBER 23, 1961

Plaintiffs' Exhibit No. 149—(Continued)

United States Vanadium Corporation
Uravan, Colorado

October 11, 1940

Vanadium Corporation of America
Boulder, Colorado

Attention: Mr. Robert Sterling

Gentlemen:

Please find herewith report covering production from Maggie "C", et al properties for the month of September, 1940.

Referring also to your inquiry under date of the 28th ultimo, please be advised that no distribution has been made on our part, between the Maggie "C" and Donald L; we built one bin to handle the surface production from the former and a second bin to keep the ores from the underground production of the Maggie "C" and Donald L separate from our Coloradium, since all were mined through the same entry.

A breakdown of the Maggie "C" and Republican tonnage beginning with January, 1940 settlements may best be clarified by referring to your files covering same, as follows:

January—All Maggie "C".
February—All Maggie "C".
March—All Maggie "C".
April—Last two loads on settlement under dates

No. 16149

United States
Court of Appeals

VOLUME VII.

Book of Exhibits

(Pages 2311 to 2564, inclusive)

Appeal from the United States District Court
for the Northern District of California,
Southern Division

Plaintiffs' Exhibit No. 149—(Continued)

4/22 & 4/25 total 39.945 tons are Republican, balance Maggie "C".

May—Maggie "C" production is shown on 1st page of settlement—total 374.08 tons, Republican on second sheet—total 165.84 tons.

June—Maggie "C" production is represented by the 1st group of figures dated 6/1 to 6/28 incl. and totaling 293.750 tons: the balance starting under date of 6/10 to 6/25 inclusive—total 91.105 tons represents production from the Republican.

From June 28 to the present we have mined no ore from the Republican claim and the tonnage shown in the reports represent Maggie "C" production.

In late August and early September we ran a development drift in low grade ore in the Donald L, but no ore of shipping grade was produced.

We trust this gives you the information desired, and beg to remain

Yours very truly,

UNITED STATES VANADIUM CORPORATION,
/s/ W. G. HALDANE,
Superintendent.

November 21, 1941

Mr. Blair Burwell, Gen. Supt.,
United States Vanadium Corporation,
30 East 42nd Street,
New York City

Dear Blair:

We have here the statement signed by Mr. Coleman for the ore mined from Dry Valley for October, together with your statement for the same production.

You both agree that the tonnage mined was 1480.763. He gives the % V_2O_5 content as 1.9251, which you give as 1.92. You show the V_2O_5 content as 56,861.30 pounds; he shows the V_2O_5 content as 57,010.850. Neither of these two figures is correct. The V_2O_5 content based on his analysis is 57,012.337.

Since we have to take your figures regarding tonnage and analyses for payments to the Molybdenum Corporation, we must put in the correct figure for the pounds contained V_2O_5, which of course for this month of October at least will not check with yours.

Will you please check your figures and send me a revised copy of your production sheet of November 10th for our records. I am enclosing an extra copy of this letter to you in case you might care to send it to Mr. Coleman.

Very truly yours,

Frederick F. Kott
General Manager, Vinadium Division

December 3, 1941

Vanadium Corporation of America
420 Lexington Avenue
New York, N. Y.

Att: Mr. Frederick F. Kett,
General Manager, Mining Division

Gentlemen:

We have received your letter of November 28th concerning our statements covering ore mined from Dry Valley during October, 1941.

Upon checking with our Uravan office, we find an error was made in reporting the percentage of V_2O_5 content, which should have been shown as 1.9521. The correct figure on the V_2O_5 content is 57,010.850 lbs.

We are attaching a revised statement based on the above figures, and would ask that you substitute this for those which you have previously received from Uravan office and this office.

We wish to thank you for calling the matter to our attention, and offer our apology for any inconvenience caused you.

Yours very truly,

Blair Burwell
General Superintendent

AGREEMENT

This Agreement, made and entered into this 12th day of June 1942, by and between Vanadium Corporation of America, a Delaware Corporation, No. 420 Lexington Avenue, New York, New York, party of the first part, hereinafter referred to as Vanadium, and Blanding Mines Company, a Utah Corporation, P. O. Box 188, Cortez, Colorado, party of the second part, hereinafter referred to as Blanding,

Witnesseth:—That for and in consideration of the premises, conditions and covenants hereinafter mentioned to be kept and performed, Vanadium does hereby lease, demise, and grant to Blanding for a period of fifteen (15) years from the date of the execution of this agreement, for the purpose of mining and milling vanadium and uranium ores, certain claims and parts of claims, situated in the County of San Juan, State of Utah, and lying south of Spring Creek and/or east of Cottonwood Creek, the same constituting all claims or parts thereof in said restricted area owned by Vanadium, said claims being described as follows:—

Name of Claim	Date of Original Location	Recorded San Juan County, Utah Book	Page	Date of Amended Location

which claims, together with any additional claims owned by Vanadium which Blanding may at any time be entitled to mine as in this agreement provided, are hereinafter called the leased premises.

The Parties Hereto Covenant and Agree as Follows:

1. As payment therefor, Blanding agrees to pay the following royalties: on all ores mined from the claims covered by this agreement and milled by Blanding, Blanding will pay to Vanadium a minimum royalty of three percent (3%) of the market price per pound, f.o.b. mill on the leased premises, on all pounds of vanadic oxide (V_2O_5) contained in the ore mined on the leased premises and there milled, such market price per pound of such con-

Plaintiffs' Exhibit No. 157—(Continued)

tained vanadic oxide (V_2O_5) to be the selling price per pound of vanadic oxide (V_2O_5) contained in the finished mill product, provided, however, that the aggregate such royalty for each calendar year shall in no event be less than one third (1/3) of the total net profit of Blanding for such calendar year computed as set forth in Appendix A hereto attached and hereby made a part hereof, and the amount, if any, by which such one third (1/3) of such total net profit for any calendar year shall exceed the aforesaid minimum royalty for said calendar year shall be paid by Blanding to Vanadium by not later than April 1 of the next succeeding calendar year. On ore mined off of the above claims but milled by Blanding in any mill on the leased premises, Blanding will pay to Vanadium two cents ($0.02) per pound of contained vanadic oxide (V_2O_5) in such ore.

2. All ore mined by Blanding on the leased premises and considered by it to be of too low grade to mill will be separately stock piled by Blanding on the leased premises and at any time at the option of Vanadium, shall be sold to it at the market price current at the time for such ore, less, however, in lieu of royalty payable by Blanding to Vanadium in respect to such ore, an amount equal to five cents ($0.05) per pound of contained vanadic oxide (V_2O_5) in such ore. If Blanding desires to sell this ore to a third party and Vanadium does not desire to purchase it on the above basis, then

Plaintiffs' Exhibit No. 157—(Continued)

Blanding may sell such ore to a third party and pay Vanadium five cents ($0.05) per pound of contained vanadic oxide (V_2O_5) in such ore so sold. Except as Blanding shall mill, or separately and normally stock-pile in order to mill, ore mined on the leased premises, whatever the grade of such ore, Vanadium shall have a like option to purchase such ore and to the extent that Vanadium shall elect not to purchase the same, a like right to royalty upon the sale thereof to a third party.

3. Royalties payable under paragraph 1 hereof for milled ore shall, except as otherwise in said paragraph 1 provided, be due and payable on all ore milled in any calendar month not later than the twentieth (20th) day of the next succeeding calendar month and royalties payable under paragraph 2 hereof for ore sold shall be due and payable within twenty (20) days after sale and delivery of such ore.

4. Royalties paid in advance to Frank A. Garbutt by Blanding, amounting to Twenty-five Hundred Dollars ($2500.00) and not yet earned by said Frank A. Garbutt shall be credited by Vanadium to the first royalty payments to become due by Blanding to Vanadium, until said amount is satisfied.

5. Should Blanding produce ore from the claims covered by this agreement containing a sufficient uranium (U_3O_8) content to make it more profitable to sell such ore to a third party than to mill the

Plaintiffs' Exhibit No. 157—(Continued)

same, such ore shall be sold to a third party at the highest price then obtainable and the net proceeds of such sale, after deducting all costs of mining, handling, shipping, and selling, and all other costs properly chargeable to the sale of such ore, shall be divided seventy-five percent (75%) to Vanadium and twenty-five percent (25%) to Blanding.

6. Any claims located or acquired by Vanadium south of Spring Creek or east of Cottonwood Creek and within a distance of one mile of the claims covered by this agreement, may at the option of Blanding be operated and mined by Blanding upon payment of the royalties stated in paragraphs 1 and 2 hereof. Any claims located or acquired by Blanding south of Spring Creek or east of Cottonwood Creek and within a distance of one mile of the claims covered by this agreement may, at the option of Vanadium, be purchased by Vanadium at the cost of acquisition or location including exploration, but the maximum price payable by Vanadium therefor shall be three hundred dollars ($300.00) on any one claim, and each such claim purchased by Vanadium may be operated by Blanding on the same royalty basis as the claims covered by this agreement. As to each such claim such option to purchase may be exercised by Vanadium not later than ninety (90) days after notice in writing of location or acquisition by Blanding shall have been given to Vanadium, together with a statement of acquisition price and location and development

Plaintiffs' Exhibit No. 157—(Continued)

costs, if any. Copies of drill logs, sampling results and all technical data in connection with such development work by Blanding, shall be furnished to Vanadium with the statement next above mentioned. Blanding will not, without the consent of Vanadium, acquire or lease any claims west of Cottonwood Creek and north of Spring Creek within one mile from the claims owned by Vanadium in that area at the date hereof, or purchase ore mined by third parties from any claims in that area.

7. In the event Blanding shall desire to cease operations on the leased premises, it may, by giving ninety (90) days written notice to Vanadium, discontinue work hereunder and terminate this agreement and surrender possession of the leased premises, in which case all liabilities and obligations of Blanding shall terminate except liabilities for royalties accrued and not yet paid, and thereupon Blanding shall cease operations but shall have a period of one (1) year from and after such surrender of possession within which to remove buildings, machinery, equipment and supplies and tailings. Anything not so removed by Blanding shall become the property of Vanadium.

8. Blanding agrees to carry workmen's compensation upon all workers employed by it upon the leased premises, and in all respects to comply with the applicable mining laws and regulations of the United States and of the State of Utah.

Plaintiffs' Exhibit No. 157—(Continued)

9. Blanding agrees to save Vanadium harmless from claims for material and labor of other parties, and agrees at all times to keep notices posted that the leased premises are being operated under a lease agreement and that Vanadium is not in any manner responsible for any debts for labor, materials, or other debts contracted by Blanding.

10. Blanding agrees to save Vanadium harmless against any operations or actions that Blanding may make or perform on the leased premises and to indemnify Vanadium against any and all loss, damage, claim, liability and expense, that may at any time be incurred, suffered or claimed, by or against Vanadium, by reason of injury, loss or damage to persons or property upon the leased premises or arising out of, or referable to, the leased premises, or the operation thereof, provided such injury, loss or damage shall have occurred during the life of this agreement; and without limiting the generality of the foregoing, Blanding shall carry and maintain in responsible insurance companies such policy or policies of insurance as may be required by the laws of the State of Utah to protect Vanadium from any loss or responsibilities whatsoever to third parties by reason of the operations of Blanding in or upon the leased premises.

11. Blanding agrees that it will apply such work, labor and expenditures as shall be necessary as assessment work upon all claims which it has the

Plaintiffs' Exhibit No. 157—(Continued)

right to operate hereunder, and will, without cost or expense to Vanadium, file and post all notices in regard thereto. When requested by Vanadium so to do, Blanding will furnish to Vanadium a statement showing all expenditures on the claims covered by this agreement, for any part of the assessment year (July 1 to July 1) which could properly be applied to cover assessment work on the claims now owned by Vanadium west of Cottonwood Creek and north of Spring Creek.

12. Blanding agrees to pay all taxes on the leased premises before the same become delinquent; taxes as used herein meaning occupational tax and real and personal property tax assessed by the United States or any political subdivision thereof or by the State of Utah or any department or political subdivision thereof.

13. Blanding agrees that Vanadium shall have the right and privilege, by authorized agent or representative, to enter upon the leased premises at any and all reasonable times in order to inspect the leased premises and to examine the mine and mill records of Blanding.

14. Blanding hereby grants to Vanadium reasonable right of ingress and egress over the leased premises and Vanadium hereby grants to Blanding, reasonable right of ingress and egress over its property in the same locality.

15. This agreement cancels that certain lease agreement dated on or about April 1, 1940 between

Plaintiffs' Exhibit No. 157—(Continued)

Frank A. Garbutt and H. L. Bigler, Dan Milenski and Howard Kimmerle, recorded in Book T3 of Miscellaneous Records at Page 361 of the Books and Records of San Juan County, State of Utah, and which lease was assigned to Blanding, as of the date of this agreement, except as to liabilities under said lease then accrued.

16. Insofar as Blanding and Vanadium have any right to the use of water from Cottonwood Creek and Spring Creek, Blanding shall have the first and prior right to the use of water from said creeks for mining, milling and domestic purposes, up to but not exceeding for such milling, the requirements of a twenty (20) ton mill; and as to any water in said creeks not needed by Blanding for such mining, milling or domestic purposes, Vanadium shall have the first and prior right for mining, milling and domestic purposes; provided, however, that the expense incurred in acquiring such water shall be paid by the user, thereof.

17. In the event Blanding shall fail to perform any of the covenants herein agreed by it to be made and performed, no action for cancellation or termination of this agreement may be taken by Vanadium unless Vanadium shall have given Blanding ninety (90) days notice in writing of its defaults and then this agreement may be cancelled by Vanadium only if Blanding fails to remedy such defaults within said ninety (90) days period, provided, however, that such period of ninety (90)

Plaintiffs' Exhibit No. 157—(Continued)

days shall be extended by ninety (90) days if weather conditions so require; all notices mentioned herein and elsewhere in this agreement must be in writing and sent by registered mail to addresses as herein given.

18. This agreement and all rights under this agreement shall be construed in accordance with and under the terms of the laws of the State of Utah as the same now are or may hereafter be amended, and all disputes shall be settled in accordance with the laws of the State of Utah. The laws of the State of Utah permitting, it is agreed that in the event any dispute shall arise under this agreement, the same shall be settled by a board of arbitration consisting of three arbitrators, one of whom shall be selected by each party, and the third selected by the two first selected, and the decision of two of said arbitrators shall be binding and conclusive upon the parties hereto.

19. In the event that Blanding shall operate its mill on the leased premises for a total period of less than 180 days in any two consecutive calendar years, Vanadium, at its option, may enter upon the leased premises and mine and remove ore therefrom up to a total of six hundred (600) tons a month without any payment whatsoever to Bland-

Plaintiffs' Exhibit No. 157—(Continued)

ing therefor except such part of the development costs of Blanding, if any, as may properly be allowable to the ore so removed, and each such right of Vanadium shall continue until Blanding shall resume commercial operation of its mill.

20. Blanding shall not assign any part of its rights under this agreement to a third party, without written consent by Vanadium. Blanding shall not sublease any part of the leased premises to a third party, except for the purpose of mining ore for milling by Blanding on the leased premises, without written consent by Vanadium. Except as herein otherwise provided, this agreement shall extend to and be obligatory upon the successors and assigns of the respective parties hereto.

21. In the event that at any time Blanding shall cease to be controlled and managed by Fred A. Brinker, H. L. Bigler and Dan Milenski, or by one or more of them, or at least by one of them and the heirs of the others, then Vanadium shall have the right forthwith to cancel this agreement and thereby to terminate all rights of Blanding under the same, except only the same right to remove its property from the leased premises which is granted to Blanding in paragraph 7 of this agreement.

22. This agreement can be altered and changed only by instrument in writing subscribed by proper officers of the respective parties.

Plaintiffs' Exhibit No. 157—(Continued)

In Witness Whereof the parties hereto have executed this agreement as of the day and year first above written.

Appendix A

Net Profit of Blanding Mines Company from its operations under lease agreement with Vanadium Corporation of America, dated June .... 1942, Paragraph One shall be gross proceeds less costs of operation.

Costs of operation shall be calculated in accordance with standard mining, milling and processing practices and accounting, including labor, power and fuel, transportation, handling, supplies, depre-

Plaintiffs' Exhibit No. 157—(Continued)

ciation, and other usual and customary costs. Also taxes (including income and excess profit taxes).

Royalty payments made by Blanding to Vanadium Corporation of America in accordance with Paragraph One covering ore mined from the leased premises and milled thereon by Blanding shall be excluded as items of cost. All other royalty payments, however, whether made in accordance with Paragraphs One or Two, shall be included as items of cost.

Blanding is not to be required, for the purposes of cost calculations under such lease, to allocate any portion of its operating costs to low grade ore stored in stockpile.

Proceeds from any sales of Uranium Ore, or costs covering same, shall not be included in calculation of net profit.

PLAINTIFFS' EXHIBIT No. 158

Mr. Daniel Milenski March 17, 1944
Cortez, Colorado

Dear Mr. Milenski:

Thank you for your wire, reading as follows:

"Retel unable to agree in writing with Sitton on deal and since we cannot we insist all officers of proposed organization be either Utah or Colorado residents as well as independent producers."

I must admit that I don't quite understand why you insist that all officers be either Utah or Colo-

Plaintiffs' Exhibit No. 158—(Continued)

rado residents, as well as independent producers.

For that matter, Mr. Sitton is eligible in both instances, whether you complete your private deal with him or not. Of course, I hope that you will be successful in your agreement with Mr. Sitton as well as with regards to the association.

Mr. Pleasants had a trial in court which delayed all his other work, but he promises to let us have the contract today or tomorrow. As soon as we receive it, it will be forwarded to you.

Needless to say, both matters, the Sitton deal and the formation of the association, are considered of equal importance by me.

Please keep me informed as to developments.

Very truly yours,

CONTINENTAL ORE COMPANY,
HENRY J. LEIR.

hjl/se

Mr. Daniel Milenski March 17, 1944

Contract.

Mr. Pleasant's messenger just delivered the contract. I have looked through it superficially, and send it along to you in order to avoid further delay.

According to Mr. Pleasant's advice over the phone to me, he inserted paragraph 10 as a protection for Continental which, in his opinion, is necessary if we now tie up with you completely.

Await your reaction.

CONTINENTAL ORE COMPANY.

PLAINTIFFS' EXHIBIT No. 160

[Penciled date: May 7, 1942.]

increase its contribution for the year 1942 to $1,250.00. The President recommended that the Corporation contribute the sum of $1,250.00 for this year. After discussion, the Committee, upon the recommendation of the President, approved of a subscription in the amount of $1,250.00 to the National Industrial Information Committee for the year 1942.

The Secretary also presented to the Committee a letter from Mr. Robert C. Stanley, President of the International Nickel Company, *Inc., requesting* a contribution for the War Production Fund to Conserve Man Power, which is sponsored by the National Safety Council, Inc. The President recommended that the Committee approve of a contribution in the amount of $1,500.00. On motion regularly moved, seconded and unanimously carried, the Committee approved a contribution to the War Production Fund to Conserve Man Power, in the amount of $1,500.00 as recommended by the President.

The President reported the Corporation had entered into an agreement to acquire vanadium ore property in Blanding, Utah. He stated such agreement contemplated royalty payments of five cents ($0.05) per lb. of contained V_2O_5 in ore produced, with an advance royalty payment of $20,000.00 at time agreement was consummated. He stated it was

Plaintiffs' Exhibit No. 160—(Continued)

planned to treat the ore mined from this property in the plant now under construction at Monticello, Utah.

There being no further business, after a general discussion of the affairs of the Corporation, on motion regularly moved, seconded and carried, the meeting thereupon adjourned.

P. J. GIBBONS,
Secretary.

Attention: Mr. P. J. Gibbons,
Secretary and Treasurer

Gentlemen:

As per our telephone conversation of today, we now have available the second consignment of Fused Vanadium Oxide for France.

Plaintiffs' Exhibit No. 162—(Continued)

The gross weight of the consignment is 53,830 pounds, or 51,585 pounds of Fused Vanadium Oxide net, which is equivalent to 44,999.54 pounds of Vanadium Pentoxide. This, at a value of $1.30 per pound of Contained V_2O_5 equals $58,499.40. Adding to this the marine freight, consular fees, consular blanks, and marine insurance charges, we arrive at a c.i.f. LeHavre value of $59,463.20.

As we understand the freight rate is to be increased on November 13th we suggest that you urge them to cable their credits promptly, enabling booking of the shipment prior to that date; otherwise, their credits must be increased.

Very truly yours,

ELECTRO METALLURGICAL

Re: Vanadium Agency Agreement

Gentlemen:

In accordance with the recommendation of the War Production Board, we wish to proceed with the program for increasing the supply of vanadium urgently needed for war requirements, by producing vanadium from the non-commercial "lead vanadate" properties of the southwest with which you are familiar.

Accordingly, we hereby appoint you our Agent, subject to cancellation in our sole discretion upon one month's notice, to carry out this program on the terms set forth below:

1. Investigation. You will immediately submit to us a statement setting forth the steps you propose to take to investigate the known lead vanadate prospects of the southwest from which vanadium may be produced, and the estimated cost of such investigation. Upon our approval of such statement, you will proceed with such investigation to determine the most desirable properties to develop, and submit your findings and recommendations to us from time to time.

Defendant U's Exhibit "B"—(Continued)

2. Development and Production. You will purchase concentrates from third parties required for the program, in such quantities and on such terms recommended by you and approved by us. You will recommend, for our approval, plans and designs for the development, equipment and operation of a particular property in its entirety or covering certain stages thereof from time to time; such recommendation to specify as far as practicable the equipment and facilities, the leases, the contracts and the purchases involved, and estimated costs thereof. Upon our written approval of the development of a particular property, you will take all the necessary steps, as recommended, to develop and equip the property, mine and mill the ore, have the concentrates smelted and refined, and to act as our selling and shipping Agent in disposing of the vanadium and other materials purchased or produced. In carrying out this work, you may enter into such contracts and leases, and purchase such property equipment and supplies as you deem advisable in our name, as our Agent, provided you obtain our prior approval for all leases covering properties to be developed and for particular contracts or purchases involving a dollar amount exceeding the amount we specify from time to time for this purpose.

3. Procedure. All property, equipment and supplies will be purchased and all materials produced will be held in our name by you, as our Agent. Each

Defendant U's Exhibit "B"—(Continued)

item of major equipment will be marked to indicate our ownership thereof and will be subject to removal from the real estate. Documents of title and ownership will be held by you in safe keeping for us and copies thereof filed with us. We are exempt from all taxation except local taxes on real estate owned by us. Accordingly, you will advise us of the imposition of any taxes. You will also carry such insurance on the properties and operations as we specify. Your representatives and employees will not be employees of this Company for any purpose. You will use your best efforts to perform all phases of the undertaking and to maintain costs at a minimum, and will report to us periodically upon our request the results of development and operations. You will use reasonable care in the use and custody of property and materials with appropriate inventory and ownership records. You will comply with all applicable Federal, State and municipal laws and regulations. We shall have the right at all times to send our representatives to examine the properties and operations and your books and payroll and inventory and other records, which shall be maintained entirely separate from your other operations.

4. Costs and Reimbursement. We have limited our allocation for all costs covered by this letter to $300,000 until the success of the program has been demonstrated by actual operations, and in making your recommendations this should be taken into

Defendant U's Exhibit "B"—(Continued)

consideration. We will pay or reimburse you from time to time for all expenses paid in connection with the investigation and reports provided for in paragraph numbered 1 above, up to a maximum of $30,000, upon receipt of your requisition therefor itemizing the expenditures and certifying as to the necessity and reasonableness thereof and that payment has been made therefor, and accompanied by receipted bills or evidence of payment. We agree to pay or reimburse you for all expenditures in acquiring, leasing, developing, equipping and operating the properties and in having vanadium and the other recoverable materials produced, transported and sold. For this purpose you will submit for our approval a budget, estimating the expenditures to be made in each three-month period, and we will establish a revolving fund in your favor for the payment of such expenses in a national bank designated by us. The revolving fund will be replenished from time to time upon receipt of your requisition therefor, itemizing prior expenditures and certifying as to the necessity and reasonableness thereof and that payment has been made therefor, and accompanied by receipted bills or evidence of payment. You will maintain a complete record of all expenditures and account to us therefor quarterly, or upon our request, by summarizing the payments covered by requisitions theretofore submitted together with transcript of the monthly bank statements and cancelled checks to be returned to you after audit, or, in lieu of accounting to us as afore-

Defendant U's Exhibit "B"—(Continued)

said, we may, at our option, audit your books and records at your offices. In addition to approving the aforesaid budget, we retain the right to require our prior approval for, or to pay directly, any particular expenditures or types of expenditures of which we advise you from time to time. It is further understood that the construction of any particular mill or plant, the cost of which exceeds $100,000, will be handled through Defense Plant Corporation, an RFC subsidiary.

5. Term and Compensation. For acting as our Agent hereunder, we will pay you a fixed fee of $1,000 per month, fractions pro rata, commencing with the day on which we authorize you to proceed with the investigation provided for in paragraph numbered 1 above. In consideration of this fee and our appointing you our Agent, you agree to act as our Agent hereunder for a period of four years from the date hereof or until the operations covered by this letter are fully liquidated, whichever date is the earlier; provided, however, that you shall have the right to terminate your employment as Agent hereunder on three months' written notice.

6. Indemnity. We agree to protect, indemnify and save you harmless from and against all claims and demands made against you and all judgments, loss or damages incurred by you in the performance of this agency within the authority granted, which are not the result of your negligence or intentional misconduct.

Defendant U's Exhibit "B"—(Continued)

If the foregoing is acceptable to you, please sign and return the enclosed duplicate original of this letter, to constitute the agreement between us as of the date hereof.

Very truly yours,

METALS RESERVE COMPANY,
/s/ By G. TEMPLE BRIDGMAN,
Executive Vice President.

Accepted and Agreed to:

U. S. VANADIUM CORPORATION,

Vice President.

DEFENDANT U'S EXHIBIT "C"

Metals Reserve Company
Washington, D. C.

April 9, 1942

United States Vanadium Corporation
30 East 42d Street
New York, New York

Re: Agency Agreement—Sandstone Vanadium—Durango Project

Gentlemen:

In accordance with the recommendation of the War Production Board, we wish to proceed with the program for increasing the supply of vanadium

Defendant U's Exhibit "C"—(Continued)

urgently needed for war requirements, by producing vanadium from the non-commercial "sandstone ore" properties of the southwest with which you are familiar.

In your letter of March 18, 1942, you inform us of several possible locations for vanadium reduction plants in the southwest. With the exception of a proposed plant at Durango, Colorado, it is our understanding that each plant would cost in excess of $100,000, and would, therefore, be handled as a Defense Plant Corporation project if and when approved.

As the Durango plant will not cost in excess of $100,000, we are writing this letter to authorize you to proceed on terms similar to the Vanadium Agency Agreement of February 25, 1942, covering the lead-vanadate properties. The Durango plant and any other plants approved by and constructed for Defense Plant Corporation, will be operated by you at the expense and under the direction of this Company, under a single operating agreement to be entered into hereafter between your Company and this Company.

To enable you to proceed immediately with the vanadium reduction plant at Durango, Colorado, we hereby appoint you our agent, subject to cancellation by us upon three months' notice and subject to cancellation by you upon three months' notice, on the terms set forth below:

1. Acquisition and Rehabilitation of Plant. You

Defendant U's Exhibit "C"—(Continued)

will, as soon as possible, purchase or lease, in our name, the plant site, acquire and rehabilitate the necessary buildings, equipment and facilities for a reduction plant with a capacity of 100 tons of ore per day; it being contemplated that the plant will be completed within three months from the date hereof. As to the site of the plant, whether fee or leasehold, your attorneys will obtain title opinion satisfactory to us. If the site is obtained by leasehold, the lease will be subject to our approval and will provide that the lessee shall have the right to remove all buildings, equipment and facilities at any time.

You will recommend, for our approval, plans and designs for the rehabilitation and equipment of the plant; such recommendation to specify as far as practicable the equipment and facilities, the contracts and the purchases involved, and the estimated cost thereof. Upon our written approval of such plans and designs, you will take all the necessary steps, as recommended, to complete the plant for operations as soon as possible. In carrying out this work you may enter into such contracts and purchase such property, equipment and supplies as you deem advisable, in our name, as our Agent, provided you obtain our prior approval with respect to particular contracts or purchases involving a dollar amount exceeding the amount we specify from time to time for this purpose.

2. Procedure. All property, equipment and sup-

Defendant U's Exhibit "C"—(Continued)

plies will be purchased, and all materials produced will be held in our name by you, as our Agent. Each item of major equipment will be marked to indicate our ownership thereof and will be subject to removal from the real estate. Documents of title and ownership will be held by you in safe keeping for us, and copies thereof filed with us. We are exempt from all taxation except local taxes on real estate owned by us. Accordingly, you will advise us of the imposition of any taxes. You will also carry such insurance on the properties as we approve. Your representatives and employees will not be employees of this Company for any purpose. You will use your best efforts to perform all phases of the undertaking and to maintain costs at a minimum, and will report to us periodically upon request as to the status of the project. You will use reasonable care in the use and custody of property and materials with appropriate records. You will comply with all applicable Federal, State and municipal laws and regulations. We shall have the right at all times to send our representatives to examine the properties and work and your books and payroll and other records at the plant, which shall be maintained entirely separate from your other operations.

3. Costs and Reimbursement. We have limited our allocation hereunder for all costs for the Durango plant, prior to operations, to $100,000. Subject to this limitation, we agree to pay or reim-

Defendant U's Exhibit "C"—(Continued)

burse you for all expenditures in acquiring, leasing, developing and equipping the above property and plant at Durango, Colorado. For this purpose you will submit, for our approval, a budget from time to time, estimating the expenditures to be made, and we will establish a revolving fund in your favor for the payment of such expenses in a national bank designated by us. The revolving fund will be replenished from time to time upon receipt of your requisition therefor, itemizing prior expenditures and certifying as to the necessity and reasonableness thereof and that payment has been made therefor, and accompanied by receipted bills or evidence of payment. You will maintain a complete record of all expenditures and account to us therefor quarterly, or upon our request, by summarizing the payments covered by requisitions theretofore submitted together with transcript of the monthly bank statement and cancelled checks to be returned to you after audit, or, in lieu of accounting to us as aforesaid, we may, at our option, audit your books and records at the plant pertaining to this operation. In addition to approving the aforesaid budget, we retain the right to require our prior approval for, or to pay directly, any particular expenditure or types of expenditures of which we advise you from time to time.

4. Operation. You agree to operate the aforesaid plant at Durango under an operating agreement to be entered into hereafter.

Defendant U's Exhibit "C"—(Continued)

5. Indemnity. We agree to protect, indemnify and save you harmless from and against all claims and demands made against you and all judgments, loss or damages incurred by you in the performance of this agency within the authority granted, which are not the result of your negligence or intentional misconduct.

6. Congressional Clause. No Member of or Delegate to the Congress of the United States shall be admitted to any share or part of this Contract, or to any benefit arising therefrom, but this provision shall not be construed to extend to this contract if made with a Corporation for its general benefit.

If the foregoing is acceptable to you, please sign and return the enclosed duplicate original of this letter, to constitute the agreement between us as of the date hereof.

Very truly yours,

METALS RESERVE COMPANY,
/s/ By G. TEMPLE BRIDGMAN,
Executive Vice President.

Accepted and Agreed to:

UNITED STATES VANADIUM CORPORATION,
/s/ By J. R. VAN FLEET,
Vice-President.

DEFENDANT U'S EXHIBIT "D"

Vanadium Agency Agreement

This Agreement made and entered into as of the 9th day of May, 1942, by and between Metals Reserve Company, a corporation duly created by Reconstruction Finance Corporation pursuant to section 5d of the Reconstruction Finance Corporation Act, as amended, with its principal office at Washington, D. C. (hereinafter called "Metals"), and United States Vanadium Corporation, a corporation created under the laws of the State of Delaware, having an office at Number 30 East 42d Street, New York, New York (hereinafter called "Vanadium"),

Witnesseth:

That Whereas, the increased domestic production of vanadium and its ore concentrates and the expansion of facilities within the United States for such production are necessary to the national defense and to successful prosecution of the war effort of the United States; and

Whereas, in accordance with the recommendation of the War Production Board, an agreement dated April 9, 1942, has been entered into between Metals and Vanadium for the construction of such facilities in the vicinity of Durango, Colorado, to cost not in excess of One Hundred Thousand Dollars ($100,000) and to have a capacity for the treatment of approximately one hundred (100) tons of vanadium ores per day in the production of vanadium

Defendant U's Exhibit "D"—(Continued)

ore concentrates (said facilities being hereinafter called the "Durango Plant"); and

Whereas, in accordance with the recommendation of the War Production Board, it is contemplated that additional facilities estimated to cost approximately Four Hundred Thousand Dollars ($400,000) will be constructed as hereinafter mentioned in the vicinity of Grand Junction, Colorado, to have a capacity for the treatment of approximately one hundred (100) tons of vanadium ores per day in the production of vanadium ore concentrates (said facilities being hereinafter called the "Grand Junction Plant"); and

Whereas, Vanadium has had extensive experience in the treatment of vanadium ores for the production of vanadium concentrates and now owns and operates vanadium ore treatment plants similar to those proposed with regard to the Durango Plant and the Grand Junction Plant (the Durango Plant and the Grand Junction Plant being hereinafter collectively called the "Plants");

Now, Therefore, in consideration of the mutual covenants herein contained, Metals hereby appoints Vanadium as its agent, and Vanadium hereby accepts such appointment, to carry out the purposes hereinafter set forth on the terms and conditions following:

1. Construction of Grand Junction Plant.

Vanadium shall carry on investigation and preliminary engineering and design work needed for

Defendant U's Exhibit "D"—(Continued)

the construction of the Grand Junction Plant, it being contemplated that Defense Plant Corporation, Washington, D. C., will provide the necessary funds to construct the Grand Junction Plant, that title to the Grand Junction Plant will be vested in Defense Plant Corporation and that the Grand Junction Plant will be leased by Defense Plant Corporation to Vanadium. The terms on which such funds will be provided (including the terms of an option to purchase, if any) are subject to negotiation between Vanadium, Metals and Defense Plant Corporation.

2. Operation of Plants and Purchase of Ores.

Vanadium shall operate the Plants for Metals' account. Metals will have, at its option, representatives at the Plants who will act independently in sampling all shipments and have sole custody of all control samples. Vanadium shall exert its best efforts to purchase for Metals' account vanadium ores suitable for treatment in the Plants, at reasonable prices not to exceed fifty cents (50c) per pound of vanadium pentoxide contained, delivered at suitable loading points or ore receiving stations, unless Metals shall hereafter authorize the payment of prices for such ores in excess of said fifty cents (50c) per pound. Vanadium will also, upon written request of Metals, act as agent for Metals in selling or otherwise disposing of, and in shipping, the production of the Plants. Detailed instructions covering sales will be forwarded to Vanadium at a

Defendant U's Exhibit "D"—(Continued)

later date. Employees of Vanadium will not be employees of Metals for any purposes hereunder.

3. Processes and Patents.

Vanadium will make available for use in the operation of the Plants by it, without charge except as herein provided, all processes and patent rights owned by or available to it, relating to the treatment of vanadium ores and plant products, and it will also make available for use in the operation of the Plants, or either of them, during such period as same may be owned or operated by others, all such processes and patent rights at such reasonable charge as may be mutually agreed upon.

4. Costs and Reimbursements

Metals will pay or reimburse Vanadium from time to time for all costs and expenses incurred by Vanadium in carrying on the investigation and preliminary engineering and design work provided for in Section 1 of this agreement (but not in excess of a total of Ten Thousand Dollars ($10,000)), and for all costs and expenses incurred and paid by Vanadium in the occupancy, maintenance, repair, management and operation of the Plants, the purchase, handling and transportation of ores and plant products and the performance of its other duties hereunder, save as is hereinafter otherwise expressly provided, and for this purpose Metals will establish a revolving fund in favor of Vanadium in a bank or banks designated by Metals. Such costs and expenses, shall include, but without limitation, all

Defendant U's Exhibit "D"—(Continued)

costs and expenses of labor (as hereinafter outlined in more detail), materials, supplies, taxes (except income and excess profits taxes and taxes based upon income or profits), bonds, insurance, power, water, steam and other services, testing, accounting, training of personnel for the operation of the Plants, and traveling, and shall also include all costs and expenses which Vanadium may properly incur and pay under the provisions of the proposed construction and lease contract, when entered into, between Defense Plant Corporation and Vanadium with respect to the Grand Junction Plant and for which Vanadium will not be reimbursed by Defense Plant Corporation under said construction and lease contract. Costs and expenses of labor as hereinabove used shall include, but without limitation, all salaries and wages whether full-time or part-time, and including compensation for overtime, for work performed at the Plants or elsewhere, both in connection with preparations necessary for the operation of the Plants and in connection with the management, operation, occupancy, repair and maintenance of the Plants; all salaries and fees for services for technical, consultant-engineering, or other professional experts, whether performed on or off the Plant sites, or whether on a full-time or part-time basis; all extra compensation paid to employees engaged in operation of the Plants and all discontinuance wages paid to such employees; the amount directly chargeable to Vanadium for all group insurance, retirement income plan, and all other wel-

Defendant U's Exhibit "D"—(Continued)

fare and employee-relation plans maintained by Vanadium for the benefit of employees engaged in the operation of the Plants; and an equitably proportionate share, in connection with the operation of the Plants, of Vanadium's cost of all welfare and other employee-relation plans maintained by it for the benefit of its employees generally. The salaries of Vanadium's executive officers, fees of its attorneys, expenses in conducting its offices and other overhead expenses of Vanadium (except offices which may be established at or near the Plants for the purposes of this agreement) shall not be so included, except that it is agreed that direct expenses of officers and employees of Vanadium in connection with the operations hereunder shall be paid by Metals to the extent approved by Metals. The revolving fund will be replenished from time to time upon receipt of requisition from Vanadium therefor itemizing prior expenditures and certifying as to the necessity and reasonableness thereof and that payment has been made therefor, accompanied by receipted bills or evidence of payment. Vanadium will maintain a complete record of all expenditures and will account to Metals therefor quarterly, or oftener at Metals' request, by statements summarizing the payments covered by requisitions theretofore submitted, such statements to be accompanied by transcripts of the monthly bank statements and cancelled checks, to be returned to Vanadium after audit, or, in lieu of accounting to Metals in this manner, Metals may, at its option, audit at the

Defendant U's Exhibit "D"—(Continued)

Plants Vanadium's books and records pertaining to the operation of the Plants, the purchase of ores, and the other performance of this agreement. Metals is to have access to the Plants and all records pertaining thereto at any time. If requested by Metals, Vanadium will submit for Metals' approval, thirty (30) days before the beginning of each quarterly period, a budget of estimated expenditures for the operation of the Plants during such period, and no substantial expenditures for operation of the Plants not shown on such budget shall be made without the written approval of Metals. Quarterly expenditures for plant operation and the purchase of vanadium ores will be limited to Two Hundred Thousand Dollars ($200,000) and Seven Hundred Fifty Thousand Dollars ($750,000), respectively.

5. Compensation and Indemnity.

As full compensation for services rendered by Vanadium as agent for Metals hereunder, Metals will pay Vanadium a fee of three cents (3c) per pound of vanadium pentoxide (V_2O_5) contained in vanadium concentrates produced through the operation of the Plants, but in any event not less than Twenty-four Thousand Dollars ($24,000) for each year of the period of this agreement beginning with the date upon which the Plants, or either of them, have been made ready for operation. Metals agrees to protect, indemnify and save Vanadium harmless from and against all claims and demands made against it and all judgments, losses or damages suf-

Defendant U's Exhibit "D"—(Continued)

fered or incurred by it in the performance of this agency within the authority granted, which are not the result of Vanadium's negligence or intentional misconduct.

6. Advances and Deliveries.

In the event that any vanadium mines or prospects are found to require assistance in providing roads, transportation facilities, mining equipment, development, and working capital, then in each such case Vanadium shall furnish to Metals its written report on the requirements of such mine or prospect, together with its specific recommendations thereon. If Metals approve in writing the granting of the proposed advance or assistance in such a case, then Vanadium shall provide the same out of the revolving fund to be established hereunder by Metals, and Vanadium shall obtain and hold for Metals such evidence of and security for the advance as Metals may require and shall comply with all other requirements of Metals. In each such case of advance, the amount of the advance shall be deducted by Vanadium from the price of any ore produced by such mine or prospect upon Vanadium's subsequent purchase thereof, pursuant to Metals' instructions; but if in any such case the value of ore so produced be insufficient to repay such advance, wholly or partially, then, to the extent of such insufficiency, such advance shall be deemed to have been made for Metals' account insofar as Vanadium is concerned. Vanadium shall maintain rec-

Defendant U's Exhibit "D"—(Continued)

ords of all such advances made and of the amounts repaid thereon and shall render to Metals such reports concerning such advances and repayments as Metals may require.

7. Discharge of Duties.

Vanadium will carry on the operations in a good and efficient manner in accordance with accepted practices and all operations shall be carried on in a systematic, orderly and economic manner and in compliance with all applicable laws, rules, regulations and orders. It is impossible to detail all the various acts which Vanadium will or may be called upon to perform in discharging its duties herein, and in consequence, but without derogating from the authority hereinabove granted, Vanadium will do all such things as are reasonably necessary and proper in order to discharge its duties hereinabove set out in the course of acting for Metals.

8. Right to Purchase.

Upon the termination of this Agreement Vanadium shall have and is hereby granted for a period of ninety (90) days after such termination (hereinafter referred to as the "option period") the right and option by written notice to Metals to purchase the buildings, equipment and machinery constituting the Durango Plant at the actual cost to Metals thereof, less an amount representing depreciation, obsolescence and loss of value due to use for national defense purposes for each year or fractional part thereof, at the rate of twelve and one-half per cent (12%) of such actual cost per annum; pro-

Defendant U's Exhibit "D"—(Continued)

vided that in no event shall Vanadium have the right hereunder to purchase the Durango Plant at a price less than 25% of the actual cost of said plant to Metals. Metals further agrees to the extent that it lawfully may that it will not sell or convey said buildings, equipment and machinery or any part thereof to any party or parties other than another branch of the Government (which branch of the Government shall be bound by the provisions hereof) for a period of ninety (90) days following the expiration of the option period unless Metals shall first have offered the same for sale to Vanadium at a price equal to the best offer received by Metals and Vanadium shall have failed or refused to purchase the same within thirty (30) days after the receipt of such offer.

9. Congressional Clause.

No member of or delegate to the Congress of the United States shall be admitted to any share or part of this contract, or to any benefit arising therefrom, but this provision shall not be construed to extend to this agreement if made with a corporation for its general benefit.

10. Force Majeure.

Neither Metals nor Vanadium shall be responsible for delays, failure or omissions due to any cause or causes beyond its control, however arising, and which cannot be overcome by due diligence. Upon the cessation or rectification of the cause or causes of delay of performance hereunder, the time for such performance shall be extended by the num-

Defendant U's Exhibit "D"—(Continued)

ber of days during which performance was so delayed.

11. Term.

This agreement shall continue in effect from the date hereof and until termination of the existing national emergency and six months thereafter, but either party hereto may at its option terminate this agreement at any time by giving to the other party three (3) months' written notice of such termination.

In Witness Whereof, the parties hereto have caused this agreement to be executed by their respective corporate officers thereunto duly authorized and their respective corporate seals to be hereunto affixed as of the day and year first above written.

Resolution

Whereas, This Corporation has been authorized to produce, acquire, carry, sell, or otherwise deal in vanadium metal; and

Whereas, upon recommendation of the War Production Board, this Corporation, has entered into an agreement, dated April 9, 1942, with United States Vanadium Corporation for the construction, in the vicinity of Durango, Colorado, of a plant and facilities for the production of vanadium and its ore concentrates; and

Whereas, it is contemplated that Defense Plant Corporation will finance the construction of an additional plant and facilities for the production of vanadium and its ore concentrates in the vicinity of Grand Junction, Colorado; and

Whereas, upon recommendation of the War Production Board, this Corporation and United States Vanadium Corporation desire to enter into a contract under which United States Vanadium Corporation will operate the said Durango and Grand Junction plants and facilities as the agent of this Corporation and for its account;

Now, Therefore, Be It Resolved:

First, That this Corporation enter into the "Vanadium Agency Agreement," dated as of the 9th day of May, 1942, with United States Vanadium Corporation, in the form attached hereto.

Second, That the President, or a Vice President, of this Corporation be and he is hereby authorized

Defendant U's Exhibit "D"—(Continued)

and directed to execute and deliver the aforesaid Agreement in the name and on behalf of this Corporation, under its corporate seal, attested by its Secretary or its Assistant Secretary.

Third, That the appropriate officers of this Corporation be and they are hereby authorized and directed, upon the execution of the aforesaid Agreement by the parties thereto and upon effective delivery thereof, to take all action necessary or appropriate to carry out the aforesaid Agreement.

The foregoing resolution was duly adopted by the Executive Committee of Metals Reserve Company on May 16, 1942.

[Seal] METALS RESERVE COMPANY,
/s/ (Illegible),
Secretary.

DEFENDANT U'S EXHIBIT "I"

October 22, 1942

Mr. H. DeWitt Smith
Metals Reserve Company
Lafayette Building
Washington, D. C.

Approval Requested

Dear Mr. Smith:

Reference is here made to my letter of October 13, 1942, recommending the Metals Reserve Company Ore Milling Contract for concentrating Met-

Defendant U's Exhibit "I"—(Continued)

als Reserve Company sandstone Vanadium ores by Nisley and Wilson, as well as, an effort to arrange to place the Calamity District mines into production.

At this time, a third party, a mine operator, has been interested, and he has agreed to produce Vanadium ore from the Calamity mines upon receipt of a Trustee (Gateway Alloys, Inc., petition for bankruptcy) Lease on the mines. The Trustee and all interested parties in the bankruptcy proceedings have agreed to grant a mining lease that stipulates that the Metals Reserve Company shall purchase all Vanadium ores from the Lessor and pay to a Trustee's escrow account, $.08 per pound V_2O_5 contained, royalty, on all ores mined thereof.

I consider the above royalty, under the present circumstances, reasonable and just, and I recommend the same.

The Lessor will simultaneously sign a Metals Reserve Company Ore Purchase Agreement at the following basic prices:

For ore having a V_2O_5 content of 1.25%, 26c per pound.

For ore having a V_2O_5 content of 1.50%, 28c per pound.

For ore having a V_2O_5 content of 1.75%, 29c per pound.

For ore having a V_2O_5 content of 2.00%, 30c per pound.

Defendant U's Exhibit "I"—(Continued)

For ore having a V_2O_5 content of 2.50%, 32c per pound.

I recommend the above schedule; it is similar in every respect to our ore prices in other parts of the Vanadium area.

The operation of these mines will create a source of supply of Vanadium ore for the Nisley-Wilson Mill for which a contract has been requested from the Metals Reserve Company as of my letter of October 13, 1942, as well as an excess of lower grade ores for the Grand Junction Plant.

The estimated cost of ore delivered at the Nisley-Wilson Mill will be $.48 per pound V_2O_5 contained for 2.00% ore. Similar ore will cost $.53 per pound V_2O_5 contained at Grand Junction.

Now, therefore, your approval is requested for the consummation of these Agreements because you have already had several requests through the efforts of Mr. H. L. Gardner, an interested party with the Gateway Alloys, Inc. The above Agreements will clear the way in untangling a hitherto unworkable litigation by mutual agreement of all parties and place the well-mineralized Calamity area into production.

The United States Vanadium Corporation, Agent for Metals Reserve Company, will proceed with the installation af a Vanadium ore sampling plant, designed as recommended by Mr. Howland Bancroft,

Defendant U's Exhibit "I"—(Continued)

at Gateway, Colorado, at an estimated cost of $3250.00. It will be necessary to rent a plant site that will cost $15.00 per month.

Very truly yours,

UNITED STATES VANADIUM CORPORATION, AGENT FOR METALS RESERVE COMPANY,

Attention: Mr. J. R. Van Fleet, Vice President

Gentlemen:

Reference is made to letter dated October 22, 1942 to Mr. H. DeWitt Smith from your Mr. John W. Hill, Supervising Engineer at Grand Junction, Colorado, requesting approval of the making of an agreement by your Corporation, as Agent for this Company under the Vanadium Agency Agreement dated as of May 9, 1942 between us, with the lessee of the Calamity District mines, covering the purchase of vanadium ores produced by the lessee from these mines.

We approve Mr. Hill's recommendations, and authorize you to enter into a purchase agreement with the above lessee for the purchase of ore produced from the above mines by the lessee, at the base prices stated in Mr. Hill's letter. As recommended by Mr. Hill, and in addition to the base prices to be paid to the lessee, the purchase agreement should provide for the payment directly to the lessor, the Trustee in Bankruptcy for Gateway Alloys, Inc., of a royalty of 8c per pound of vanadium pentoxide (V_2O_5) contained in ore purchased

Defendant U's Exhibit "J"—(Continued)

thereunder. The purchase agreement should also give you the option to cancel at any time after January 1, 1944. In addition to such other provisions as you may deem appropriate under the circumstances, the purchase agreement should incorporate the standard provisions contained in all Metals Reserve Company purchase contracts, which are enclosed herewith in the form of, and for use as, an exhibit to the purchase agreement and other purchase contracts entered into by you, as Agent for this Company.

As a condition to your entering into the above purchase agreement, your counsel should, of course, be satisfied that the above-mentioned lease is valid and binding upon the parties, and entitles the lessee to mine vanadium ore from the Calamity District mines.

Sincerely yours,

G. TEMPLE BRIDGMAN,
Executive Vice President.

DEFENDANT U'S EXHIBIT "K"

Metals Reserve Company
Washington, D. C.

Nov. 25, 1942

United States Vanadium Corporation
30 East 42nd Street
New York, New York

Attention: Mr. J. R. Van Fleet, Vice President

Gentlemen:

In accordance with Paragraph 2 of the Vanadium Agency Agreement dated as of May 9, 1942, as amended, between your Corporation and this Company, the Gateway Colorado vanadium ore treatment plant formerly owned by Gateway Alloys, Inc. and presently being operated by Messrs. Frank Nisley and Hays C. Wilson under lease from H. I. Gardner, is hereby designated as one of the vanadium ore treatment plants to be supplied with vanadium ore purchased by you under said Agency Agreement.

The terms upon which you are to furnish ore for the operation of the Gateway plant were agreed upon at a conference in Denver, Colorado, on October 8, 1942, attended by Messrs. H. I. Gardner, Frank Nisley, Blair Burwell (representing your Corporation) and O. R. Whitaker (representing Metals Reserve Company). We have incorporated these terms in a proposed Toll Agreement between your Corporation, as Agent for this Company, and Messrs. Nisley and Wilson, eight copies of which

Defendant U's Exhibit "K"—(Continued)

are enclosed herewith. If this agreement as enclosed is acceptable to you and Messrs. Nisley and Wilson, we authorize you, as Agent for this Company, to execute it, provided your counsel is satisfied that the lease under which Messrs. Nisley and Wilson are operating the Gateway plant is valid and binding upon the parties thereto. We have obtained a copy of this lease, together with other related documents, from counsel for Messrs. Nisley and Wilson, and these documents, together with a copy of the accompanying letter of their counsel, are enclosed herewith.

The enclosed Agreement provides in substance that for a period of ninety (90) days your Corporation, as Agent, will supply vanadium ore for the operation of the Gateway plant, that such ore will be treated at said plant in consideration of the treatment charges specified in the Agreement, and that all fused vanadium oxide, together with all tailings, produced from such ore will be returned to you, as Agent, at the Gateway plant. The Agreement has been prepared upon the basis of a term of ninety (90) days from the date of its execution, it being contemplated that operation of the plant during this period will furnish a basis for a subsequent agreement. Accordingly, during the term of the enclosed Agreement, you should request and obtain from Messrs. Nisley and Wilson such complete information as to costs of operation, etc. as may be necessary for this purpose.

Defendant U's Exhibit "K"—(Continued)

You will act as shipping agent for this Company, arranging for the shipment of vanadium oxide and tailings returned to you by Messrs. Nisley and Wilson to consignees designated by us, and following our written instructions as to means of transportation, routing and forwarding bills of lading, invoices and other related documents.

Upon execution of the enclosed Agreement by your Corporation, as Agent, and Messrs. Nisley and Wilson, please return to us for our files one executed original counterpart.

Sincerely yours,

METALS RESERVE COMPANY,
/s/ G. TEMPLE BRIDGMAN,
G. Temple Bridgman,
Executive Vice President.

Mr. J. W. Hill

October 12th, 1943

Metals Reserve Company
Washington 25, D. C.

Attention: Mr. H. DeWitt Smith
Subject: Toll Agreement (Nisley-Wilson)

Gentlemen:

Enclosed is executed copy of a supplemental agreement entered into as of July 6, 1943, by United States Vanadium Corporation as Agents for Metals Reserve Company and Nisley and Wilson, a partnership operating vanadium plant at Gateway, Colorado. The attached agreement extends the Toll Agreement, entered into January 26, 1943 by the same two parties, from the period of its expiration July 1, 1943 to January 1, 1944.

From our wire of June 30th to you and from conversations in the interim we have recommended to you that the treatment charges to be paid under this supplemental agreement should initially be the same as those provided for in the toll agreement dated January 6, 1943. We are in this letter hereby reaffirming that our examination of the records of the Nisley-Wilson operation, copies of which have been sent you, indicates to us that present toll charges are necessary for the maintenance of this operation. It is our recommendation that these charges remain unchanged at this time.

Defendant U's Exhibit "O"—(Continued)

Attached to this letter are typewritten copies and photostatic copies of the following correspondence:

(1) Letter from our Colorado attorney, Mr. E. B. Adams, dated October 4th, 1943.

(2) Our letter to our Mr. J. W. Hill dated September 28th, 1943.

(3) Letter from our attorney, Mr. E. B. Adams, dated September 22, 1943.

(4) Copy of certification signed by Alta Hall, acknowledging receipt of $1156.50 from Mr. H. I. Gardner. Copy of this certification was forwarded to our New York office attached to our Mr. Hill's letter dated July 29th.

We believe the above correspondence concerning the right of Nisley and Wilson to continue during the term of the present agreement, is sufficient for your needs, if not, we shall be glad to obtain whatever more is necessary.

Yours very truly,

UNITED STATES VANADIUM CORPORATION,
As Agents for Metals Reserve Company,

vl/G. Donald Emigh
USVC

Defendant U's Exhibit "O"—(Continued)

October 12th, 1943

Metals Reserve Company
Washington 25, D. C.

Attention: Mr. H. DeWitt Smith
Subject: Nisley-Wilson Vanadium Operation

Gentlemen:

In the August Progress Report on the vanadium operations, three copies of which were sent recently to your Mr. Petterson, it was pointed out that recovery to date in the Nisley Wilson vanadium mill at Gateway, Colorado, is between 66.30% and 67.80%. The Toll Agreement of January 26th, under Clause 6, provides that the V_2O_5 content of the fused vanadium oxide produced shall not be less than 70.00% of the V_2O_5 content in the ore treated.

With present recovery figures at hand it is apparent that the operators of the Nisley-Wilson plant are not making the 70.00% recovery. In our judgment this plant is being handled in an efficient manner and the recoveries being made are not out of line with those effected at other vanadium plants in this region.

We recommend to Metals Reserve Company, therefore, that in the Toll Agreement dated January 26th, 1943 in Clause 6, the minimum recovery figure of 70.00% be changed to 65.00%.

Attention: Mr. H. DeWitt Smith

Re: Toll Agreement dated January 26th, 1943 with Nisley & Wilson

Gentlemen:

We have received in our office on October 6th a letter from you inquiring into the status of the supplemental agreement between ourselves and the operators of the Nisley-Wilson Vanadium Mill at Gateway, Colorado.

We have in New York an executed supplemental agreement which you had previously approved and also have in New York an opinion from our counsel concerning the legal right of Nisley and Wilson

Defendant U's Exhibit "O"—(Continued)

to continue operations at the Gateway plant during the term of the supplemental agreement. The writer did not believe our counsel's opinion was sufficiently clear for your purpose and some time back wrote our Mr. J. W. Hill in Colorado asking for a clearer opinion. We anticipate receiving this shortly and will forward it to you along with a copy of the agreement and our written recommendation as to toll charges.

Yours very truly,

UNITED STATES VANADIUM CORPORATION,
As Agents for Metals Reserve Company,
/s/ G. DONALD EMIGH.

DEFENDANT U EXHIBIT "Q"

Exhibit No. 1
A-43-a
May 11, 1943
Letter Contract No. W-7405 eng-78
New York, New York

Union Mines Development Corporation
30 East 42nd Street
New York, N. Y.

Gentlemen:

The United States of America, acting through the undersigned Contracting Officer, has requested your Corporation to perform the work hereinafter outlined and we understand that in the interests of the war effort you are willing to exert your best efforts to perform such work, but it is understood that you make no representation or warranty whatsoever and assume no responsibility or obligation that the work can be successfully performed.

Accordingly, the United States of America, acting through the undersigned Contracting Officer, hereby places an order with you, that you shall with the utmost secrecy and dispatch, and in accordance with instructions of the Contracting Officer, or his duly authorized representative, furnish all labor, materials, and equipment not furnished by the Government, and services, and do all things necessary to cover the work anticipated in a survey of S-37 and the development of suitable processes of beneficiation for such S-37.

Defendant U Exhibit "Q"—(Continued)

Your fee for conducting this survey will be determined by the Contracting parties at a future date.

Funds for carrying out this work have been appropriated and are now available for use of the War Department under Procurement Authority No. ENG 31110 P-430-07 A-0905-23.

The Secretary of War finds that it is in the interest of the war effort that this work be not delayed awaiting negotiations of a formal contract and accordingly, you are hereby given formal notice to proceed with the survey.

It is contemplated that this contract will be supplemented by a formal contract between yourselves and the United States of America. All applicable contract clauses, required by Federal Law and Executive Order, to be incorporated in contracts for services of the kind herein specified, are hereby incorporated herein by reference. Such formal Contract will also include an appropriate clause providing for the termination of the contract for the convenience of the United States of America.

Upon your acceptance hereof, advance payments in accordance with the existing requirements of the War Department as set forth in W. D. Contract Form No. 24 may be made to you upon your application. Notwithstanding any other provision of this contract, you shall be under no obligation whatsoever to advance or use any of your own funds in the performance of this contract, but you shall be

Defendant U Exhibit "Q"—(Continued)

reimbursed as therein provided to the extent that you, at your option, may advance or use any of your own funds for such purpose.

In the event the United States of America is unable to negotiate with you a satisfactory contract to supplement this contract prior to August 15, 1943, this contract will terminate and the United States of America will pay you in full settlement hereof a sum equal to reimbursement for all costs incurred by you in connection with the performance of this contract plus such other sums as may have actually been or may be expended by you, in good faith, in settlement of all obligations, commitments and claims which you may theretofore have incurred, less any reimbursements previously made, but in any event the total payments shall not exceed the sum of Five Hundred Thousand Dollars ($500,000.00).

It is the understanding of the parties hereto, and the intention of this contract, that all the work is to be performed at the expense of the Government and that the Government shall hold you harmless against any loss, expense (including, but not limited to, expense of litigation) or damage (including, but not limited to, liability to third persons because of death, bodily injury, property injury, destruction, patents or otherwise) of any kind whatsoever arising out of or in connection with the performance of the work, except to the extent that such loss, expense, damage or liability is due to the per-

Defendant U Exhibit "Q"—(Continued)

sonal failure on the part of your corporate officers, or other of your representatives having supervision or direction of the work as a whole, to exercise good faith or that degree of care which they normally exercise in the conduct of your business.

Neither this contract nor any interest therein or claim thereunder shall be assigned or transferred by the Contractor to any other party or parties.

It is understood that disclosure of information relating to the work contracted for hereunder to any person not entitled to receive it, or failure to safeguard all secret, confidential and restricted matter that may come to the Contractor or any person under his control in connection with the work under this contract, may subject the Contractor, his agents, employees, and Subcontractors to criminal liability under the laws of the United States. (See Title 1 of an Act approved June 15, 1917, 40 Stat. 217; 50 U.S.C. 30-42), as amended by an Act approved March 23, 1940 (54 Stat., Chap. 72); and the provisions of an Act approved January 12, 1938, (52 Stat. 3; 50 U.S.C., Supp. V 45-45d), as supplemented by Executive Order No. 8381, dated March 22, 1940, 5 F.R. 1147, D.I.

The Contractor will not permit any alien employed or to be employed by it or by any sub-bidder or subcontractor to have access to the drawings, specifications and accompanying enclosures relating to the performance of this contract, or to the mod-

Defendant U Exhibit "Q"—(Continued)

els or material referred to therein, or to engineering principles, composition, sub-assemblies or assemblies which are vital to the functioning or use of article or articles forming the subject matter of this contract, without the written consent beforehand of the Secretary of War.

It is understood and agreed that the meaning of the code term S-37 as used herein as well as the general aims and procedure to be followed in the performance of the work hereunder shall be as set forth in a secret letter from the Government to the Contractor dated May 11, 1943, the contents of said letter constituting a part of this contract to the same extent as if fully set forth herein. A copy of said letter shall be kept on file in the Manhattan District Office.

If the foregoing is acceptable to you, it is desired that you indicate hereon and on the inclosed two copies of this letter and return the original and one copy to the Contracting Officer as soon as possible. Such acceptance will constitute this Order a Contract.

Very truly yours,

UNITED STATES OF AMERICA,

/s/ By K. D. NICHOLS,

K. D. Nichols,

Lt. Col., Corps of Engineers,

Contracting Officer.

Defendant U Exhibit "Q"—(Continued)

Accepted this 24th day of May, 1943.

UNION MINES DEVELOPMENT CORPORATION,
/s/ By J. R. Van FLEET,
President. (Title)

Exhibit No. 2

Contract No. W-7405 eng-78

Exploration and Development Contract

Contractor: Union Mines Development Corporation, New York, N. Y.

Contract For: Exploration and Development of S-37.

Estimated Cost: First year $750,000.00; Second year $3,500,000.00.

No Fixed Fee.

Payment: To be made by Finance Officer, U. S. Army at: U. S. Engineer Office, Manhattan District, New York, N. Y.

The supplies and services to be obtained by this instrument are authorized by, are for the purpose set forth in, and are chargeable to the following procurement authority or authorities, the available balances of which are sufficient to cover the cost of the same:

210/40141 E. P. OF E. & S. 1940-44 8-25562 P110-07.

. . . . . .

This contract is authorized by the following laws: Title II of the First War Powers Act, 1941, Act of

Defendant U Exhibit "Q"—(Continued)

December 18, 1941 (Public Law 354 — 77th Congress), and Executive Order No. 9001, dated December 27, 1941.

Exploration and Development Contract

This Contract entered into this 17th day of April, 1944, effective as of the 11th day of May, 1943, by and between the United States of America (hereinafter called the "Government"), represented by the Contracting Officer executing this contract, and Union Mines Development Corporation, a corporation organized and existing under the laws of the State of Delaware, with its principal business office at No. 30 East 42nd Street, New York, New York (hereinafter called the "Contractor");

Witnesseth That:

Whereas, The Government desires to determine and evaluate resources of S-37 and acquire the strongest possible control of the production and disposal of such resources as may be accessible and are considered to have commercial value, and to determine suitable methods of exploitation of such resources as may be found, and to develop suitable processes for beneficiation of any supplies of S-37 as may be required; and

Whereas, in the accomplishment of this work, the Government desires to utilize among others the services of the Contractor under a contract providing for reimbursement of costs, entered into after negotiations approved by the Secretary of War, and without advertising for proposals, and such con-

Defendant U Exhibit "Q"—(Continued)

tract is authorized by law, and will facilitate the prosecution of the War; and

Whereas, as a result of such negotiations, the Secretary of War has directed the Government to enter into a contract with the Contractor to accomplish such purposes;

Now, Therefore, the parties hereto do hereby mutually agree as follows:

Title I
Statement of Project

Article I-A—Objectives and Scope

1. The Contractor shall, at the cost and expense of the Government (see Title II) and in accordance with instructions of the Contracting Officer, exert its best efforts to furnish all labor, materials and equipment not furnished by the Government, and otherwise do all things necessary to determine and evaluate the resources of S-37, to make recommendations for the acquisition of the strongest possible control of the production and disposal of such resources as may be accessible and are considered to have commercial value, to make recommendations for suitable methods of exploitation of any such resources as may be found, and to make recommendations for the beneficiation of any supplies of S-37 which may be acquired (all work to be performed by the Contractor under this Contract being hereinafter sometimes called the "Project"). Except as the

Defendant U Exhibit "Q"—(Continued)

Contracting Officer may otherwise direct or approve, the Contractor shall conduct the Project with the utmost secrecy and dispatch and shall not inform its subcontractors or other outside organizations that any of the Project is being performed for the Government.

In addition to the foregoing, other general objectives of the Project are as follows:

(a) To determine as quickly and accurately as possible, the total S-37 resources of each geographical area broken down into three classes, (1) Proven, (2) Semi-proven or Reasonably Certain and (3) Conjectural.

(b) To evaluate the commercial productive possibilities of each of the three classes of resources in terms of richness of the S-37 and quantities of each grade of S-37 available in separate deposits or localities.

(c) To make recommendations and, to the extent mutually agreed upon between the parties hereto, make suitable arrangements for prompt exploitation of the S-37 resources as may be accessible and are considered to have commercial value.

(d) To prepare estimates from time to time of quantities and qualities of the S-37 resources which can be produced. These estimates shall be broken down into two classes, (1) Economical Rates of Production and (2) Maximum Rates of Production, together with estimates of production costs, for both classes.

Defendant U Exhibit "Q"—(Continued)

2. As a part of the Project, the Contractor shall work along the following lines:

(a) Library and institutional research of available literature bearing on the Project objectives shall be conducted for the purpose of collecting the maximum information with regard to known occurrences of S-37 and related geological factors. Preliminary and final reports covering this phase of the Project shall be prepared on separate geographical areas. The results shall be evaluated, and recommendations prepared concerning the character and scope of physical investigation which should be made leading toward the accomplishment of the ultimate Project objectives. The Contractor shall exert its best efforts to complete the initial study of such available literature by December 31, 1944.

(b) In accordance with programs which shall be prepared and recommended by the Contractor and to the extent directed or approved by the Contracting Officer, the Contractor's field forces shall conduct preliminary reconnaissance, surface prospecting, detailed geological mapping, sub-surface prospecting, and other physical exploration and development work at promising locations of S-37. Concurrently with such field work, analyses of ore samples shall be made in analytical laboratories.

(c) When promising deposits of S-37 are discovered or are reasonably believed to exist as a result of the work hereunder the Contractor shall make recommendations to the Contracting Officer for the

Defendant U Exhibit "Q"—(Continued)

acquisition of the strongest possible control of the production and disposal of the desired resources. In accordance with such recommendations and to the extent directed or approved by the Contracting Officer, the Contractor shall, as a part of the Project, exert its best efforts to acquire (by purchase, staking, filing, refiling or otherwise) claims discovered by the Contractor in carrying out the Project on all mineral deposits containing or believed by the Contracting Officer and/or by the Contractor to contain S-37 or to contain other mineral deposits of value which the Government wishes to own directly or through a Governmental Agency. All such claims so acquired shall be located, filed or otherwise acquired in the name of the Contractor or otherwise as the Contracting Officer shall direct. The Contractor is empowered, upon the direction or approval of, and to the extent authorized in writing by, the Contracting Officer, to purchase or otherwise acquire for the Government or a Governmental Agency, as the Contracting Officer may direct, hold in its name or otherwise as the Contracting Officer may direct, secure or grant leases of, obtain options for rights in, assign, transfer, sell or otherwise dispose of metals, minerals, and ores, lands containing metals, minerals, or ores, and claims or other rights with regard to metals, minerals, or ores. Such right, title and interest to any property, real or personal, leasehold or option, as may be acquired by the Contractor pursuant to this paragraph shall, unless

Defendant U Exhibit "Q"—(Continued)

such property shall be abandoned or otherwise disposed of as approved by the Contracting Officer, be held by the Contractor for the Government or a Governmental Agency, as the Contracting Officer may direct, and be turned over to the Government or such Governmental Agency at the request of the Contracting Officer, subject to any leases, claims, options or other rights in third parties not granted by the Contractor or granted by the Contractor with the approval of the Contracting Officer.

* * * * *

Article IV-J—Disclosure of Information

It is understood that disclosure of information relating to the work contracted for hereunder to any person not entitled to receive it, or failure to safeguard all secret, confidential and restricted matter that may come to the Contractor or any person under its control in connection with the work under this contract, may subject the Contractor, its agents, employees, and subcontractors to criminal liability under the laws of the United States. (See Title I of an Act approved June 15, 1917, (40 Stat. 217; 50 U.S.C. 30-42), as amended by an Act approved March 23, 1940 (54 Stat. Chap. 72); and the provisions of an Act approved January 12, 1938 (52 Stat. 3; 50 U.S.C., Supp. V 45-454), as supplemented by Executive Order No. 8381, dated March 22, 1940, 5 F.R. 1147 D.I.).

* * * * *

In Witness Whereof, the parties hereto have

Defendant U Exhibit "Q"—(Continued)

executed this contract in triplicate as of the day and year first above written.

DEFENDANT U EXHIBIT "R"

United States Vanadium Corporation
Agent For Metals Reserve Company
Grand Junction, Colorado

December 20, 1943

Metals Reserve Company
Washington 25, D. C.

Gentlemen:

Attached hereto is the Progress Report for the month of November, 1943, covering the operations of the United States Vanadium Corporation, Agent for Metals Reserve Company, in the procurement of sandstone vanadium ores.

Included in this report, under the heading of "Condensed Monthly Report" for Durango, is a breakdown of the United States Vanadium Corporation's operating fee for the Durango Plant at 2c per pound of V_2O_5 contained in the fused oxide produced at Durango, Colorado, and 1c per pound of V_2O_5 for the fused oxide for purchasing the ore as approved by Mr. S. H. Petterson on December 7, 1943.

Very truly yours,

UNITED STATES VANADIUM CORPORATION, AGENT FOR METALS RESERVE COMPANY,

/s/ JOHN W. HILL,
John W. Hill, Supervising Engineer.

JWH:fr

Defendant U Exhibit "R"—(Continued)

Report of
United States Vanadium Corporation
Agent for Metals Reserve Company

November 30, 1943

Durango Plant

General

Ore receipts for the month were 4670.163 dry tons containing 195647.3 pounds of V_2O_5, and 174003 pounds of CaO. The milled tonnage was 2862.504 dry tons with an average assay of 2.08% V_2O_5 or its equivalent of 118908.4 pounds of V_2O_5. The lime averaged 1.82% CaO or 104432 pounds of CaO. Without the application of the loss factor, the dry tons to stockpiles becomes 1807.659, 46.6% of which was Placerville Roscoelite. The Placerville stockpile now contains 4,588.463 dry tons at 1.74% V_2O_5 or 159,682.5 pounds of V_2O_5. A composite sample of eight cars of Placerville was run some time ago for U_3O_8 with a result of 0.12%.

Roasting Plant

The roaster average thruout was 95.407 dry tons per day. The circulating load of flue dust averaged 7.65 tons per day over the dry heads. The calcined ore contained 1.35% W. S. V_2O_5 from 2.08% V_2O_5 heads giving an extraction which averaged 62.52%.

The composite sample of Roaster Feed roasted in the laboratory resulted in an overall weight loss of 3.36% in volatile and combustible losses, dust being negligible under laboratory conditions. The follow-

Defendant U Exhibit "R"—(Continued)

ing is a comparison of the actual and laboratory results:

	Wt. Loss	% NaCl	% Tot. V_2O_5	% W.S. V_2O_5	% Extrac.	% Res. NaCl
Lab.	3.356	6.90	2.06	1.60	76.2	3.95
Act.	?	6.14	2.08	1.35	62.52	2.37

Roaster operation was practically continuous since there were only four hours lost time for drag cooler drive repair.

Leach Plant

Estimated tonnage by tank fills was 2708.75 tons of tailings to the pound. Weight loss from dry heads to tailings was 5.37%. This loss is apparently very low and is used to compensate for those that may have been too high. The laboratory results on a calcine composite show an over-all weight loss on water soluble alone of 5.2%. Of this amount 1.30% V_2O_5 and 2.38% residual NaCl represent known water soluble compounds. The over-all weight loss with salt and pyrite in was 9.946 in the laboratory and 11.17% in the plant.

A weighted composite of tailings assayed 0.84% V_2O_5 and 0.24% U_3O_8. The content of the current tailings to the pond was 43955.6 pounds of V_2O_5 and 13,002.0 pounds of U_3O_8.

Precipitation

Total precipitations this month were 69,924.6 pounds of V_2O_5. The washed red cake to fusion contained 69,225.4 pounds of V_2O_5. Recovery by V_2O_5 to fusion was 58.22%.

Defendant U Exhibit "R"—(Continued)

Fusion

Sacked Oxide produced totals 78660 pounds at the average assay of 87.103% V_2O_5 or 68515.29 pounds of V_2O_5. Recovery by the final product was 57.62%.

As of November 30, 67633.24 pounds of V_2O_5 remained in storage. Shipments to date total 885415 pounds of V_2O_5 and production to date totals 953048.24 pounds of V_2O_5.

Nisley & Wilson Vanadium Mill

The Nisley & Wilson Vanadium Mill at Gateway, Colorado, delivered 11,243.10 pounds of V_2O_5 to this office at Grand Junction, Colorado, which was the amount of V_2O_5 produced from 16,246.82 pounds of V_2O_5 available for treatment. This indicates a recovery of 68.3% for a total cost of V_2O_5 delivered of $1.56 per pound.

The Nisley & Wilson Vanadium Mill has been notified that their present operating agreement with the Metals Reserve Company terminates on January 1, 1944. At that time the plant circuit will be cleaned up and all V_2O_5 tied up in the plant inventory will be delivered to the Metals Reserve Company and final settlement will be made of the Nisley & Wilson account. It is anticipated that some loss will occur as it will not be possible to obtain the vanadium tied up in the low-grade circulating liquors.

At this time there are 2787.47 tons of ore, containing 101,310.05 pounds of V_2O_5 stockpiled at

Defendant U Exhibit "R"—(Continued)

Gateway, Colorado. In the anticipation of the continued storage of this Gateway stockpile, a new lease arrangement is being made with H. I. Gardner for the continued storage of the ore at Gateway.

Ore Procurement

Costs and Amounts.

During this month 7,650.04 dry tons of ore containing 309,976.75 pounds of V_2O_5 including all receipts were accounted for in the procurement of sandstone ores. This month's receipts show an increase of 952.89 dry tons over the month of October. The only reason for this increase would be the completion of the harvest season and the termination of the big game hunting season.

The cost per pound of V_2O_5 contained in ores purchased plus the direct stockpile expense and the allocated overhead expense for this month was $.568, an increase of 2c per pound over the previous month. Of the increase of 2c per pound approximately 1c per pound can be accounted for as increased direct stockpile expenses. It can be noted that at Thompsons, Utah, the expenses have increased approximately 75%; Moab, Utah, 73%; Dove Creek, Colorado, 42%; Gateway, Colorado, 63%. In all cases the increase in cost is due principally to maintenance and replacement of worn equipment. At Thompsons the gravity sampler splitters had to be replaced as well as the crusher jaws. At Moab numerous parts had to be supplied

Defendant U Exhibit "R"—(Continued)

and replaced in the crushing unit, and similarly at Dove Creek as well as repairs on the Dolores County gasoline power unit. The invoice on this power unit was not presented for payment although the work had been completed for many months. We are endeavoring to make the necessary repairs on the sampling plants as time permits.

The principal item of increase as noted on the Summary of Costs of Sandstone Vanadium Ores, under the heading of "Rate per pound V_2O_5" is ores received from Farmington. It shows an increase from $.623 to $.788. It will be noted that the receipts for the current month were only 47.64 dry tons of ore containing 1994.47 pounds of V_2O_5, and against this amount was charged the direct stockpile expense of $298.25. Of this amount $288.00 was paid to Ledoux and Company for the assaying of the Wade, Curran ores. This amount has been collected from Wade, Curran and Company and has appeared as a credit heretofore.

At Monticello, Utah, producer's ore showed an increase of $.022 per pound of V_2O_5 contained in ores received. This increase is due to recommended increases in price on two small producers in that area. This increase in price is justified due to the fact that these two producers have been producing an appreciable tonnage at a cost to Metals Reserve Company below the average ore purchase price. The increase was made to allow some development and maintenance of production for the re-

Defendant U Exhibit "R"—(Continued)

mainder of the ore purchasing program. New contracts were made that stipulated thirty-day cancellation clauses.

No other changes in ore prices will be made. The date of the above ore contracts was November 1, 1943.

Operations

The operations at all receiving stations were conducted on a normal basis.

Rare Metals of Colorado, Inc. Lease

As of November 30, 1943, 4,135.07 has been expended at the Rare Metals, Inc. mine near Placerville, Colorado. Of this amount approximately $1400.00 was spent in October for air and water lines, air hose, hand tools, jackbits, and $450.00 for labor. In the month of November approximately $1500.00 was spent, the principal items being drill steel, switches, powder, caps, fuse, opinion on obstracts, expense accounts, transportation charges, building materials, jackbits, rental on compressor and miscellaneous items. Labor for the month of November was $773.17. The total anticipated expenditures for the month of December will be $5800.00. It is estimated that the air and water lines and track will be installed in the principal adit by the middle of next month.

The No. 5 Portal and the surface buildings will be completed and active development work will be undertaken by December 20th, 1943.

DEFENDANT U EXHIBIT "T"

Metals Reserve Company October 4th, 1944
Washington 25, D. C.

Attention: Mr. H. DeWitt Smith, Executive Vice President.

Gentlemen:

In reply to your letter of September 30, 1944, we are enclosing our check for $86,152.16 in payment for purchase of buildings, machinery and equipment located at Durango, County of La Plata, Colorado, as per bill of sale executed as of July 31, 1944, from the Metals Reserve Company. This covers:

Depreciated price of Durango Plant	$90,736.60
Allowance for Fire Loss	4,656.94
Net Purchase Price	$86,079.66
Pro rata share of annual rental of $100.00 paid by Metals Reserve Company to American Smelting & Refining Company	72.50
Total Payment	$86,152.16

We are also enclosing one counterpart of the assignment of lease.

We understand that Metals Reserve Company will make payment on the portion of taxes assessed against the property for 1944 when due, which is

Defendant U Exhibit "T"—(Continued)

covered by the period of Metals Reserve Company ownership.

Yours very truly,

UNITED STATES VANADIUM CORPORATION,

Vice President.

DEFENDANT U EXHIBIT "U"

Conformed Copy

Agreement made as of the 13th day of October, 1944, by and between United States Vanadium Corporation, a corporation created and existing under the laws of the State of Delaware, and having an office at 30 East 42nd Street, New York, N. Y., herein called "Contractor", and Metals Reserve Company, a corporation created pursuant to Section 5d of the Reconstruction Finance Corporation Act, as amended, to aid the Government of the United States in its national defense program and war effort and having an office at 811 Vermont Avenue, N.W., Washington 25, D. C., herein called "Metals Reserve",

Witnesseth:

Whereas, the Contractor has acquired or is about to acquire from Metals Reserve, the ownership of

Defendant U Exhibit "U"—(Continued)

the vanadium plant at Durango, Colorado, mentioned in, and in accordance with the option contained in, a certain agreement between the parties hereto identified as Agency Agreement AA-92; which plant is hereinafter referred to as the Durango Plant; and

Whereas, Metals Reserve is the owner of a certain stockpile of vanadium bearing ores located at or near said Durango Plant, it being estimated that said stockpile contains approximately 21,609 short tons of crude vanadium ore, and Metals Reserve is desirous of having the said ore processed and treated in said Durango Plant by the Contractor upon the terms and conditions hereinafter set forth;

Now, Therefore, in consideration of the premises Contractor and Metals Reserve hereby agree as follows:

1. Subject to the provisions and conditions hereinafter mentioned, the Contractor shall process and treat the aforesaid vanadium bearing ores at said Durango Plant, and deliver to Metals Reserve in the form of sacked fused vanadium oxide f.o.b. railroad cars at said Durango Plant or storage warehouse at Durango, at option of Metals Reserve, an amount of sacked fused vanadium oxide equal to 62.62% of the V_2O_5 contained in said ore fed to said Durango Plant. All the rest, residue and remainder of said ore in the form of tailings, processed or partially processed material, or other-

Defendant U Exhibit "U"—(Continued)

wise, shall be and become the property of the Contractor, it being intended that if the quantity of V_2O_5 extracted from such ore and delivered in the form of fused vanadium oxide shall be less than 62.62% of the V_2O_5 content of the ore fed to the plant, then the Contractor shall make good the difference, and if the quantity extracted shall be more than 62.62% as aforesaid, the Contractor shall be entitled to retain the excess. All of said sacked fused vanadium oxide delivered hereunder shall contain a minimum of 84% V_2O_5, a maximum of 0.3% sulphur, a maximum of 1.5% insoluble material and shall otherwise conform to usual trade specifications and quality. Fused vanadium oxide not meeting the foregoing conditions may be rejected by Metals Reserve and Contractor shall replace same with sacked fused vanadium oxide meeting such conditions.

2. Metals Reserve shall pay to the Contractor an amount equal to 32.4c per lb. of V_2O_5 delivered hereunder in the form of fused vanadium oxide, packed in sacks, such payment to be made upon receipt of two copies of Contractor's invoice for treatment, accompanied by two copies of R.F.C. Form No. T-31 Voucher, signed copy of railroad bill of lading or storage receipt in form acceptable to Metals Reserve identifying the material, and two weight and analysis certificates certified by Contractor. All billings by the Contractor hereunder shall be based upon Contractor's analyses and ex-

Defendant U Exhibit "U"—(Continued)

cept in the case of final billing shall be made on the basis of carload lots. In the event that Metals Reserve shall dispute any analysis of the Contractor, final adjustment shall be made between the parties hereto on the basis of umpire laboratory analyses made pursuant to Article 6 hereof.

3. All weights of ore fed to the plant are to be determined by truck scale weights, of which Metals Reserve's representative has the right of inspection and check. At the time the truck weights are taken moisture samples are to be taken for the determination of moisture content. Moisture samples are to be stored in sealed cans and the moisture determined by standard methods as agreed to by the representative of Metals Reserve and the Contractor, or failing agreement as determined by an independent analyst. The resulting dry weights are to constitute the quantity of ore fed into the Durango Plant.

4. Daily samples of ore for the determination of the vanadium content of the ore fed into the plant will be taken by standard methods at a point and in a manner to be agreed upon by the representatives of Metals Reserve and the Contractor, preferably and if possible by automatic sampling methods. Such daily samples are to be divided into three parts. One of said parts shall be used for daily analysis by the Contractors; the second of said parts shall be delivered to the representative of Metals Reserve; and the third of said parts shall

Defendant U Exhibit "U"—(Continued)

be used for the composite sample hereinafter mentioned.

At the end of each ten day period the daily composite sample shall be used to make one weighted sample jointly by the representatives of Metals Reserve and the Contractor. This weighted ten day composite sample shall be divided into three parts. One of said parts shall be delivered to the Contractor; one of said parts to the representative of Metals Reserve; and the remaining part shall be retained for umpire analysis.

The Contractor shall deliver to representative of Metals Reserve written statements containing the following information:

a. The gross wet tons of ore fed to the plant each day and during each ten day period;

b. The net dry tons of ore fed to the plant each day and during each ten day period;

c. The V_2O_5 analysis and pounds of V_2O_5 contained in ore fed to the plant each daily period and during each ten day period;

d. The V_2O_5 analysis of the composite sample of ore fed to the plant each ten day period.

If Metals Reserve does not disagree in writing within thirty days after receipt of such statement, the V_2O_5 analysis of the composite sample therein stated shall be deemed accepted and shall be binding upon both parties as the determination of the V_2O_5 content of the ore fed to the plant during the period covered by such statement. Should Met-

Defendant U Exhibit "U"—(Continued)

als Reserve disagree with the V_2O_5 determination of the Contractor contained in such statement, Metals Reserve shall deliver to the Contractor, within such thirty day period, a written statement setting forth its determination. If the parties shall be unable to promptly reconcile the difference, then the part of the composite sample for the same period preserved for umpire analysis shall be delivered to the umpire laboratory agreed upon for this purpose. The umpire laboratory findings are to be final and binding upon both parties and the cost of umpire analyses shall be borne by the party whose determination was furthest from the umpire determination.

5. The finished fused oxide shall be weighed and sampled by representatives of Metals Reserve and the Contractor in accordance with standard practice as agreed upon by the representative of Metals Reserve and the Contractor, and three portions of such final sample shall be taken, one of such portions shall be delivered to the representative of Metals Reserve, one of such portions shall be delivered to the representative of the Contractor, and the third of such portions shall be retained for umpire analysis in the event of any dispute between the parties hereto as to the analysis thereof.

6. In the event of dispute as to the analysis of any sample or samples of ore fed to the plant and/or fused vanadium oxide delivered hereunder, the same shall be submitted to either Ledoux & Co.

Defendant U Exhibit "U"—(Continued)

Inc., Booth, Garrett and Blair or Andrew S. MacCreath and Son, as Metals Reserve may elect, as umpire laboratory, and the determination of such umpire laboratory shall be final and binding upon both parties.

7. Contractor agrees, upon request of Metals Reserve, to make available without compensation for the storage of sacked fused vanadium oxide pending sale or other disposition any existing storage capacity at said Durango Plant. Should Metals Reserve so request, Contractor also agrees to act without compensation as shipping agent for Metals Reserve and in this connection will arrange shipments of said sacked fused vanadium oxide pursuant to letters of instruction issued by Metals Reserve.

8. The processing of the ore shall be commenced as soon as practicable and Contractor shall and will complete this contract not later than twelve months from the date hereof. Contractor shall not be liable for any faliure to make deliveries or delay in making deliveries which may result from fire, strikes, Acts of God, or other causes beyond the control of the Contractor.

9. This contract shall be deemed to contain all of the provisions of subsection (b) of the Renegotiation Act, as amended by Section 701 of the Revenue Act of 1943 (Public Law 235, 78th Congress), enacted February 25, 1944; and in compliance with

Defendant U Exhibit "U"—(Continued)

that subsection the Contractor shall insert, in each subcontract (as that term is defined in said Act) entered into by the Contractor, a provision that: "This contract shall be deemed to contain all of the provisions of subsection (b) of the Renegotiation Act, as amended."

10. It is expressly understood and agreed that the convenants, conditions and provisions contained in Exhibit A, annexed hereto and made a part hereof, shall be and be deemed to be incorporated in this agreement to the same extent and with the same effect as if set forth herein at length.

In Witness Whereof, Contractor and Metals Reserve have caused this agreement to be executed in duplicate by their respective officers thereunto duly authorized, the day and year first hereinabove written.

UNITED STATES VANADIUM CORPORATION,

/s/ By J. R. VAN FLEET,
President.

METALS RESERVE COMPANY,

/s/ By H. DEWITT SMITH,
Executive Vice President.

MRC Form No. 21, revised 11/11/43

EXHIBIT A

1. Assignment. (a) Contractor shall not, without the prior written consent of Metals Reserve,

Defendant U Exhibit "U"—(Continued)

sell, assign or pledge this Contract or any of its rights, powers, privileges, duties or obligations hereunder. (b) Metals Reserve may assign its interest under this Contract to any other branch or agency of the Government of the United States of America, and upon such assignment such assignee shall acquire all the rights, powers and privileges of Metals Reserve hereunder and shall be bound by all the duties and obligations of Metals Reserve hereunder, and Metals Reserve shall thereby cease to have any rights, powers, privileges, duties or obligations hereunder, it being expressly understood that any such assignment by Metals Reserve of its i est in this Contract shall be subject to all the rights, powers, and privileges of Contractor hereunder and shall be conditioned upon such assignee's assuming all duties and obligations of Metals Reserve hereunder.

2. Non-Waiver Clause. The failure of either the Contractor or Metals Reserve to insist, in any one or more instances, upon the performance of any of the terms, covenants, and conditions of this Contract shall not be construed as a waiver or relinquishment of the future performance of any such term, covenant or condition by the other party hereto, but the obligation of such other party with respect to such future performance shall continue in full force and effect.

3. Notice. Notice to either party hereto shall be sufficient only if given in writing addressed to

Defendant U Exhibit "U"—(Continued)

such party at the address set forth in the Contract, or, if the Contract designates an Agent, to such Agent's address as set forth in the Contract, or to such other address as either party for itself may hereafter specify to the other in writing.

4. Default. Notwithstanding any other provisions of the Contract to which this is attached as an Exhibit, Metals Reserve may, by notice in writing to Contractor, cancel this Contract or any part thereof at any time, without payment of damages or penalty of any kind for such cancellation, in the event (a) a receiver, liquidator or trustee is appointed for Contractor or its property, or Contractor makes an assignment for the benefit of Creditors, or Contractor becomes insolvent, or a petition is filed by or against Contractor pursuant to any of the provisions of the United States Bankruptcy Act, as amended, for the purpose of adjudicating Contractor a bankrupt, or for the reorganization of Contractor, or for the purpose of effecting a composition or rearrangement with Contractor's creditors, and such receiver, liquidator, or trustee is not discharged or any such petition filed against Contractor is not dismissed within sixty (60) days, (b) of the liquidation or dissolution of Contractor (if Contractor is a corporation), whether voluntary or involuntary, (c) of default by Contractor in the performance of any of the terms, conditions or covenants of this Contract or any amendment or supplement thereto and the failure of Contractor

Defendant U Exhibit "U"—(Continued)

to cure such default within thirty (30) days from the giving of a written notice of such default by Metals Reserve to Contractor, (d) of the determination by Metals Reserve that Contractor obtained this Contract for the purpose of speculation.

5. Governing Law. This Contract shall be construed under and governed by the law of the State of New York.

6. Contingent Fees. Contractor warrants that Contractor has not employed any person to solicit or procure this Contract upon any agreement for a commission, percentage, brokerage or contingent fee. Breach of this warranty shall give Metals Reserve the right to deduct from any amounts due Contractor from Metals Reserve the amount of such commission, percentage, brokerage, or contingent fee or to recover said amount upon making demand therefor, without prejudice to any other rights of Metals Reserve.

7. Members of Congress. No member of or delegate to the Congress of the United States of America or Resident Commissioner shall be admitted to any share or part of this Contract or to any benefit that may arise therefrom, but this provision shall not be construed to extend to this Contract if made with a corporation for its general benefit.

8. Compliance with Applicable Laws. In the performance of this Contract, Contractor shall comply with and give all stipulations and representations

Defendant U Exhibit "U"—(Continued)

required by any applicable Federal, State, Municipal or local law, or Executive order, or any applicable rules, orders, regulations or requirements of any government department or bureau, including the provisions of and regulations under Walsh-Healey Act (49 Stat. 2036-2039) which are hereby incorporated herein by reference, but nothing herein contained shall be considered as preventing Contractor from contesting in good faith the validity of such law, rule, order, regulation or requirement or any charge that Contractor has not complied therewith. Contractor expressly agrees to comply with the applicable provisions of Executive Order 9301 establishing a minimum wartime workweek of forty-eight hours and any modifications thereof and any regulations issued pursuant thereto. Pursuant to Executive Order No. 8802 dated June 25, 1941 as amended by Executive Order 9346 dated May 27, 1943, Contractor hereby agrees that Contractor will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin and that Contractor will include in its subcontracts a similar provision obligating the subcontractor not to discriminate against any employee or applicant for employment because of race, creed, color or national origin.

DEFENDANT U EXHIBIT "Z"

Attention: Mr. J. R. Van Fleet, President.

Gentlemen:

Reference is made to Exploration and Development Contract No. W-7405 eng-78 effective as of the 11th day of May, 1943, between the United States of America (hereinafter called the "Government"), represented by the Contracting Officer executing the Contract, and yourselves. In aid of the war effort and of said Contract, you are hereby authorized by us to locate on Public Domain Lands in the so-called Colorado Plateau Area within the States of Wyoming, Colorado, New Mexico, Arizona and Utah mining claims containing carnotite and related ores subject to the following conditions:

All locations shall be made in your own name, but shall be made on our behalf and it is expressly understood and agreed that: any and all title acquired by you shall be transferred to our name or to the name of our nominee upon our request; the

Defendant U Exhibit "Z"—(Continued)

mining claims located pursuant to this authorization shall be only such claims as you shall be authorized to locate by the Government, acting through the Contracting Officer, as provided in Section 2.(c) of Article I-A, Title I of said Contract; this authorization is permissive only and you shall not look to us for reimbursement of any costs or expenses or for indemnification.

You shall promptly furnish us with a list of all mining claims as located by you from time to time, together with such detailed descriptions thereof as may be requested by us. You shall hold said claims, dispose of same and have the option rights regarding same as provided in said Contract No. W-7405 eng-78. The authorization contained in this letter may be cancelled by us at any time upon not less than fifteen days' prior written notice to you, provided that, if not previously terminated by us, said authorization shall terminate coincidentally with the termination of said Contract No. W-7405 eng-78 of which said termination you shall give us immediate notice in writing.

No Member of or Delegate to the Congress of the United States shall be admitted to any share or part of this Contract or to any benefit arising therefrom, but this provision shall not extend to this Contract if made with a corporation for its general benefit.

If the foregoing is agreeable to you, kindly indi-

Defendant U Exhibit "Z"—(Continued)

cate your acceptance by signing and returning to us the enclosed copy of this letter.

Very truly yours,

METALS RESERVE COMPANY,

Attention: Mr. J. R. Van Fleet

Gentlemen:

Reference is made to letter agreement dated July 3, 1944 between Union Mines Development Corporation and Metals Reserve Company, and to Exploration and Development Contract No. W-7405 eng-78 effective as of the 11th day of May, 1943 between the United States of America and yourselves.

As you know, pursuant to Public Law 109, 79th Congress, approved June 30, 1945, Metals Reserve Company was dissolved effective July 1, 1945, and all of its functions, powers, duties and authority, together with all of its documents, books of account, records, assets and liabilities of every kind and nature were transferred to Reconstruction Finance Corporation to be performed, exercised and administered by that Corporation in the same manner and to the same extent and effect as if originally vested in Reconstruction Finance Corporation.

Under date of May 1, 1947, we received a letter from Honorable David E. Lilienthal, Chairman, United States Atomic Energy Commission, informing us that Contract No. W-7405 eng-78 was transferred to the Atomic Energy Commission pursuant to Executive Order No. 9816, dated December 31, 1946, and requesting that Union Mines Development Corporation be instructed to transfer to the United States of America those mining claims acquired by it under said contract and held for and on behalf of Metals Reserve Company pursuant to said letter agreement dated July 3, 1944. The Commission is arranging for the preparation of the necessary transfer instruments.

Please, therefore, transfer to the United States of America, our nominee, all mining claims acquired by you under said letter agreement dated July 3, 1944. You will please contact the Atomic Energy Commission, which will prepare all necessary transfer instruments. We are forwarding a copy of this letter to the Atomic Energy Commission.

Under date of May 14, 1947, Honorable Sumner T. Pike, Acting Chairman of the Commission, wrote us advising that the Secretary of War has not excepted the right, title and interest of the War Department in the said claims from the transfers effected under Presidential Executive Order No. 9816 dated December 31, 1946.

Kindly acknowledge receipt hereof and inform us when the action herein requested has been consummated.

Very truly yours,

DEFENDANT UNION CARBIDE EXHIBIT No. 2-I

December 10, 19 40

ELECTRO METALLURGICAL SALES CORPORATION agrees to sell and

Continental Ore Company of New York, New York

agrees to buy Buyer's domestic manufacturing requirements

of Vanadium Oxide (Fused)

for delivery in as nearly equal monthly quantities as practicable at the respective prices, terms, and conditions set forth in this agreement, which shall continue until terminated by either party giving not less than six (6) months' prior written notice to the other party.

The prices and terms of payment for the standard grade or grades and sizes of this material, applicable in the zone or zones in which Buyer's plants are located, are shown on the schedule hereto attached and made a part of this agreement. The boundaries of the established price zones are shown on the reverse hereof.

The prices which are in effect may be revised by the Seller at the beginning of any calendar quarter year by giving not less than fifteen (15) days prior written notice to the Buyer. Such revised prices shall become effective at the beginning of such calendar quarter year and shall remain in effect until again revised in the manner hereinbefore provided. If any such revised prices are not acceptable to the Buyer, the Buyer may cancel future tonnage contracted for hereunder to which such revised prices apply by giving written notice to the Seller not less than ten (10) days prior to the beginning of such calendar quarter year.

Deliveries are subject to strikes, riots, war, governmental acts and regulations, fires, explosions, accidents, acts of God, delays in procuring sufficient or suitable raw materials, delays of carriers, curtailment of or failure in obtaining sufficient electrical power, and other similar or dissimilar contingencies affecting the Seller or the manufacturer of the material and beyond its reasonable control.

During any time in which the Seller is not satisfied with the Buyer's financial responsibility, the Seller may change the terms of payment or suspend deliveries.

The Buyer shall pay all existing and future taxes imposed *by reason of sale or delivery* under this agreement.

The benefits and obligations of this agreement shall extend to the successors and assigns of the respective parties.

This agreement shall not be effective until approved by an officer or manager of the Seller and when so approved shall supersede all prior agreements covering the same material. No change in or addition to the terms hereof shall be made unless approved in writing by an officer or manager of the Seller, and an authorized representative of the Buyer.

PRICE SCHEDULE

VANADIUM OXIDE (FUSED)—EASTERN ZONE

Analysis:

Vanadium Oxide (V_2O_5)	86-89%
Sodium Oxide (Na_2O)	10% approximately
Calcium Oxide (CaO)	2% approximately

CONTRACT PRICE—Effective November 8, 1943

In Any Quantity $1.10

Price is per pound of vanadium oxide (V_2O_5) contained in the compound. Delivery is f.o.b. carrier at works or warehouses of the Seller with transportation charges not exceeding railroad freight allowed to destination. Terms are net cash thirty (30) days from date of invoice.

NON-CONTRACT PRICE is $.05 higher than above price, and is subject to change without notice.

DEFENDANT U EXHIBIT 2-R

Nisley & Wilson Vanadium Mill
Gateway, Colorado

Mr. Paige Edwards **July 9, 1943**
Metals Reserve Company
Monticello, Colo.

Dear Mr. Edwards:

Enclosed please find copies of letters sent to John Hill regarding continuation of the Toll Agreement. We have asked for an extension of the present arrangement.

Sincerely yours,

NISLEY & WILSON,
/s/ FRANK NISLEY JR.

[Pencil Notes: Other Metals. Refer Hill's Letter 7/13/43. Agreement for 6 months from July 1st.—Hill's Letter 7/16/43. Recov. to date 72%. 1—2% in amount excell. product.]

Defendant U Exhibit 2-R--(Continued)

Nisley & Wilson Vanadium Mill
Gateway, Colorado

Mr. John Hill — July 8, 1943
Supervising Engineer
Metals Reserve Company
Grand Junction, Colorado

Dear Mr. Hill:

We are submitting a report of our costs per pound of V_2O_5 produced during the month of June which we think is a representative cost of our operation. These costs very closely compare with the costs which we presented to Mr. Burwell and Mr. Whitaker at the time the Toll Agreement was drawn up.

Although we have not been able to reach our capacity due to explanation shown in letter enclosed, we are satisfied to continue under the same terms and conditions as specified in the Toll Agreement dated January 26th, 1943, which we are now operating under. We feel that the extension of the Toll Agreement should continue the operation for as long as the Metals Reserve Company is purchasing ores in the Gateway District.

We would appreciate your immediate attention to this matter.

Sincerely yours,

NISLEY & WILSON,
/s/ FRANK NISLEY JR.

DEFENDANT U EXHIBIT 2-U

[Letterhead of Nisley & Wilson Vanadium Mill]

Mr. Henry J. Leir — December 13, 1943
Continental Ore Company
New York, New York

Dear Mr. Leir:

We have been informed by the United States Vanadium Corporation as Agents for Metals Reserve Company that the present contract with them will not* be renewed after the expiration date of January 1, 1944. The M.R.C. have about 3500 tons of raw ore stockpiled at our plant at the present time. We do not know yet what will be done with it.

The trend in this section is for the Metals Reserve Company to relinquish ore buying contracts and drop out of the ore buying business. Control of production is to be returned to individual companies.

The most serious problem which will arise out of the change of control, as far as the production of vanadium is concerned, is the buying of vanadium ores. The M.R.C. have raised the price of ore to such a high level that it will make the cost of the finished product 20c over the old price of $1.10. It will not be possible at the present time at least to buy the crude ore at the prices existing before the M.R.C. began buying ore. The M.R.C. raised the raw ore price from the old level of 21c

*Underscored in pen.

Defendant U Exhibit 2-U—(Continued)

to 31c per pound of contained V_2O_5. The hauling price was also raised on the ore. The raises will amount to about 20c per pound of recovered vanadium pentoxide. This raise can be readjusted in time but at present labor is scarce and also costs more per ton of ore produced. The raise in ore price is the only serious problem which we see in the way of production.

We would appreciate any information which you may be able to give us concerning a market for the vanadium after the first of the year and also the price. We would like to formulate plans as soon as possible for the change in operation.

We appreciate very much your past cooperation and sincerely hope that plans can be made for an operation which will be of mutual benefit.

Sincerely yours,

NISLEY & WILSON,
/s/ FRANK NISLEY JR.

[Pencil Notes: a.1 in flakes ground 1/16". b.1 1.10 $ Basis 1% Na_2O.]

DEFENDANT U EXHIBIT No. 2-Y

[Letterhead of Nisley & Wilson Vanadium Mill]

Mr. Henry John Leir
Continental Ore Company
500 Fifth Avenue
New York City

May 15, 1944

Dear Mr. Leir:

Since I have been called to service in the Navy and leave day after tomorrow, I thought it best to write you a note regarding the status of the mill.

For the time being Mr. Wilson, Mr. Gardner and myself have decided to leave the mill intact pending future developments. Mr. Wilson intends to go to other work. Mr. Gardner therefore will look after the plant. Should anything of interest develop I would suggest that you contact Mr. Gardner at Glenwood Springs. As you know Mr. Gardner is doing other work and has kept the chemist, who was with us since the mill started and who is familiar with the plant operation, with him. The plant could be operated again should the occasion demand on fairly short notice.

There is one other matter which should be straightened out. As you know we had some drums on hand which belong to you. At the time we started production under the M.R.C. program you will remember that you had an order for our production thru the M.R.C. We wrote you concerning the matter and your Company write us that we

Defendant U Exhibit No. 2-Y—(Continued)

could use the drums to ship the material in. Later however the program was changed. However our material was stored in your drums. Since you did not take the material, the drums were stored in the warehouse in Grand Junction. A few days ago the M.R.C. shipped the material from Grand Junction. I informed Mr. Hill again that the drums were your property. He asked me that we find out the price on the drums and they would pay for them if it would be alright instead of returning them as the cake is to be stored and therefore will not be removed from them except by special demand. If it is alright with you to accep cash for them and if you will send us the price on them we will collect for them and send you the check. We still have some of the drums stored at the plant. If you will write to Mr. Wilson at Gateway immediately telling us what you wish done about the matter, he will take care of it, either returning drums to you or preferable paying for them. Mr. Wilson will be at the plant for a week or two yet.

Sincerely yours,

NISLEY & WILSON,
/s/ FRANK NISLEY JR.

U. S. Navy—E.E. & R.M.

University of Houston, Houston, Texas

Mr. Leir 10/8/44
c/o Continental Ore Company
500 Fifth Avenue
New York City

Dear Mr. Leir:

Last week Mr. Wilson wrote me regarding the Gateway plant. As you may know Mr. Gardner isn't interested in operating it himself. He is interested in contracting and that keeps him busy.

I'm sort of helpless in the situation at least until the war is over. The question bothering Mr. Wilson was what to do about the plant, and whether we should attempt to hold it intact until later on, or should it be salvaged and expenses connected with the plant stopped thereby.

Before I attempt to make a decision as to where I stand, I would like very much to have your opin-

Defendant U Exhibit No. 3-C—(Continued)

ion on the outlook for a market for vanadium after the war. Does the picture look at all favorable for a return to normal or to the condition existing just prior to the war?

Personally, if there is a chance to have anywhere near the same conditions as existed just prior to the Metal Reserve Company's entrance into the picture, I would very much like to continue the Gateway operation and with average chances, I feel confident we could have a very steady and profitable operation.

Harry Gardner has suggested in the past a way by which we could bring the business under one ownership entirely whereby we could charge the plant as we saw fit. This would clear the old Gateway alloys entirely from the picture.

Mr. Balsley wrote me a few days ago and he mentioned in his letter about a new program affecting uranium which was being put into effect by the government. He is quite concerned over the way Sec. Ickes is removing Grand country area from filing rights.

I have been going to school since leaving Great Lakes and expect to be in school for at least 8 more months. The course is rather a fast one and quite general. We get electricity as well as radio, sound equipment, radar, and all related subjects. We spend from 7:30 in the morning until 9:30 at night in school with little time in between except

Defendant U Exhibit No. 3-C—(Continued)

for meals. This climate is very warm but other than that we can't complain.

Would surely appreciate your opinion as to the possibilities of a vanadium industry or market for vanadic oxide after the war if you find time to write.

Sincerely,

FRANK NISLEY, JR.

DEFENDANT U EXHIBIT No. 3-Q

North Continent Mines, Inc. July 14, 1942
231 South La Salle Street
Chicago, Illinois.

Gentlemen:

Attention: Mr. W. P. Hendricks.

Re: Vanadium Concentrates.

We should like to refer to our conversation of yesterday, and to thank you very much for the courtesies extended to the writer.

We informed you that since the Apex Smelting Company is at present unable to carry on their ferro department because of urgent Government commitments, we have made arrangements to continue this business in a plant located on Long Island, near New York City.

We understand that the necessary changes in your plant will be completed shortly, so that you

Defendant U Exhibit No. 3-Q—(Continued)

will be in a position to deliver the regular vanadic acid 85%, instead of iron vanadate, as you do now.

In this connection, we informed you of our present price schedule for regular vanadic acid, which is as follows:

Monthly Deliveries

Less than 3,000 lbs.....$1.10 per lb. V_2O_5
Between 3,000 & 10,000 lbs.... 1.12½ per lb. V_2O_5
Between 10,000 & 20,000 lbs... 1.15 per lb. V_2O_5
f.o.b. producers shipping point.

The moment you start shipments of vanadic acid, the prices mentioned above will, of course, also be applied to your deliveries.

During the interim, we agreed to pay you for your iron vanadate the minimum price provided in the above schedule, that is $1.10 f.o.b. your shipping point.

The address of our plant is as follows:

Continental Ore Corporation
51-40 Manila Street
Winfield
Long Island, N. Y.

The address to be notified is:

Continental Ore Corporation
500 Fifth Ave.
New York, N. Y.

We leave it up to you whether shipments are made by rail or truck. If by rail, routing should be as follows:

Long Island Railroad Delivery.

Defendant U Exhibit No. 3-Q—(Continued)

As to terms of payment, we asked you to let us know your wishes, and expect to hear from you in this respect.

We are enclosing photostatic copy of our general license to process vanadium, which, of course, will be supplemented each month by the allocation from the War Production Board, as heretofore.

In order to be able to make the necessary applications in time and to contact our customers regarding the sale of the finished product, we would appreciate your informing us between the tenth and fifteenth of each month as to the quantities you expect to have available for shipment during the following month.

We are convinced that our direct relationship with you will prove to be pleasant and satisfactory for all parties concerned.

Very truly yours,

CONTINENTAL ORE CORPORATION,
Martin Wolf.

mw/o
enc.

P.S. Regarding allocation for August, we noted that you will have between 10,000 and 12,000 lbs. V_2O_5 available next month, and we therefore are applying to the WPB for 12,000 lbs. V_2O_5 from you during August.

DEFENDANT U EXHIBIT No. 4-A

August 3, 1942

Gentlemen:

We are pleased to inform you that we have received copy of the allocation (the original of which you will receive) issued by the WPB, authorizing you to ship to us 4,500 lbs. V which is equivalent to about 9,500 lbs. of vanadic acid.

We also received your wire reading

> "Have shipped by Ringsby Truck to Apex 6507 pounds of vanadic acid. Other 500 pounds can be shipped with approximately 2000 more on August 10 if satisfactory."

for which we thank you.

Because of urgent government work in the aluminum and magnesium field at the Apex Smelting Co. plant in Chicago, we have shifted our ferro-alloys production to our Long Island plant for the duration of the war. We would, therefore, appreciate your making all future shipments to

Continental Ore Corporation
51-40 Manila Street
Winfield, Long Island
New York

The address to be notified is

Continental Ore Corporation
500 Fifth Avenue
New York, New York

Defendant U Exhibit No. 4-A—(Continued)

If shipment is made by rail, routing should be as follows:

Long Island Railroad Delivery.

If shipment is made by truck, the value to be specified is $50 per shipping package (drum or bag). If you ship by rail, please declare value of 5c a lb.

We opened today a letter of credit for the 2,500 lbs. of acid you intend to ship on August 10. We based our figures on a price of $1.10 per lb. V_2O_5, f.o.b. Gateway, Colorado. We will make price adjustment as soon as the material is received and we know what quantities will be shipped during August.

As you will see from the letter of credit, we stipulated that you have to present

our certificate of weight (plant's weighmaster)
Ledoux' certificate of analysis

for payment.

We trust that this arrangement is satisfactory to you. (We talked to Ledoux and they informed us that they require three days for an analysis of V_2O_5.)

Very truly yours,

CONTINENTAL ORE CORPORATION,
Martin Wolf.

Gentlemen:

Re: 178 bags Fused Vanadium Oxide

Your order number 24892

Thank you for your shipping advice of April 30 regarding the above shipment made to our address at Langeloth, Pa.

We would very much appreciate your kindly giving us the complete analysis of each of the three lots.

We would also appreciate your attaching copy of the bill of lading to your invoice as we need it for our bookkeeping department.

Thank you for your kind attention.

Very truly yours,

CONTINENTAL ORE COMPANY,

Metals Reserve Company
Washington, D. C.

Mr. M. Wolf — August 4, 1944
Continental Ore Company
500 Fifth Avenue
New York 18, New York

Dear Mr. Wolf:

Please refer to your letter of July 25, 1944, inquiring about vanadium pentoxide.

Our stockpile of Fused Vanadium Oxide at East St. Louis consists of three analyses of V_2O_5; viz, 85.22%—85.06%—87%, all in the form of flakes and if any of this material is of interest to you we shall be pleased to receive your offer for a given quantity.

For your information, we no longer have the material in Colorado which was at one time of interest to you.

Very truly yours,

E. L. MURPHY.

Mr. Wolf

Let us discuss this on the phone.—Should we not buy say 5 tons for the purpose of filling our several trial orders. I have a feeling, that we could buy this material at 1.00 Doll fob East St. Louis.

How can we find out, how much of it is in stock?

Defendant U Exhibit No. 4-R—(Continued)

Continental Ore Company
500 Fifth Avenue
New York, New York

Sep. 20, 1944

Gentlemen:

Subject to the terms and conditions of the contract enclosed herewith in duplicate, Metals Reserve Company will sell to you approximately 4,353 pounds of vanadium pentoxide (V_2O_5) contained in approximately 5,049 pounds of fused vanadium oxide, dry basis, at the price of $1.10 per pound of contained vanadium pentoxide (V_2O_5), to be delivered f.o.b. railroad cars at your plant, Winfield, Long Island, New York promptly upon receipt of your shipping instructions satisfactory to this Company.

Both copies of the contract should be executed by an authorized officer of your Company with its corporate seal affixed thereto and returned to this office, upon receipt of which an executed copy will be promptly forwarded to you. The date of the contract will be inserted at the time of its execution by Metals Reserve Company.

Certified check covering preliminary payment and shipping instructions should be forwarded to the Traffic Manager, Metals Reserve Company, Wash-

Defendant U Exhibit No. 4-R—(Continued)

ington 25, D. C., who will, upon receipt of same, arrange the details for delivery of the material.

Sincerely yours,

/s/ S. D. STRAUSS,
S. D. Strauss,
Vice President.

Metals Reserve Company
Washington, D. C.

CONTRACT

Seller: Metals Reserve Company, 811 Vermont Avenue, N. W., Washington 25, D. C. (hereinafter called "Seller"), agrees to sell and deliver,

Buyer: Continental Ore Company, 500 Fifth Avenue, New York, New York (hereinafter called "Buyer"), agrees to buy and receive,

Material: Fused Vanadium Oxide (hereinafter called "Oxide"), containing 86.22% vanadium pentoxide (V_2O_5).

Quantity: Approximately 4,353 pounds of vanadium pentoxide (V_2O_5) contained in approximately 5,049 pounds of oxide, dry basis.

Delivery: The oxide is available for prompt shipment from Seller's East St. Louis, Illinois stockpile and shall be delivered f.o.b. railroad car Buyer's plant at 51-40 Manila Street, Winfield, Long Island, New York, upon receipt of preliminary payment provided for hereinafter and sub-

Defendant U Exhibit No. 4-R—(Continued)

ject to Buyer's promptly furnishing shipping instructions satisfactory to Seller.

Price: One Dollar Ten Cents ($1.10) per pound of contained vanadium pentoxide (V_2O_5).

Weights: Weights as determined upon arrival of the oxide at Buyer's plant by Ledoux & Company, Inc., New York, New York shall be conclusive as to quantity, the cost of such weighing to be divided equally between Buyer and Seller:

Sampling, Moisture Determination and Analysis: The oxide has been sampled and analyzed and the moisture determined in accordance with the usual practice by Ledoux & Company, Inc., whose analysis shall be conclusive as to quality. Cost of such sampling, analysis and moisture determination shall be borne equally by Buyer and Seller.

Payment: Preliminary payment of $4,313.14 shall be made to Seller prior to delivery, with final payment and adjustment, if any, to be made promptly upon receipt of Seller's invoice, with certificates of weights and analysis attached.

Force Majeure: If the performance of any part of this Contract by either Seller or Buyer is prevented, hindered or delayed by reason of any cause or causes beyond the control of Seller or Buyer, then the Seller or Buyer, as the case may be, shall be excused from such performance during the continuance of any such happenings or events.

Defendant U Exhibit No. 4-R—(Continued)

Congressional Clause: No member of or delegate to the Congress of the United States shall be admitted to any share or part of this Contract or to any benefit arising therefrom, but this provision shall not be construed to extend to this Contract if made with a corporation for its general benefit.

Cancellation: Notwithstanding any other provision hereof this Contract may be canceled by Seller with respect to any oxide remaining undelivered after October 31, 1944.

Executed in Duplicate.

Dated: September 26, 1944.

Att: Mr. A. F. Brown, General Manager
Re: Metals Reserve's Vanadium Stocks

Gentlemen:

We refer to your recent visit here, when you wanted to get an idea as to the quantities of vanadium at present held by Metals Reserve Company, or other government agencies.

Unfortunately, these figures are not readily available, but as far as we can ascertain, the stocks at the beginning of this year were approximately as follows:

*Ferro Vanadium: About 500,000 pounds V in the form of 40% ferro vanadium.

*Vanadium Pentoxide: About 1,500,000 pounds V in the form of 85% V_2O_5.

Lead Vanadate: About 160,000 pounds V contained.

We heard, however, that these stocks were recently reduced by reason of the fact that the Vanadium Corporation of America,** in order to fill some

*[Note: Marginal note "x Wall Street Journal July 17, 1944."]

**[Note: Marginal note "xx Mirel Oct. 28, 1944".]

Defendant U's Exhibit "4-T"—(Continued)

export orders for ferro vanadium, bought 250,000 pounds of V contained in vanadium pentoxide from Metals Reserve, so that present stocks of vanadium pentoxide should be reduced to about 1,250,000 pounds, if not lower.

These figures are arrived at on the basis of various, scattered information, and as soon as more precise data are available, we will of course let you know.

Very truly yours,

CONTINENTAL ORE COMPANY,

Manager.

January 29, 19 46

ELECTRO METALLURGICAL SALES CORPORATION agrees to sell and

Continental Ore Company of New York, New York

agrees to buy Buyer's domestic manufacturing requirements of the following material for delivery in as nearly equal monthly quantities as practicable at the respective prices, terms and conditions set forth in this agreement which shall continue until terminated by either party giving not less than six (6) months' prior written notice to the other party.

VANADIUM PENTOXIDE

EASTERN ZONE

PRICE: Any Quantity $1.10

Requirements estimated to be approximately 1000 lbs. per month.

Prices are per pound of vanadium pentoxide (V_2O_5) contained in the compound. Delivery is f.o.b. carrier at works or warehouses of the Seller with transportation charges not exceeding railroad freight allowed to destination. The boundaries of the established price zones are shown on the reverse hereof. Terms are net cash thirty (30) days from date of invoice.

The prices which are in effect may be revised by the Seller at the beginning of any calendar quarter year by giving not less than fifteen (15) days prior written notice to the Buyer. Such revised prices shall become effective at the beginning of such calendar quarter year and shall remain in effect until again revised in the manner hereinbefore provided. If any such revised prices are not acceptable to the Buyer, the Buyer may cancel future tonnage contracted for hereunder to which such revised prices apply by giving written notice to the Seller not less than ten (10) days prior to the beginning of such calendar quarter year.

Deliveries are subject to strikes, riots, war, governmental acts and regulations, fires, explosions, accidents, acts of God, delays in procuring sufficient or suitable raw materials, delays of carriers, curtailment of or failure in obtaining sufficient electrical power and other similar or dissimilar contingencies affecting the Seller or the manufacturer of the material and beyond its reasonable control.

During any time in which the Seller is not satisfied with the Buyer's financial responsibility the Seller may change the above terms of payment or suspend deliveries.

The Buyer shall pay all existing and future taxes imposed *by reason of sale or delivery* under this agreement.

The benefits and obligations of this agreement shall extend to the successors and assigns of the respective parties.

This agreement shall not be effective until approved by an officer or manager of the Seller and when so approved shall supersede all prior agreements covering the same material. No change in or addition to the terms hereof shall be made unless approved in writing by an officer or manager of the Seller, and an authorized representative of the Buyer.

OFFICE OF PRICE ADMINISTRATION

(Document No 23586)

PART 1499—PERSONAL ALLOYS

[MPR 489]

TUNGSTEN, MOLYBDENUM, VANADIUM, COBALT, AND CERTAIN OTHER ALLOYS AND METALS

In the judgment of the Price Administrator it is necessary and proper to establish maximum prices for sales of tungsten, molybdenum, vanadium, cobalt, and certain other alloys and metals by a specific maximum price regulation. The Price Administrator has ascertained and given due consideration to the prices of tungsten, molybdenum, vanadium, cobalt, and certain other alloys and metals covered by this regulation prevailing between October 1 and October 15, 1941, and has made adjustments for such relevant factors as he has determined and deemed to be of general applicability. So far as practicable, the Price Administrator has advised and consulted with representative members of the industries which will be affected by this regulation.

In the judgment of the Price Administrator the maximum prices established by this regulation are and will be generally fair and equitable and will effectuate the purposes of the Emergency Price Control Act of 1942, as amended. A statement of the consideration involved in the issuance of this regulation is issued simultaneously herewith and has been filed with the Division of the Federal Register.*

Such specifications and standards as are used in this regulation were, prior to such use, in general use in the trade or industry affected.

§ 1499.154 *Maximum prices for tungsten, molybdenum, vanadium, cobalt, and certain other alloys and metals.* Under the authority vested in the Price Administrator by the Emergency Price Control Act of 1942, as amended, and Executive Order No. 9250 and 9328, Maximum Price Regulation No. 489 (Tungsten, Molybdenum, Vanadium, Cobalt, and Certain Other Alloys and Metals), which is annexed hereto and made a part hereof, is hereby issued.

AUTHORITY: § 1499.154 issued under Pub Laws 421 and 729, 77th Cong., E.O. 9250, 7 F.R. 7871, E.O. 9328, 8 F.R. 4681

* Copies may be obtained from the Office of Price Administration

MAXIMUM PRICE REGULATION 489—TUNGSTEN, MOLYBDENUM, VANADIUM, COBALT, AND CERTAIN OTHER ALLOYS AND METALS

CONTENTS

Sec	
1	Maximum prices for tungsten
2	Maximum prices for molybdenum
3	Maximum prices for vanadium
4	Maximum prices for cobalt
5	Maximum prices for ferrophosphorus
6	Maximum prices for certain special alloys and metals
7	Maximum prices for types, grades and sizes of alloys and metals for which maximum prices cannot be established by sections 1 through 6 of this regulation
8	Terms of general applicability
9	Exemption of sales for laboratory and experimental purposes
10	Sales by independent warehousemen
11	Maximum prices for certain sellers
12	Applicability of regulation
13	Records and reports
14	Adjustable pricing
15	Applications for adjustment
16	Petitions for amendment
17	Prohibition against dealing in tungsten, molybdenum, vanadium, cobalt, and certain other alloys and metals at prices above the maximums
18	Enforcement
19	Licensing
20	Definitions

SECTION 1. *Maximum prices for tungsten*—(a) *Ferrotungsten.* The maximum prices for ferrotungsten shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Analysis of standard grade*

	Percent
Tungsten	70–83
Carbon, maximum	0.60
Phosphorus, maximum	0.10
Sulphur, maximum	0.10
Silicon, maximum	1.00
Manganese, maximum	0.75
Copper, maximum	0.10
Arsenic, maximum	0.10
Antimony, maximum	0.08
Tin, maximum	0.20
Sum of tin, copper, arsenic, phosphorus, and sulphur, maximum	0.45

(2) *Maximum base prices for standard grade ferrotungsten.* The maximum prices per pound of contained tungsten for standard grade ferrotungsten, lump or ¼ X down, packed, f. o. b. producer's plant at Niagara Falls, New York, Washington, Pa., or York, Pa., shall be:

10,000 pounds or more	$1.00
2,000 to 10,000 lbs	1.00
100 to 2,000 lbs	1.10
Less than 100 lbs	1.15

(3) *Premiums*—(i) *Crushing to a specified mesh.* The highest premium for crushing to a specified mesh size which the seller charged during January, February or March 1943, may be added to the above prices. (This does not apply to ¼ X down.)

(ii) *Special analysis.* Premiums not exceeding 25 cents per pound of contained tungsten may be added to the above base prices for ferrotungsten of special analysis. By "special analysis" is meant an analysis varying substantially from the analysis for the standard grade, set forth above, and supplied at the request of and for the convenience of the buyer.

(b) *Other tungsten products.* The maximum prices for the tungsten products listed below shall be, except as otherwise provided in section 11, (1) the highest prices charged for such products by a seller on a delivery made during January, February or March 1943 to a purchaser of the same class, or (2) if the seller cannot make this determination on the basis of a delivery, the highest prices which the seller quoted for delivery of such products during January, February or March 1943 to a purchaser of the same class.

If the seller cannot determine his maximum prices under either of the above provisions, his maximum price shall be subject to the approval of the Administrator, as set forth in section 7 of this regulation.

The following tungsten products are covered by this paragraph:

- Tungsten metal powder
- Tungsten carbide powder
- Tungstic acid
- Tungstic oxide
- Ammonium para-tungstate
- Sodium tungstate
- Calcium tungstate
- Other alloys and compounds of tungsten which are consumed principally by the metallurgical industry

(c) *Tungsten ores and concentrates.* Tungsten ores and concentrates are exempt from the provisions of this regulation and the General Maximum Price Regulation.

N. B. For general terms see section 8 below

SEC. 2. *Maximum prices for molybdenum*—(a) *Ferromolybdenum, molybdic oxide and calcium molybdate.* The maximum prices per pound of contained molybdenum for any quantity of ferromolybdenum, molybdic oxide and calci-

um molybdate suitable for steel or iron manufacture, packed, f o b producer's plant shall be

Ferromolybdenum	80 86
Molybdic oxide technical (powder or briquettes)	80
Calcium molybdate	80

(b) *Other molybdenum products.* The maximum prices for the molybdenum products listed below shall be, except as otherwise provided in section 11, (1) the highest prices charged for such products by a seller on a delivery made during January, February or March 1942 to a purchaser of the same class, or (2) if the seller cannot make this determination on the basis of delivery, the highest prices which the seller quoted for delivery of such products during January, February or March 1942 to a purchaser of the same class.

If the seller cannot determine his maximum prices under either of the above provisions, his maximum price shall be subject to the approval of the Administrator, as set forth in section 7 of this regulation.

The following molybdenum products are covered by this paragraph:

Molybdenum metal powder
Molybdenum carbide powder
Molybdic acid
Molybdenum trioxide
Molybdenum silicide
Sodium molybdate
Ammonium molybdate
Other molybdenum alloys and compounds which are consumed principally by the metallurgical industry

(c) *Molybdenum ores and concentrates.* Molybdenum ores and concentrates are exempt from the provisions of this regulation and the General Maximum Price Regulation.

N B For general terms see section 8 below.

SEC. 3. *Maximum prices for vanadium.*—(a) *Ferrovanadium.* The maximum prices per pound of contained vanadium for standard crushed sizes of the grades and analysis of ferrovanadium shown, in any quantity, f o b Niagara Falls, N Y or Bridgeville, Pa. with freight allowed to destination on quantities of 25 pounds or over, up to but not in excess of the freight rates from the basing point to St. Louis, Missouri, shall be determined by using the following maximum base prices and premiums where applicable:

(1) *Maximum base prices*

Grade	Analysis: Percent V minimum	Analysis: Percent C maximum	Analysis: Percent Si maximum	Prices: Contract	Prices: Spot
A Open hearth	30	12.00	1.50	$2.70	$2.80
B Crucible	35	6.00	1.00	2.80	2.90
C Primex	35	1.50	.20	2.80	2.90

(2) *Premiums for crushing.* The standard crushing sizes for all grades of ferrovanadium are from lump size down to and including 20 mesh X down. Premiums per pound of contained vanadium may be added to the above base prices for crushing or grinding to smaller sizes as follows:

Quantity	48 mesh X down	65 to 100 mesh X down	150 or 200 mesh X down
Carload lots	$0.03	$0.04	$0.06
Ton lots	.04	.08	.09
Less than ton lots to 200 lbs	.08	.10	.12
Less than 200 lbs	.10	.20	.25

(b) *Vanadium pentoxide.* The maximum prices per pound of contained V_2O_5 for air dried or fused vanadium pentoxide, f o b Niagara Falls, N Y or Bridgeville, Pa., with freight allowed to destination on quantities of 25 pounds or over, up to but not in excess of the freight rate from the basing point to St. Louis, Missouri, shall be determined by using the following maximum base prices and premiums, where applicable:

(1) Maximum base contract price, any quantity	$1.10
(2) Maximum base spot price	
800 lbs. and over	1.15
Less than 800 lbs. to 10 lbs.	1.20
Under 10 lbs.	1.25

(3) *Premiums for crushing.* The standard crushed size for air dried vanadium pentoxide is powdered, and standard crushed sizes for fused vanadium pentoxide are ¾" X down, ½" X down and ¼" X down. Premiums per pound of V_2O_5 contained may be added to the above base prices for crushing or grinding to smaller sizes as follows:

Quantities	8 mesh X down	30 mesh X down
Ton lots	$0.015	$0.0175
Less than tons down to 200 lbs	.02	.03
Less than 200 lbs	.03	.04

(c) *Other vanadium products.* The maximum prices for the vanadium products listed below shall be, except as otherwise provided in section 11, (1) the highest prices charged for such products by a seller on a delivery made during January, February or March 1942 to a purchaser of the same class, or (2) if the seller cannot make this determination on the basis of a delivery, the highest prices which the seller quoted for delivery of such products during January, February or March 1942 to a purchaser of the same class.

If the seller cannot determine his maximum prices under either of the above provisions, his maximum price shall be subject to the approval of the Administrator, as set forth in section 7 of this regulation.

The following vanadium products are covered by this paragraph:

Vanadium metal
Vanadium metal powder
Vanadium silicide
Vanadium chloride
Sodium ortho vanadate
Ammonium meta vanadate
Other vanadium alloys and compounds which are consumed principally by the metallurgical industry

(d) *Vanadium ores and concentrates.* Vanadium ores and concentrates are exempt from the provisions of this regulation and the General Maximum Price Regulation.

N B For general terms see section 8 below.

SEC. 4. *Maximum prices for cobalt.*—(a) *Cobalt metal sold to a metallurgical user.* The maximum price per pound of cobalt metal containing a minimum of 97% cobalt, packed, f o b producer's plant, with freight allowed to destination on quantities of 25 pounds or more up to but not in excess of the freight rate from producer's plant to Chicago, Illinois, shall be as follows when sold to a metallurgical user:

	Contract	Spot
Keg, 500 to 580 lbs	$1.80	$1.85
Cases, 100 lbs	1.92	1.97
Less than 100 lbs	1.97	2.02

For the purposes of this section "metallurgical user" means a person whose principal use of cobalt metal is in the production of steels, carbides and ferrous or non-ferrous alloys.

(b) *Other cobalt products and cobalt metal sold to other users.* The maximum prices for the cobalt products listed below, and for cobalt metal sold to persons other than metallurgical users shall, be, except as otherwise provided in section 11, (1) the highest prices charged for such products or metal by a seller on a delivery made during January, February or March 1942 to a purchaser of the same class, of (2) if the seller cannot make this determination on the basis of a delivery, the highest prices which the seller quoted for delivery of such products during January, February or March 1942 to a purchase of the same class.

If the seller cannot determine his maximum prices under either of the above provisions, his maximum price shall be subject to the approval of the Administrator, as set forth in section 7 of this regulation.

The following cobalt products are covered by this paragraph:

Cobalt metal fines
Cobalt metal powder
Cobalt oxides
Other alloys and compounds of cobalt which are consumed principally by the metallurgical industry

(c) *Cobalt ores, concentrates and crudes.* Cobalt ores, concentrates and crudes are exempt from the provisions of this regulation and the General Maximum Price Regulation.

N B For general terms see section 8 below.

SEC. 5. *Maximum prices for ferrophosphorus.* (a) The maximum prices for ferrophosphorus shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Analysis*

	17-19% Grade	25-28% Grade
Phosphorus	Base, 18%, range, 17-19%	Base, 24%, range, 25-28%
Iron	Approx 79%	Approx 70%

(2) *Maximum base prices.* The maximum prices for ferrophosphorus based on the gross weight of the material, f.o.b. producer's plant shall be:

Quantity	17-19% Grade	25-28% Grade
	Per gross ton	Per gross ton
Carload lots, bulk	$68.00	$74.00
Carload lots, packed	63.00	70.00
Less than carload lots down to 3 gross tons, packed	70.00	80.00
3 gross tons to 1 gross ton, packed	81.00	100.00
	Per lb.	Per lb.
1 gross ton down to 500 lbs., packed	.06	.065
500 lbs. down to 100 lbs., packed	.06	.07
Less than 100 lbs., packed	.08	.10

(3) *Premiums.* To the above base prices may be added the following premiums: (1) For crushing to egg size or smaller—$10.00 per gross ton in gross ton lots or over, and $0.005 per pound in less than gross ton lots. (2) For phosphorous content in excess of the base analysis—$3.00 per gross ton on gross ton lots or over for each 1% of phosphorus, fractions prorated.

(4) *Penalty.* For phosphorus content lower than the base analysis deduct $3.00 per gross ton on gross ton lots or over for each 1% of phosphorus, fraction prorated.

Sec. 6. *Maximum prices for certain special alloys and metals.*—(a) *Siminal.* The maximum prices for siminal shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) Analysis:

	Percent Approximate
Silicon	30
Manganese	30
Aluminum	30
Balance being principally iron	

(2) *Maximum base contract prices.* The maximum prices per pound of material, gross weight, f. o. b. producer's plant with freight allowed to destination, up to but not in excess of the freight rate from producer's plant to St. Louis, Missouri, shall be:

	Lump	3" X D	1" X D	¼" X D	¼" X D	8M X D	28M X D
Carload (bulk)	$0.0880	$0.0880	$0.0880	$0.0873	$0.0873	$0.1030	$0.1030
Ton lots (packed 80 gal. barrels)	.1030	.1035	.1035	.1030	.1030	.1075	.1430
Less than ton lots (packed 80 gal. barrels)	.1400	.1400	.1400	.1125	.1125	.1125	.1300

(3) *Premiums.* (i) To the above base prices may be added a premium of $0.005 per pound for spot sales.

(ii) For packing ton lots or less in 25 gal. barrels a premium of $0.0060 per pound may be added.

(b) *Alsifer.* The maximum prices for alsifer shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Analysis:*

	Percent approximately
Aluminum	20
Silicon	40
Iron	40

(2) *Maximum base contract prices.* The maximum prices per pound of material, gross weight, f. o. b. Suspension Bridge, N. Y. shall be:

Carload lots (bulk or packed)	$0.0750
Ton lots (packed)	.0800
Less than ton lots (packed)	.0850

(3) *Premium.* To the above base prices may be added a premium of $0.0050 per pound for spot sales.

(c) *Calcium metal.* The maximum prices for calcium metal shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Maximum base contract prices.* The maximum prices per pound of metal, packed, f. o. b. Sault Ste. Marie, Michigan, with freight allowed to Mississippi River points and all the area east of the Mississippi River shall be:

	Casts	Turnings
2,000 pounds or more	$1.80	$1.20
Less than 2,000 lbs.	1.30	1.80

(2) *Premium.* To the above base prices may be added a premium of $0.05 per pound for spot sales.

(d) *Calcium silicon.* The maximum prices for calcium silicon shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Analysis:*

	Percent
Calcium, approximate	30-35
Silicon, approximate	60-65
Iron, maximum	3.50
or	
Calcium, approximate	28-33
Silicon, approximate	60-65
Iron, maximum	6.00

(2) *Maximum base contract prices.* The maximum prices per pound of material, gross weight, f. o. b. Niagara Falls, N. Y., with freight allowed to destination up to but not in excess of the freight rate from Niagara Falls, N. Y. to St. Louis, Missouri, shall be:

	Lump, 2M X 1"	3" X D	1" X D	¼" X D	¼" X D	8M X D	28M X D
Carload lots	$0.1300	$0.1400	$0.1400	$0.1400	$0.1400	$0.1400	$0.1400
Gross ton lots	.1400	.1400	.1400	.1400	.1400	.1400	.1400
200 lbs. to gross ton	.1400	.1400	.1400	.1400	.1400	.1400	.1400
Less than 200 lbs.	.1400	.1700	.1700	.1700	.1700	.1700	.1700

(3) *Premium.* To the above base prices may be added a premium of $0.0025 per pound for spot sales.

(e) *Calcium-manganese-silicon.* The maximum prices for calcium-manganese-silicon shall be determined by using the maximum base prices and premiums, where applicable, set out below:

(1) *Analysis:*

	Percent Range
Calcium	18-20
Manganese	14-18
Silicon	60-65
Balance principally iron	

(2) *Maximum base contract prices.* The maximum prices per pound of material, gross weight, f. o. b. Niagara Falls, N. Y., with freight allowed to destination up to but not in excess of the freight rate from Niagara Falls, N. Y. to St. Louis, Mo., shall be:

	Lump, 2M X 1"	3" X D
Carload lots	$0.1400	$0.1400
Gross ton lots	.1400	.1400
200 lbs. up to gross ton	.1700	.1700
Less than 200 lbs.	.1700	.1700

(3) *Premium.* To the above base prices may be added a premium of $0.0025 per pound for spot sales.

(f) *Other special alloys and metals.* The maximum prices for the special alloys and metals listed below shall be, except as otherwise provided in section 11, (1) the highest prices charged for such products by a seller on a delivery made during January, February or March 1942 to a purchaser of the same class, or (2) if the seller cannot make this determination on the basis of a delivery, the highest prices which the seller quoted for delivery of such products during January, February or March 1942 to a purchaser of the same class.

If the seller cannot determine his maximum prices under either of the above provisions, his maximum price shall be subject to the approval of the Administrator, as set forth in section 7 of this regulation.

The following products are covered by this paragraph:

Borosil	Manganese boron
Bortam	Silicas
Ferroboron	8 Ivas
Ferromanganese-silicon	SMZ alloy
Grainal alloys	

Other alloys and compounds consumed principally by the metallurgical industry in which boron, calcium, chromium, manga-

nese phosphorus or silicon accounts for a larger part of the material cost than any other constituent element. This provision however does not apply to any material covered by any other section of this regulation or by Revised Maximum Price Regulation 138 (Ferromanganese and Manganese Alloys and Metals), Maximum Price Regulation 448 (Ferrosilicon and Silicon Metal) and Maximum Price Regulation 407 (Ferrochromium and Chromium Metal).

N B For general terms see section 8 below

SEC. 7. *Maximum prices for types, grades and sizes of alloys and metals for which maximum prices cannot be established by sections 1 through 6 of this regulation.* If the seller of any type, grade or size of alloy or metal listed in this regulation cannot determine his maximum prices under the provisions of sections 1 through 6, inclusive, he shall submit his proposed maximum price for the approval of the Administrator. This price and an analysis of the material shall be reported within 15 days after delivery and pending approval such price may be paid and received subject to adjustment between the parties if the price is disapproved. A price once reported and approved need not thereafter be reported by the same seller.

Reports called for by this provision shall be made by letter addressed to the Non-Perrous Metals Branch, Office of Price Administration, Washington, D. C. In approving or disapproving a price submitted for approval, the Office of Price Administration will consider whether the price submitted is in line with other maximum prices established by this regulation.

SEC. 8. *Terms of general applicability.*—(a) *Credit.* No charge shall be made for extension of credit when payment is made within 30 days of date of invoice.

(b) *No spot premiums on sales to the United States or any agency thereof.* No spot premium may be added on any sale or delivery to the United States or any agency thereof of tungsten, molybdenum, vanadium, cobalt or any of the other alloys or metals covered by this regulation.

SEC. 9. *Exemption of sales for laboratory and experimental purposes.* Sales of tungsten, molybdenum, vanadium, cobalt, and the other alloys and metals covered by this regulation shall be exempt from this regulation and the General Maximum Price Regulation when such sales are made for laboratory and experimental uses. For the purpose of this section "sales for laboratory and experimental purposes" means sales of relatively small amounts used for testing, research, sampling or experimental use and covers alloys, metals and compounds already being produced commercially, as well as those produced experimentally and in the process of development.

SEC. 10. *Sales by independent warehousemen.* The maximum price at which an independent warehouseman may sell tungsten, molybdenum, vanadium, cobalt or any of the other alloys or metals covered by this regulation shall be the maximum price at which the quantity and grade sold by him could be sold by a producer for delivery to his warehouse, plus the following differentials or premiums:

	Percent
500 lbs. and over	10
Less than 500 lbs. down to 100 lbs.	15
100 lbs. and less	20

The maximum price for independent warehousemen is f. o. b. warehouse with no allowance for freight.

For the purpose of this section "independent warehouseman" means a private seller, other than a manufacturer of tungsten, molybdenum, vanadium, cobalt and other alloys and metals or a subsidiary or affiliate thereof, who renders the service of maintaining a stock of tungsten, molybdenum, vanadium, cobalt, or other alloys or metals for the convenience of buyers who desire to purchase small quantities or to receive quick delivery.

SEC. 11. *Maximum prices for certain sellers.* (a) Cleveland Tungsten, Inc., Cleveland, Ohio, may sell or deliver, and any person may buy or receive from Cleveland Tungsten, Inc. tungsten metal powder, containing a minimum of 99.7% tungsten and a maximum of .20% alkalis and .02% molybdenum, at a price not in excess of $5.40 per pound f. o. b. seller's plant.

(b) The S. W. Shattuck Chemical Company of Chicago, Illinois, may sell and deliver, and any person may buy and receive in the course of trade or business from the S. W. Shattuck Chemical Company, technical grade tungstic oxide (WO_3) at a price not in excess of $2.58 per pound delivered.

SEC. 12. *Applicability of regulation.*—(a) *Geographical.* The maximum prices established by this regulation shall apply to the forty-eight states and the District of Columbia.

(b) *Export sales.* The maximum price at which any person may export tungsten, molybdenum, vanadium, cobalt or any other alloy or metal covered by this regulation shall be determined in accordance with the provisions of the Second Revised Maximum Export Regulation," issued by the Office of Price Administration.

(c) *Import sales and sales of imported tungsten, molybdenum, vanadium, cobalt, and other alloys and metals.* Neither this regulation nor the General Maximum Price Regulation shall apply to the importation of tungsten, molybdenum, vanadium, cobalt, and the other alloys and metals listed in this regulation. This regulation shall apply, however, to the sale of all tungsten, molybdenum, vanadium, cobalt, and other alloys and metals listed in this regulation after they shall have been imported into the forty-eight states and the District of Columbia.

(d) *Relation to General Maximum Price Regulation.* This regulation supersedes the General Maximum Price Regulation as to sales and deliveries which are covered by, or expressly excluded from, this regulation.

SEC. 13. *Records and reports.* (a) On and after November 8, 1943, every person making a purchase or sale of tungsten, molybdenum, vanadium, cobalt, and other alloys and metals covered by this regulation shall keep for inspection by the Office of Price Administration, for so long as the Emergency Price Control Act of 1942 remains in effect, complete and accurate records of each such purchase or sale showing (1) the date thereof, (2) the name and address of the buyer and the seller, (3) the quantity and analysis of each grade and size purchased or sold, (4) the date of delivery of each shipment, and (5) the price paid or received. The invoice or any other customary record containing the required data may be retained for the purposes of this section.

(b) Persons subject to this regulation shall submit such reports, subject to the approval of the Bureau of the Budget in accordance with the Federal Reports Act of 1942, as the Office of Price Administration may from time to time require.

SEC. 14. *Adjustable pricing.* Any person may agree to sell at a price which can be increased up to the maximum price in effect at the time of delivery, but no person may, unless authorized by the Office of Price Administration, deliver or agree to deliver at prices to be adjusted upward in accordance with action taken by the Office of Price Administration after delivery. Such authorization may be given when a request for a change in the applicable maximum price is pending, but only if the authorization is necessary to promote distribution or production and if it will not interfere with the purposes of the Emergency Price Control Act of 1942 as amended. The authorization may be given by the Administrator or by any official of the Office of Price Administration to whom the authority to grant such authorization has been delegated. The authorization will be given by order, except that it may be given by letter or telegram when the contemplated revision will be the granting of an individual application for adjustment.

SEC. 15. *Applications for adjustment.*—(a) *When available.* The Office of Price Administration will adjust any maximum price established by this regulation whenever it finds, from an application for adjustment or on its own motion, that the price impedes or threatens to impede any seller's production of any commodity and that the seller's production is necessary for essential war or civilian purposes.

(b) *Considerations.* In considering whether production is impeded or threatened, among other factors, consideration will be given to (1) costs of

[illegible] OPA "[illegible]" [illegible]

[illegible] 8864 10782
[illegible] 8181 10579
[illegible] 9075 8810 9024

[illegible] 4132 5087 7662 5987 9998
[illegible] 3096 3449 4347 4486 4724 4848 4974 [illegible] 8662 8513 9025 9901 11985 13724

and revenue from the commodity in question, (2) the relative importance of the commodity in the seller's overall business, (3) the profitableness of the seller's business, and (4) any special facts which the seller calls to the attention of the Office of Price Administration.

(c) *Amount of adjustment.* Increase in price will be permitted in an amount which the Office of Price Administration considers sufficient to avoid the impeding of production or the threat of impeding production.

(d) *Form of application.* An original and one copy of an application for adjustment must be filed with the Office of Price Administration, Washington, D.C. It is suggested that, before filing an application for adjustment under the provisions of this section, the seller obtain from the Non-Ferrous Metals Branch, Office of Price Administration, Washington, D.C., a statement of the specific information that will be necessary in order that his application may receive prompt action.

Sec. 16. *Petitions for amendment.* Any person seeking an amendment of any provision of this regulation may file a petition for amendment in accordance with the provisions of the Revised Procedural Regulation No. 1,* issued by the Office of Price Administration.

Sec. 17. *Prohibition against dealing in tungsten, molybdenum, vanadium, cobalt, ferrophosphorus and other alloys and metals at prices above maximum.* (a) On and after November 8, 1943, regardless of any contract, agreement, or other obligation, no person shall sell or deliver tungsten, molybdenum, vanadium, cobalt, ferrophosphorus or any other alloys or metals covered by this regulation and no person in the course of trade or business shall buy or receive tungsten, molybdenum, vanadium, cobalt, ferrophosphorus or any other alloys or metals covered by this regulation at prices higher than the maximum prices set out in this regulation; and no person shall agree, offer, solicit, or attempt to do any of the foregoing.

(b) Any practice or device which is an attempt to get the effect of a price higher than the maximum without actually charging a higher price is prohibited and is as much a violation of this regulation as an outright excessive price. This applies to devices involving commissions, services, transportation arrangements, premiums, special privileges, tying-agreements, trade understandings and the like.

(c) Prices lower than those set out in this regulation may be charged, demanded, paid or offered.

Sec. 18. *Enforcement.* (a) Persons violating any provision of this regulation are subject to the criminal penalties, civil enforcement actions and suits for treble damages provided for by the Emergency Price Control Act of 1942, as amended.

(b) No war procurement agency, nor any contracting or paying finance office thereof, shall be subject to any liability, civil or criminal, imposed by this regulation or the Emergency Price Control Act of 1942, as amended. "War procurement agency" includes the War Department, the Navy Department, the United States Maritime Commission and the Lend-Lease Section in the Procurement Division of the Treasury Department, or any agency of the foregoing.

Sec. 19. *Licensing.* The provisions of Licensing Order No. 1, licensing all persons who make sales under price control, are applicable to all sellers subject to this regulation. A seller's license may be suspended for violation of the license or of any one or more maximum price regulations. A person whose license is suspended may not, during the period of suspension, make any sale for which his license has been suspended.

Sec. 20. *Definitions.* (a) When used in this regulation the term:

(1) "Person" includes an individual, corporation, partnership, association, or any other organized group of persons, or legal successor or representative of any of the foregoing, and includes the United States or any agency thereof, or any other government or any of its political subdivisions, or any agency of any of the foregoing.

(2) "Purchaser of the same class" refers to the practice adopted by the seller in setting different prices for sales to different purchasers or kinds of purchasers or for purchasers located in different areas or for different quantities or grades or under different conditions of sale.

(3) "Contract price" means that price determined by a written contract calling for delivery or deliveries of an estimated amount at some future date or dates within a specified period of time, not less than three months.

(4) "Gross ton" means 2,240 pounds.

(5) "Spot price" means the price for a single or isolated sale for delivery within three months.

(6) "Carload lots" means not less than the minimum quantity which may be shipped by the seller to the particular buyer at the carload tariff rate.

(7) "Freight" means the charge for transportation not in excess of the charge made by railroads and includes the federal tax on such railroad transportation charge.

(8) "Tungsten" means any one of the materials which are specifically listed in section 1 and any other alloy or compound of tungsten which is consumed principally by the metallurgical industry.

(9) "Molybdenum" means any one of the materials which are specifically listed in section 2 and any other alloy or compound of molybdenum which is consumed principally by the metallurgical industry.

(10) "Vanadium" means any one of the materials which are specifically listed in section 3 and any other alloy or compound of vanadium which is consumed by the metallurgical industry.

(11) "Cobalt" means any one of the materials which are specifically listed in section 4 and any other alloy or compound of cobalt which is consumed principally by the metallurgical industry.

(12) "Ferrophosphorus" means an alloy of phosphorus as described in section 5.

(13) "Other alloys and metals" means any of the materials covered in section 6.

(14) "Alloy of compound of a particular element" (as tungsten) means an alloy or compound, consumed principally by the metallurgical industry, in which the particular element accounts for a larger part of the material cost than any other constituent element.

(15) "Metallurgical industry" means the group of industries which produce metals, steels, carbides and ferrous and non-ferrous alloys.

(b) Unless the context otherwise requires, the definitions set forth in section 302 of the Emergency Price Control Act of 1942 shall apply to other terms used in this regulation.

This regulation shall become effective November 8, 1943.

NOTE: All reporting and record-keeping requirements of this regulation have been approved by the Bureau of the Budget in accordance with the Federal Reports Act of 1942.

Issued this 2d day of November 1943.

GEORGE J. BURKE,
Acting Administrator.

Re: Vanadium Pentoxide

Gentlemen:

As a trial lot we would very much appreciate receiving from you

100 lbs. of metallic V contained in V2O5 fused

packed in steel ~~cans~~ DRUMS, each containing exactly 10 lbs. metallic V in the form of V2O5

Some time ago you advised us that for such special packing you would ask a premium of $0.065 per pound of V2O5 (for quantities below 2000 lbs.) which would have to be added to the contract price of $1.10 per pound of V2O5.

We would very much like to have these te~~ cans~~ DRUMS placed in a box, and will give you shipping instructions as soon as you tell us when the material is expected to be ready.

As mentioned before, this is a trial lot, and if it works out as we hope it will, we can follow this up with larger and regular orders.

Looking forward to hearing from you at your early convenience,

Very truly yours,

CONTINENTAL ORE COMPANY

September 10, 19

ELECTRO METALLURGICAL SALES CORPORATION agrees to sell

Continental Ore Company of New York, N. Y.

agrees to buy Buyer's domestic manufacturing requirements

of Vanadium Oxide

for delivery in as nearly equal monthly quantities as practicable at the respective prices, terms, and conditio forth in this agreement, which shall continue until terminated by either party giving not less than six (6) m prior written notice to the other party.

The prices and terms of payment for the standard grade or grades and sizes of this material are sho the schedule hereto attached and made a part of this agreement.

The prices which are in effect may be revised by the Seller at the beginning of any calendar quarte by giving not less than fifteen (15) days prior written notice to the Buyer. Such revised prices shall become tive at the beginning of such calendar quarter year and shall remain in effect until again revised in the manner inbefore provided. If any such revised prices are not acceptable to the Buyer, the Buyer may cancel future t contracted for hereunder to which such revised prices apply by giving written notice to the Seller not less th (10) days prior to the beginning of such calendar quarter year.

Deliveries are subject to strikes, riots, war, governmental acts and regulations, fires, explosions, acc acts of God, delays in procuring sufficient or suitable raw materials, delays of carriers, curtailment of or fail obtaining sufficient electrical power, and other similar or dissimilar contingencies affecting the Seller or the ma turer of the material and beyond its reasonable control.

During any time in which the Seller is not satisfied with the Buyer's financial responsibility, the Selle change the terms of payment or suspend deliveries.

The Buyer shall pay all existing and future taxes imposed *by reason of sale or delivery* under this ment.

The benefits and obligations of this agreement shall extend to the successors and assigns of the res parties.

This agreement shall not be effective until approved by an officer or manager of the Seller and when proved shall supersede all prior agreements covering the same material. No change in or addition to the hereof shall be made unless approved in writing by an officer or manager of the Seller, and an authorized sentative of the Buyer.

APPROVED:

DEFENDANT U'S EXHIBIT "5-J"

Nisley & Wilson Vanadium Mill
Gateway, Colorado

October 15, 1943

Continental Ores Company
500 Fifth Avenue
New York City, New York

Dear Mr. Leir:

Some time ago we were corresponding with you concerning the possibility of making a flake material which would be more desirable than crushed material. At the time we were extremely pressed under the Metals Reserve operation and weren't able to do anything about it, equipment being very scarce.

A few days ago we completed a flaking machine and put it into operation. The material seems to us to be of a very desirable nature, for as far as we are concerned, it can be sacked without further treatment. If it is not fine enough for your work, we could if necessary run the thin flakes thru a small set of rollers and make it somewhat finer than it is at the present time.

We are sending you a small sample of the material we are now making.

Concerning production we are operating under the same arrangements with M.R.C. However we are treating somewhat lower grade ore than we used to. Our output has been running in the neighborhood of 11,000 to 12,000 lbs. of Vanadic Acid

Defendant U's Exhibit "5-J"—(Continued)

monthly. The grade of the product has been extremely good, last months average being 87.47% V_2O_5.

We would like to hear from you concerning your reaction to the flake material. I might add that we are turning out this product commercially, in fact all V_2O_5 being produced is of this nature. Perhaps this change will be of value to us both after the war.

Sincerely yours,

NISLEY & WILSON,
/s/ FRANK NISLEY, JR.

P.S.: I notice in checking over our files that we have a letter dated July 8 from Mr. Wolf in which he asked us for a 25 lb. sack of ore. I can find no record or having ever sent the material nor do I remember having seen the letter before. I'm extremely sorry if the ore hasn't been sent and if it would still be of value to you we would gladly send it to you.

/s/ FRANK.

October 28, 1943

Mr. Frank Nisley, Jr.
Nisley & Wilson Vanadium Mill
Gateway, Colorado

Re: Vanadic Acid in Flakes

Dear Mr. Nisley:

We refer to our letter of October 25.

Defendant U's Exhibit "5-J"—(Continued)

Your sample has just arrived, and we really want to congratulate you on the fine job you are doing, because these flakes are just what we like best.

From your letter of October 15, we note that you are making 11,000 to 12,000 pounds of vanadic acid per month at the present time.

Please let us know what your situation is with regard to crude ore, that is, whether you have some of your own or whether you are dependent upon the U. S. Vanadium Corp.

We would also like to know whether you believe that after the war you will be in a position to either operate your own mines or to buy ore from independent miners.

The war may be over in the not too distant future, and we would like to obtain an idea as to what your situation would be at that time. There are already signs of abundance of basic ores and minerals, but we are anxious to cooperate with you and keep your mill running in peacetime.

Please let us know at the same time when your present contract with the Metals Reserve Company expires.

With kind personal regards.

Very truly yours,

CONTINENTAL ORE COMPANY,
HENRY J. LEIR.

DEFENDANT U'S EXHIBIT "5-K"

July 3, 1939

The Vitro Manufacturing Company
Corliss Station
Pittsburgh, Pa.

Gentlemen:

I refer to my telephone conversation with your President, Mr. Fleg, following your offer of June 13.

I hereby inform you that I am connected now with the above Company which will handle the business for the Luxemburg firm on this side of the ocean. I hope it will be possible to come now to some substantial business.

I telegraphed you today as follows:

"Please book definitely two lots Vanadic Acid three thousand lbs. each stop hope you can ship first lot promptly second lot July earliest,"

and shall be glad to have your confirmation for the following business:

Merchandise: Your Vanadic Acid, gas-dried, containing a min of 83% V_2O_5.

Quantity: 6,000 lbs.

Price: $1.25 per lb. of V_2O_5 content.

Delivery: F.A.S. New York.

Time of Shipment: 3,000 lbs. immediately; 3,000 lbs. earliest afterwards.

Sampling/Weighing/Analysis: By Messrs Ledoux & Co., the cost to be equally divided between us.

Payments: Against Documents.

Defendant U's Exhibit "5-K"—(Continued)

As the analysis of Messrs. Ledoux & Co. generally takes from 7-10 days, we propose you the following:

We pay you your provisional invoice, made out on the basis of 83% against receipt of the merchandise, so that we can ship it over to Europe without delay.

The settlement of any balance will be effected as soon as the certificates of Ledoux are in our hands.

We shall be very much obliged to you if you can ship the 3,000 lbs. directly to Messrs. Ledoux & Co., and we will hand them our cheque made out to your order.

We shall be glad to hear from you soon, and remain,

Yours very truly,

July 5, 1939

The Vitro Manufacturing Co.
Corliss Station
Pittsburgh, Pa.

Attention: Mr. E. M. Fleck, President

Gentlemen,

Your letter dated July 3, crossed ours of the same date.

We agree with the sampling by the Pittsburgh Testing Laboratory, and as soon as this sampling has been done please forward the first lot of 3000 lbs. to the following address:

Defendant U's Exhibit "5-K"—(Continued)

Messrs. Transhipp, Inc.,
8-10 Bridge Street,
New York City,

whom in exchange we shall hand our cheque on the provisional basis of 83%, cheque made out to your order directly.

We further agree with weighing, respectively control checking of weighing by the Pittsburgh Testing Laboratory if this suits you better.

In any case we will be very much obliged to you, if you will forward those 3000 lbs. on receipt of this letter because we want to ship this first lot next week already.

Thanking you in advance for the kind attention you will give this matter, we remain,

Yours very truly,

CONTINENTAL ORE CORPORATION,
HENRY JOHN LEIPZIGER.

Pittsburgh, Pa.

July 18, 1939

Continental Ore Corporation
500 Fifth Avenue
New York, New York

Attn: Mr. Paul M. Hirschland

Gentlemen:

We have your letter of July 17 in regard to the methods of testing Vanadic Acid.

We note that you wish to have the second lot, consisting of 3,000 pounds, now in the course of preparation, sampled and analyzed by Ledoux & Company. You are probably not aware of the fact that in order to have it sampled by Ledoux we must request that a representative comes from New York to Pittsburgh to do so. This involves *considerable

*Pen underscore.

Defendant U's Exhibit "5-K"—(Continued)

expense, amounting to possibly $60.00-$70.00. If it is agreeable to you to bear this expense, we will be glad to have Ledoux' representative come to Pittsburgh. It is for reason of economy that we have, in the past, had the sampling done by the Pittsburgh Testing Laboratory, and we only charged you for half of the cost of this work. This was only a matter of a few dollars.

If your clients still insist on Ledoux' sampling from now on, we will do so only if you agree to pay this additional expense. Otherwise, we will be obliged to cancel the order.

Kindly advise us of your final decision in this matter and oblige.

Very truly yours,

THE VITRO MANUFACTURING COMPANY,
/s/ A. J. STROD,
A. J. Strod, Sales Mgr.

July 19, 1939

The Vitro Manufacturing Co.
Corliss Station
Pittsburgh, Pa.

Att: Mr. A. J. Strod

Gentlemen:

We are in receipt of your letter of July 18 regarding testing method of Vanadic Acid.

We have passed along immediately to our people

Defendant U's Exhibit "5-K"—(Continued)

on the other side your information that you require the coming over to Pittsburgh of a representative of Ledoux & Co. for sampling purposes, and that you would not participate in bearing such costs.

We also noted that you will be obliged to cancel the order, unless the additional charges are paid on our side, or, unless of course the sampling and testing will be done as in the case of the previous shipment.

We regret to say that for the moment we cannot do anything except wait for the reply which we expect in about two weeks. We hope, however, that we will be able to come to an agreement, and remain in the meantime,

Yours very truly,

CONTINENTAL ORE CORPORATION,
PAUL M. HIRSCHLAND.

Attention: Mr. Paul M. Hirschland

Gentlemen:

Please refer to your letter of July 19 in regard to a shipment of Vanadic Acid covered by your

Defendant U's Exhibit "5-K"—(Continued)

contract. According to your letter, we were to be advised by you early this month whether or not the shipment is to be expedited as per conditions of the contract.

So far, we have not received any notice from you, and are holding the material pending your shipping instructions. We would like to move the shipment before the end of the month, and would ask you to kindly let us know as quickly as possible about the method of sampling of the lot in question.

Thanking you for your prompt attention, we are,

Yours very truly,

THE VITRO MANUFACTURING CO.,
/s/ A. J. STROD,
A. J. Strod, Sales Manager.

AJS:AH

August 21, 1939

The Vitro Manufacturing Co.
Corliss Station
Pittsburgh, Pa.

Attention: Mr. A. J. Strod

Gentlemen:

We have your letter of August 18 and also received a reply from Europe.

As we wrote you in our letter of July 19 we passed to our European friends the sampling—and analysing—conditions that you mentioned in your letter of July 18 to us, and also that you will be obliged to cancel the order unless those conditions are accepted.

Defendant U's Exhibit "5-K"—(Continued)

We hear now from the other side that they cannot see why you do not accept Ledoux, except under additional expenses which they are not prepared to incur, particularly since differences in the analysis results are apparent, on your last shipment.

As it seems to us under the circumstances an agreement on the basis of your letter of July 18 cannot be reached.

Accordingly we accept your offer to cancel the order.

Yours very truly,

CONTINENTAL ORE CORPORATION,
PAUL M. HIRSCHLAND.

The Vitro Manufacturing Co.
Corliss Station
Pittsburgh, Pa.
August 22, 1939

Continental Ore Corporation
500 Fifth Avenue
New York, New York

Attn: Mr. Paul M. Hirschland

Gentlemen:

We are in receipt of your letter of August 21 and regret to note that your clients abroad do not wish to accept the analysis and sampling conditions agreed upon between us.

Under the date of July 3 you wired us, requesting a definite booking of two lots of Vanadic Acid,

Defendant U's Exhibit "5-K"—(Continued)

each of 3,000 pounds, and confirmed the purchase by letter on July 3. In a letter dated July 5 you also expressly agreed that the weighing and sampling could be done by the Pittsburgh Testing Laboratory. After these definite conditions of sale were mutually accepted and the two lots prepared by us, you now intend to cancel the second lot for what appears to us no valid or just reason.

Frankly, we are very much disappointed over the news you have communicated at this late date as we have kept the shipment for over a month and lost a sales possibility in other directions.

In order to find some manner of settling this matter, we again reviewed our files—particularly, your contract of July 3. There, under the heading "Sampling, Weighing, and Analysis", we found that you did originally expect that all these operations would be done by Ledoux & Company, with the costs evenly divided between us. Although this clause was later modified, we will accept the original instructions in order to fully satisfy your clients. Therefore, if agreeable to you, we will have a representative of Ledoux & Company come to Pittsburgh and promptly sample the second 3000-pound lot which we are still holding.

As to a difference in analyses, we assure you that no two analyses made by different parties will check exactly. An allowance should always be made for the human element and a possible slight deviation in the results obtained.

Defendant U's Exhibit "5-K"—(Continued)

In closing, we wish to add that it may prove to your advantage in the future to have available an independent source of supply for Vanadic Acid.

We will appreciate having your final decision in this matter at the earliest possible date.

Very truly yours,

THE VITRO MANUFACTURING COMPANY,

/s/ A. J. STROD,

A. J. Strod, Sales Manager.

AJS:AS

August 23, 1939

The Vitro Manufacturing Co.
Corliss Station
Pittsburgh, Pa.

Attention: Mr. A. J. Strod

Gentlemen:

We have your letter of August 22 and noted its contents.

We appreciate your new proposal to reach an agreement and we have today written accordingly to Europe by air-mail. You will realize that we are in a difficult position, because we passed along to our friends your conditions contained in your letter of July 18. We can only repeat that in that letter you declared that if our clients continued insisting on Ledoux's sampling you would only agree provided we paid the additional expenses, and that you would be obliged to cancel the contract otherwise.

Defendant U's Exhibit "5-K"—(Continued)

To all this we got the reply that your proposals are not acceptable, and that they accept your cancellation accordingly.

Nevertheless we naturally, and very gladly, informed our friends today and we will communicate with you immediately upon reply from them to your new offer of yesterday.

We remain until then,

Yours very truly,

CONTINENTAL ORE CORPORATION,
PAUL M. HIRSCHLAND.

February 1946				240,640.01	-0-
		1,857,659.48	59,227.59	1,798,431.89	-0-

Six lots containing 59,227.59 pounds of Vanadium Oxide (V205) were recorded as receipts and later returned to the mill for further processing. When returned to the mill, they were recorded as a shipment rather than a reduction of receipts resulting in an overstatement of receipts in this amount.

Five lots were returned to process and not recorded as a receipt or shipment.

Lots returned to the mill feed lost their identity and the material was included in a new lot when reduced to end product.

187 lot numbers were used and are summarized as follows:

6 lots were recorded as receipts and later returned to the mill.
5 lots were not recorded in receipts and were returned to mill feed.
176 lots transferred to the U. S. Treasury Department and shipped per their instruction to the Sioux Ordnance Depot.
187 Total lots accounted for

EXHIBIT 1

DEFENDANT V'S EXHIBIT "1-A"

November 5, 1941

To: Apex Smelting Company

Attention: Mr. L. Lippa
Re: Vanadium

Thank you for having sent us copies of your correspondence with Blanding.

Following our conversation of last Saturday, we have already contacted several of our customers with regard to

Exothermic Vanadium

and we want to tell you that the reaction is absolutely favorable.

1. We expect to have a very satisfactory price for this new vanadium compound as we call it.

2. We will easily sell whatever quantities we can produce.

We see from your correspondence with Blanding that Mr. Milenski is going to visit you around November 10th. He is probably on his way to the East, and we must do everything to prevent him from dealing with other parties.

We think you should offer him $1.05, delivered Chicago "until further notice", and tell him that if his material proves to be reliable in quality, and particularly if he could increase the quantities, you will consider going up to $1.10.

As a matter of fact, our calculation for the exothermic vanadium is already based upon the $1.10

Defendant V's Exhibit "1-A"—(Continued)

price, delivered Chicago, as you can see from the following figures:

$1.10 per pound V_2O_5	178
—$1.958 per lb. V	
0.042 Canning	
$2.000	
.10 Aluminum	
$2.10	

The prices we offered, dependent upon the customer, were between $2.30 and $2.35, and we feel pretty certain that we can get them.

Therefore, you can see for yourself that we should go up to $1.10 if necessary, in order to secure the material for ourselves, and as much material as possible.

If Blanding will start to give us their entire output now, they certainly cannot switch in 3 months time, to other consumers, because of the contracts which will be made from now until the end of the year.

Please be so kind as to confirm receipt of this letter, so that we see that it is in your hands before you see Mr. Milenski.

CONTINENTAL ORE CORPORATION.

Henry J. Leir/rk

DEFENDANT V'S EXHIBIT "1-D"

July 14, 1938

Societe d'Electro-Chimie de Brignoud
66, Rue de Miromesnil
Paris, France

Gentlemen:

We hereby offer to employ Mr. Henry John Leir as Production Consultant to the Thermit Department which we are establishing pursuant to our agreement of July 1, 1938. His employment shall continue during the term of said agreement and with the understanding that he will devote at least three months in each year to direct work and activity for the Thermit Department in the United States. It shall be his duty to assist us in the purchases, production and sales of the Thermit Department. He shall not, of course, make any commitment on our behalf without express authority from our Board of Directors.

As full compensation for his services during each calendar year, we agree to pay to him an amount equal to 10% of the net receipts, as defined in said agreement, of our Thermit Department during such calendar year. Payment of this compensation will be made in lawful money of the United States within forty-five days after the close of each calendar year. Remittance shall be by Chicago or New York draft, subject, however, to all applicable laws of the United States or the State of Illinois relating to the withholding of taxes at the source.

Defendant V's Exhibit "1-D"—(Continued)

If this arrangement is satisfactory to you and Mr. Leir will you both kindly confirm the same.

Very truly yours,

Continental Ore Corporation
500 Fifth Avenue
New York

Pocatello, Idaho
July 27, 1940

Mr. Daniel Milenski
Cortez, Colo.

Dear Mr. Milenski:

I refer to our conversation in Grand Junction.

As soon as you will have 1000 lbs. ready, please forward them to the following address:

Apex Smelting Co. 2537 W. Taylor Street, Chicago, Ill.

It is understood, the material must be "fused vanadic acid, with at least 85% V_2O_5 or better". In other words, please make sure, that the 1000 lbs. will be sent only, if the quality is right.

Declare the merchandise with 5 cents per lb. value

Defendant V's Exhibit "1-E"—(Continued)

only, the Continental will take care of the insurance, because otherwise the freight becomes too expensive.

*You are authorized to attach a sight-draft to the B/L for, let us say, 80 cents per lb. of acid shipped, which will be paid by the Apex on arrival.

Final settlement will be done through our office within 14 days after arrival of your material in Chicago and exchange of analysis. Only in case of a difference of more than 0.5% V_2O_5 we should go to some independent laboratory for an analysis of arbitration, the cost of which will then be at the charge of the succumbing party.

Until further notice, we will pay a price of 1.03 Doll. per lb. of V_2O_5 f.o.b. Thompson, less 3%. We undertake to return the bags or barrels, you will use for packing.

I hope, that besides of this domestic business, also some exportation will be possible again in a not to distant future.

Kind regards.

Sincerely yours,

/s/ HENRY JOHN LEIR,
Henry John Leir.

c.c: New York

*[Marginal Note: "No."]

DEFENDANT V'S EXHIBIT "1-F"

Continental Ore Corporation
500 Fifth Avenue
New York

August 10, 1940

Mr. Dan Milenski
Cortez, Colorado

Dear Mr. Milenski

I returned to New York today and remember with pleasure our conversation in Grand Junction.

I was again in Chicago last Thursday, where I saw our friends, the Apex Smelting Company. They expect the arrival of the 1,000 lbs. which you forwarded in the meantime.

However, I do not quite understand why you mentioned to them the price of $1.03 less 3%, when you approached them directly. As a matter of fact these 3% represent our commission and you will admit that we cannot work for nothing.

During the last twelve months our gentlemen were three times in Grand Junction and Blanding respectively, not to mention the numerous trips to Chicago; apart from these traveling expenses there is the cost of correspondence, wires and telephone calls, etc.

The Apex Smelting Company is a very valuable customer for you, as I already explained; they are the only independent producer of Ferro Vanadium in the United States and there is no doubt that they can accept your entire output.

Defendant V's Exhibit "1-F"—(Continued)

There is no sense, therefore, to annoy them and to increase the price, now that you have quoted them at the figure of $1.03 less 3%, corresponding to practically $1.00 f.o.b. Thompson.

We therefore ask you to reserve us our commission of 3% on this price and to send us your statement every month for such commission, due to us.

With regard to further shipments, we hereby authorize you to ship the 3,000 lbs. which you have ready to Chicago, provided you are absolutely sure that the quality will not be inferior to the material we had from the old mill. In other words, it should analyze around 90% V_2O_5, but must contain a guaranteed minimum of 85%.

If you are not absolutely sure about this point, we suggest that you await the analysis of Apex for the first shipment of 1,000 lbs., which should be available very shortly.

We have arranged the following procedure for the analysis with Apex:

As soon as a shipment arrives in Chicago Apex will sample and test it, and will send you a sealed sample bottle of the shipment and another sealed bottle to ourselves.

You will send us the result of your analysis and they will do likewise, so that we will act as trustees for the exchange of analyses. If the difference between the two analyses does not exceed 0.5%, the average between the two will be the basis for settlement. Should the difference exceed 0.5%, then

Defendant V's Exhibit "1-F"—(Continued)

we will send our bottle to Ledoux & Company for an analysis of arbitration, the cost of which will have to be borne by the succumbing party.

There is another detail which the Apex wanted us to discuss with you; it refers to the freight rate. For internal arrangements Apex prefers that you prepay the freight to Chicago, so that they have nothing to do with it. You can of course debit us with the amount of the freight. We, in turn, can authorize you to declare a value of only 5c per pound, in order to keep the freight rate down to a minimum, and we hereby undertake to cover all these shipments under our insurance policy, at no cost to you.

We think the above covers all details for the time being, and trusting that the pleasant relationship which existed between the old mill and ourselves will continue on an even more active basis, we remain, with best regards,

Yours very truly,

CONTINENTAL ORE CORPORATION,
/s/ HENRY JOHN LEIR,
Henry John Leir.

HJL/LL

DEFENDANT V'S EXHIBIT "1-G"

August 16, 1940

Continental Ore Corporation
500 Fifth Avenue
New York

Attention: Mr. Henry John Leir

Dear Mr. Leir:

We are sorry that we perhaps went too far in our conversations with the Apex Smelting Company. However, at the time that we talked to them over the telephone, we had not as yet heard from you, and we were quite desirous of shipping the product.

We, of course, realize that you must have a commission for handling; and apparently I had misunderstood as to your relationship with the Apex Smelting Company. However, we will be glad to bill the Apex Smelting Company for $1.03 f.o.b. Thompson, and then deduct and pay to you directly your 3% if this is satisfactory. We certainly desire to follow your wishes in the matter and see that you collect your commission regularly.

We are shipping 5400 lbs to Chicago today. Shipment is being made by truck instead of railroad for the reason that the service should be much better, and also that we will be able to affect a savings on the freight.

Our mill is running quite well, and we have had no shut-downs since we started operation. Our recovery is not quite satisfactory as yet, but is never-

Defendant V's Exhibit "1-G"—(Continued)

theless improving. Our ore deposits look better daily.

Bigler and I were sorry that you and Mrs. Leir did not have time to stop on your way back from California; and if you are out this way again, we certainly want you and Mrs. Leir to arrange to come to Cortez and Blanding.

With kindest regards to yourself and Mrs. Leir,

Very truly yours,

DM:E

DEFENDANT V'S EXHIBIT "1-H"

Continental Ore Corporation
500 Fifth Avenue
New York

August 19, 1940

Blanding Mines Company
P. O. Box 895
Cortez, Colorado

Gentlemen:

We have carefully noted your letter of August 16th and it is up to you to decide whether you want to maintain the price you quoted to the Apex Smelting Company or whether you prefer to increase it.

All we want is the commission of 3%, which is a very moderate one.

Defendant V's Exhibit "1-H"—(Continued)

Of course, we must abstain from giving you any advice in this matter but all this correspondence could have been avoided had you not contacted Apex direct.

We think up to the present you have not had any bad experience with our firm. If we make a statement in our correspondence, you can entirely rely upon it.

We would suggest that in order to avoid any misunderstanding in the future, that you communicate only with us here in New York and all matters will run very smoothly as they have in the past.

I was very pleased to hear the operations are running well and I hope your recovery will also now improve.

I do not contemplate coming to the West during the next few weeks but I certainly will do my best to visit the new mill as soon as I can.

With best regards, I am

Very truly yours,

/s/ HENRY JOHN LEIR,
Henry John Leir.

DEFENDANT V'S EXHIBIT "1-J"

Continental Ore Corporation
500 Fifth Avenue
New York

August 20, 1940

Apex Smelting Company
2537 West Taylor Street
Chicago, Illinois

Re: Blanding

Gentlemen:

We have your letter of August 19th and will try to reach Mr. Lippa on the telephone in order to give you our remarks as to the following points:

1. Please do not crush the 5400 lbs. which are arriving but crush only, let us say, 200 to 300 lbs., according to our letter of August 17th and re-ship the balance of 5100 to 5200 lbs. in its original state (lumpy) to Ledoux.

2. As long as we are re-shipping this material, we would prefer that you do not let the Blanding Mines crush the material down to 1/8", according to your letter to them of August 19th. In other words, the material should remain lumpy as it has been in the past.

3. Instead of giving Blanding your own analysis on the 200 to 300 lbs. according to #1 of this letter, kindly wait a few days and we will give you Ledoux's exact figures for the 5100 to 5200 lbs. and you can exchange with Blanding the Ledoux figure.

Defendant V's Exhibit "1-J"—(Continued)

4. Should Blanding dispute the figure, then we will arrange for another analysis with Ledoux from this end, all the more because the arrangements with Blanding provide that we have the arbitration sample in our hands and that we have to do the necessary regarding the analysis in arbitration.

This whole system, in our opinion, is excellent and will certainly not lead to any differences.

However, we hereby confirm that we will take the responsibility upon ourselves for this whole transaction. As a matter of fact, the merchandise is simply going "in transit" thru your firm in this particular case.

5. It results from the foregoing that we also take care of the insurance from Chicago to New York.

6. Since it was too late to write you yesterday, we wish to inform you now that we had the opportunity late in the afternoon to sell another 5,000 lbs. of this acid.

7. Blanding intends to ship 20,000 lbs. during the next two months; we think it advisable to re-sell exactly these 20,000 lbs. to other parties because there is a production of about 10,000 lbs. every month from Rifle and two new productions which will open very shortly in Arizona and Los Angeles respectively.

Our sales of ferro vanadium will start on a larger

Defendant V's Exhibit "1-J"—(Continued)

scale only in September/October and will only reach the maximum from January on when the new contracts for 1941 will go into effect.

Blanding is in a position to increase the production to, let us say, 20,000/25,000 lbs. every month within sixty days' notice.

Rifle is in a position to increase the production in a similar way.

Our idea is to completely buy up both of these productions for the Apex and we can do it all the better if, in the meantime, we are in a position to take every pound they produce.

Needless to tell you that your requirements have first call on all vanadic acid we can secure in the market. However, we repeat that in order to eliminate any buyers in the next months and strengthen your position, it is now necessary to sell certain quantities. We think with the 20,000 lbs. sold according to the above suggestion, the situation will be decidedly in our favor, especially during the period when we will have to make arrangements with the various producers for our own 1941 requirements.

Very truly yours,

CONTINENTAL ORE CORPORATION,
/s/ HENRY JOHN LEIR,
Henry John Leir.

HJL/r

HENRY JOHN LEIR
30 Central Park West
New York, N.Y.

2405

JUN 12 1958

December 16,1940

Mr. Louis Lippa
3811 East 67th Street
Chicago, Illinois

Dear Mr. Lippa:

Your letter of December 6th to Continental was obviously written on a very hurried day; it also was written on a Friday — therefore, not under a lucky star and I therefore did not answer it.

However, your letters to the Continental in the meantime make me think that a reply is due now.

An impartial reader analyzing your letter would see the following situation:

1. You do not want to buy raw material for your manufacture because you are not sure the finished product will be sold. Careful

2. You feel you are under moral obligation to accept material from Blanding at $1.05 f.o.b. Chicago and from Shattuck at $1.10 f.o.b. Chicago, but you cannot authorize us to buy material from Morrison at $1.00, f.o.b. Chicago.

3. You doubt whether Morrison is able to supply material, although I just made a second trip out there within four months; incidentally both trips were made entirely out of Continental's pocket. You obviously have no confidence in my judgment.

I stopped when we sent you the order for 5,000 lbs. from Braeburn on December 9th, and you would now see that we know our business and that we are on the right track to develop it, because these 5,000 lbs. of Vanadium correspond to 13,000 lbs. of 205 which is the exact quantity we have available from Morrison for December.

If I want to bring Morrison's price down to $1.00, f.o.b. Chicago, as of the first of the year, I must be in a position to take his whole output of 15,000 to 18,000 lbs. a month. Therefore, we now even must sell at $2.70 in order to make the wheels go round and to get out of the vicious cycle described in your letter of December 6th.

If you can book an order at $2.75, we certainly will accept this price as you have seen from the orders we sent you from:

Disston
Simonds Saw & Steel
Latrobe

As the Continental Ore has a direct interest in your profits, it is needless to say that we are not throwing any money away by reducing the price to $2.70 if it is not absolutely necessary.

Defendant Vanadium Corporation Exhibit No. 1-K--(Continued)

There is no doubt in my mind that if we ship the 5,000 lbs. to Braeburn this month as specified, they will pay us at least $2.72 in January and probably $2.75 in February. But, I repeat, even if we had to sell every pound at $2.70 we must do so at this time in order to be in a position to buy Morrison's whole output at $1.00 per lb. f.o.b. Chicago; this will enable us to also bring down the price of Blanding's material, and also enable us to eliminate Shattuck.

The prime object must be to sell 15,000 lbs. of V per month so that we can take up the 30,000 lbs. of V205 from Morrison/Blanding and lower the price of our raw material.

It is easier to lower the price of the raw material than to increase the sales price; and on a price of $1.00 f.o.b. Chicago, we make quite a nice profit, even if we sell at $2.70.

Within the last three weeks, Mr. Hirschland has made two trips to Pennsylvania for the express purpose of selling ferro vanadium; he returned with the recommendation that we establish stocks at the consumers or at least in Pittsburgh. You rejected this proposal.

However, there is no doubt that if we can ship from Pittsburgh immediately, we will be in a better position to compete with the Vanadium Corporation in Bridgeville, Pa. and we will find that we can get $2.75 much easier than $2.70.

In order to substantiate what I have just written (although I do not believe anything we tell you needs substantiation), the Continental Ore Corporation will send you an order tomorrow for 5,000 lbs. of Ferro Vanadium or V which we are willing to buy at $2.75, f.o.b. Pittsburgh, less our commission of 2½%, and which we ourselves want to stock in Pittsburgh. You will see we mean business.

I am writing this letter while Mr. Hirschland is out of town (he is in Nicetown, near Philadelphia, today) on a trip for ferro vanadium and I would suggest that any reply to this letter be sent to my home; you will find the address above.

As you probably know, he is the nephew of Dr. Franz Hirschland, president of the Metal and Thermit Corporation, 120 Broadway, the firm which introduced the Goldschmidt process into this country thirty years ago. He was brought up in England and acquired a B.A. degree in Law at Cambridge.

We have found it is relatively easy for Mr. Hirschland to establish contacts with the consumers of ferro alloys because he can simply refer to his uncle's firm, who for years were the only ones who made ferro alloys by the aluminothermic process in this country.

As our program called for activity in these ferro alloys in the U.S., I found it advisable to take Mr. Hirschland into the firm. I can assure you that as long as he is in the Continental Ore Corporation, Metal and Thermit will not re-open its ferro department.

Defendant Vanadium Corporation Exhibit No. 1-K--(Continued)

I must also tell you that your letter of December 4th surprised me a little. You mention in this letter that "we have never before had anything so unpleasant occur to us".

I think this is a little exaggerated because I have been told that in the waste metal trade, difficulties -- particularly with merchants -- about the most ridiculous matters are quite frequent.

You will hear and probably read very shortly about the active part the Continental has played in the project of a Government-owned tin smelter; you will also hear that we had the courage, at the beginning of this year, to bring a technical man over from the other side, and he is today unanimously acknowledged the finest electro-metallurgist in his field.

All in all, we are enjoying a good reputation in different quarters today, and we are quite content with what we have accomplished.

With regard to the ferro alloy field, we have the sincere desire to continue and develop this business with you, if you so wish. The first item has been ferro vanadium, but as soon as ferro vanadium moves along on its own momentum, we will not hesitate to develop other items as well, and each of these items can easily represent $40,000. a year profit (without exaggeration), if you let us go ahead with our knowledge of the business and do not handicap us unnecessarily.

I think this business should be attractive to you, especially because no one can forsee whether the developments in your own field (aluminum) will remain as lucrative as they have been.

If there should be any misunderstandings, you can always write me and the situation will be cleared up. I think I have proved, in all my dealings with you, that I am broadminded, but I cannot conceal from you that many of your last letters appear to have been written in a very angry mood.

If you have no taste for this business, you should tell us frankly that you want to get rid of it.

If, however, you do like the business, then we should see from your letters that you are pleased with it.

Kindest regards.

Sincerely yours

HJL*r

DEFENDANT V'S EXHIBIT "1-L"

Continental Ore Corporation

November 6, 1940

To: Apex
Subject: Philipp Brothers, New York

We refer to yesterday's telephone conversation when you informed us that the above firm is anxious to obtain ferro vanadium from you.

May we be permitted to make the following comments regarding the above:

1. This New York firm knows that we are your agents and yet they approach you.

2. They did the exact same thing in the Knoxville case (kindly note enclosures which please return); you will see they finally gave in for Mr. Leute gave them the right answer and then they finally gave us their orders.

3. They used the same tactics with Fredet-Kuhlmann, Paris, in offering vanadic acid and vanadium ores to Mr. Spitzer and Mr. Spitzer repeatedly told them to communicate with us.

4. You certainly know that Mr. Forchheimer's brother is in the United States; he is a chemist and was in charge of their ferro alloy operations, first in Germany and then in Sweden. We wish to give you some good advice in this connection—use extreme caution with Mr. F. who is only too anxious to start here with this manufacture with which he is fully familiar.

5. Furthermore, you know that they are on the best of terms with Shattuck and if our memory is

Defendant V's Exhibit "1-L"—(Continued)

correct. Shattuck produced some ferro vanadium in previous years.

For all these reasons we recommend that you give no information whatsoever to Phillip Brothers.

6. As soon as the War is over, there will again be the International arrangements in Ferro Vanadium which existed heretofore and we must avoid bringing new parties into the Ferro Vanadium field.

7. Phillipp Brothers have been known for their big business, first with Germany, then with Italy and Japan and we think we should avoid becoming involved in their transactions.

8. If, however, they want to buy for guaranteed domestic use only, you would weaken your proper position as well as ours for we mention in every offer and confirmation that we are your agents.

CONTINENTAL ORE CORPORATION,

President.

Re: Vanadium Corporation of America

We confirm our wire of today as follows: "Before Writing Vanadium Corporation Please Await Our Today's Letter".

In thinking over what we wrote you yesterday,

Defendant V's Exhibit "1-N"—(Continued)

it seems to us that it might perhaps be unwise to contact them because they may make a photostatic copy of your inquiry and use it against you when contacting consumers, hinting at your dependence on raw material.

However, this is only a thought and it is up to you to decide.

CONTINENTAL ORE CORPORATION,

President.

H.J.Leir/r

P.S. This of course applies also to the Electro Metallurgical Sales Corporation.

(Copy)

National Vanadium Corporation
Box 583, Grand Junction, Colo.

9/10/41

Continental Ore Corp.
500 5th Ave.
New York City, N. Y.

Attention—Mr. Henry J. Leir

Dear Mr. Leir:

I thought you would be interested in knowing that the government engineers have completed their preliminary examination of our properties and have recommended a complete survey and assay development with proper maps.

Defendant V's Exhibit "1-Q"—(Continued)

The men who were sent were Mr. Jackson, chief engineer of the bureau of mines with two assistants, also Dr. Hewitt, chief of the geological survey with two assistants. The work will begin at once and rushed as much as possible with crews from both departments doing the work.

I have taken up with my directors the matters we discussed in your office and here are a few of the questions which they asked me.

(1) Will they sign a bonded five year contract for the entire output of our 100 ton mill.

(2) Will they pay $1.00 per pound fused V_2O_5, 85% or better, F.O.B. Thompson Utah, and increase this price in the relation to what ever increase there might be in the price of their ferro alloy.

(3) When will they furnish funds to stock pile ore on at least a two months anticipation basis, before mill is started or after.

I am quoting these questions for your information and might add that my directors are interested in your proposition. I have also recommended it to them as I told you I would do.

When the assay maps and surveys are completed to the point which we believe will meet the requirements of the R.F.C. I will return to Washington with our complete application. You will probably not be surprised to hear that the U. S. Vanadium Corp. are endeavoring to tie up our product if we are successful and also to block us in every way possible if we do not line up with them.

Defendant V's Exhibit "1-Q"—(Continued)

Trusting I will hear from you.

Very truly yours,

NATIONAL VANADIUM
CORP.,
(Signed Wyman Sanford.)

co

Continental Ore Corporation

Date: 9/16/41

To: Apex Smelting Company
Subject: National Vanadium Corp.

Please find herewith enclosed copies of correspondence with the above.

Kindly send us a letter which we can forward to them.

In any case, we should be cooperative, in order to obtain this output, which, on the basis of 100 tons crude ore per day, we estimate as follows:

Average of the ore	2.5 tons
Less 20% loss in recovery	0.5 tons
	2.0 tons daily

= 60 tons per month
= 120,000 pounds of V_2O_5

However, you will remember that they want to make only 80,000 pounds of V_2O_5 per month, which would enable us to make about 40,000 pounds of V,

Defendant V's Exhibit "1-Q"—(Continued)

on which we should be able to make a profit of about $8,000.00 a month.

We shall be awaiting your news.

CONTINENTAL ORE CORPORATION,
/s/ HENRY J. LEIR.

Henry J. Leir/rk

September 16, 1941

National Vanadium Corporation
Box 583
Grand Junction, Colorado
Attention: Mr. Wyman Sanford

Gentlemen:

We wrote you yesterday and received your letter dated September 10th this morning.

We immediately submitted your letter to the Apex Smelting Company, and will reply in a few days.

In the meantime, we should like to point out the following with regard to the three specific questions you put before us:

1. We are willing to sign a 5-year contract for your total output, and will put up a bond to insure payments.

Inasmuch as you certainly do not want to guarantee a definite amount of production, we think Apex should just give you the preference on their

Defendant V's Exhibit "1-Q"—(Continued)

total requirements, with regard to all you can produce.

2. The price they pay, which we mentioned the other day in New York, is $1.00 per pound delivered Chicago. The freight rate for you is 2c. We would return the bags or drums, so that you can save on that. The price would be based upon their sales price for the finished Ferro-Vanadium.

3. We think that it is only fair that Apex should have an opportunity to see proof that your process is a good one, before they invest money for the ore stock pile.

As mentioned above, we have submitted your letter to the Apex Smelting Company, and will write you again within the next few days.

Very truly yours,

CONTINENTAL ORE CORPORATION,

.....,

President.

Henry J. Leir/rk

Sept. 17, 1941

Continental Ore Corporation
500 Fifth Avenue
New York, N. Y.
Attention: Mr. Henry J. Leir

Gentlemen:

We have your letter of September 16th which is

Defendant V's Exhibit "1-Q"—(Continued)

in reference to advancing money to cover a supply of ore to the National Vanadium Corporation.

Mr. Singer and I have very carefully thought this matter over, and we come to the conclusion that we have so frequently expressed to you, and that is to keep ourselves from becoming involved in anything outside of our own operations. We, of course, are always glad to finance our own operations, but we do not feel it advisable to finance raw materials in the plants of others, and therefore, we regret exceedingly that we must turn down this National Vanadium suggestion.

So far as a contract with them is concerned, we feel it is entirely too dangerous to tie up for a five year contract, in fact for any length of time. We would be glad to give them a contract based on the market for Ferro Vanadium and for a per cent of our production. In other words, if we sell 50000 lbs. of Vanadium contained material a month, we would guarantee to purchase from them 60 or 70% of that amount. A contract such as this would be flexible and would take care of us so that if business dropped off entirely, we would have no obligations.

We are also in receipt of your letter of September 17th, and we wish to advise that we temporarily held up the new construction although we have set aside one building which we hope will eventually house the Ferro Department. It so happens that in order to make this building suitable, the other build-

Defendant V's Exhibit "1-Q"—(Continued)

ings have to be done with it, and it will require an expenditure of approximately $75000.00, and we just deemed it advisable to hold up until we have completed some of our other work, and also to determine whether the sources of Vanadium would develop sufficient material to run that department, for as you know, we are not getting a sufficient quantity to run our present facilities on half time.

We, of course, have faith in this department, and you may rest assured that we will not fail to keep up with the situation, and will utilize the building set aside for it as quickly as we possibly can.

Incidentally, we wonder if you are making any progress on the disposal of the Ferro-Tungsten we have on hand.

If you have any further views pertaining to this National Vanadium, we, of course, would be very glad to have you advise us.

Very truly yours,

APEX SMELTING CO.,
L. LIPPA.

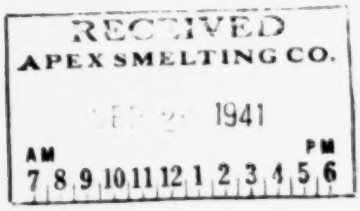
9-434

CONTINENTAL ORE CORPORATION



TO: Apex Smelting Company

RE: NATIONAL VANADIUM CORP.

9/19/41

We have your letter of September 17th, which, frankly, we do not understand.

As we note from the last paragraph of Page 1, you are temporarily holding up the new construction because of the raw material situation.

Therefore, one would think that you would be anxious to tie up this new vanadic acid production.

We agree with you completely that this agreement should be made in a very cautious form, in order to avoid any speculation or risk.

We can also understand that you do not want to help in the financing of a stock pile of the raw ore.

But you should at least give us a free hand with regard to signing a contract for the vanadic acid, in order to encourage them to create this new mill.

We therefore suggest that you let us sign a contract with them according to which we would give them:

Preference on all your requirements of Vanadic Acid
for a period of 5 years.

The price would be $1.00 per pound V205 delivered Chicago, and would be related to your present sales price of the finished product, going up and down accordingly.

We do not believe such a contract (we have signed a similar one with regard to the Deadwood Tungsten, as you know) would constitute any risk for you. It would then be a question only of how to manage the output from: Shattuck, Blanding, and Gateway. We think you can rely upon us to create larger sales of ferro vanadium, in the same proportion in which we obtain raw material.

You must admit that the building of a mill for 80,000 pounds of V205 per month represents many times the output of Shattuck and Blanding, and we think that we have reason to offer them some inducement to go ahead in their project.

Please let us have your reaction to the above.

CONTINENTAL ORE CORPORATION

Henry J. Leir/rk

DEFENDANT V'S EXHIBIT "1-R"

cc Apex

September 26, 1941

National Vanadium Corporation
Box 583
Grand Junction, Colorado

Attention: Mr. Wyman Sanford

Gentlemen:

With reference to our most recent correspondence, we had the opportunity to discuss the situation with the Apex Smelting Company yesterday.

1. They agree to let us sign up with you for 70% of their requirements. This is all we could obtain. They are on very good terms with their present suppliers of vanadic acid, and you will understand that they do not want to endanger these relations.

2. While we estimate that this 70% of their requirements will absorb the biggest part of your production, there might be a surplus, which we should like to sell for your account, on a commission basis, to the smaller consumers of vanadic acid in this country and abroad. We would charge you a commission of 2%. It is understood, of course, that shipments to Apex would be exempt from this commission.

3. With regard to this point, we refer to Point 3 in our letter of September 16th. We do not doubt that as soon as you are in production and Apex is convinced that you can supply them with the proper

Defendant V's Exhibit "1-R"—(Continued)

grade, something can be arranged to help you financially.

We hope that the above is sufficient for the present.

If you come East, please let us know, so that we can get together and make a definite contract along the above lines.

Very truly yours,

CONTINENTAL ORE CORPORATION,

.....,

President.

Henry J. Leir/rk

P.S.—You will have noted from your discussion with Apex that they are very conservative. It is our personal opinion that the consumption of Ferro Vanadium will go up so very much that eventually every pound of your production will go to Apex. However, you will appreciate their attitude to their present suppliers.

DEFENDANT V'S EXHIBIT "1-T"

November 27, 1941

Yesterday I saw Mr. Linz, a chemist, of the Climax Molybdenum Corp., and I gathered from him the following:

1. They do not expect any shortage of molybdenum in 1942. They alone will have 65 million

Defendant V's Exhibit "1-T"—(Continued)

pounds. The production of Kennecott is 12 million pounds.

2. The molybdenum briquettes contain carbon as binder. Carbon reacts for the reduction only if it is pressed. Therefore, mixing molybdenum with carbon powder and packing it into cans would not be useful.

3. These molybdenum briquettes are very useful in the electric furnace, where no carbon is contained.

4. For open hearth furnaces, it seems that they recommend calcium molybdate and molybdenum in cans.

5. In open hearth furnaces, where carbon is present, Scheelite and vanadic acid work automatically because the carbon reduces them.

6. Linz has patents himself for the use of carbon in pressed form as a mixture for tungsten, vanadium, etc.

7. Dr. Saklatwalla has patents for exothermic mixtures, comprising silicon and aluminum as agents. Mr. Linz does not know whether these patents are still in force.

8. Calcium vanadate would be an ideal compound.

9. Linz assures me that mixtures of vanadium with aluminum would lead necessarily to explosions, and he warned me of the danger involved.

Henry J. Leir/rk

Defendant V's Exhibit "1-T"—(Continued)

Apex Smelting Company
Vanadic Acid

11/27/41

We wrote you the other day that you should inform your suppliers to ship all the material in ground form, ground to 1/8" and down.

In making this suggestion, we of course assume that you can use material of such sizes also for the production of ferro vanadium.

However, if 1/8" is too fine for the making of ferro vanadium, then we think we should let the suppliers ship the material in some coarser size, fit for the production of both Van-Ex and ferro vanadium.

With regard to the amount of aluminum to be used, we are just now making some new investigations. We will know more in a few days.

We think it very likely that we will suggest that you keep the amount of aluminum lower than you anticipated, in order to avoid any damage of explosions in the steel furnace.

Therefore, until you have such new information from us, please do not prepare any mixtures for Van-Ex.

CONTINENTAL ORE CORPORATION.

Henry J. Leir/rk

DEFENDANT V'S EXHIBIT "1-U"

12/3/41

Apex Smelting Company
Van-Ex

Please find herewith enclosed a copy of our today's letter to Mr. Frankel, of Washington.

The man from whom we expect to receive some more information with regard to the correct amount of aluminum is, unfortunately, out of town, and we will be able to see him only on Monday.

In any case, we confirm our letter of November 27th, and would ask you not to prepare any mixtures before we enlighten you a little more about the proper quantity of aluminum.

Another question is whether you would have an opportunity in Chicago to approach a steel mill and place a few cans into their steel furnace (by preference an electric steel furnace) with varying amounts of aluminum, in order to make a practical test before actually shipping such material to the steel mills.

It must be our aim to add less aluminum, rather than too much, in order to eliminate any danger of explosions.

CHICAGO

May 29, 1942

Defendant Vanadium Corporation Exhibit No. 2-B--(Continue

Mr. W. A. Singer, President
Apex Smelting Co.
2537 West Taylor Street
Chicago, Illinois

Dear Sir:

In accordance with the provisions of an agreement dated July 1, 1938 between Apex Smelting Co. (an Illinois corporation) and Societe D'Electro-Chimie De Brignoud (a French corporation), we have prepared the attached statement of net receipts of the Thermit Department of Apex Smelting Co. for the period from July 1, 1938 to April 30, 1942. As this statement shows a deficiency of $8,420.60 of net receipts for this period, there is no royalty payable under the terms of the agreement.

During the course of our regular audits of Apex Smelting Co., we have reviewed the records of the Thermit Department but we did not make a detailed audit of all of the departmental transactions. Based upon such review, it is our opinion that the accompanying statement of net receipts presents fairly the results of the operations of the Thermit Department in accordance with the factors defined in paragraph five of the aforementioned agreement.

Respectfully,

Alexander Grant & Company

This report or certificate is delivered to client with the specific reservation that copy, publication or quotation thereof, either in full or in part, shall be in form approved by us. It is not to be published or quoted

STATEMENT OF "NET RECEIPTS" OF THERMIT DEPARTMENT AS DEFINED IN PARAGRAPH FIVE OF AGREEMENT DATED JULY 1, 1938 BETWEEN APEX SMELTING CO. (AN ILLINOIS CORPORATION) AND SOCIETE D'ELECTRO-CHIMIE DE BRIGNOUD (A FRENCH CORPORATION)

Advertising	-	749.50	1,417.75
TOTAL	63,282.48	189,847.43	151,557.40
Percentage applicable to Thermit Department - Note (3)	3.41%	4.87%	1.33%
Amount applicable to Thermit Department	$ 2,157.93	$ 9,245.57	$ 2,015.71

Note (1) - Operations of the Thermit Department for the period from July 1, 1938 to January 1, 1940 were experimental and no indirect expenses were charged thereto.

Note (2) - Indirect expenses for the period from January 1, 1942 to April 30, 1942 are estimated to equal one-third of the indirect expenses for the year 1941.

Note (3) - The percentage of indirect expenses applicable to the Thermit Department is computed as follows:

Total sales	$2,124,987.94	$4,571,869.04	$4,108,113.81
Sales of Thermit Department	72,384.95	222,609.81	54,623.49
Percentage of Thermit Department sales to total sales	3.41%	4.87%	1.33%

DEFENDANT V'S EXHIBIT "2-C"

February 1, 1943

Mr. Henry J. Leir
Continental Ore Company
500 Fifth Avenue
New York, N. Y.

Dear Mr. Leir:

Please accept our thanks for your letter of January 28. I have discussed this matter with both Mr. Starmann and Mr. Singer and we all regret exceedingly to advise that due to the demand upon our time at Apex it would not be advisable to associate ourselves with any other enterprise at this time.

Furthermore, from an investment standpoint, in view of the high taxes, there really is no great advantage to us. As a matter of information to you, however, I would like to call your attention to your plan "a". You will note that you stipulate approximately $5,000 will be allocated for equipment. As you know, our investment and equipment was considerably higher than that and was greatly inadequate for a sound, efficient business. We believe that you are making a mistake in figuring so small an amount for that item.

I regret exceedingly that I am unable to give you any more favorable news than this. The above explains our attitude at the moment. What the future will bring, we do not know, but we feel it would be inadvisable for any of this at this time.

Defendant V's Exhibit "2-C"—(Continued)

Thank you, however, for your thought in this matter, and with kindest regards, we are

Very truly yours,

APEX SMELTING CO.,
L. LIPPA.

Chicago, Illinois

Re: Ferro Alloys

Dear Mr. Lippa:

We are at last able to resume the production of ferro vanadium since sufficient raw material is available and fully assured by the WPB.

Inasmuch as we cannot, unfortunately, count on Mr. Starmann at the present time, we have made arrangements with a first-class specialist who is familiar with production not only in the electric furnace but by alumino-thermic and silico-thermic reaction as well.

While reduction by silicon would be somewhat cheaper, we would of course prefer the alumino-thermic process if only to maintain our business relations with you.

And we would prefer also to have you join our

Defendant V's Exhibit "2-C"—(Continued)

new enterprise in one way or another so that you could watch it from the first moment on.

We intend to form a separate corporation in any event for this manufacture according to one of the two following plans:

a) The new corporation to finance the entire business on its own account and keep all the profits. Sales: through C.O.C. on a 2.5% commission basis. Capital: between $50,000 and $100,000 of which approximately $5,000 would be allocated for equipment, the remainder for raw material and working fund.

b) The new corporation to be formed with a small capital: $1,000, $5,000 or $10,000, and with the purpose of converting vanadium oxide only on a toll basis for the account of C.O.C. at cost plus 10%. Financing of raw material, etc., by C.O.C.

We would very much like to have you join us in either combination.

We can tell you that if you personally prefer Proposition B, we would not ask your aid in financing, not even as regards the aluminum, since we have assurances from our bankers concerning an adequate credit.

We believe there are such large possibilities for the future in this field that we would like to be associated with you right from the beginning. We are confident that once the war is over you will be

Defendant V's Exhibit "2-C"—(Continued)

more interested than now in this alumino-thermic field.

If Apex as a firm cannot join us, we suggest that Mr. Singer, you and Mr. Starmann come into the new corporation as individuals.

I am enclosing herewith a balance sheet of our firm as of December 31, from which you can see that we have expanded our business again during the past year.

The new enterprise would start with ferro vanadium and later take in

ferro zirconium
ferro titanium

For your information, the business in Van-Ex would be discontinued.

May we hear from you?

Sincerely yours,

/s/ HENRY J. LEIR.
Henry J. Leir.

DEFENDANT V'S EXHIBIT "2-G"

Chicago January 19, 1942

Continental Ore Corp.

Attention: Mr. H. J. Leir

Gentlemen:

We have your letters of the 15th and the 16th, and we wish to advise that we would prefer not to run the Columbite, but would prefer to have you sell it, and of course while you are not recommending the purchase of additional Columbite at the present time, still we would not be interested in purchasing it.

Mr. Christiansen has returned, and we are now digesting his information and will write you in detail tomorrow.

We want you to know that we have been attempting to start the Ferro Department ever since last Tuesday, but we have had a lot of labor difficulty. It so happens that our men are now organizing, and the men that we have had in the Ferro Department refuse to go back into it, as they claim that it is injurious to their health. We have promises from a sufficient number of men to start the Department tomorrow, but each of these men have not promised to stay in the Department over four days. What the outcome of this will be, we cannot yet determine, but we will keep you advised.

We also note letter addressed to Mr. Singer. As you know, Mr. Singer is now with the OPM, but we will try to get your letter to him.

Very truly yours,

LL:FS

Defendant V's Exhibit "2-G"—(Continued)

January 13, 1942

Chicago
Continental Ore Corporation

Attention: Mr. H. J. Leir

Gentlemen:

We have your letter of January 12th, and wish to advise that our Mr. Christiansen will be in Washington this week, at which time he will go over this entire matter with the Vanadium Section of the OPM. After receipt of his report, we will contact you and advise you regarding the results.

We note the article you sent to us from Business Week, but we do not feel that we can consider this as authoritative, as the orders as given out by the OPM are specific, and we would not have any excuse to deviate from those orders.

We hope to get into production on Ferro Alloy this week, although we are having some difficulty with the labor, as most of them refuse to go to work in that Department. As you know, we have been trying to secure the proper respirators, but somehow or other, we have never been able to get any that keep the dust from getting into the men's throats and nostrils.

However, we will try to overcome this the best way we possibly can.

Very truly yours,

LL:FS

New York City, N. Y.

Att: Mr. Gustav Laub, Vice President

Gentlemen:

In accordance with conversation our Mr. Christiansen had with you, we are pleased to enclose an equipment inventory of our Ferro Alloy Department which we desire to sell.

This list does not include all the equipment used in that department, since we find use for the rest of it in our aluminum production.

We would appreciate very much if you will advise us by return mail whether this will be of any interest to you.

We are greatly in need of the space and therefore are anxious to move these items as quickly as possible.

Incidentally, if your Chicago office would like to inspect this material, we want you to know that they will be welcome to do so.

Very truly yours,

APEX SMELTING CO.

Cortez, Colorado

March 16, 1942

Attention: Mr. Dan Milenski

Dear Mr. Milenski:

We refer to our letter of March 5th, to which we have not yet received any reply.

As you can see from the enclosed clipping, prices for Ferro Alloys will remain unchanged during the second quarter.

However, we have an idea which makes it possi-

Defendant V Exhibit No. "2-J"—(Continued)

ble for us to pay our suppliers an especially high price, which would work out in your case to be as high as $1.20 FOB Blanding.

If you are interested in a contract, please let us know.

Very truly yours,

CONTINENTAL ORE CORPORATION,
/s/ HENRY J. LEIR,
President.

Henry J. Leir/rk

DEFENDANT V EXHIBIT No. "2-K"

(Copy)

Mr. Henry John Leir — February 8, 1944
Continental Oil Company
500 Fifth Avenue
New York, New York

Dear Mr. Leir:

In line with our telephone conversation yesterday morning, I talked at length to Blanding Mines Company's engineer, Mr. Fred A. Brinker of Durango, Colorado, concerning the probable disposition of his concentrating process.

I find that Mr. Brinker has been in contact with both U. S. Vanadium Company and Vanadium Corporation of America, however, he has delt with neither and as far as Mr. Brinker is concerned,

Defendant V Exhibit No. "2-K"—(Continued)

he is willing to make an equitable deal with our company. As I advised you over the phone, the process which Brinker discovered while in the employ of Blanding Mines is the separate property of Mr. Brinker.

Brinker has perfected a concentrating process whereby about five tons of ore are concentrated into one. That recovery in this concentration is in excess of 90% of the V_2O_5 and U_3O_8 contained and also, the radium, if any, is in the concentrate. Brinker states that the cost of concentrating would be probably $1.50 per ton. In view of the fact that the average transportation costs on moving ore to a mill-site are more than this, the process appears to have unlimited possibilities.

Blanding Mines Company controls quite a number of claims and with these claims and others we could acquire or control, it is our opinion that we could, through this process, concentrate and treat the concentrate and recover approximately 50,000 pounds of vanadium and a considerable quantity of uranium every month. Mr. Brinker suggested that if you could spare the time to make a trip to this section that he believes the same highly desirable and advisable for the reason that you could see these properties and could see the mills in this territory and, in addition, you could get a complete picture of the actual mining and milling costs and production practices and problems. Blanding Mines Company's records are kept in great detail and we

Defendant V Exhibit No. "2-K"—(Continued)

have cost analyses of every phase of the operation. We believe that it would be unavailing to meet in any location other than here for the reason that you ought to familiarize yourself with the production of vanadium and uranium.

I believe that Blanding Mines would be interested in working out a joint undertaking or some other arrangement whereby we would work in harmony and to the mutual advantage of each other and that such an arrangement is highly desirable on account of your marketing set-up and your marketing ability and our milling and producing experience.

As far as I am concerned, there is a great deal of uncertainty as to any expansion program by the present owners of Blanding Mines. I anticipate that I will probably be in the Army before long and our organization would like to formulate their plans for the future rather soon.

If we are going to utilize Brinker's process, which is revolutionary, we are going to need additional capital, as I mentioned to you over the telephone. I don't know the exact amount that it will take and we feel that before endeavoring to discuss the possibility of any arrangement with you that you should first see this vanadium producting section and if you could make arrangements to come to either Gallup or Albuquerque, New Mexico, we would be very happy to pick you up and bring you

Defendant V Exhibit No. "2-K"—(Continued)

to Cortez and spend all the time with you that would be needed.

To utilize Mr. Brinker's process, we would need a concentrating mill and a treatment plant; expansion should take care of itself. The costs of recovery by this process will be much less than it has been in the past. Whether or not others would be licensed is another problem.

In the event that you should decide to make this trip, my wife asked me to extend to your wife an invitation to accompany you and to be our guest while you are here. We certainly enjoyed our visit with you in Grand Junction and we certainly hope that you will be able to come to this section.

Your Christmas favor was greatly appreciated.

Very truly yours,

DM:mp

[Night Letter]

Mr. Henry John Leir
Continental Ore Co.
500 Fifth Ave.
New York, New York

Suggest you arrange to mave us meet you in Alamosa, you may get train from Denver for Alamosa in the evening. This would permit you to examine our mining and mill records in Durango, Colorado, and then we could go to the mining districts and our mill, and we could take you to Grand Junction if you wish. Deem it advisable for you to have about 3 days in this territory as we desire that you thoroughly familiarize yourself with our operations and holdings.

Dan Milenski.

Agreement Made and Entered into this .... day of March, 1944 by and between Blading Mines Company, a Utah corporation, having its principal place of business in Cortez, Colorado, (hereinafter called "Blading") party of the first part, and Henry J. Leir, E. D. Leir and L. Schloss, co-partners doing business under the firm name and style of Continental Ore Company, 500 Fifth Avenue, New York, N. Y., (hereinafter called "Continental") party of the second part.

Defendant V Exhibit No. "2-K"—(Continued)

Witnesseth

Whereas Blading owns vanadium deposits and has heretofore entered into a lease upon a certain plant of the Defense Plant Corporation, to be used for the manufacture of vanadium pentoxide, and

Whereas Continental is a manufacturer of ferro vanadium by a special secret process and is also engaged in business as a dealer in vanadium and similar products and acts as agent on behalf of producers of vanadium products of all kinds, and

Whereas the parties hereto desire that Continental shall provide to Blading a continuous outlet for the vanadium and similar products manufactured by Blading, including uranium and radium or intermediary products,

Now, Therefore, in consideration of the premises, the parties hereto agree as follows, to wit:

1. Continental undertakes to receive delivery of the entire output of vanadium pentoxide as produced by Blading as the same shall or may be specified for delivery from time to time by Continental but subject to the limitations hereinafter in this agreement contained, and Continental undertakes and agrees upon the delivery thereof to pay to Blading the purchase price thereof, and Blading covenants and agrees that during the life of this contract that it will not sell or offer for sale any vanadium pentoxide unless and until Continental shall give notice that it will not accept delivery of the same, and then only upon the terms and con-

Defendant V Exhibit No. "2-K"—(Continued)

ditions hereinafter in this agreement more particularly provided.

2. Blading agrees that vanadium pentoxide tendered for delivery pursuant to the terms hereof will be fuxed into a material commonly referred to in the market as "Black Oxide" containing at least eighty-five (85%) percent vanadium pentoxide (V_2O_5) which said material shall be crushed to ten (10) mesh or less, and shall contain a minimum of sodium (Na_2O).

3. Continental agrees upon the delivery of the product as hereinafter provided that it will pay to Blading the current market price for the material which is presently fixed by the parties and which shall remain until further notice One and 10/100 ($1.10) Dollar per pound vanadium pentoxide contained, delivery including packaging in either bags or drums, at the election of Continental, which said bags or drums shall be returned by Continental to Blading with freight charges collect.

4. The price of One and 10/100 ($1.10) Dollar per pound vanadium pentoxide is based upon two (2%) percent sodium (Na_2O) and such price will be increased or decreased for any sodium (Na_2O) above or below two (2%) percent, with pro rata adjustment for fractions.

5. The parties hereto agree that the present price of ferro vanadium based on present market quotations per pound of vanadium contained is as follows:

Defendant V Exhibit No. "2-K"—(Continued)

Open Hearth Grade	$2.70
Crucible Grade	$2.80
Primos Grade	$2.90

In the event that Continental by reason of competitive conditions in the market for ferro vanadium shall find it necessary to reduce these prices and that in consequence of such reduction the net profit of Continental shall be less than five (5%) percent, Blading undertakes that there shall be a corresponding reduction in the purchase price to the extent that it shall be necessary in order for Continental to make a net profit of five (5%) percent. Blading shall be entitled in its discretion to grant or refuse such price adjustments. In the event that such price adjustments shall be refused, Continental shall thereafter be released from the obligation to specify or to accept deliveries or to make payment for any additional quantities of vanadium pentoxide. In the event that after such reduction it shall be determined upon an actual sale of the product that the profit of Continental in connection with such deliveries upon which the price shall have been reduced is in excess of five (5%) percent, Continental shall in turn account to Blading for any excess over said five (5%) percent.

6. If at any time during the term of this contract Blading shall accumulate a quantity of vanadium pentoxide equivalent to two months production and Continental shall fail to specify or receive delivery thereof, from and after such period Blad-

Defendant V Exhibit No. "2-K"—(Continued)

ing shall be entitled to sell the amounts so accumulated and Continental shall be relieved from any liability or responsibility on account of any such deliveries as to which it shall not have specified or received delivery. The right of Blading to sell such quantities shall, however be conditional and they shall not be privileged to sell said vanadium pentoxide or any part thereof at a lesser price nor upon terms more favorable than Continental has indicated its willingness to pay therefor.

7. Blading hereby appoints Continental its exclusive sales agent for all other products excluding vanadium pentoxide but including vanadium, uranium, radium and other intermediary products as it shall or may product and/or the tailings from any such production or portion, and Blading undertakes and agrees to pay to Continental a commission of two and one-half (2½%) percent on the net price of the product, after all discounts. The net sales price in each case shall be the price f.o.b. Blading's plant at Cortez, Colorado or such other point or points of production as shall be selected by Blading. Such commission shall be paid monthly on or before the 10th day of the month following the month in which payment for shipments shall have been made.

8. In the event that Blading shall produce over a period of ..... months a quantity of fifty thousand (50,000) pounds vanadium pentoxide contained per month and it shall be apparent that

Defendant V Exhibit No. "2-K"—(Continued)

such production can be maintained over a reasonable period thereafter, Continental undertakes to construct a plant in the State of Colorado for the utilization of its process for the manufacture of ferro vanadium. In the event that such plant shall be erected by Continental, all ferro vanadium produced from such plant shall be sold by Continental and after Continental shall have paid the expense of such manufacture and deducted a reasonable amount for amortization and the sum of five (5%) percent upon the net sales price as profit, the balance received upon the sale of said product shall be paid to Blading.

9. Continental agrees to cooperate with Blading in connection with the production, refinement and manufacture of uranium and/or radium and/or intermediary products thereof and to put at the disposal of Blading all technical and engineering information and data in the possession of Continental with reference thereto and to consult with Blading with reference to the production and/or the metallurgical or chemical processes to be employed. Continental further agrees that it will at all times place at the disposal of Blading any and all information with reference to the production and sale of the products which it is authorized to sell as agent, and that Continental will report to Blading from time to time, as in the discretion of Continental it shall be necessary, all changes in market conditions and the development of new

Defendant's Exhibit No. "2-K"—(Continued)

sources of supply for raw materials and other information likely to be of assistance to Blading, and Blading agrees to communicate like information in its possession.

10. Blading undertakes and agrees to procure from its stockholders an undertaking that such stockholders will not sell or dispose of their shares or any part thereof or hypothecate or pledge the same without the consent of Continental, and that Continental shall be entitled to cancel the within contract upon such sale and shall be entitled to receive from each of said stockholders a sum equal to ( ) percent of the purchase price received by any such stockholder.

11. It is agrees that the term of this contract shall commence on the .... day of March, 1944 and shall continue for a period of twenty years thereafter.

In Witness Whereof Blading has caused these presents to be executed by its officers and Continental has hereunto set its hand and seal.

BLADING MINES COMPANY,

By .....

President.

.....

.....

.....

Defendant V Exhibit No. "2-K"—(Continued)

[Letterhead of Blanding Mines Company]

[Handwritten Note: Contract to be signed also by UTE Mining Co.]

Mr. Henry John Leir
Continental Ore Company
500 Fifth Avenue
New York, New York

March 24, 1944

Dear Mr. Leir:

We received the draft of contract prepared by your attorney and this morning we wired you as follows:

"Contract received—Some points need clarification. We suggest while these points are being discussed that you agree by letter to purchase our entire output up to 20,000 pounds vanadium pentoxide per month for period of nine months at price of $1.10 per pound contained of 85% grade or better less carload freight Utah shipping point to New York. Letter follows."

The proposed contract is somewhat different from what we discussed in Grand Junction and we desire the following points to be definitely covered, changed, or clarified, namely:

In paragraph No. 1 of your contract, the recital is "Continental undertakes". Throughout this contract we notice that Continental "undertakes", and in most instances, Blanding "agrees". Paragraph No. 1 also states that you will receive delivery of the entire output of vanadium as the same may

Defendant V Exhibit No. "2-K"—(Continued)

be specified from time to time for delivery. This is definitely objectionable and we insist that you agree to take our entire output up to 50,000 pounds of V_2O_5 contained. Of course, at the present time we can only make about 15,000 pounds per month and as per our conversation with you in Grand Junction, we realize that we will need financial assistance to increase the output above 15,000 pounds. Paragraph 1 is further objectionable in that the privilege is left with Continental to give notice that it will not accept delivery. If Continental would not accept delivery, we could only sell upon such terms and conditions as you have set forth. We believe the contract should be a contract in which you would unconditionally agree to buy and we agree unconditionally to sell, however, if you would desire or need some arrangements to cease buying, we believe that at least six months notice should be given. Of course, some other arrangements might be worked out for your protection in the event the market should decline to the point where you could not accept. The suggestion of six months notice if purely arbitrary and three months might be sufficient.

Paragraph 2 of your proposed contract recites that the material should be crushed to a No. 10 mesh or less. We believe that this should be changed to ¼", however, as per our conversation, if we find it practical and feasible to granulate the same to a No. 10 mesh or less, we will do so.

Defendant V Exhibit No. "2-K"—(Continued)

Paragraph No. 3 states that delivery shall be made in bags or drums at the election of Continental. It was our impression that you were to pay the return freight charges on the drums. If you are not willing to do this, we believe that we should have the right to elect whether it should be shipped in bags or drums.

As to Paragraph No. 4 in which you recite the 2% Sodium oxide (Na_2O), it was our understanding that this was to be based on Sodium (Na) and we now suggest that the minimum Sodium content be based upon our average sodium content in the fused black which we have made in the past. We believe that we can hold the Sodium to a minimum, however, we desire to ascertain what the Sodium content was in our former production before we could commit ourselves to hold it to an agreed minimum. After we had agreed upon the minimum, the pro-rated adjustments, either upwards or downwards, could easily be arrived at. In this connection, we submit that there is nothing in the proposed contract which clarified the adjustments which should be made.

Paragraph No. 5 states that the price is based on the present ferro vanadium price and you quote the three grades. We believe that this should be modified and be based upon the grade which you make and upon the price which you receive for such product. Paragraph No. 5 is definitely objectionable in regard to the 5% net profit to Continen-

Defendant V Exhibit No. "2-K"—(Continued)

tal. Since we have no guarantee as to our net profit, we believe that you should have no guarantee as to your net profit, as we have no control over your costs and it would be impossible for us to agree on a definition of your term "net profit". Likewise, all market policy is beyond our control.

Our objections to Paragraph 6 are included in our objections outlined in Paragraph 1.

As to Paragraph No. 7, we believe that uranium and radium and other intermediary products should be covered by separate contract and before we would endeavor to contract on those items, we would have to be informed of the market for such products so that we could ascertain whether or not it would be economically practical for us to make the change in the milling process to recover such other products and in what form we should recover them. In the event that we could economically recover such other products, we would have no objection to the 2½% commission. Of course, all points in connection with the sale of products other than vanadium should be further discussed when we are advised of the market price.

Paragraph No. 8 appears to be satisfactory except that no mention is made of the exact number of months that the 50,000 pound production should be required.

In Paragraph No. 9, we note that disclosure of certain information is reserved to the discretion of Continental. We believe that such reservation

Defendant V Exhibit No. "2-K"—(Continued)

should be eliminated. If you are our exclusive selling agent and broker, we should certainly receive all information concerning the market conditions, development of new sources, etc.

Paragraph No. 10 is objectionable in that until such time as you have some financial interest with us, that restriction should not be made concerning our transfer of stock. In addition to this, any of our stockholders should be able to sell to the remaining stockholders without any restriction whatsoever, although, if you desire some evidence of us not selling our stock to others, we would be willing to agree that the three major stockholders or their heirs will, during the continuance of this contract, maintain controlling interest in Blanding Mines Company. We feel this would give you all protection needed. Also, in the event of a transfer of any stock to other than a present stockholder, you would have the first right and privilege to buy said stock. In addition, if we agree along those lines, Continental Ore should rightfully agree that it will not sell its business.

It was our understanding in Grand Junction that if our concentration process was a success that you would be willing to assist us financially in increasing our production facilities. It occurs to us that this should be included in the contract.

As to the Association, we are somewhat at a loss to ascertain the correct procedure in organizing such an association. We are perfectly willing to

Defendant V Exhibit No. "2-K"—(Continued)

organize such an association but no member of our organization will accept the Presidency thereof. In addition, as you have been advised, Sitton is indifferent to our proposition. We had a verbal agreement with him in Grand Junction. When we attempted to reduce it to writing, we could not do so to his satisfaction. On or about the 12th day of March, he agreed that he would have an attorney of his choosing to meet with us immediately to discuss the matter further, and to date we have heard nothing more from him, consequently, we do not feel that Sitton should be further considered or consulted in the matter of this association. It also appears to us that at the present time there are only two independent producers, namely, Gateway and Blanding. We believe that other so-called "independent" producers are using suggestions outlined in Grand Junction for their benefit in negotiating for the sale of ore to major companies.

In my last conversation with Gardner, Gardner mentioned that he was in a hurry to get some sort of an organization. He didn't seem to care exactly what provisions were contained in the articles and the important thing being the organization. I told Mr. Gardner that if there was an organization that it should be a marketing organization so that any signor who produced ore would have to agree that when any other member of the organization desired to purchase his ore that he would do so at

Defendant V Exhibit No. "2-K"—(Continued)

the same price that the member was then getting. As a further precaution, that the sales price of all ore should be a matter of record with the association. This would thwart individual deals and we note that in the past that the selling price received for ore has usually been based upon the individual's dealing ability and not on the type of ore or a uniform market policy.

In connection with the association, we would like to have your ideas concerning the same in connection with the problems which I wrote to you about some days ago.

Very truly yours,

BLANDING MINES COMPANY,
/s/ By DAN MILENSKI.

DM:mp

Blanding Mines Company March 27, 1944
P. O. Box 895
Cortez, Colorado

Attention: Mr. Dan Milenski
Re: Vanadium

Gentlemen:

We are in receipt of your wire of March 24th, and after considering all angles, we feel that at the present time it would not seem advisable for us to enter into a contract as suggested by you, without the framework of an agreement as outlined in the draft we sent you.

Defendant V Exhibit No. "2-K"—(Continued)

We hope that you will understand our position. We believe that a straight purchase contract does not do justice to the general situation, which should be covered by the agreement that we now have under discussion.

We trust that in the near future you will be able to clarify the points which you say need additional thought.

Looking forward to hearing from you in this respect, we are

Very truly yours,

CONTINENTAL ORE COMPANY,
Henry J. Leir.

[Letterhead of Continental Ore Company]

March 31, 1944

Blanding Mines Company of Utah
P. O. Box 188
Cortez, Colorado

Att. Mr. Dan Milenski
Re: Vanadium

Gentlemen:

Your letter of March 24 and ours of March 27 no doubt crossed in the mails.

Before entering into further details, we would like to make some general remarks so that you can properly appraise our situation:

When shipments on V_2O_5 from Utah and Colo-

Defendant V Exhibit No. "2-K"—(Continued)

rado decreased, and at a time when we needed them the most, we decided to make ourselves independent. We created equipment for the treatment of foreign vanadium ores and, frankly speaking, we are not in need of any material from Utah/Colorado today, unless we should want to expand our present business considerably.

We will buy from you only if you are willing to make a long-term contract with us which will protect our interests so that any changes we might make now in your favor (and to the detriment of our own conversion of foreign ores) would not prove harmful to our own interests one day.

As long as your output is only 15,000 pounds per month there are no particular difficulties with regard to our own outlets, but the moment you achieve a larger output, we would like to see an "association" created, because the "association" would give us a better standing in the marketing of the finished product.

The price must be based on the Na_2O contents because whatever Na_2O we have in the acid will absorb a like quantity of V_2O_5.

We would be willing to buy the material in full carloads, which would in turn enable you to make considerable savings on freight and packing. We would accept so-called asphalt laminated paper bags, which we can buy for you at about $100 per 1,000 delivered Utah, or 10c per bag. The bags can easily contain 100 pounds.

Defendant V Exhibit No. "2-K"—(Continued)

In giving you these advantages the 2% Na_2O basis which I mentioned in Grand Junction should be reduced to 1% Na_2O.

We believe that the above will show you our position in the matter, and we await your reaction before going further into the other details which, we are certain, can be worked out to our mutual advantage.

Very truly yours,

CONTINENTAL ORE COMPANY,
/s/ HENRY J. LEIR.
Henry J. Leir.

Defendant Vanadium Corporation Exhibit No. 2-A-

tatement of Considerations for Regulation No. 489

I. The Commodities

gsten, molybdenum, vanadium, cobalt and other alloying materials etals, covered by this regulation, are used primarily as alloying lients in the manufacture of iron and steel. Limited amounts are nsumed by the chemical and other industries. At the present time nsumption of these materials is restricted to war and essential n purposes.

ough these alloying materials have somewhat the same general each element serves a distinct and separate function in the manu- e of different alloy steels and other products. Each has its own r characteristics from a metallurgical standpoint and requires dif- methods of processing. A brief description of each is set out be-

gsten. As an alloying material, tungsten imparts qualities of ex- hardness and toughness to steels. It is one of the indispensable gents of high-speed tools, both in the tool steels and the carbides which they are manufactured. Such high-speed tools are essential rapid fabrication of war implements. Tungsten is also a vital ele- n steels used in the manufacture of certain types of armor-piercing tiles, armor plate, gun barrel liners and breeches, motor valves and seats and propeller blades. In the electrical and electronics field, en is essential for lamp, radio, radar and X-ray filaments, contact transformer cores, electrodes and precision control instruments. chemical field, tungsten has many uses as a catalyst, such as in anufacture of high octane aviation gasoline, and is also used in proofing cloth, in tanning leathers, and in many other chemical ses.

ough some of the tungsten consumed is charged into the steel bath form of ores and concentrates, the major portion of the tungsten nd concentrates is further processed into ferrotungsten, tungsten powder and tungsten compounds. Both in tonnage and dollar value, ungsten is by far the most important, about 70% of the ore and ntrates consumed in the United States being for this purpose. As oying material for high-speed and other steels, tungsten is chiefly in the form of ferrotungsten. Tungsten metal powder finds its pal use in the electrical and carbide fields, while the tungsten com- s are consumed principally by the chemical industry. The com- s are also intermediate products in converting the ore to the form tal powder.

ybdenum. Although it has come into use more recently than most other principal alloying elements, molybdenum has been widely used domestic steel industry during the past decade and has been of partic- mportance since the outbreak of the present war. This element has f the characteristics of tungsten; and, because of the relative scarcity latter, molybdenum has been widely substituted for it in the high- ontent tool steels. Molybdenum is also now being much used in the

t 1943 by F.R.P.

low-alloy National Emergency steels in combination with smaller amounts of the previously accepted alloys for these purposes, such as chromium and nickel. Molybdenum is used in the manufacture of virtually every type of alloy steel. It is usually introduced into steel in one of three forms—ferromolybdenum, calcium molybdate and molybdic oxide, the last being the form most generally used.

In addition, increasing amounts of molybdenum in the form of metal powder are being consumed in the electrical and electronics field; and molybdenum compounds have a diversity of uses in the chemical industry.

Vanadium. Vanadium is of prime importance as an alloying material in three general classes of steel products: (1) large forgings, castings and armor plates, (2) dies, taps and drills, and (3) high-speed tools. The vanadium content in these products is relatively low, running from 0.15% to 2.25%. Vanadium, however, has a greater effect than any other element in enhancing the tensile strength and hardness of steel without impairing its toughness. About 80% of the vanadium consumed is in the form of ferro-vanadium which is usually produced from vanadium pentoxide—an intermediate product processed from vanadium ores and concentrates. Very small amounts of concentrates are charged directly into the steel bath. In addition, vanadium in the form of compounds is used for catalytic and other purposes, and limited amounts are produced in the form of metal.

Cobalt. Cobalt is consumed commercially in the form of metal, oxides, hydrates and salts. Practically all the metal is cast into rondelles, with minor amounts being produced and sold in the form of granules, fines and powder. During the past few years the metallurgical uses of cobalt have increased many fold and it is estimated that over 90% of the United States consumption of cobalt is now used for these purposes. Prior to 1940, the principal uses of cobalt were in the non-metallurgical fields—for ceramics, protective coatings, inks and chemical purposes.

About 50% of the cobalt being consumed in this country currently is used in the manufacture of the stellite and carbide types of alloy which are used for high-speed cutting edges on machine tools. Cobalt gives to an alloy the ability to retain a sharp edge under extreme heat—a characteristic known in the industry as "hot-hardness." Cobalt is also used for this purpose in high-speed steels.

Stellite-type molten non-ferrous alloys are becoming increasingly important in the manufacture of certain types of aviation motor accessories and searchlight reflectors for the armed forces.

Another characteristic of cobalt is its magnetic qualities and it serves as an alloying material in the better magnet steels. Some of these steels contain as much as 35% cobalt.

Ferrophosphorus. Ferrophosphorus is an alloy of iron produced by smelting phosphate rock in electric furnaces. Almost the entire production currently is of the 23-26% phosphorus grade. Ferrophosphorus is added to steels used in the manufacture of thin steel sheets for containers and for galvanizing purposes. The addition of phosphorus to steel gives it brittleness and prevents cohesion when several sheets are rolled in one operation. In foundry operations, ferrophosphorus is also used for certain types of castings in order to assure fluidity.

wholesalers, manufacturers or producers of such commodity, and that this relationship subjects sellers at retail of such commodity generally to substantial hardship, should immediately communicate such information in writing to the Retail Trade and Services Division, Office of Price Administration, Washington, D. C., so that the Price Administrator may take appropriate action.

§ 1499.19 *Petitions for amendment.* Any person seeking a modification of any provision of this General Maximum Price Regulation, or an adjustment not provided for in § 1499.18 of this General Maximum Price Regulation, may file a petition for amendment in accordance with the provisions of Procedural Regulation No. 1 issued by the Office of Price Administration.

Definitions and Explanations

§ 1499.20 *Definitions and explanations.* This General Maximum Price Regulation, and the terms appearing therein, unless the content otherwise requires, shall be construed as follows:

(a) "Appropriate field office of the Office of Price Administration" means the district office for the district (or in the absence of such district office, the state office for the State) in which is located the seller's place of business from which his sales are made.

(b) "Appropriate War Price and Rationing Board" means the War Price and Rationing Board for the area in which is located the seller's place of business from which the cost-of-living commodities are offered for sale.

(c) "Commodity" includes commodities, articles, products, and materials and contracts to buy, sell, or deliver any of the foregoing, but does not include real property.

(d) "Delivered." A commodity shall be deemed to have been "delivered" during March 1942, if during such month it was received by the purchaser or by any carrier, including a carrier owned or controlled by the seller, for shipment to the purchaser.

(e) "Establishment" refers to the physical location of the store, shop or other place of business in which commodities or services are sold. Any such establishment shall be deemed to be selling at retail if it has an established practice of making sales at retail.

(f) "Mixed feed" includes a mixture or blend of more than one feed ingredient for the purpose of feeding animals, except a mixed feed resulting from the blending or mixing of offal from a single grain.

(g) "Most closely competitive seller of the same class". "Seller of the same class" means a seller (1) performing the same function (for example, manufacturing, distributing, retailing, processing, storing, installing, or repairing), (2) of similar type (for example, department store, mail order house, chain store, specialty shop, cut-rate store), (3) dealing in the same type of commodities or services, and (4) selling to the same class of purchaser. A seller's "most closely competitive seller of the same class" shall be a seller of the same class who (i) is selling the same or a similar commodity, and (ii) is closely competitive in the sale of such commodities, and (iii) is located nearest to the seller.

(h) "Offering price" means the price quoted in the seller's price list, or, if he had no such price list, the price which he regularly quoted in any other manner, except that in the case of sales of commodities by an establishment selling at retail, the offering price shall be the price at which the commodity was offered for sale at the immediate point of sale (for example, the shelves or counters). But "offering price" shall not include a price intended to withhold a commodity or service from the market, or a price offered as a bargaining price by a seller who usually sells at a price lower than his asking price.

(i) "Person" includes an individual, corporation, partnership, association, any other organized group of persons, legal successor or representative of any of the foregoing, and includes the United States, any agency thereof, any other government, or any of its political subdivisions, and any agency of any of the foregoing.

(j) "Price regulation" means a price schedule effective in accordance with the provisions of section 206 of the Emergency Price Control Act of 1942, a maximum price regulation or temporary maximum price regulation issued by the Office of Price Administration, or any order issued pursuant to any such regulation or schedule.

(k) "Purchaser of the same class" refers to the practice adopted by the seller in setting different prices for commodities or services for sales to different purchasers or kinds of purchasers (for example, manufacturer, wholesaler, jobber, retailer, government agency, public institution, individual consumer) or for purchasers located in different areas or for different quantities or grades or under different conditions of sale.

(l) "Raw and unprocessed agricultural commodity or greenhouse commodity". Commodities that are picked, harvested, thrashed, ginned, hunted, cleaned, baled, boxed, packed, transported, and/or refrigerated, without more, remain "raw and unprocessed". But operations such as slaughtering, freezing, drying, canning, preserving, milling, crushing, straining, centrifuging, shelling of peanuts, and purifying with heat, constitute processing for this purpose. For purposes of this General Maximum Price Regulation, flowers, seeds, and bulbs shall be agricultural or greenhouse commodities. Forest products, such as lumber and naval stores and mineral products, whether processed or unprocessed, shall not be deemed to be agricultural commodities.

(m) "Records" includes books of account, sales lists, sales slips, orders, vouchers, contracts, receipts, invoices, bills of lading, and other papers and documents.

(n) "Replacement cost" shall be the net price paid by the seller after May 18, 1942, or the net price which the seller would have to pay to replace such commodity after such date.

(o) "Sale at retail" or "selling at retail" means a sale by selling to an ultimate consumer other than an industrial or commercial user, except that for the purposes of § 1499.4 of this General Maximum Price Regulation a "sale at retail" shall not include any sale by a producer, manufacturer, or fabricator of any commodity produced, manufactured, or fabricated by him.

(p) "Sale at wholesale" means a sale by a person who receives delivery of a commodity and resells it, without substantially changing its form, to any person other than the ultimate consumer.

(q) "Securities" includes any note, stock, bond, and interest or instrument commonly known as a "security".

(r) "Sell" includes sell, supply, dispose, barter, exchange, lease, transfer, and deliver, and contracts and offers to do any of the foregoing. The terms "sale," "selling," "sold," "seller," "buy," "purchase" and "purchaser," shall be construed accordingly. Nothing in this General Maximum Price Regulation shall be construed to prohibit the making of a contract to sell a commodity or service at a price not to exceed the maximum price at the time of delivery or supply.

(s) "Seller" includes a seller of any commodity or service. Where a seller makes sales or supplies services through more than one selling unit, other than salesmen making sales at uniform prices, each separate place of business of the seller shall be deemed to be a separate seller, except that for the purposes of § 1499.18 of this General Maximum Price Regulation, the owner of the business shall be considered the seller regardless of the number of separate places of business he owns.

(t) "Service" includes any service rendered or supplied, otherwise than as an employee, in connection with the processing, distribution, storage, installation, repair, or negotiation of purchase or sale of a commodity, and generally, without limiting the foregoing, all services which reserve or add to the value or utility of a commodity.

(u) "Supplied". A service shall be deemed to have been "supplied" during March 1942, if during such month it was completed or in process.

Other Price Regulations, Applicability, Effective Date

§ 1499.21 *Effect of other price regulations.* This General Maximum Price Regulation shall not apply to any sale or delivery for which a maximum price is in effect, at the time of such sale or delivery, under the provisions of any other price regulation issued, or which may be issued, by the Office of Price Administration.

§ 1499.22 *Applicability.* The provisions of this General Maximum Price Regulation shall be applicable to the United States, its territories and possessions, and the District of Columbia.

§ 1499.23 *Effective date.* All the provisions of this General Maximum Price

r Alloys and Metals. In addition to the alloying elements discussed this regulation covers a number of special alloys, known in the trade xidizers, intensifiers or purifiers.

special alloys usually represent a combination of a number of ele- such as vanadium, boron, manganese, zirconium, and aluminum com- frequently with silicon. Each of the various combinations marketed carries its own brand name, and is produced by only one manufac- The addition of these special alloys to steel produces results some- ifferent from those obtained by the use of the various contained ele- separately. Their use in the combination provided by the special is desirable in certain types of steel.

gsten. Approximately one-half of the tungsten ores normally con- during peacetime in the United States is domestically produced. alance being imported from distant sources, the most important of are China, British Malaya, Bolivia, Australia, Argentina, Mexico, nd Thailand.

roximately thirty concerns are producing tungsten ores and con- tes in appreciable quantities in this country. Three firms account ore than three-fourths of current production; the other producers igher costs and their output is currently sold to the Metals Reserve any at prices above the world market prices.

ddition, the Metals Reserve Company serves as the government iling agency for all imported ores as well as certain other domes- produced ores. The sale of ores so stockpiled by the Metals Re- Company accounts currently for approximately three-fourths of the ten ores and concentrates consumed. The sale of such ores and ntrates is at prices approved by the Office of Price Administration.

gsten ores and concentrates are processed in one or more forms by twenty concerns and are charged directly by about ten steel com- . Two companies are responsible for the entire production of fer- gsten and these companies also produce metal powder and com- s. The major portion of the metal powder is produced for their onsumption by companies engaged in the manufacture of electrical, and electronics material and equipment. The metal powder is sin- to ingots and swaged and drawn to wire and rods for these uses. dition, these producers also supply metal powder for the manufacture rbides and other materials. Limited amounts of metal powder and ounds, which are used primarily for processing into metal powder, oduced by small, independent firms.

ht 1943 by FRP (11 10 43) 129

¶ 33w. *Tungsten, Molybdenum, Etc.* (Reg. No. 89)

Very little integration exists in the tungsten industry. Only two processors of ores and concentrates own or control tungsten mining properties which are capable of supplying an appreciable amount of the ores and concentrates consumed. In general the processors as well as the three major producers of ores and concentrates are in a favorable financial position.

Sufficiently detailed information on the production of ferrotungsten, tungsten metal, tungsten carbide powders and compounds for years prior to the outbreak of the present war is not available to estimate the value of their total output. However, a very substantial increase over peacetime production has been accomplished, and it is estimated that the 1943 combined value of tungsten products and ores and concentrates consumed will exceed $95,000,000. The average annual value of ferrotungsten alone produced during 1936–40 was about $6,000,000, and the aggregate value of the ores and concentrates consumed for the period averaged about $6,525,000 per year.

Molybdenum. The United States is the world's major source of molybdenum, accounting for about 90% of the world output during the period 1936–40. Prior to the outbreak of the present war, about 70% of the domestic production was exported. At the present time exports are limited to those handled through the Office of Economic Warfare, the Office of Lend-Lease Administration and to Canada through the War Production Board. Limited amounts of ores and concentrates are being imported mainly for government stockpiling purposes.

The domestic molybdenum industry is integrated in large measure. One company which accounts for about 70% of the total production of ferromolybdenum, calcium molybdate, molybdic oxide and other compounds and metals, owns and operates the mine from which its concentrates are obtained. The remaining concentrates produced in this country are obtained largely as a by-product of copper mining operations. Most of the concentrates so obtained are processed by two other companies, one a steel producer and one a producer of other alloys. Small quantities of molybdenum compounds are also produced by ten additional companies. All major factors in the industry are in a favorable financial position.

The average annual value of domestic mine shipments of molybdenum ores and concentrates for the period 1936–40 was $17,965,000. Similar data are not available for the value of the output of molybdenum products. The expansion in production and consumption of molybdenum as a result of war demands has been one of the notable developments in the alloy field. The combined value for 1943 of molybdenum products produced and ores and concentrates consumed is estimated to exceed $95,000,000.

Vanadium. In its mineral form vanadium is derived from two main sources. About 35% of the vanadium ores and concentrates consumed in this country are of Peruvian origin and domestic vanadium ore deposits furnish most of the remaining 65%. Minor amounts of vanadium are obtained from flue dust, from boilers burning Venezuelan fuel oil, from phosphate rock mined in Idaho and from a complex gold-silver-lead-molybdenum-vanadium ore mined in Arizona. A little lead vanadate ore is imported from South Africa.

The ore and concentrates are generally roasted and leached into vanadium pentoxide, which, by electric furnace reduction, is converted into ferrovanadium. Virtually 100% of the production of ferrovanadium is in the

129

Defendant Vanadium Corporation Exhibit No. 2-M--(Continued)

Regulation shall become effective on May 11, 1942, except that:

(a) The provisions of this General Maximum Price Regulation, other than § 1499.11 (a), shall not apply to establishments selling at retail until May 18, 1942;

(b) The provisions of §§ 1499.1 and 1499.2 shall not apply to any sale of services at retail until July 1, 1942; and

(c) The provisions of § 1499.11 (a) shall become effective upon the date of issuance of this General Maximum Price Regulation.

Issued this 28th day of April 1942.

LEON HENDERSON,
Price Administrator.

§ 1499.26 *Appendix A: General Maximum Price Regulation—Report of maximum price determined under § 1499.2 (a).*

To: Office of Price Administration
From .....
Name
.....
Address

The undersigned hereby reports its determination, made in according with § 1499.2 (a) of the General Maximum Price Regulation, of the maximum price for the commodity described in Item 1 below.

1. Brief description of commodity for which a maximum price is reported:
.....
.....
.....

2. Reasons why price could not be determined on the basis of a same or similar commodity dealt in by the undersigned or a competitive seller during March 1942:
.....
.....
.....

3. (a) General classification in which the undersigned classes the commodity for which maximum price is reported.....
.....

(b) Name of comparable commodity in this general classification and price range of which the undersigned delivered the largest number of units during March 1942 (referred to herein as "comparable commodity").....
.....

4. The maximum price reported was determined from calculations A, B, and C below, in accordance with instructions printed in § 1499.26, Appendix A, of the General Maximum Price Regulation:

A. Comparable Commodity:

Col. (1) Name	Col. (2) Unit of pricing	Col. (3) Replacement cost per unit	Col. (4) Maximum price per unit	Col. (5) Percentage (col. 4 divided by col. 3)
Example: Commodity X.....	Each	$4.00	$5.00	125

B. Cost per unit of commodity for which maximum price is reported.....

C. Maximum price reported per unit.....

(Item 4B multiplied by percentage, Item 4A, Col. 5)

I swear (or affirm) that to the best of my knowledge and belief, the above statements are true.

.....

.....
(Address)

Instructions

Section 1499.2 (a) of the General Maximum Price Regulation provides for the determination of a maximum price by a seller for commodities which cannot be priced under the provisions of § 1499.2. Any seller who has determined a maximum price under § 1499.2 (a) is required, within 10 days after such determination, to report such price to the appropriate field office of the Office of Price Administration.

The following instructions must be followed in completing this form:

Item 1. Name the commodity for which the price is reported; indicate its use, unit, size, package, etc.

Item 2. Indicate how commodity for which price is reported differs from other commodities sold by seller, or competitive sellers of the same class, during March 1942.

Item 3. (a) Insert general classification (food, hardware, clothing, etc.), in which the seller classes the commodity for which a maximum price is reported.

(b) Insert the name of comparable commodity in the same general classification and price range of which the seller delivered the largest number of units during March 1942.

Item 4-A. Column 1: Name of comparable commodity.

Column 2: Insert unit of pricing, e. g., pound, quart, garment, etc.

Column 3: Insert replacement cost per unit. Replacement cost shall be net price[1] per unit paid by the seller after May 18, 1942, or the net price which the seller would have to pay to replace the comparable commodity after such date.

Column 4: Insert the maximum price per unit established in accordance with § 1499.2 of General Maximum Price Regulation.

Item 4-B. Insert *net cost*[1] per unit of commodity for which price is reported.

Item 4-C. Calculate maximum price reported per unit as follows: Multiply unit cost (4-B) by percentage (4-A, column 5).

§ 1499.26 *Appendix B: Commodities designated by the Price Administrator as cost-of-living commodities.*

Note: For the commodity classifications marked by asterisks, maximum prices may be posted by price-lines at the place in the business establishment where the commodities are offered for sale, provided that, in addition, the selling price of each commodity in such classification shall be marked on the commodity itself.

See § 1499.12 of this General Maximum Price Regulation.

TOBACCO, SEEDS, TOILETRIES, AND SUNDRIES

(All brands, grades, and sizes, except where otherwise indicated)

Tobacco:
Cigarettes
Smoking tobacco, in cans and packages.
Packaged household drugs:
Aspirin tablets.
Milk of magnesia, liquid.
Cod liver oil, liquid.
Epsom salts.
Packaged household drugs—Continued.

Defendant Vanadium Corporation Exhibit No. 2-M--Continued)

hands of two companies with plants at Columbiana, Ohio, Bridgeville, Pennsylvania, Niagara Falls, New York and Alloy, West Virginia. Three grades are produced: open hearth, crucible and primos. Eleven companies produce vanadium pentoxide and the vanadium compounds and metal are produced by the same companies who produce ferrovanadium. In addition, some compounds are also produced by one other concern.

A high degree of integration exists in the vanadium industry. The largest producer of ferrovanadium owns the Mina Ragra in Peru which is its major source of raw materials. The other producer obtains its ores from domestic mines owned by an affiliated company. Both companies are in a favorable financial position.

In tonnage and dollar value vanadium production is not large in comparison with other alloys, but in value per pound it is the highest of the major alloys, averaging $2.80. During 1936–40 ferrovanadium production showed an average annual value of $3,495,000 while the average annual value of pentoxide production for the period was about $2,750,000 and ores and concentrates consumed was about $1,515,000. This rate of production has been expended very substantially due to war demands. For 1943 it is expected that the combined value of ferrovanadium, pentoxide and ores and concentrates will exceed $22,000,000.

Cobalt. The United States has been almost entirely dependent on imports for its supply of cobalt in the past. Prior to the outbreak of the present war the major portion of the cobalt imported was in the form of metal, oxides, salts and hydrates which were produced in Belgium from Belgium Congo ores and crudes. Less significant amounts of ores and crudes were and continue to be imported from Canada and converted to oxides and hydrates by one concern in this country. In addition, small amounts of metal, oxides and hydrates were produced by another company from domestically mined crudes. The production of metal by this concern has since been expanded.

When Belgium was occupied by Germany in 1940, the Belgium interests, which controlled the cobalt mining enterprise in the Belgium Congo, arranged for the importation of the crudes into this country and their conversion to metal, oxides, salts and hydrates by a number of American plants on a toll basis. At the present time about 90% of the production of cobalt products in the United States is produced in this manner. This operation may be described as being fully integrated and under foreign control.

The average annual value of imports of cobalt metal, oxides, salts and hydrates for the period 1936–40 was $2,212,000; and the average annual value of ores and crudes for the same period was $775,000. These compare with an estimated 1943 combined value of more than $19,000,000 for metal, oxides, salts and hydrates produced in the United States and for ores and crudes imported.

Other Alloys and Metals. Several of the companies regularly producing the major alloys also produce combination alloys classified by this regulation as special alloys. As indicated above these materials are usually sold under brand names and are, in some instances, patented products. Calcium metal, until the outbreak of the present war, was imported from France, but now one company in this country supplies all of the American requirements.

Ferrophosphorus, the production of which is relatively small, is currently being produced by two chemical companies and the Tennessee Valley Authority.

Copyright 1943 by F.R.P.

III. Price History

Although materials containing tungsten, molybdenum, vanadium, cobalt and other alloys and metals have been characterized by relative price stability in recent years, the price movement in each group has been largely independent of the others because different cost factors are involved in the production of each and because their interchangeability in consumption is limited.

A brief resumé of the price history of each of the major items for which specific dollars-and-cents maximum prices are provided by the regulation is set forth below.

Tungsten. Of all the commodities covered by this regulation, the price of ferrotungsten has been the most volatile. Prior to World War I, ferrotungsten sold at a base price of about $1.00 per pound of contained tungsten. Due to the pressure of demand and scarcity of supply, prices advanced sharply to a reported high of $8.50 in 1916, receding thereafter to a yearly average of $2.30–$2.40 in 1917–18.

Following the war the price returned to the levels prevailing prior thereto, the low point in the monthly average during the Twenties being $.59 in 1921, and the high $1.33 in 1929. From 1929 to 1936, the yearly average price fluctuated from $1.04 to $1.40. The price from 1937 through October 1939, ranged from $1.35 to $2.25 and the yearly average price for 1940 was $1.97.

The average quoted price for the first ten months of 1941 was $1.95, and in the fall of that year the price was reduced to $1.90 by informal agreement of the producers with this Office, effective November 1941. This level was subsequently frozen by the General Maximum Price Regulation, issued April 28, 1942, and has prevailed up to the present time.

Molybdenum. The current prices of principal molybdenum products are at the same level which has prevailed since 1932, namely,

Ferromolybdenum	—95 cents per pound molybdenum
Molybdic Oxide	—80 cents " " "
Calcium Molybdate	—90 cents " " "

Prior to 1932, there was a gradual reduction in prices from the World War I high of $5.00 per pound for ferromolybdenum. (The use of molybdic oxide and calcium molybdate was not developed until the middle Twenties.) By 1925 the price of ferromolybdenum had dropped to $1.50 per pound and calcium molybdate was first offered commercially during that year at $1.27 per pound of molybdenum contained. By 1928, the year when molybdic oxide was first offered commercially, the prices were:

Ferromolybdenum	—$1.20 per pound molybdenum
Calcium Molybdate	— .95 " " "
Molybdic Oxide	— .95 " " "

Approximately the above level continued until 1931 when the prices were reduced 20 cents on ferromolybdenum, and 10 cents on the other two products. Another reduction of 5 cents was made in 1932 to the current levels.

Vanadium. The current base prices of ferrovanadium and vanadium pentoxide have remained unchanged since 1934. By informal agreement of the producers with this Office during the fall of 1941, these prices were not

to be advanced without prior notice to this Office. On issuance of the General Maximum Price Regulation on April 28, 1942, they became the ceiling prices for the commodities.

The World War I high reported for ferrovanadium was $8.00 per pound of contained vanadium. During the Twenties the quoted prices were well above $3.00 per pound. In 1931 the contract prices were $3.15, $3.25 and $3.40 for the three grades. These were reduced in 1932 to $3.05, $3.15 and $3.30 and to $2.60, $2.70 and $2.80 in 1933 and the present prices were established in 1934.

Cobalt. The base price of $1.50 per pound for cobalt metal in the metallurgical industry has prevailed since October 26, 1939, at which time the price was increased from $1.36. The latter price was for imported cobalt metal and had been in effect since September of 1937. This Office is informed that the increase of about 10% was made to cover higher costs involved in the production of the metal in the United States as compared to costs in the Belgium plants where the metal had been produced previously and to cover increases in ocean transportation costs on ores and crudes. This base price of $1.50 became the ceiling price upon issuance of the General Maximum Price Regulation. Cobalt metal for metallurgical uses accounted for over 80% of the total cobalt consumed in the United States in 1942.

The prices of cobalt metal and cobalt oxides were originally established when by far the largest part of the supply was consumed in the ceramic and chemical industries. The present prices of cobalt oxides still reflect this condition but the price of $1.50 per pound for cobalt metal for metallurgical use represents a concession on the part of the producers in the price of the metal to increase the metallurgical consumption of their product.

Other Alloys and Metals. Data on the price history for special alloys and metals are not available for any extended period of time because most of these materials have been developed during recent years. This Office is informed that no major changes in prices have been made by the producers since their production was first undertaken in commercial quantities. Maximum prices prescribed by this regulation are the same as those established under the General Maximum Price Regulation, except for Simanal and Calcium Metal, the prices of which have been reduced by the producers.

The base prices of ferrophosphorus set forth in this regulation as maxima, i. e., $75.00 and $58.50 per gross ton for the 23-25% and 17-19% grades, respectively, have been in effect since January 1, 1936. In the six-year period from 1930 to 1936 prices were somewhat lower, having receded from a 1929 level of $122.50 and $91.00.

IV. Necessity for Regulation

As stated above, tungsten, molybdenum, vanadium, cobalt, and other alloys and metals are subject to the provisions of the General Maximum Price Regulation. The issuance of a specific price regulation with dollars-and-cents ceilings on principal items will serve to define more clearly the maximum prices for the principal types and grades of these alloying materials and to make these prices better known to consumers. A more satisfactory administration of price control by this Office is thereby made possible and compliance by both buyers and sellers will be facili-

Copyright 1943 by P.H.P.

tated. Moreover, a specific price regulation affords more direct and positive control and, at the same time, provides a more flexible basis for adaptation of control to meet any contingencies which may arise as a result of the war effort.

Although this regulation is not issued for the purpose of initiating any significant changes in ceiling prices for the materials covered now provided by the General Maximum Price Regulation, nonetheless, certain minor price inequities which prevailed during March 1942 and were frozen by that regulation are corrected.

V. Justification of Provisions of Regulation

A. Coverage

This regulation is applicable to all sales and deliveries within the continental United States of tungsten, molybdenum, vanadium, cobalt alloying materials and the special alloys listed.

The importation of processed materials covered by the regulation is exempted from control but their resale in the United States is subject to the same maximum prices as domestically produced materials. In normal times, the importation of tungsten, molybdenum, vanadium, and other alloys and metals in processed form is extremely limited. Instead, this country imports the ores and concentrates which are processed here. Since the outbreak of the war, the imports of ores and concentrates have, as stated above, increased substantially. On the other hand, importation of the processed materials had virtually ceased during the first six months of the current year, as well as in 1942. In the case of cobalt, this element is now being imported almost entirely in the crude form for conversion to metal, oxides, salts and hydrates by plants in the United States.

The only imports of cobalt products in 1942, and thus far in 1943, have been from Canada in the form of metal. These imports have been by the major factor in the industry which imports cobalt crudes from the Belgian Congo for conversion. Most of such conversion to metal consumed in this country takes place in domestic plants. However, limited amounts are converted in Canadian plants and the metal is imported by this firm. Metal so imported has customarily sold at the same price as metal domestically produced.

It is believed appropriate to place ceiling prices on any processed material that may be imported and resold in the United States at some future date at the same levels as domestically produced materials because there is little prospect of imports in appreciable volume and because it is doubtful that the need for a higher price could be demonstrated should the volume of imports increase.

Under this regulation ores and concentrates are specifically exempted from price control. The provisions of the General Maximum Price Regulation, as amended, exempt ores and concentrates, both imported and domestic. It is believed that no useful purpose will be achieved through the establishment of ceiling prices on ores and concentrates containing the elements covered by this regulation. This is believed true for the reason that in the cases of molybdenum, vanadium and cobalt a high degree of integration exists between the mining, milling and smelting operations. In the case of tungsten, about three-fourths of the new supply

(Defendant Vanadium Corporation Exhibit No. 2-M--Continued)

s and concentrates is now under the control of the Metals Reserve ny through its stockpiling activities. An agreement has been d between this Office and that company as to appropriate prices material in sales to the consumers. Because such prices have been hed and are well known to consumers, a de facto stabilization has been olished and no need for a regulation exists.

B. Prices

maximum prices established by this regulation conform, in general, prices which prevailed during March 1942 and were frozen by the l Maximum Price Regulation. Some relatively minor changes are discussed below, have, however, been effected in such prices. vel of prices for these commodities which prevailed dur e March as, in the light of experience of both producers and c sumers, to be generally fair and equitable. Production since that date panded very substantially. Although unit costs of production are d to have increased, reducing somewhat the unit profits below el of March 1942, the larger volume of output has permitted pro to show satisfactory total profits. On the other hand, it would ap- om reports concerning their earnings since March 1942 that pres- ces have not subjected consumers to any hardship.

ific dollars-and-cents maximum prices are set forth for those com- r in each element group which represent the major portion of ales and for which uniform prices can readily be established on is of past industry practice.

maximum prices for the remaining items are the highest prices at the seller sold or offered for sale such materials during January, ary or March 1942 to a purchaser of the same class. In substance the same basis of price control as that provided by the General um Price Regulation, except that the "freeze period" is extended first quarter of 1942 rather than limited to the month of March. of some of these commodities so covered have been made infre- . Hence, a longer base period will facilitate the determination of prices by certain sellers. Price differences for some of the com- and metals have existed in the past due to differences in analysis nufacturing methods and the freeze technique permits a continua- these differentials which are based on trade practice. Provision e to facilitate the determination of maximum prices for new com- s and those not sold during the freeze period.

ng the minor variations in dollars-and-cents maximum prices pro- by this regulation is the price for ferrotungsten in quantities of pounds and over. Heretofore, one producer's price schedule set base price of $1.90 per pound of contained tungsten for carload ntities, with a differential of $0.05 per pound higher for quan- of less than a carload down to 10,000 pounds. The base price for her producer was $1.90 for any quantity of 10,000 pounds or more. ver, because of the relative scarcity of ferrotungsten, the War Pro- n Board finds it necessary from time to time to allocate less than l lots so that the carload lot buyer might be required to pay a m even though he were willing to purchase a full carload. For ason, and also for the reason that many shipments of ferrotungsten

are or can be made by truck, it is believed appropriate to establish the maximum base price on quantities of 10,000 pounds rather than on car load lots. This reduction has been agreed to by the producer involved.

Another variation in price from that prevailing during March 1942, is the price provided on sales of a special grade of tungsten metal powder by Cleveland Tungsten, Inc. of Cleveland, Ohio. The maximum price provided by this regulation is identical to that established by Order No. 77 under Section 1499.3(b) of the General Maximum Price Regulation. Similarly, The S. W. Shattuck Chemical Company of Chicago, Illinois is permitted to sell technical grade tungstic oxide at a price higher than prevailed in March 1942 by Order No. 5 under Section 1499.75(a)(4) of Supplementary Regulation No. 15 of the General Maximum Price Regulation. The reasons for these exceptions are set forth in the opinions accompanying those orders.

Still another variation in maximum prices from those which existed in March 1942, is that provided for Simanal. One of the principal constituents in its manufacture is aluminum and the sole producer of Simanal has reduced its price below the March 1942 level to reflect the recent reduction in aluminum ingot prices. The maximum prices for Simanal set out in the regulation, at the producer's request, conform with these current prices.

The prices for Calcium Metal have been revised recently. Until war threatened in Europe Calcium Metal had been produced only in France. Foreseeing an interruption in the flow of material from France, a ferro alloy producer began experiments in this country with the result that this domestically produced product entered the commercial market in the summer of 1939. Prices, established to compete with the imported product, had no relation to experience in the production of this material. When importation ceased, the War Production Board found it necessary to place Calcium Metal under strict allocation. Production increased to a point which permitted the restrictions to be relaxed and recently to be removed entirely. The sole producer has submitted a revised schedule of prices rationalized with present production. While this schedule increases the price from $1.75 to $1.80 per pound in one quantity bracket, an even greater rate of decrease is afforded all other quantities. The removal of allocation gives the buyer the option of purchasing quantities at more favorable prices. A substantial allowance for freight charges, not previously in effect, is also included in the revised prices.

Finally, the price of technical grade molybdic oxide sold and produced in small amounts by one minor producer, which was frozen at the March 1942 level under the provisions of the General Maximum Price Regulation, is slightly below the maximum price so established for the major producers. This regulation raises this producer's maximum price to that generally prevailing and thereby removes a possible inequity occasioned by the issuance of the General Maximum Price Regulation.

C. Other Provisions

Sales for laboratory and experimental purposes are exempted from price control by this regulation because such sales are of little significance either in volume or in their impact on the price structure of manufactured commodities for which the commodities covered by this regu-

Chapter XI—Office of Price Administration

PART 1499—COMMODITIES AND SERVICES

GENERAL MAXIMUM PRICE REGULATION

FINDINGS OF THE PRICE ADMINISTRATOR

Maximum Prices

Sec.
1499.1 Prohibition against dealing in commodities or services above maximum prices.
1499.2 Maximum prices for commodities and services: general provisions.
1499.3 Maximum prices for commodities which cannot be priced under § 1499.2.
1499.4 Supplemental regulations.
1499.5 Transfers of business or stock in trade.
1499.6 Sales for export.
1499.7 Federal and State taxes.
1499.8 Less than maximum prices.

Commodities and Services Excepted From This Regulation

1499.9 Commodities excepted from this regulation.
1499.10 Services excepted from this regulation.

Records

1499.11 Base-period records.
1499.12 Current records.
1499.13 Maximum prices of cost-of-living commodities: statement, marking or posting.
1499.14 Sales slips and receipts.

Registration and Enforcement

1499.15 Registration.
1499.16 Licensing.
1499.17 Penalties.

Procedure for Adjustment or Amendment

1499.18 Applications for adjustment by retail sellers.
1499.19 Petitions for amendment.

Definitions and Explanations

1499.20 Definitions and explanations.

Other Price Regulations, Applicability, Effective Date

1499.21 Effect of other price regulations.
1499.22 Applicability.
1499.23 Effective date.
1499.24 Appendix A. Report of maximum price determined under § 1499.3 (a).
1499.25 Appendix B. Commodities designated by the Price Administrator as cost-of-living commodities.

Findings of the Price Administrator

In the judgment of the Price Administrator the prices of commodities and services generally have risen and are threatening further to rise to an extent and in a manner inconsistent with the purposes of the Emergency Price Control Act of 1942.

In the judgment of the Price Administrator the maximum prices established by this General Maximum Price Regulation, which apply with certain exceptions to all commodities and services not otherwise subject to regulation, are generally fair and equitable and are necessary to check inflation and to effectuate the purposes of the Act.

So far as practicable the Price Administrator gave due consideration to prices prevailing between October 1 and 15, 1941, and to relevant factors of general applicability. So far as practicable the Price Administrator consulted with representatives of trade and industry.

A statement of the considerations involved in the issuance of this General Maximum Price Regulation is issued simultaneously herewith.[1]

Therefore, under the authority vested in the Price Administrator by the Emergency Price Control Act of 1942, this General Maximum Price Regulation is hereby issued.

Maximum Prices

NOTE: The meaning of certain provisions and terms of this General Maximum Price Regulation is further explained and defined in § 1499.20. The explanations and definitions are set forth in alphabetical order. The terms explained and defined are underlined the first time they appear in the text.

§ 1499.1 *Prohibition against dealing in commodities or services above maximum prices.* On and after the effective date of this General Maximum Price Regulation, regardless of any contract or other obligation:

(a) No *person* shall *sell* or deliver any *commodity*, and no person shall sell or supply any *service*, at a price higher than the *maximum price* permitted by this General Maximum Price Regulation; and

(b) No person in the course of trade or business shall buy or receive any commodity or service at a price higher than the *maximum price* permitted by this General Maximum Price Regulation.

§ 1499.2 *Maximum prices for commodities and services: General provisions.* Except as otherwise provided in this General Maximum Price Regulation, the *seller's* maximum price for any commodity or service shall be:

(a) *In those cases in which the seller dealt in the same or similar commodities or services during March 1942:*

The highest price charged by the seller during such month—

(1) For the same commodity or service; or

(2) If no charge was made for the same commodity or service, for the similar commodity or service, most nearly like it; or

(b) *In those cases in which the seller did not deal in the same or similar commodities or services during March 1942:*

The highest price charged during such month by the *most closely competitive seller of the same class*—

(1) For the same commodity or service; or

(2) If no charge was made for the same commodity or service, for the similar commodity or service most nearly like it.

"Highest Price Charged During March 1942"

For the purposes of this General Maximum Price Regulation, the highest price charged by a seller "during March 1942" shall be:

(a) The highest price which the seller charged *for* a commodity *delivered* or service *supplied* by him during March 1942; or

(b) If the seller made no such delivery or supplied no such service during March 1942 his highest *offering price* for delivery or supply during that month.

No seller shall change his customary allowances, discounts or other price differentials unless such change results in a lower price. The "highest price charged" shall be a price charged during March 1942 to a *purchaser of the same class*. But if during March 1942 a seller (1) had an established practice of making allowances, discounts or price differentials to different classes of purchasers, and (2) raised his general level of prices, but thereafter during March 1942 made no delivery to any purchaser of a particular class he shall, for that particular class of purchasers calculate the highest price charged by taking the highest price charged during March 1942 to a purchaser of another class and then adjusting such price to reflect his established allowances, discounts and price differentials. No seller shall require any purchaser, and no purchaser shall be permitted, to pay a larger proportion of transportation costs incurred in the delivery or supply of any commodity or service, than the seller required purchasers of the same class to pay during March 1942 on deliveries or supplies of the same or similar types of commodities or services.

"Similar Commodities or Services"

One commodity shall be deemed "similar" to another commodity, if the first has the same use as the second, affords the purchaser fairly equivalent serviceability, and belongs to a type which would ordinarily be sold in the same price line. In determining the similarity of such commodities, differences merely in style or design which do not substantially affect use, or serviceability, or the price line in which such commodities would ordinarily have been sold, shall not be taken into account. One service shall be deemed "similar" to another service if the first has the same use and purpose as the second and belongs to a type which would ordinarily be sold for the same or substantially the same price.

§ 1499.3 *Maximum prices for commodities which cannot be priced under § 1499.2.* The seller's maximum price for a commodity which cannot be priced under § 1499.2 of this General Maximum Price Regulation shall be a maximum price in line with the level of maximum prices established by this General Maximum Price Regulation. Such price shall be determined by the seller in accordance with the following procedures:

(a) *Sales at wholesale or retail.* In the case of a *sale at wholesale or retail*, the seller (1) shall select from the same general classification and price range as the commodity being priced under this section, the comparable commodity for which a maximum price is established under § 1499.2 of this General Maximum

[1] Filed with the Division of the Federal Register.

Price Regulation and of which the seller delivered the largest number of units during March 1942, (2) shall divide his maximum price for that commodity by his *representative cost* of that commodity, and (3) shall multiply the percentage so obtained by the cost to him of the commodity being priced under this paragraph. The resulting figure shall be the maximum price of the commodity being priced. Within ten days after determining such maximum price under this paragraph the seller shall report such price to the *appropriate field office of Price Administration* upon a form, duly filled out and signed under oath or affirmation, copied from the form contained in § 1499.24, Appendix A, of this General Maximum Price Regulation. The price so reported shall be subject to adjustment at any time by the Office of Price Administration.

(b) *Sales other than at wholesale or retail.* In the case of a sale other than at wholesale or retail, the maximum price shall be a price determined by the seller after specific authorization from the Office of Price Administration. A seller who seeks an authorization to determine a maximum price under the provisions of this paragraph shall file with the Office of Price Administration in Washington, D. C., an application setting forth (1) a description in detail of the commodity for which a maximum price is sought; and (2) a statement of the facts which differentiate such commodity from other commodities delivered during March 1942 by such seller and by other competitive sellers of the same class. If such authorization is given, it will be accompanied by instructions as to the method for determining the maximum price. Within ten days after such price has been determined, the seller shall report the price to the Office of Price Administration in Washington, D. C., upon a form, duly filled out and signed under oath or affirmation, which will be furnished him. The price so reported shall be subject to adjustment at any time by the Office of Price Administration.

§ 1499.4 *Supplemental regulations.* If the maximum prices established for any commodity under the provisions of this General Maximum Price Regulation fail equitably to distribute returns from the sale at retail of such commodity among producers, manufacturers, wholesalers and retailers, the Price Administrator will by supplementary regulation establish such maximum prices for different classes of sellers, or fix such base periods for the determination of their maximum prices, as will insure that each such class of sellers shall receive a fair share of such return.

§ 1499.5 *Transfers of business or stock in trade.* If the business, assets or stock in trade of any business are sold or otherwise transferred after April 28, 1942, and the transferee carries on the business, or continues to deal in the same type of commodities or services, in an establishment separate from any other establishment previously owned or operated by him, the maximum prices of the transferee shall be the same as those to which his transferor would have been subject if no transfer had taken place, and his obligation to keep records sufficient to verify such prices shall be the same. The transferor shall either preserve and make available, or turn over to the transferee all records of transactions prior to the transfer which are necessary to enable the transferee to comply with the record provisions of this General Maximum Price Regulation.

§ 1499.6 *Sales for export.* The maximum price at which a person may export any commodity shall be determined in accordance with the provisions of the Maximum Export Price Regulation issued by the Office of Price Administration on April 25, 1942.

§ 1499.7 *Federal and State taxes.* Any tax upon the sale of a commodity or service, and any compensating use tax upon a commodity, levied by any statute of the United States or statute or ordinance of any state or subdivision thereof, shall be treated as follows in determining the seller's maximum price for such commodity or service and in preparing the records of such seller with respect thereto:

(a) *As to a tax in effect during March 1942.* (1) If the seller customarily stated and collected such tax separately from the purchase price during March 1942, the seller shall not include the tax in determining the maximum price under this General Maximum Price Regulation, and in such case may collect the tax in addition to the maximum price.

(2) If the seller did not customarily state and collect such tax separately from the purchase price during March 1942, the seller shall include the tax in determining the maximum price under this General Maximum Price Regulation, and in such case may not collect the tax in addition to the maximum price.

(b) *As to a tax which becomes effective after March 31, 1942.* If the statute or ordinance levying such tax requires or permits the seller to state and collect the tax separately from the price paid by the purchaser, and the seller does separately state it, the seller may collect the tax in addition to the maximum price.

§ 1499.8 *Less than maximum prices.* Lower prices than those established by this General Maximum Price Regulation may be charged, demanded, paid or offered.

Commodities and Services Excepted From This General Maximum Price Regulation

§ 1499.9 *Commodities excepted from this General Maximum Price Regulation.* (a) This General Maximum Price Regulation shall not apply to sales or deliveries of the following commodities:

(1) Any *raw and unprocessed agricultural commodity or greenhouse commodity* while it remains in substantially its original state, except that bananas shall be governed by this General Maximum Price Regulation.

(2) Eggs and poultry.

(3) All milk products, including butter, cheese, condensed and evaporated milk, except that fluid milk sold at retail, and ice cream shall be governed by this General Maximum Price Regulation.

(4) Flour, except that packaged cake mixes and other packaged flour mixes shall be governed by this General Maximum Price Regulation.

(5) Mutton and lamb.

(6) Fresh fish and seafood, and game.

(7) Dried prunes, dry edible beans, leaf tobacco (whether dried or green), nuts (but not peanuts), linseed oil, linseed cake and linseed meal, *mixed feed* for animals, and manure.

(8) Living animals, whether wild or domestic.

(9) Books, magazines, motion pictures, periodicals, newspapers, and materials furnished for publication by any press association or feature service.

(10) Domestic ores and ore concentrates.

(11) Stumpage, logs, and pulpwood.

(12) Stamps and coins; precious stones; antiques and knotted oriental rugs; paintings, etchings, sculptures and other objects of art.

(13) Used automobiles.

(14) Wood and gum for naval stores, and naval stores prior to sale to industrial consumers, or prior to the first sale to a distributor: *Provided, however,* That this General Maximum Price Regulation shall apply to all sales of such commodities on any exchange.

(15) *Securities.*

(16) Such other commodities as may be specified by supplementary regulations issued under this section.

(b) This General Maximum Price Regulation shall not apply to the following sales or deliveries:

(1) By a farmer, of commodities grown and processed on his farm, if the total of such sales or deliveries does not exceed $75.00 in any one calendar month.

(2) By any merchant, farmer, artisan, or person who renders professional services, of his used supplies, or business, farm, or professional equipment, not acquired or produced by him for the purpose of sale.

(3) By an owner, of his used personal or household effects or other personal property used by him.

(4) At a bona fide auction of used household or personal effects.

(5) By hotels, restaurants, soda fountains, bars, cafes, or other similar establishments, of food or beverages prepared and sold for consumption on the premises.

(6) By a breeder, trapper, or hunter, of pelts, furs, or other parts of wild animals raised by him, or trapped, shot, or killed by him, if the total of such sales or deliveries does not exceed $75.00 in any one calendar month.

(7) Of commodities sold without private profit in the course of any sale, fair, or bazaar conducted for a period of not more than 15 days by any religious, charitable, or philanthropic organization.

(8) To the United States or any agency thereof of such commodities or in such transactions as may be specified by supplementary regulations issued under this section.

(9) Such other sales and deliveries as may be specified by supplementary regulations issued under this section.

§ 1499.10 *Services excepted from this General Maximum Price Regulation.* The provisions of this General Maximum Price Regulation shall not apply to the following services:

(a) Services of an employee to his employer.

(b) Personal services not rendered in connection with a commodity.

(c) Professional services.

(d) Motion pictures, theatres and other entertainments.

(e) Services of a common carrier or public utility.

(f) Advertising services, including radio broadcasting.

(g) Insurance and underwriting services.

(h) Press association and feature services.

(i) Services relating solely to real property.

(j) Such other services as may be specified by supplementary regulations issued under this section.

Records

§ 1499.11 *Base-period records.* Every person selling commodities or services for which, upon sale by that person, maximum prices are established by this General Maximum Price Regulation, shall:

(a) Preserve for examination by the Office of Price Administration all his existing *records* relating to the prices which he charged for such of those commodities or services as he delivered or supplied during March 1942, and his offering prices for delivery or supply of such commodities or services during such month; and

(b) Prepare, on or before July 1, 1942, on the basis of all available information and records, and thereafter keep for examination by any person during ordinary business hours, a statement showing:

(1) The highest prices which he charged for such of those commodities or services as he delivered or supplied during March 1942 and his offering prices for delivery or supply of such commodities or services during such month, together with an appropriate description or identification of each such commodity or service; and

(2) All his customary allowances, discounts, and other price differentials.

Any person, other than a person selling at retail, who claims that substantial injury would result to him from making such statement available to any other person, may file it with the appropriate field office of the Office of Price Administration. The information contained in such statement will not be published or disclosed unless it is determined that the withholding of such information is contrary to the purposes of this General Maximum Price Regulation.

§ 1499.12 *Current records.* Every person selling commodities or services for which, upon sale by that person, maximum prices are established by this General Maximum Price Regulation shall keep, and make available for examination by the Office of Price Administration, records of the same kind as he has customarily kept, relating to the prices which he charged for such of those commodities or services as he sold after the effective date of this General Maximum Price Regulation; and, in addition, records showing, as precisely as possible, the basis upon which he determined maximum prices for those commodities or services.

§ 1499.13 *Maximum prices of cost-of-living commodities; statement, marking or posting.* For the purposes of this section, a cost-of-living commodity is any commodity designated as such by the Price Administrator. A list of the classes of commodities so designated appears in § 1499.25, Appendix B, of this General Maximum Price Regulation.

(a) On and after May 18, 1942, every person offering to sell a cost-of-living commodity at retail shall mark the maximum price of such commodity in a manner plainly visible to, and understandable by, the purchasing public. The maximum price may be marked on the commodity itself or on the shelf, bin, rack, or other holder or container upon or in which the commodity is kept, or it may be posted at the place in the business establishment where the commodity is offered for sale. The maximum price shall be stated as follows: "Ceiling Price $____;" or "Our Ceiling $____." Any person choosing to post by price-lines the maximum prices of commodities in the classifications marked by asterisks in § 1500.25, Appendix B, shall post the maximum price by price-line at the place in the business establishment where the commodities in such price-line are offered for sale, and, in addition, shall mark the selling price of each such commodity on the commodity itself.

(b) On or before June 1, 1942, every person offering to sell cost-of-living commodities at retail shall file with the *appropriate War Price and Rationing Board* of the Office of Price Administration a statement showing his maximum price for each such commodity, together with an appropriate description or identification of it. Such statement shall be kept up to date by such person by filing on the first day of every succeeding month a statement of his maximum price for any cost-of-living commodity newly offered for sale during the previous month, together with an appropriate description or identification of the commodity.

§ 1499.14 *Sales slips and receipts.* Any seller who has customarily given a purchaser a sales slip, receipt, or similar evidence of purchase shall continue to do so. Upon request from a purchaser any seller, regardless of previous custom, shall give the purchaser a receipt showing the date, the name and address of the seller, the name of each commodity or service sold, and the price received for it.

Registration and Enforcement

§ 1499.15 *Registration.* Every person selling at wholesale, and every person who owns, or hereafter becomes the owner of, any business operating an *establishment selling at retail* any commodity or service for which a maximum price is established by this General Maximum Price Regulation or by any other *price regulation* issued on or prior to April 28, 1942, by the Office of Price Administration shall register each such establishment with the Office of Price Administration at such time and in such manner as the Administrator may hereafter by regulation prescribe, on forms which will be made available by the Office of Price Administration.

§ 1499.16 *Licensing.* Every person selling at wholesale or retail any commodity or service for which a maximum price is established by this General Maximum Price Regulation or by any other price regulation issued on or prior to April 28, 1942, by the Office of Price Administration is by this General Maximum Price Regulation granted a license as a condition of selling any such commodity or service. Such license shall be effective on the effective date of this General Maximum Price Regulation or when any such person becomes subject to the maximum price provisions of this or any other price regulation, and shall, unless suspended in accordance with the provisions of the Emergency Price Control Act of 1942, remain in effect as long as such regulation, or any applicable part, amendment, or supplement remains in effect.

§ 1499.17 *Penalties.* Persons violating any provision of this General Maximum Price Regulation are subject to the criminal penalties, civil enforcement actions, and suits for treble damages provided for by the Emergency Price Control Act of 1942, and proceedings for the suspension of licenses.

Procedure for Adjustment or Amendment

§ 1499.18 *Applications for adjustment by retail sellers.* (a) Any seller at retail who finds that the maximum price of a commodity or service established for him under the provisions of §§ 1499.2 or 1499.3 of this General Maximum Price Regulation is abnormally low in relation to the maximum prices of the same or similar commodities or services established for other sellers at retail, and that this abnormality subjects him to substantial hardship, may file an application for adjustment of that maximum price in accordance with procedural regulations which will be issued by the Office of Price Administration.

(b) Any seller at retail who finds that his maximum price for any commodity, and the maximum prices of other retail sellers for the same commodity are abnormally low in relation to the level of maximum prices established by this General Maximum Price Regulation for

IN UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

Before: Magruder, Merrill, Circuit Judges and Solomon, District Judge.

MINUTE ENTRY OF ARGUMENT AND SUBMISSION—
March 10, 1961

This cause coming on regularly for hearing and submission Mr. Joseph L. Alioto argued for the appellants and Mr. Richard J. Archer and Edward R. Neaher argued for the appellees and thereupon, the court ordered this cause submitted for consideration and decision.

[fol. 2565]

IN UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

Before: Merrill, Magruder, Circuit Judges, and Solomon, District Judge.

MINUTE ENTRY OF ORDER DIRECTING FILING OF OPINION AND FILING AND RECORDING OF JUDGMENT—March 22, 1961

Ordered that the typewritten opinion this day rendered by this Court in above cause be forthwith filed by the clerk and that a judgment be filed and recorded in the minutes of this court in accordance with the opinion rendered.

[fol. 2566]

IN UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

No. 16,149

CONTINENTAL ORE COMPANY, a Partnership; and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as Partners under the trade name and style of Continental Ore Company, Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL COMPANY; ELECTRO METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA, Appellees.

Appeal from the United States District Court for the Northern District of California, Southern Division.

OPINION—March 22, 1961

Before: Merrill and Magruder, Circuit Judges, and Solomon, District Judge.

Magruder, Circuit Judge.

Plaintiffs filed in the court below a treble damage antitrust complaint against defendants. Plaintiffs, a partnership and the partners in it suing individually, are the successors in interest to a family corporation known as Continental Ore Corporation. Both the plaintiff partnership, Continental Ore Company, and the previous corporation will be referred to as Continental.

The guiding light in Continental has been and still is the plaintiff Henry J. Leir. Leir was born in Germany and entered the ore and metal business there. His enterprises [fol. 2567] in Germany involved for the most part the purchase of raw materials for metal producers and the sale

of their finished products. Upon Hitler's rise to power Leir moved to Luxembourg, where he formed a company known as Société Anonyme des Minerais. This corporation subsequently entered into a joint venture with the Société d'Electro-Chimie de Brignoud, a French company otherwise known as Fredet-Kuhlmann. Brignoud undertook to install equipment for the production of ferro-vanadium and other alloys by a process known as the alumino-thermic method; Minerais supplied the raw materials, and the profits were split evenly. In 1938 Leir moved again, this time to the United States. He organized the Continental Ore Corporation in 1939 under the laws of the State of New York.

The defendants named in the complaint are Union Carbide and Carbon Corporation, a New York corporation, United States Vanadium Corporation, a Delaware corporation, Electro Metallurgical Company, a West Virginia corporation, Electro Metallurgical Sales Corporation, a New York corporation, Electro Metallurgical Company of Canada, Ltd., a Canadian corporation, and Vanadium Corporation of America, a Delaware corporation. Several other persons, whose names were unknown to the plaintiffs, were listed as Doe defendants.

The complaint states that, by means of a combination and conspiracy in violation of §§ 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1 and 2, defendants eliminated the plaintiffs and their predecessor in interest, the Continental Ore Corporation, hereinafter included in the term plaintiffs, from the business of producing, selling and distributing vanadium oxide and ferro-vanadium. Plaintiffs claim that they made several forays into the vanadium industry, sometimes approaching the brink of success, other times not getting quite so far. Their inability to reach the desired goal in any of their various vanadium undertakings is the gist of their complaint. They ascribe their failures to defendants' alleged unlawful course of conduct.

Vanadium is a rare metallic element found for the most part in carnotite and roscolite ores. These vanadium-bearing ores are taken from the mines to the mills where they are "crushed," "roasted" and "leached" to form a substance called red cake. The red cake is then fused into a black oxide, which is called vanadium oxide, vanadic acid,

[fol. 2568] vanadium pentoxide, or V_2O_5. This oxide is then converted into ferro-vanadium through the application of great heat either by means of an electric furnace or by the alumino-thermic process. The ferro-vanadium thus produced is used by steel makers in the steel bath to add toughness and tensile strength to the steel.

According to the complaint, the defendants frustrated the plaintiffs' sallies into the vanadium field in five particulars:

(1) In 1938 Leir negotiated a contract between Apex Smelting Company of Chicago (hereinafter "Apex") and Société d'Electro-Chimie de Brignoud, the French corporation. Subsequently the plaintiffs were assigned one half of Brignoud's interest under the contract. The agreement provided that Apex was to build and operate a ferro-vanadium plant, using Brignoud's alumino-thermic method of conversion. Brignoud was to contribute the secrets of this process as its part of the project. Since the profits were to be divided equally between the two signatories to the agreement, the plaintiffs, as a result of the assignment to them, became entitled to one quarter of the profits realized from the arrangement. Plaintiffs were also appointed exclusive sales agents throughout most of the United States for the ferro-vanadium to be manufactured by Apex.

Production under this agreement was not actually begun by Apex until April, 1940. The agreement was terminated by Apex in the spring of 1942. According to the complaint, Apex ceased operations in ferro-vanadium and canceled the aforesaid agreement because a sufficient supply of oxide could not be obtained, this being attributed to defendants' antitrust violations. More specifically, in pursuance of their illegal combination and conspiracy, defendants were said to have refused to sell enough oxide to Apex and also to have prevented Apex from acquiring the necessary quantities of raw materials from other suppliers.

(2) In 1942, after the termination of the unfortunate Apex joint venture, the plaintiffs transformed rented premises on Long Island, New York, and there packaged a vanadium compound made up of vanadium oxide and small amounts of other materials. This compound, which was

sold under the trade name Van-Ex, was designed for direct use in the steel bath where it could be converted into ferro-[fol. 2569] vanadium and mixed into the steel in one operation, thereby obviating the need to produce ferro-vanadium by a separate procedure. In 1944 the sale of Van-Ex was discontinued because, according to plaintiffs' allegations, defendants' antitrust violations precluded the acquisition of sufficient oxide and ore. It is claimed that defendants refused to sell to the plaintiffs and prevented their securing raw materials elsewhere.

(3) During 1942 the plaintiffs sold substantial quantities of ferro-vanadium, apparently produced by Apex, and of Van-Ex to a Canadian company, Atlas Steels, Ltd. These sales ceased during 1943 because, as alleged, defendants agreed with Electro Metallurgical Company of Canada, Ltd., a wholly owned subsidiary of defendant Union Carbide, and the wartime agent of the Canadian Government for the purchase and allocation of vanadium products to Canadian steel firms, to eliminate Continental from the Canadian market. Pursuant to the agreement Electro Metallurgical Company of Canada refused, while exercising its powers as an agent of the Canadian Government, to purchase for and allocate to Canadian steel makers vanadium products made by the plaintiffs.

(4) During 1943, by threats of reprisals defendants allegedly forced the termination of contractual negotiations between Climax Molybdenum Corporation and the plaintiffs.

(5) In 1944 plaintiffs and Imperial Paper & Color Corporation entered into a contract much like the Apex arrangement above described, but providing in addition for the milling of oxide from vanadium ore. Imperial abandoned this contract before the production stage was ever reached because, according to the allegations, neither Imperial nor Continental was able to secure either ore or oxide with which to work as a consequence of defendants' refusal to sell supplies to them and of their actions which precluded the purchase of the same from other persons.

These five particulars by which defendants' alleged monopoly was purportedly furthered at Continental's expense

are given as the reason for plaintiffs' assertion that after 1944 they could no longer operate profitably in the vanadium business. The complaint does not recite any particular activities by the defendants against the plaintiffs after 1944. In summary, plaintiffs complain that defendants [fol. 2570] conspired and combined to monopolize the production and sale of vanadium oxide and ferro-vanadium; that in pursuance of this monopolistic scheme defendants refused to supply vanadium oxide to the plaintiffs to carry on the business of producing ferro-vanadium; that defendants similarly refused to sell to plaintiffs sufficient vanadium oxide to continue the business of processing, packaging and selling Van-Ex; and that, in the course of their unlawful monopolistic conspiracy, defendants coerced the defection of one of plaintiffs' Canadian customers for ferro-vanadium and Van-Ex, namely, Atlas Steels, Ltd.; and moreover that defendants defeated the efforts by plaintiffs to enter into a successful arrangement with Climax Molybdenum Company for the production of ferro-vanadium. The complaint states that, owing to all this,

> "Plaintiffs have lost business; the value of their trademarks has been diminished; markets and customers which they have obtained in open competition with defendants have been taken away from them; their investments have been lost; the good will attaching to the business of Continental has been impaired—all to the damage of plaintiffs in the sum of Five Hundred Twenty-Eight Thousand Dollars ($528,000)."

This amount the plaintiffs estimate they would have made from their various vanadium ventures had not the defendants committed the above listed acts as part of their unlawful conspiracy.

At the conclusion of the plaintiffs' case, and also when all the evidence was in, defendants moved for a directed verdict on the ground that there was insufficient evidence to establish the plaintiffs' claim to relief. The court took the motion under advisement but submitted the case to the jury, which reported a verdict for the defendants, with which verdict the trial judge noted his concurrence. Pursuant to this verdict the trial judge, on June 25, 1958, en-

tered his judgment stating that "the plaintiffs take nothing by their complaint and that the same be dismissed and that the defendants have judgment on the verdict against the plaintiffs". It is this judgment which is now before us on appeal by the unsuccessful plaintiffs.

An appellate court reviews judgments, not the reasons which may be given in their support. It is only common [fol. 2571] sense that if, on the record before us, we determine that the judgment is correct, it should be affirmed, regardless of the correctness of the reasons which may be given to support it. Suppose that the trial judge had decided to direct a verdict for the defendants. He would, in that event, have entered a judgment to the same effect as the one under review. If we conclude that the trial judge should have granted defendants' motion for a directed verdict, we should affirm the judgment as rendered, whatever errors appellants may convince us were made by the judge during the trial.

This proposition is well settled on the authorities. See *United States* v. *American Railway Express Co.*, 265 U.S. 425, 435 (1924); *Stroud* v. *Benson*, 254 F.2d 448, 451 (C.A. 4th, 1958); *Lady Nelson, Ltd.* v. *Creole Petroleum Corp.*, C.A. 2d, decided January 19, 1961. We think that the Fifth Circuit was quite wrong in *Thurber Corp.* v. *Fairchild Motor Corp.*, 269 F.2d 841 (1959), in holding that the foregoing rule was required to be modified or rendered inapplicable by the reasoning of the Supreme Court in *Cone* v. *West Virginia Pulp & Paper Co.*, 330 U.S. 212 (1947). This last-named case dealt with quite a different situation, namely, the power of an appellate court upon *reversal* of the district court where the losing party below had not moved for a judgment n.o.v. or, in the alternative, for a new trial, as provided in Rule 50(b) F.R.C.P. In the present case we propose to *affirm* the judgment of the district court. As late as 1957 the Supreme Court said, in *Jaffke* v. *Dunham*, 352 U.S. 280, 281 (1957), that, "A successful party in the District Court may sustain its judgment on any ground that finds support in the record," without any suggestion that this statement had to be modified to meet the reasoning of *Cone* v. *West Virginia Pulp & Paper Co.*, supra.

In fact, in the situation presented we do not see how we could do otherwise than affirm the judgment under review if we would obey the commands of 28 U.S.C. § 2111 and Rule 61 F.R.C.P. If we conclude that the trial judge should have granted defendants' motion for a directed verdict, it is not apparent how any alleged error at the trial could be deemed to "affect the substantial rights of the parties" within the meaning of both 28 U.S.C. § 2111 and Rule 61. In reaching our decision we shall look not only at all the evidence ad-[fol. 2572] mitted by the trial judge, but also at all the evidence offered by plaintiffs but excluded below.

In a treble damage action under 15 U.S.C. § 15, it is clear that the plaintiff, in order to make out a claim on which recovery might be had, has the burden of proof to establish the following elements of his case: (1) That the defendant has violated the antitrust laws; (2) that plaintiff has suffered an injury to his business or property susceptible of being described with some degree of certainty in terms of money damages; and (3) that a causal connection exists between the defendant's wrongdoing and the plaintiff's loss. See, generally, Comment, 61 Yale L. J. 1010, 1011-28 (1952). Although in the instant case the defendants challenged the sufficiency of the evidence as to the three elements of the plaintiffs' case, we shall first direct our analysis to the third element, the sufficiency of the evidence as to causation, because defendants' strongest argument seems to us to apply here. Of course, a failure by the plaintiffs to prove any one of the three elements of their case would require the trial judge to direct a verdict for the defendants.

For present purposes we shall assume that the evidence was adequate to support a jury finding that the defendants committed the violations of the Sherman Act claimed, and that the defendants did the acts mentioned as part of a plan to monopolize the marketing of ferro-vanadium. Our problem is to determine whether or not the evidence could have justified jury findings that defendants' alleged illegal acts were in fact the cause of the plaintiffs' failure in various adventures into the business of producing and selling ferro-vanadium and Van-Ex. We have come to the conclusion that the evidence offered by the plaintiffs was insufficient to justify a jury verdict that this necessary causal relation

existed, and therefore that the trial judge should have directed a verdict for the defendants.

As the First Circuit recognized in *Momand* v. *Universal Film Exchanges, Inc.*, 172 F.2d 37, 42-43 (1948):

> "The degree of certainty required of a plaintiff in proving causation of damage is necessarily elastic. It varies with the nature of the case. Particularly in an anti-trust suit, covering as it must many imponderables, rigid standards of precise proof would make a plaintiff's task practically hopeless.
>
> . . .
>
> [fol. 2573] "To sum up: It is well appreciated that a plaintiff has a difficult task in anti-trust suit and that adherence to strict requirements of proof as to exact quantity of damage may deprive him of the substance of his rights. The law has gone far to ease that burden by permitting proof of losses which border on the speculative, in order to implement the policy of the anti-trust laws. But a fair degree of certainty is still essential to show the causative relation of defendants' misconduct and plaintiff's injury."

No doubt, a plaintiff's difficulties of proof may be somewhat mitigated by a rule much akin to the doctrine of *res ipsa loquitur:* where the plaintiff proves a loss, and a violation by defendant of the antitrust laws of such a nature as to be likely to cause that type of loss, there are cases which say that the jury, as the trier of the facts, must be permitted to draw from this circumstantial evidence the inference that the necessary causal relation exists. *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946). See also *Eastman Kodak Company of New York* v. *Southern Photo Materials Co.*, 273 U.S. 359 (1927); *Story Parchment Co.* v. *Paterson Parchment Paper Co.*, 282 U.S. 555 (1931). See *Martin* v. *Herzog*, 228 N.Y. 164, 170-71, 126 N.E. 814, 816 (1920).

But we are not sure that *Bigelow* v. *RKO Pictures, Inc.*, supra, is applicable in the instant case. Appellants have complained of the loss of a few named, specific, business arrangements rather than a general loss inflicted by the defection of countless, individual customers. Direct evi-

dence of causation was readily available to Continental, while in the case cited such direct evidence was practically impossible to come by. See, generally, Clark, "The Treble Damage Bonanza: New Doctrines of Damages in Private Antitrust Suits," 52 Mich. L. Rev. 363 (1954). Yet, even if the *Bigelow* decision could be enlisted to serve appellants' purposes, it was still incumbent upon them to show on the trial that their reiterated lack of supplies was the result of defendants' refusals to deal with them and of defendants' efforts to prevent them from obtaining raw materials elsewhere. See *Royster Drive-in Theatres, Inc.* v. *American Broadcasting-Paramount Theatres, Inc.*, 268 F.2d 246, 251 (C.A. 2d, 1959), cert. denied 361 U.S. 885 (1959); *Standard Oil Company of California* v. *Moore*, 251 F.2d 188, 198 [fol. 2574] (C.A. 9th, 1958); *Congress Bldg. Corp.* v. *Loew's, Inc.*, 246 F.2d 587, 596-98 (C.A. 7th, 1957); *Milwaukee Towne Corp.* v. *Loew's, Inc.*, 190 F.2d 561, 568 (C.A. 7th, 1951). This evidence is necessary in order to connect the asserted antitrust infractions with the alleged scarcity of supplies. Without such a connection, the *Bigelow* case does not come into play, for the requisite likelihood that defendants' actions caused plaintiffs' injuries is not sufficiently established to justify use of the *Bigelow* v. *RKO Pictures, Inc.*, supra, 327 U.S. 251, inference.

First, regarding the contract with Apex above referred to: Here, as elsewhere, the plaintiffs should have produced enough evidence to warrant a jury finding that defendants refused to sell to them and dried up other sources of raw materials.

The contract between Apex and Brignoud was executed on July 1, 1938, but it was not until the latter part of 1940 that Apex was actually ready to manufacture ferro-vanadium. Between the date of the execution of the contract and April, 1940, Apex was busy seeking technical assistance from Brignoud, a task made exceedingly difficult by the growing Nazi belligerence on the other side of the ocean. This assistance was needed to determine how much aluminum should be used in the alumino-thermic method of vanadium reduction; in other words, the amount of aluminum which, when used in the smelting process, would produce the best recovery of metallic vanadium from oxide. During this experimental period plaintiffs made their first

requests for the purchase of raw materials from the defendants.

In May, 1939, and again in July and October, 1939, the plaintiff Henry J. Leir, through the Continental Ore Corporation, sought to purchase from defendant Vanadium Corporation of America certain quantities of oxide. Although these various efforts were turned down by that defendant, it is clearly in evidence that during July and August, 1939, another defendant, Electro Metallurgical Sales Corporation, a wholly owned subsidiary of defendant Union Carbide, sold to the plaintiffs 16,000 pounds of oxide. In 1939 Apex was not ready to begin making ferro-vanadium and so did not call for any oxide from Continental. The oxide which plaintiffs acquired in 1939 was sold either on the export market or to non-associated buyers in the United States. It is clear that the alleged lack of oxide [fol. 2575] during 1939 could have no bearing on the ultimate unsatisfactory outcome of the Apex agreement. What Continental wanted in 1939 was oxide to sell abroad at export prices, not oxide to be delivered to Apex for its ferro-vanadium plant, which could not use it yet.

In 1940 the story is much the same. In March Apex did make one approach to Vanadium Corporation of America seeking to buy oxide. Vanadium replied that it had no material to offer Apex at that time. Even so, during the period between September and December, 1940, Apex having first begun in August of that year to produce ferro-vanadium, Continental sold 28,000 pounds of vanadium oxide to others than Apex, which it would certainly not have done had there been a shortage either at that time or to be anticipated in the near future. If such a shortage did exist, it is hard to understand why Apex turned down proffered arrangements with the Blanding mine or with Morrison, both of which could have furnished Apex a considerable quantity of oxide. We cannot by any stretch of the imagination come to the conclusion that the refusal of Vanadium Corporation of America to sell oxide to Apex in March, 1940, contributed to a shortage of supplies at its plant.

Nor was the situation much different during 1941. We note that during that year nobody on the plaintiffs' side made any offer to buy oxide from defendants. Rather,

plaintiffs wrote to defendants seeking from them offers for sale. The last of these letters was written in June, 1941, to defendant Electro Metallurgical Sales Corporation, which failed to answer. It is also in evidence that during 1941 Continental continued the practice of selling oxide indiscriminately.

Though no overtures were made to any defendant during 1942 concerning the possible purchase of oxide or ore, it is in evidence that an Apex supplier, Nisley & Wilson, sold 10,000 pounds of oxide to Vanadium Corporation of America in February of that year because Apex was unable to take that shipment owing to a fire in its ferro department.

It was not until June, 1942, that Apex canceled its joint venture arrangement with Brignoud allegedly because of the shortage of oxide resulting from plaintiffs' inability [fol. 2576] to buy supplies from defendants and from defendants' action in preventing Apex from obtaining raw materials from other producers. As noted previously, when rejections by defendants to deal with the plaintiffs are the crux of treble damage actions under the antitrust laws, it is clearly required that the plaintiffs must show that they offered to buy and that the defendants did not sell to them. Even assuming that the failure to make offers to sell in response to plaintiffs' inquiries amounted to a refusal to deal, the last request was made a year before the alleged lack of supplies is claimed to have caused Apex to end its relationship with the plaintiffs. We hold, under the cases cited pages 8-9,* *supra*, that the failure of Apex or of Continental to try to buy oxide from the defendants during the final and most critical period in the life of the Apex contract made it impossible for the jury to find that defendants' refusals to deal caused Apex to terminate the arrangement with Brignoud. In regard to the Apex venture, the judgment below is affirmed.

We come now to the plaintiffs' efforts to market the Van-Ex compound. Some Van-Ex had been made by Apex before relations with Brignoud finally came to an end in July, 1942. But most of this product was manufactured by Continental in rented premises in Long Island City, New York. According to the allegations of the complaint, the

* Printed herein at side folios 2573 and 2574.

sales of Van-Ex were completely stopped in 1944 for the reason that, because of the defendants' wrongdoing, Continental was never able to secure sufficient supplies of raw materials to stay in business. The defendants contended that the manufacture of Van Ex really stopped in 1943, when Continental sold its pebble mill.

The complaint itself is somewhat confusing as to why the Van-Ex business fell off. One paragraph states that the cause of this disaster was the inability of the plaintiffs to secure raw materials through defendants' wrongful acts. Another paragraph asserts that the plaintiffs were shouldered out of the vanadium field, and specifically out of Van-Ex, by defendants' interference with Continental's primary customer for Van-Ex, Atlas Steels, Ltd., of Canada. Defendants are accused of preventing Atlas from securing Van-Ex from Continental. It seems obvious that, if lack of supplies was really the cause of Continental's undoing with regard to Van-Ex, the loss of Atlas as a customer would [fol. 2577] become irrelevant, for the absence of customers cannot hurt a seller who has nothing to sell. On the other hand, if the defection of Atlas was the cause of Van-Ex's demise, the alleged lack of supplies could have had no relevance, for an abundance of goods is of no use to a seller who lacks customers.

As to the lack of supplies needed to produce Van Ex, the plaintiffs once again have the burden of introducing sufficient evidence to warrant the inference that they were unable to obtain oxide from the defendants or from anybody else.

The Van-Ex venture must be viewed against the background of wartime regulations and procedures. Metals Reserve Company (hereinafter MRC) was formed by the United States Government in the early months of 1942 to insure that vanadium for the war effort would be readily available when needed. MRC named defendant United States Vanadium Corporation its agent to carry out the appointed task. MRC and United States Vanadium Corporation had three plants at their disposal for milling oxide from ore, one run by the latter at Durango, Colorado, one by Vanadium Corporation of America at Monticello, Utah, and, toward the end of 1942, the Nisley & Wilson mill at

Gateway, Colorado. These three plants processed ore furnished by United States Vanadium Corporation as agent for MRC, and the oxide produced was turned over to MRC for a fee or "toll" on each pound.

The oxide accumulated by MRC in this manner was then sold to private interests, provided the prospective buyer could receive an allocation from the War Production Board. There is no evidence that Continental had any trouble obtaining such allocations. By the end of 1943 MRC to all intents and purposes had stopped functioning. At that time the Manhattan Project, designed to make the first atomic bomb, began operations. Since uranium comes from the same ore as vanadium, control over vanadium ore was assumed by the Manhattan Project. So far, however, as can be inferred from the record, the manipulations by the Manhattan Project and by its agent, Union Mines Development Company, a wholly owned subsidiary of defendant Union Carbide, did not come into play until after the Van-Ex project had come to an unsuccessful close.

[fol. 2578] In March, 1943, Continental was granted an allocation for 20,000 pounds of oxide from the War Production Board. MRC supplied 10,000 pounds and the balance was purchased from the defendant Electro Metallurgical Sales Corporation. In making this purchase from Electro, Continental squabbled somewhat over the price but eventually the sale was made at the price offered by Continental.

Later in the same year Continental asked defendants Electro Metallurgical Sales Corporation and Vanadium Corporation of America for contracts under which it could buy from them a certain amount of oxide each month over a prolonged period, but the requests were turned down. Again, we must assume that the denial of these requests for contracts amounted to a refusal to deal with the plaintiffs.

None the less, appellants failed to show that defendants prevented them from buying raw materials from an independent supplier, namely, Nisley & Wilson. Late in 1942, at the beginning of that firm's toll agreement with MRC, some of its production was earmarked and sent to Continental through MRC. These shipments apparently stopped

early in 1943. In the spring of that year MRC entered into a contract with Continental under which the production of Nisley & Wilson, or a part of it, would be shipped to Continental from time to time. In June 17,000 pounds of oxide were ready, but Continental did not wish to buy for the reason that the oxide was in lumps and Continental needed material more finely ground. Continental had bought these lumps from Nisley & Wilson in the fall of 1942 but did not want them in the summer of 1943. This may have been because Continental had sold the pebble mill which it had begun to operate in Long Island City in 1942. Moreover, because in the summer of 1943 Nisley & Wilson could not have produced oxide in forms smaller than the lumps unacceptable by Continental, the latter canceled its contract with MRC.

In October, 1943, Nisley & Wilson foresaw the end of its toll agreement with MRC and installed a flaking machine. It could now produce oxide in flakes rather than in lumps. Continental was advised of the new acquisition and a sample of oxide in the new form was submitted. Continental [fol. 2579] replied that the flakes were just what the doctor ordered, but made no effort to secure Nisley & Wilson's product. Plaintiff's witness Martin Wolf testified that this was because Continental did not know that the toll agreement was about to expire and thought that it would not be able to get anything from MRC which, says Continental, was controlled by its agent United States Vanadium Corporation. Nisley & Wilson shut down in January, 1944. It had on hand a stockpile of about 300,000 pounds of oxide which it tried to sell to Continental in the spring of 1944. Again Continental refused to buy.

We think this failure to deal with Nisley & Wilson during the Van-Ex period precludes Continental from arguing that defendants prevented the acquisition of raw materials at that time. As to Apex, appellants failed to show their inability to get oxide from defendants. With regard to Van-Ex, they failed to show that it was impossible for them to obtain supplies from an independent producer.

As to the alternative allegation, that the loss of the Van-Ex business was caused by the defendants' interference

with Canadian buyers, principally Atlas Steels, Ltd., we cannot ignore the fact that Electro Metallurgical Company of Canada, Ltd., had been appointed by the Canadian Government to act as its agent in purchasing Van-Ex for Canadian steel makers. The Canadian Government established a regulation under which no vanadium oxide (including Van-Ex) could be imported into Canada by anybody other than its agent, and Electro Metallurgical Company of Canada, Ltd., refused to purchase Van-Ex from the plaintiffs. Thus, even if we assume that Electro Metallurgical Company of Canada, Ltd., acted for the purpose of entrenching the monopoly position of the defendants in the United States, it was acting as an arm of the Canadian Government, and we do not see how such efforts as appellants claim defendants took to persuade and influence the Canadian Government through its agent are within the purview of the Sherman Act. See *Eastern Railroad Presidents Conference* v. *Noerr Motor Freight, Inc.*, decided by the Supreme Court February 20, 1961.

We now refer briefly to the two remaining allegations of the complaint designed to show that the defendants' illegal acts caused a failure of the plaintiffs to compete successfully in the ferro-vanadium field.

[fol. 2580] During 1943, by threats of reprisals made by one M. D. Arrouet, defendants allegedly forced the termination of contractual negotiations between Climax Molybdenum Corporation and the plaintiffs. The trial judge excluded all evidence dealing with the alleged threats of reprisal; therefore we look to appellants' offer of proof to determine what the story was. Appellants offered to demonstrate that Mr. Arrouet was a highly placed representative of defendants Union Carbide group. It is admitted that he was not an officer of any of the defendants, but it is alleged that his threats of reprisals ought to bind Union Carbide and Electro Metallurgical Company. Appellants' offer of proof would show that Arrouet threatened that if Climax undertook the manufacture of ferro-vanadium for Continental, the defendants would enter the industry as a reprisal against Climax.

For present purposes we shall assume that Arrouet said what appellants say he said, and we shall also assume that

his statement is to be considered the statement of those defendants in the Union Carbide group. The difficulty with appellants' position in this regard is that the record contains no evidence of the nature of the alleged pending negotiations with Climax. There had been, in February, 1943, an earlier arrangement between Continental and Climax, which it appears was completed. By the end of April, 1943, Continental had shipped the agreed poundage of vanadium oxide to Climax, and Climax had converted this material in accordance with its part of the bargain. This earlier transaction stands alone in the record as the only connection between Climax and Continental. Thus even if Continental and Climax were threatened with reprisals, the evidence does not reveal the result of such threats. On the basis of the evidence in the case, the threat of reprisal appears to be one directed against a corporation with which Continental had no business, since the nature and existence of the alleged "pending negotiations" are not shown by the record. Appellants have thus failed to show any injury resulting from the alleged threats. There must be an injury, together with a wrong and a causal connection between the two, before liability can result.

The remaining instance given in the record is the so-called Imperial venture. On January 4, 1944, Continental Ore Corporation and Imperial Paper & Color Corporation, in- [fol. 2581] corporated in New York, entered into a contract calling for the manufacture of vanadium products. Continental was appointed the exclusive sales agent for these products. Imperial was to pay Continental a commission on all sales made. Imperial was also to install the necessary equipment and give Continental the first opportunity to supply Imperial's total requirements for raw materials. Imperial had some raw materials of its own as by-products of its other business. The Continental-Imperial contract was made contingent upon the decision of Imperial to manufacture vanadium from other raw materials than its chromite by-products. If Imperial should decide not to enter this new field of production, the contract was to become null and void.

This is exactly what transpired. In December, 1944, Imperial wrote Continental that it was not yet willing to

begin the manufacture of ferro-vanadium as called for in the contract between them. It is clear from this letter that Imperial was worried over the sources of supply of vanadium-bearing raw materials. Similar letters from Imperial to Continental were written on April 9, April 13, and May 11, 1945. Sometime during 1945 Imperial decided not to go into the ferro-vanadium venture with Continental and chose to exercise its right under the contract to call the agreement off. The arrangement never got started. Imperial did not install the necessary equipment and no ferro-vanadium was produced.

The various communications from Imperial to Continental show clearly that Imperial was dissuaded from entering this field because of the lack of sources of raw material. It is the appellants' position that they could not get a steady, uniform supply of raw materials because of defendants' alleged antitrust infractions. There is a great deal of evidence showing that various sources of vanadium other than vanadium oxide mined on the Colorado plateau were available to Continental during the life of the Imperial contract. These included lead vanadate from Africa, vanadium ash from Peru, flue dust from ocean-going vessels burning certain Venezuelan and Mexican oils, and something called cuprodescloizite ores. Mr. Wolf, the vice-president of Continental, testified that it would be almost impossible to produce vanadium from these raw materials unless they could be gotten in a steady and uniform manner. Be that as it may, the evidence in regard to [fol. 2582] the period of the Imperial venture shows the failure on the part of appellants to offer to buy raw materials from the defendants. As we have observed in regard to the Van-Ex venture, both Electro Metallurgical Sales Corporation and Vanadium Corporation of America turned down requirements contracts with Continental late in 1943. At this time the supplies of Nisley & Wilson were available to Continental and were not procured from that firm. The Imperial contract was entered into in January, 1944, and canceled sometime in 1945. Yet from the end of 1943 until 1946, when Electro Metallurgical Sales Corporation gave Continental a requirements contract for vanadium oxide, appellants made no move to obtain the allegedly necessary

steady and uniform source of supply from any of the defendants. This is much like the Apex situation except that here there were no offers to buy during the entire life of Continental's arrangement with Imperial. Surely Continental cannot complain that the defendants did it wrong when it cannot show that it sought to alleviate its situation by seeking supplies from the defendants at any time during the life of the Imperial venture.

A judgment will be entered affirming the judgment of the District Court.

IN UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

No. 16149

CONTINENTAL ORE COMPANY, et al., Appellants,

vs.

UNION CARBIDE AND CARBON CORPORATION, Appellees.

JUDGMENT—Filed and entered March 22, 1961

Appeal from the United States District Court for the Northern District of California, Southern Division.

This Cause came on to be heard on the Transcript of Record from the United States District Court for the Northern District of California, Southern Division and was duly submitted.

On consideration whereof, It is now here ordered and adjudged by this Court, that the judgment of the said District Court in this Cause be, and hereby is affirmed, with costs in favor of the appellees and against the appellants.

It is further ordered and adjudged by this Court that the appellees recover against the appellants for their costs herein expended, and have execution therefor.

[fol. 2584]

IN UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

Before: Magruder, Merrill, Circuit Judges and Solomon, District Judge.

MINUTE ENTRY OF ORDER DENYING PETITION FOR REHEARING —May 15, 1961

On consideration thereof, and by direction of the Court, It Is Ordered that the petition of appellants filed April 21, 1961, and within time allowed therefor by rule of court, for a rehearing of above cause be, and hereby is, denied.

[fol. 2585] Clerk's Certificate to foregoing transcript (omitted in printing).

[fol. 2586]

SUPREME COURT OF THE UNITED STATES

No. 304, October Term, 1961

CONTINENTAL ORE COMPANY, et al., Petitioners,

vs.

UNION CARBIDE AND CARBON CORPORATION, et al.

ORDER ALLOWING CERTIORARI—October 23, 1961

The petition herein for a writ of certiorari to the United States Court of Appeals for the Ninth Circuit is granted limited to Questions 2, 5, and 6 presented by the petition which read as follows:

"2. Whether an Appellate Court can take away from a jury the question of causal effect concerning an injury by a 100% two-company monopoly (admittedly achieved pursuant to an intent to monopolize) when the question of violation is confessed and the issue of measurement of damages is more than sufficiently supported by relevant economic data and where the destruction of the plaintiff company (petitioners herein) was admitted to be, by a chief executive officer of a defendant, an important goal of the monopolists?

"5. Whether petitioners, an American company, can claim damages under the anti-trust laws for injury caused by their elimination from the Canadian market when it is shown that two other American companies had entered [fol. 2587] into a conspiracy to eliminate all competition and to monopolize the industry and when it is shown that as part of this conspiracy one of the American companies utilized its domination and control over a wholly owned Canadian subsidiary which had been given a discretionary power by the Canadian government to allocate the importation of vanadium into Canada during the war, to exclude the exports of petitioners (competitors) from entering Canada for sale to petitioners' Canadian customers and when it is shown that the refusal of the Canadian subsidiary to allocate vanadium to petitioners' Canadian customers was directed by its American parent company pursuant to the overall conspiracy to eliminate all competition and specifically to eliminate petitioners. This issue was erroneously decided against petitioners on the Court of Appeals' manifest misapplication of this Court's recent opinion in Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc. (1961), 365 U.S. 127, 81 S.Ct. 523.

"6. Whether petitioners, against whom a directed verdict was ordered by the Appellate Court, were deprived of a trial by jury by the Appellate Court below which weighed the evidence, made factual rulings on the sufficiency of evidence of causation, did not view the evidence as a whole, did not allow petitioners the benefit of all their evidence, did not allow petitioners the benefit of all inferences and presumptions to be drawn from the evidence and did not

resolve all conflicts in the evidence in favor of petitioners in direct conflict with this Court's opinion in Beacon Theatres, Inc. v. Westover, 359 U.S. 500 (1959)."

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

INDEX

Plaintiffs' Exhibit No.:		Original	Print
1.	Answers to interrogatories showing production of vanadium oxide by defendants, 1933 to 1947	1	1
2.	Answers to interrogatories showing production of ferrovanadium, 1933 to 1947, by defendants	5	7
3.	Answers to interrogatories showing sales of vanadium oxide and ferrovanadium by defendants, 1933 to 1944	8	11
4.	Union Carbide price sheets of vanadium products, 1933 to 1944	16	19
5.	Price sheets of vanadium products distributed by Vanadium Corporation of America, 1933 to 1945	24	27
10.	Contracts dated November 18, 1938 and June 30, 1939 between Electromet Sales and Vanadium Corporation of America for the sale of vanadium oxide to V.C.A.	46	49

RECORD PRESS, PRINTERS, NEW YORK, N. Y., JANUARY 29, 1962

Plaintiffs' Exhibit No.:		Original	Print
14.	Purchases of vanadium ore concentrates and vanadium source materials made by the Vanadium Corporation of America, 1933 to 1944	48	51
15.	Vanadium-bearing materials purchased by Union Carbide subsidiaries from others, excluding vanadium-bearing ore, 1933 to 1945	50	53
16.	List of purchasers of vanadium products sold by subsidiaries of Union Carbide, 1933 to 1944	54	57
17.	List of purchasers of vanadium products sold by Vanadium Corporation of America, 1933 to 1944	70	73
18.	Chart showing production of vanadium oxide from 1927 to 1945, entitled "Compilation of United States Vanadium Corporation, Total Production, United States Imports and Comparison of Same With Electro-Met. Sales"	131	134
19.	Schedule showing total number of requirement contracts of each of the defendants with purchasers of vanadium products	132	135
21.	Answers to interrogatories setting forth the vanadium-bearing ores mined by each of the defendants and purchased by each, 1933 to 1947	135	138
24	Answers to interrogatories setting forth the quantity of vanadium oxide and vanadium-bearing ore, and in the case of V.C.A. of ferrovanadium as well, which the defendants purchased from the Metals Reserve Company, 1943 and 1944	139	142
33.	Letter dated 9/14/38 from Van Fleet, Vice President of U.S.V., to B. Burwell	141	144

Plaintiffs' Exhibit No.:		Original	Print
34.	Letter dated 9/19/38 from Van Fleet to Gormely, Swain and Sneath	143	146
36.	Letter dated 12/24/41 from W. G. Haldane, Assistant to Blair Burwell, to J. E. Weston, Burwell, and Coleman of U.S.V.	147	151
37.	Telegram dated 2/29/44 from B. Burwell to W. G. Haldane	148	152
40.	Letter from Continental Ore Company to Vanadium Corporation of America, Mr. G. Laub, dated 11/16/43	149	153
41.	Letter of G. Laub dated 11/19/43, Vanadium Corporation of America, to Continental Ore	150	154
42.	Letter of Continental Ore Company to Electro Metallurgical Sales Corporation dated 11/17/43, together with reply of Electro Metallurgical Sales Corporation dated 11/30/43	151	155
43.	Minutes of Vanadium Corporation of America in 1939	154	158
57.	Document entitled "Vanadium Bearing Raw Material" 1935-1939	155	159
59A.	A portion of press release of A.E.C. dated 12/17/48	157	162
62.	Report of Gustav Laub to Bransome, President of V.C.A. dated 3/14/42; reports of Gustav Laub dated 2/20/42 and 4/14/42; and letter dated 4/22/42 from R. Sterling to F. F. Kett	158	163
63.	Letters dated 3/11/40 and 4/8/40 from Lippa of Apex Smelting to V.C.A., and reply of G. Laub of V.C.A. to Apex dated 4/20/40	163	170
75.	Telegram dated 1/13/44 from Nisley & Wilson to Continental Ore	166	172
76.	Letter dated 1/31/44 from Frank Nisley to Continental Ore	171	174

Plaintiffs' Exhibit No.:		Original	Print
77.	Letters from Leir to Roser dated 6/14/41, from Leir to Gormely dated 6/16/41, and from Gormely to Leir dated 7/31/41	172	176
78.	V.C.A. inter-office memorandum dated 2/14/47, P. J. Gibbons to J. B. Girdler; letter dated 2/24/47, Girdler to Continental Ore Company; letter dated 3/7/47, Continental Ore Company, by J. A. Mirel, to Vanadium Corporation of America; letter dated 3/13/47, Girdler to Continental Ore Company	175	178
111.	Letter agreement between Climax Molybdenum Company of Pennsylvania and Continental Ore Company dated February 10, 1943	179	182
113.	Letter dated 11/10/43 from E. F. Hatch of War Production Board to W. G. Haldane of U.S.V.	180	184
114.	Letter dated 12/5/44 from Brown, General Manager of Imperial Paper & Color Corporation to Continental Ore Company	181	185
116.	Memorandum of Martin Wolf, Continental Ore Company, dated 2/19/43	182	187
127.	Letter dated 1/13/42 from Continental Ore Corporation to Apex Smelting Company	183	188
128.	Telegram from Continental to Apex dated 10/17/40 and letter from Apex to Continental of the same date	184	189
135.	Exchange of letters between Vitro Manufacturing Co. and Continental Ore Corporation in August 1942	186	191
142.	Letter dated 5/25/38 from Apex Smelting Company to Robert E. Adams	188	193

Plaintiffs' Exhibit No.:		Original	Print
145.	Defense Plant Corporation letter to Mr. Lippa, Apex Smelting Co., dated 12/20/41	189	194
147.	Letter dated 9/17/43, J. W. Hill to Page Edwards	190	195
148.	Memo dated 2/4/44, Page Edwards to J. W. Hill	192	196
152.	Agreement between Mesa Vanadium Company and United States Vanadium Corporation, dated May 7, 1940	193	197
155.	Letter dated 10/13/43 from Remmers to J. D. Swain	199	203
156.	Letter dated November 19, 1941 from Milenski to Apex Smelting Company	201	206
159.	Letter from Blanding Mines to Apex Smelting dated 2/23/42	202	207
161.	Telegram, Jaoul Electrochimie to Vanadium Corporation of America, dated 10/4/39	203	208
163.	Cablegram, 11/8/39, from Vanadium Corporation of America to Trochim, France	204	209
164.	Letter, V.C.A. to Societe d'Electro Chimie, dated 11/9/39	205	210
165.	Cablegram, 12/14/39, Vanadium Corporation of America to Trochim	207	212
166.	Letter, 3/28/40, Bransome to Painvin	208	213
171.	Letter, Bransome to Viles, V.C.A. dated 5/25/43	210	216

Plaintiffs' Exhibit No. for Identification only		Original	Print
20.	Union Carbide's Answers to Interrogatory No. 33 showing net sales, total costs of net sales and profits before federal taxes pertaining to vanadium and uranium together with Vanadium Corporation of America's answer setting forth yearly total costs of all vanadium and uranium products and their respective compounds and sales value, years 1933 to 1947	211	217
25.	Memorandum of Sale of vanadium oxide by Electromet Sales to Vanadium Corporation of America, dated 9/15/33 together with correspondence pertaining to said memorandum of sale; Memorandum of Sale of oxide by Electromet Sales to Vanadium Corporation of America, dated 1/3/36	213	219
47.	Report on Vanadium dated June 1935 by C. E. MacQuigg of Union Carbide Research Laboratories (excerpts)	224	230
48.	Series of letters between personnel of Union Carbide or its subsidiaries dated from July 29, 1935 to December 3, 1935, entitled "Vanadium Situation" or "Vanadium Report"	281	286
49.	Inter-office communications from Van Fleet to F. P. Gormely of Electromet dating from 3/9/36 to 11/3/37 and letter from Van Fleet to Burwell dated 12/29/36	304	316
50.	Memoranda of V.C.A. Ore Conference Meeting held in New York dated 12/8/36 and 2/9/37	314	326

[fol. 7]

32. That during the period 1933 through 1944 the total production of ferrovanadium by Electro Metallurgical Co. was approximately 7,834,731 pounds contained vanadium.

ANSWER: Said defendants hereby revise their answer to Interrogatory 8(e) propounded by plaintiffs and on file herein and admit that Union Carbide and Carbon Corporation and its United States subsidiaries, consolidated produced the following quantities of ferrovanadium in the years indicated:

Year	Pounds of Contained "V"
1933	180,816
1934	228,128
1935	181,319
1936	193,073
1937	301,217
1938	245,079
1939	292,347
1940	443,688
1941	1,323,641
1942	1,540,524
1943	1,835,628
1944	1,066,508
1945	708,649
1946	458,855
1947	406,701
Total	9,406,173

Said revision is occasioned by clerical errors or different accounting methods used in prior computations.

Re: Continental Ore Company et al. v. Union Carbide and Carbon Corporation et al.

Dear Mr. Alioto:

Enclosed herewith is a statement of returned or cancelled sales of ferrovanadium in the United States for the years 1935 through 1944. In the statement previously delivered to you on June 2, 1950, showing ferrovanadium sales in the United States adjustment is not made for these returned or cancelled sales.

Very truly yours,

Herbert W. Clark

Plaintiff's Exhibit No. 4

ELECTRO METALLURGICAL SALES CORPORATION

TYPED PRICE SHEETS

AMMONIUM META VANADATE

Dated - 12/5/28 - $2.50 per running pound, delivered

6/8/32 - $2.00 per pound, delivered. Freight surcharge for account of Buyer.

12/19/32- $1.90 per pound, delivered.

1/1/35 - Lots of 5,000# and over - $1.90 per lb.
Lots under 5,000# - 2.00 " "

Both prices are quoted f.o.b. our Works or warehouses with freight charges allowed to points within a reasonable distance.

FERROVANADIUM

2/1/28 - Open Hearth Grade: $3.15
Special Grade: 3.40
High Speed Grade: 3.55

All prices per pound contained vanadium, f.o.b. our Works with freight charges allowed to reasonable distance.

12/5/28 - Open Hearth Grade: $3.15
Special Grade: 3.25
High Speed Grade: 3.40

All prices per pound of contained vanadium, f.o.b. our Works with freight charges allowed to reasonable distance.

12/7/31 - Open Hearth Grade: $3.05
Special Grade: 3.15
High Speed: 3.30

All prices per pound of contained vanadium, f.o.b. our Works with freight charges allowed to reasonable distance.

Freight surcharge for account of Buyer.

New York City — Inq. No. P. J. G.

P. J. Gibbons

PLEASE FURNISH US THE FOLLOWING MATERIAL SUBJECT TO ALL CONDITIONS PRINTED ON REVERSE SIDE OF THIS ORDER, PURCHASED ON BASIS OF SHIPPERS' ANALYSIS, IN TRIPLICATE AND BILL OF LADING SHOWING ABOVE ORDER NUMBER SUBMIT TO [redacted]. 420 Lexington Avenue, New York City

Material:	Vanadium Pentoxide (V_2O_5) - to be shipped from Newark
Quantity:	One (1) car - 10,920 lbs. net - 97380.30 Lbs. Ninety Five Cents (.95)
Price:	~~Eighty Cents ($.80)~~ per pound of contained V_2O_5 f.o.b. Bridgeville, Pa.
Terms:	Net cash thirty (30) days from date of invoice.
Delivery:	To be shipped at once.

Ship on B/L #. 61910 from Newark
Inst. on B/L #-CL.3-WHP-W.I.E-1.#Va

Confirming arrangements made between Mr. John Swain and Mr. P. J. Gibbons.

7/11 - 62.218.20 - 39-8-284

MAKE EACH PACKAGE PLAINLY WITH ABOVE ORDER NUMBER. DUPLY ACKNOWLEDGE RECEIPT OF THIS ORDER STATING WHEN SHIPMENT WILL BE FORWARDED.

Ship via L.V.R.R.

(A) U. S. V. Durango Prod.

(B) Estimated Production - Plant Operated intermittent, during year (prior to Metals Reserve)

(C) Shattuck Chemical Co. prod. only 85% recovery

(D) Vitro Chemical Co. prod. calculated from 85% recovery of Utah production

(E) Mammoth-St. Anthony Prod. calculated at 70% recovery

(G) Mammoth-St. Anthony Mines closed May 15, 1937

(H) V.C.A. Naturita Mill operated full year in 1941 Prod. estimated from known prod. in 1942

(J) Known production

(K) United States Vanadium Corp. practically sole producer in United States

(L) All production in U. S. from Utah and Colorado sold through Howard Belsley

(M) Includes Gateway private production

(N) U.S.B.M. Import figures of V changed to V_2O_5

(P) Includes 2 for 1 conversion factor to change V to V_2O_5 used and corrected to 75% recovery

(R) Includes Export Sales in addition to Canadian

(S) Includes "Conversion" oxide

(T) Export Sales in addition to Domestic and Canadian

(U) Ores and Metals inventory December 31, 1945

(V) No imports into U. S. this year

Outside Vanadium Ore Production

Mr. Blair Burwell
United States Vanadium Corp.
Uravan, Colorado

Dear Blair:

As I discussed with you the other night on the telephone, it has become very important that we find out accurately and definitely who is producing vanadium ore and where it is going. Along with this, we want to know the quality of the ore shipped so that we can get a line on the pounds of V_2O_5. I realize that some of the quality will have to be estimated, but we ought to get a very accurate line on what the shipments have been from southeastern Utah and southwestern Colorado. We may have to do something about this production, and if information could be obtained on what they get for this ore, it would help out. For instance—Harbison told me that he received 42¢ per pound for V_2O_5 and 60¢ per pound for U_3O_8 on a low-grade Polar Mesa ore, but if the V_2O_5 went over 7%, and the U_3O_8 over 2%, he received 45¢ per pound of V_2O_5 and 80¢ per pound for U_3O_8. These are pretty high prices for us, but it may be necessary to finally do something about it.

I have an idea that this production of ore which is going to Europe and Japan is quite a quantity of V_2O_5, and more than we think it is. I have been talking about this for some time here in New York, stating that the high prices maintained for V_2O_5 in Europe invite and stimulate this kind of competition and can eventually support a considerable vanadium business, with possibly later on a plant.

In this respect I have had some correspondence with King about the application made by Balsley and Kipe for a freight rate on vanadium ore to Castleton, N. Y. where it is claimed the ore will be reduced. We cannot get any line on this plan here, and at Castleton there is no plant now available for this kind of work.

I hope you will be able to put somebody on this and make a very careful canvass of the situation. If you could have a talk personally with Balsley you could probably find out all about it. In talking to Balsley it would be to his advantage to give you this information because I have an idea that he is not making any too much money out of this business, and it might be made easier for him on some kind of a combination with us if we decide to do something about it, rather than to fight it. We could, of course, run all this business out—but it would not be good policy to hint of this or threaten.

In this connection, I would like to have a line on the Shattuck Chemical Company production. They are selling fused oxide not only in this country, but in Europe. Their oxide is low-grade containing only a little over 50% V_2O_5, [fol. 142] but they are selling it for less money. I have an idea their production is about 25 tons of fused oxide a year, but you may be able to get a closer line on this. From the record, you will be able to gather on the shipments to Vitro, we can get a line on their production of V_2O_5.

I have a pretty good line on the production of vanadium in Mammoth, Arizona, as it is all sold through a friend of mine here in New York.

Will you please see what you can do about this for me.

Very truly yours,

J. R. Van Fleet/mm
IC

Competitive Vanadium Ore Production

Dear Mr. Gormely:

A preliminary investigation of the vanadium ore production in southeastern Utah and southwestern Colorado has been made. The investigation is being continued and will be made complete at a later date. Preliminary figures indicate that the V_2O_5 content of the ore which has been shipped already this year up to September 1st amounts to approximately 225,100 lbs. It is thought that for the balance of this year production will be at about the same rate, and the total ore production will amount to approximately 338,000 pounds contained V_2O_5.

The preliminary report does not give exports to Europe, but 7 cars containing 34,000 lbs. V_2O_5 have been shipped to Japan already this year. An approximate list of these shipments to September 1, 1938 follows:

Japan	7 cars	34,000 lbs.	V_2O_5
Vitro Mfg. Co.	29 "	125,500 "	"
Shattuck Chemical Co.	2 "	5,600 "	"
North Continent Mining Co. (Produced)		40,000 "	"
Miscellaneous		20,000 "	"
		225,100 "	"

The 7 cars of ore which were sent to Japan were produced from the Temple Mountain, Yellow Cat and Polar Mesa properties in southeastern Utah. A Japanese outfit started to build a mill at Temple Mountain to concentrate ore from the many dumps. They worked about 60 days, apparently ran out of money and left the property—leaving unpaid bills. The ore shipped from Yellow Cat and Polar Mesa was purchased from the operators of those properties.

The Vitro Manufacturing Company has purchased 29 cars containing 125,500 lbs. V_2O_5. This ore also contains better than 2% U_3O_8. The Vitro Manufacturing Company process this ore from the uranium and sell the vanadium residue in some convenient form, recently reported as being fused oxide. It is not known at present where this vanadium goes. About half of these 29 cars have been produced at Polar Mesa by Harbison and Kipe. They receive high prices for this ore, viz., 45¢ per pound of V_2O_5 and 80¢ per pound of U_3O_8 contained in the ore. Vitro pays the freight from Utah.

[fol. 144] *The Shattuck Chemical Company* of Denver has purchased 2 cars of rather low-grade ore containing 5,600 lbs. of V_2O_5. These 2 cars were specially selected uranium ore and contained higher uranium in proportion to V_2O_5 than most shipments.

The North Continent Mining Company has a small plant in the Paradox Valley and has produced about 40,000 lbs. of V_2O_5 so far this year. This production is sent to the Shattuck Chemical Company in Denver. This production of the North Continent Mining Company purchased by Shattuck rather checks previous information that Shattuck Chemical Company produces and markets between 50,000 and 75,000 lbs. of V_2O_5 yearly. They put this in the form of fused vanadium oxide with varying degrees of purity and containing from 51 to 75% V_2O_5.

There has been an estimated miscellaneous production of approximately 20,000 lbs. V_2O_5 from various sources.

If the production for the rest of 1938 is in proportion, the entire 1938 production will amount to approximately 338,000 lbs. contained V_2O_5 from these ore sources.

The Mammoth Mine in Arizona has an appreciable production of vanadium. Several years ago the Molybdenum Corporation of America built a mill at Mammoth with which to process ores extracted from the New Year and Mohawk properties. They entered into a contract with the owners of the Mammoth mine adjoining, to also treat ores from that mine. The treatment and recoveries were not satisfactory to Mammoth. Consequently, about January 1, 1938 Mammoth purchased the mill from the Molybdenum Corporation and took over the milling operation. Concentrates are made in this mill containing gold, lead, molybdenum and vanadium. The concentrates contain about 5% V_2O_5 and 7% MoO_3.

We have looked over this operation, obtained samples of concentrates and are able to check up fairly well the production. The present capacity of the Mammoth mill would yield approximately 100,000 lbs. V_2O_5 yearly, which checks closely with the 1937 production amounting to 90,000 lbs. V_2O_5 purchased by Associated Metals and Minerals Company.

The Mammoth mine is owned by Lloyd-Smith, owner of Time, Life and Fortune magazines, and it is incorporated under the name of Mammoth Saint Anthony Company. Foster Naething is the General Manager of this company and is a very competent mining engineer.

If we add this 100,000 lbs. V_2O_5 to the competitive ore production listed above, the total competitive production for 1938 will be approximately 438,000 lbs. V_2O_5. There are many attractive occurrences of carnotite ore in the Southwest, and the production could easily be twice as much—given adequate financing and management.

[fol. 145] One potential producer of V_2O_5 is the *Anaconda Copper Company*. In Idaho they produce phosphate rock, moving it to Anaconda, Montana for processing into fertilizer and phosphoric acid. The plant for this purpose at Anaconda is in connection with the smelter where they obtain cheap acid. This phosphate rock all contains a small amount of vanadium, and a process has been developed for recovering the vanadium from the phosphoric acid solution.

They expected to be producing vanadium this year, after installing equipment costing about $200,000, but they did not feel inclined to proceed with this expenditure this year. I imagine when business is better they will begin producing fused oxide. It is estimated that this plant will produce approximately 100,000 lbs. V_2O_5 yearly, and we have agreed to purchase the output.

The International Vanadium Corporation has taken over the lead vanadate property at Dripping Springs, Arizona. It is now being managed by one de Villiers, who was for a time employed at Rhodesian Broken Hills. The company is now well financed and the plan is to produce lead vanadate concentrates containing 17% V_2O_5. de Villiers claims that he can do this for 19c per pound of V_2O_5, producing 4 tons of concentrates per day. This production, if carried through, would amount to approximately 40,000 lbs. V_2O_5 monthly, or 480,000 lbs. yearly. They expect to be in production in about 3 months.

I have recently made two visits to Dripping Springs and one of our field engineers has sampled the Dripping Springs mine. We have paid particular attention to this operation from its inception several years ago. We could never check the quality or quantity of ore claimed. The last sampling, which was very comprehensive, confirmed our previous impression, and we cannot see how a profitable operation can be maintained at this place. The ore is entirely too low-grade—containing approximately .20% V_2O_5, with a small tonnage. There will be however, some concentrates made at this place, as in the past, but we anticipate that after a few months this operation will have to close.

For the last two years we have been making a comprehensive investigation of all vanadium resources in the Southwest, which we expect to finish this season. Several attempts have been made to erect small roasters, mills and other equipment for processing these ores on a small scale. So far all of these attempts have met with failure. There is a new one going in now at *Gateway* and is being managed by Harry Brown, who up until about 9 months ago was employed by us at Uravan as a draftsman. It is reported that Harry Brown is being backed by his father and has

raised $20,000 with which to install a 20 ton plant which will be designed to produce fused oxide. He intends to make the roaster from original designs, and it is evident additional funds will be necessary. The ore will be obtained from Polar Mesa and from the deposits on the other side of the Dolores River in the vicinity of Gateway. There are a number of small, high-grade deposits in this locality.

[fol. 146] Probably the best of the outside resources are in southeastern Utah around Blanding and in Dry Valley. Last year, as a result of our investigations, we considered that we should purchase additional property in that locality, and $200,000 was put into the original 1938 Budget to cover these purchases. Due to poor business conditions however, it was not thought desirable to pursue recommendations for this purpose. We will renew this request in the 1939 Budget.

We have already purchased two or three groups of claims which were potential producers and could be the nucleus of an operation. The intensive development during the past year has made it more imperative to continue this policy, and it now appears that we should purchase some properties and possibly install a small plant in southeastern Utah to forestall serious competition. A definite recommendation will be made on this as soon as the field work has been finished.

Very truly yours,

J. R. Van Fleet/mm

AIR MAIL

Dear Joe:

Yesterday Mr. Kett of the Vanadium Corporation of America called up to protest against some attempt on our part to take a customer away.

The story is that you went to one Lyen, operating in the Cedar district, offering him $2.00 per ton above the established rate, which he in turn reported to the Vanadium Corporation of America. Knowing nothing of the circumstances surrounding the case, or of Lyen either, I advised Mr. Kett that I would look into the matter.

Will you kindly give me the details of this case.

With kind regards, and with best wishes to yourself and Mrs. Weston for a Happy and Prosperous New Year, I am

Yours very truly,

AF/W. G. Haldane

PLAINTIFFS' EXHIBIT NO. 43

[Handwritten notation—Illegible]

The Secretary submitted Appropriation Request No. SMP-3, dated July 6, 1939, in the amount of $7,000. to cover the estimated cost of Air Separator Table Installation at the Piney River plant of the Southern Mineral Products Corporation. After discussion, on motion regularly moved, seconded and carried, it was unanimously

> RESOLVED, that Request for Appropriation No. SMP-3, in the amount of $7,000. covering the estimated cost of Air Separator Table Installation at the Piney River, Va. plant of the Southern Mineral Products Corporation, be and is hereby approved, as recommended by the President.

The President advised that certain claims of the Vanadium Corporation of America located in Colorado were adjacent to claims of the United States Vanadium Corporation and that in view of the present mining operations of the United States Vanadium Corporation, said corporation is willing to mine and mill the ore on one particular claim, namely, the "Maggie C", or any other claim or claims that might later be agreed upon, delivering the product therefrom (oxide containing a minimum V_2O_5 content of 85%) to our Bridgeville, Pa. plant at a delivered price to be accepted if satisfactory to the Vanadium Corporation of America. He requested authority to enter into an agreement that would provide for the delivery of such ore at an agreed upon price. After a general discussion, on motion regularly moved, seconded and unanimously carried, the President was authorized to enter into an agreement, as outlined above, with the United States Vanadium Corporation.

After a general discussion of the affairs of the Corporation and business conditions, on motion regularly moved, seconded and carried, the meeting thereupon adjourned.

[Signature illegible]
Secretary

[fol. 155]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 57

VANADIUM BEARING RAW MATERIAL

Following are the figures covering exports of contained vanadium in ore for the years 1935-1939 inclusive.

PERUVIAN ORE

Year		High Grade Mix	Low Grade Ore	Total
1935	Lbs. "V"	163,551		163,551
1936	"	424,947		424,947
1937	"	590,823	635,667	1,226,490
1938	"	926,930	838,096	1,765,026
1939	"	963,547	1,309,504	2,273,051
Totals		3,069,798	2,783,267	5,853,065

The low grade ore is shipped as taken from the ground. The shipments in 1937 consisted of mined Veta Madre ore and averaged approximately 6.5% vanadium and the cost delivered at Bridgeville was $.39 per lb. contained vanadium.

Shipments made in 1938 and 1939 consisted of Oxide ore from the dumps at Mina Ragra and averaged around 5% in vanadium and the cost delivered at Bridgeville was $.445 per lb. contained vanadium in ore.

The high grade mix consists of a mixture of precipitates and tailings or low grade oxide ore or of all three. In 1935 and 1936 all shipping mixture consisted of a mix of precipitates and tailings. In 1937 and 1938 the mixture was precipitates, tailings and oxide ore. In 1939 the mixture was precipitates and low grade oxide ore. The preparation of each in the mix is one part of precipitates to two parts of either tailings or low grade ore by weight. As an example—

1 part precipitates	37%	37
2 parts ore or tailings	3%	6
3 parts		43
Average of mix		14.3%

Over the five-year period the cost of delivering this material to Bridgeville was $.59 per lb. vanadium contained. In the years 1936 to 1937 inclusive, when practically all the material used for mixing was tailings, the average cost was approximately $.58 per lb. vanadium contained in mix, delivered Bridgeville. In 1938 the mixture contained both tailings and oxide ore, low grade, and was delivered to Bridgeville at a cost of approximately $.615 per lb. contained vanadium in mixture. In 1939 the mix consisted of precipitates and oxide ore, low grade only, and the delivered price was the same as in 1938, i.e. $.615 per lb. contained vanadium in mix. Inasmuch as the oxide ore was taken from stock piles and not mined, when it is found necessary to mine oxide ore from the mine the cost will increase approximately $.05 to $.06 per lb. of contained vanadium delivered Bridgeville.

[fol. 156] PURCHASED V^2O^5

During the period from 1932 to 1939 the following purchases of pentoxide were made:

1932	3,956 lbs.	V^2O^5
1933	216,412 "	"
1934	483,202 "	"
1935	495,428 "	"
1936	360,401 "	"
1937	540,785 "	"
1938	147,552 "	"
1939	577,849 "	"
	2,825,585 "	"

The above purchased material was consumed as follows:

	1932-1934	1935	1936	1937	1938	1939
Ferro-vanadium	398,366	472,395	410,288	540,784	70,319	560,527
Pentoxide						
Air Dried		35,084				
Grainal						7,793
Sales-Domestic		59,401	600			
Sales-Export		96,121	86,350			45,294
Miscellaneous		127	669		2,164	141
Totals	398,366	663,128	497,907	540,784	72,483	613,755
						2,786,423
				Inv. 12/31/40		39,162
						2,825,585

Purchases from 1932 to 1936 were made to meet our demands for product which could not be filled from our Peruvian mine due to proving out a leaching process on our pilot plant there and the necessary time required to transfer the results from the 15-ton pilot plant to the 50-ton commercial plant and bring the 50-ton plant to commercial operating basis.

In 1937 and 1939 purchases were made to meet our commitments which were beyond our operating capacity at Bridgeville.

From 1932 to 1938 inclusive, purchases were on a straight purchase order basis at a price of $.80 per lb. V_2O_5 contained, delivered Bridgeville. From June 30, 1939, deliveries were made under agreement for a delivery of ore by Vanadium Corporation of America to United States Vanadium as per contract, and an additional processing charge of $.65 per lb. V_2O_5 contained, delivered Bridgeville. This price was increased to $.75 for 1940 deliveries.

P.J.G.
4/4/40

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 59-A

—2—

The Colorado Plateau was the only area in the United States actually producing uranium. Production came from low-grade carnotite ore mined primarily for vanadium, with uranium recovered as by-product. During the war the Manhattan District financed the construction and operation of two plants for the extraction of uranium from tailings of Colorado vanadium plants and also purchased uranium concentrates produced as a by-product from the vanadium operations. Following the war it was tentatively decided by the Manhattan District to purchase only by-product uranium rather than to stimulate and support increased production by special incentives. "This position was based on the fact that the known uranium reserves of the Colorado Plateau were limited and expensive to mine and process and that the only advantage of an accelerated program would be to make this limited supply available sooner. Since the estimated annual production of the Colorado Plateau, even under an accelerated program, would be small in relation to total U. S. requirements and to supplies available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market. The quantity of vanadium produced is much greater than the quantity of uranium recovered from these operations.

SPECIAL REPORT
GUSTAV LAUB

February 20, 1942

APEX SMELTING COMPANY
Chicago, Illinois

Mr. Edward S. Christiansen—Vice Pres.

Mr. Christiansen, Vice President of the above company, whom I have known slightly for sometime, called on me stating that they have decided to go out of the Vanadium business and that they had certain equipment and some small stock of Oxide on hand that they would like to dispose of if we were interested.

He did not have an actual list of the equipment nor of the raw materials they have on hand but from the figures he had it looked as though they have close to 50,000 pounds of Vanadium Pentoxide containing between 78/87% V_2O_5 and about 40,000 to 50,000 pounds of Magnesite.

I told him that we might be interested in the Vanadium Oxide and possibly the Magnesite and some of the equipment which included jaw crushers and miscellaneous equipment. He promised to obtain from their Chicago office an actual complete list of the equipment they have to offer as well as the quantities and grades of Vanadium Oxide and Magnesite and to deliver these to me the early part of next week. I told him that I would then refer this to the proper parties of our company and that we would probably be interested in the Vanadium Oxide and the Magnesite if their prices were right. He stated that they would be reasonable in their prices and did not expect to make a profit.

Mr. Christiansen further stated that they had been contemplating going out of the Vanadium business for sometime and their definite decision was reached for two rea-

sons. First, that they had a fire in this department of their plant and secondly, that the sales contract which they had with Mr. Leir, President of the Continental Ore Corporation had not worked out very well. Mr. Leir was getting a fifty percent cut on the profits. Mr. Christiansen also stated that they had some agreements with the Shattuck Chemical Company and Niley & Smith for deliveries of Vanadium Oxide and that he would also look into this and advise us of the status thereof.

GL:ESW

[fol. 159]

VANADIUM CORPORATION OF AMERICA

INTER-OFFICE COMMUNICATION

Boulder, Colorado
DATE April 22, 1942.

FROM Robert Sterling, Manager

TO Mr. Frederick F. Kett,
Gen'l Manager Mining Division, N. Y.

SUBJECT Your Letter of April 20th.

Kimmerle Report — — As long as this matter has come up in the way it has, I think Kimmerly should be put on the spot to prove his statements. Such things do go on, whether at our plants or not, and it generally involves collusion between someone in the plant and some outsider. It would really go hard with them, if anything could be proved. However, all that can be left until you come out.

Sale of Ore to Balsley — There was some doubt in my mind about selling small lots to Balsley except on a cash-on-the-barrel-head basis. Even then, no matter what he promised, I think there would be interminable delay in getting the cash—as, always, in the past. I assume that if any high grade comes into Monti-

cello, it should be held and eventually transferred to Naturita for shipment from there with any carload of slimes that may be accumulated? In fact any high grade produced at the Yellow Bird may as well go direct to Naturita, and so save transferring it later on? They might run into another "Tree" at any time.

Dry Valley Claims — — I have no doubt that the matter of the whereabouts of all the claims in Dry Valley will be cleared up in the course of time, and that there is really nothing to worry about, except to see that the Affidavits of Annual Assessment Work are filed. That is, of course, up to the Moly Corporation, or U.S.V. and can, as you say, be checked up at the Monticello (not Moab) court house. The claims are all in San Juan County.

Ore Prices — — — — Your decision on that matter is definite, so no price changes will be conceded without first getting authority from you. It's rather hard to know how to decide, when the producers tell us these stories about U.S.V. offering more, and then U. S. V. denying it. It is difficult to learn who is lying. Personally, I am inclined to believe the "honest miner."

Property Deals — — — It is my intention, of course, to advise and consult with you on any property deals. It seems to me the present arrangement should save you a lot of grief and letter writing, as I imagine you have plenty to do without being bothered with something that can be handled perfectly well out here with out troubling you.

[fol. 160] That $100.00 was paid on an option on the so-called Hyde claims belonging to Mrs. Hyde and two of her nephews, and which we have been trying to line up ever since last fall. These claims join the Happy Jack, the workings of which are getting pretty close to them. The $100.00 was for 90 day option then $1,000 down, then $500.00 in 90 days, and the balance on a 10% royalty—total price $6,000.00. I have asked Garard for copies of the option.

I have just received from Blitz, copies of the contract he has negotiated with the Waggoners on 15 claims on Carpenter mesa. You have a copy of his letter of April 20th, on the subject. In case he did not send you a copy of the contract, one is enclosed herewith. I shall sign and return them today.

Blitz is very sure there is $3,000.00 worth of positive ore and that we are more than safe in buying them on the terms set out in the contract.

Apex Smelting Co. — — It is nice to know that we won't have to worry about them after July 1st.

Norwood Bridge — — As you know, the needed steel is to be rolled this month. However, there isn't a chance of the bridge being in place before the high water comes and goes; so we shall just have to pray for the best. The Highway Department seems to be prepared to replace the old one, if necessary.

Moab Bridge — — — Garard went to Salt Lake and got the Highway Department there to allow a 20-ton load over this bridge. As most of the heavier stuff has already passed over, the 20-ton load should see us through, until the bridge is strengthened. One would think they could get the necessary priority for the needed steel.

Navajo Indian Reservation I agree with you, as I said in my letter of April 17th, that there would be no need of tying up more ground on the reservation, until we have found something worth getting. I think then, we could get anything within reason. Garard has established a camp at Tec-nes-pah, having in some way secured the CCC Camp for nothing, and has three or four men prospecting.

/s/ Robt. Sterling

[fol. 161]

[Handwritten notation—Cont'l Ore Corp.]

VANADIUM CORPORATION OF AMERICA

INTER-OFFICE COMMUNICATION

DATE March 14, 1942

FROM Gustav Laub

TO Mr. E. D. Bransome, President

SUBJECT APEX SMELTING COMPANY
Chicago, Illinois

Inasmuch as the following information has been conveyed verbally this memorandum therefore is for our records.

With reference to the writer's memorandum of February 20th advising that Mr. Christiansen, Vice President of the above company, had informed us that they were going out of the Vanadium business and had offered us their stocks of Vanadium raw materials, equipment, etc. as I had not heard further from Mr. Christiansen in this regard I had Larry Johnson casually contact him by phone and tell him that I had not received the information that he promised to send.

As a result, Mr. Christiansen phoned the writer and stated that in going into the matter further they had run into some legal difficulties. Mr. Leir, President of the Continental Ore Corporation, with whom Apex has an agreement to furnish their entire production of Vanadium, he acting as sales agent, objected strenuously to their breaching their contract and upon referring the matter to their counsel Apex were advised that Mr. Leir had a strong case against them and to make the most satisfactory arrangement with Mr. Leir that they could.

This resulted, Mr. Christiansen advised, in Mr. Leir putting a proposition up to them in that they would produce Vanadium at full capacity for a period of three months

after which time he would take over their equipment and raw materials contracts and produce the material himself.

Mr. Christiansen therefore advised that they felt they would be obligated to produce at maximum capacity for a period of three months and had decided to proceed on this basis but that they had not come to a definite conclusion about turning over the equipment and raw materials contracts after that time. The contract with Mr. Leir, he said, extended over the balance of the calendar year.

In event that the second part of Mr. Leir's proposition does not go through Mr. Christiansen stated that they still proposed to offer us such raw materials as they have available as well as plant equipment.

The above information, at your suggestion, was conveyed by phone to Mr. E. K. Jenekes, Assistant Chief, Vanadium Branch, War Production Board.

GL:ESW

[fol. 162]

SPECIAL REPORT
GUSTAV LAUB April 14, 1942

APEX SMELTING COMPANY
Chicago, Illinois

Mr. Edward S. Christiansen—Vice President

With reference to the writer's previous report of February 20th, Mr. Christiansen of the above company called again yesterday stating that they had now gotten their Vanadium situation straightened out and that they had definitely concluded to dismantle their Vanadium plant at once and go out of the Vanadium business permanently. The equipment from their plant is now for sale. He doubted whether there would be much of the equipment that might interest us but said that the list of same would be sent to us promptly.

Mr. Christiansen stated that they had finally been able to come to an agreement with Mr. Leir of the Continental Ore Corporation, with whom they had a 14 year contract, to cancel the same. By doing so it was necessary for them, he said, to produce only enough Ferro Vanadium to complete two open orders which Mr. Leir had on his books and to continue producing Vanex (a mixture of Oxide and Aluminum which they have been supplying) up through June after which time they would be completely out of the Vanadium picture. Mr. Christiansen further stated that their contract and dealings with Mr. Leir had not proven at all satisfactory to them and that they regretted ever having gone into the business.

He further stated that he would furnish us with the names of all of their suppliers of Ores and Oxide; the principal ones apparently being Shattuck Chemical Company, and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the Vanadium business.

We had an interesting discussion concerning low copper grained aluminum which they produce and release with necessary priority approval and I therefore turned him over to our Purchasing Department with regard to this item.

[fol. 171]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT No. 76

NISLEY & WILSON VANADIUM MILL

GATEWAY, COLORADO

January 31, 1944

Mr Henry J Leir
Continental Ore Company
New York, New York.

Dear Mr Leir:

As you know, Mr Gardner, Mr Wilson and myself are owners and operators of the Gateway plant. Mr Gardner has the old plant, and Mr Wilson and myself have added considerable new equipment and have been operating under a contract with Mr Gardner.

Since the curtailment of Vanadium production and the lessing need for it, I have been called to the service. This will affect our contract with Mr Gardner. Since the plant cannot be operated at the present time, and it doesn't look as if it could for quite sometime, we are going to have to sell either our interest in the plant, or dismantle it. Since I must leave shortly, we are going to have to act quickly.

We are all very sorry to have to discontinue, but we see no other way out at present. Mr Gardner has taken an active interest in the operation and has helped us in getting our problems straightened out. The local M.R.C. told us that the mill had made a very good extraction, in fact better than some of the others under the M.R.C. The cake was of good quality. We had a very satisfactory operation during December, especially.

The big mill at Uravan was closed down last Sat night and they are letting a number of their men go. Their other

plants are still operating full blast however. We do not believe that they will ever let the price of the crude ore adjust wo where we could operate at $1.10 again, at least for quite some time.

Concerning our bill with you, we will get things straightened out shortly and send you a check. We would like to have you also include the amount we owe you for this year so it can all be straightened out at once.

We want you to know we sincerely appreciate ail you have done for us in the past. We have never had business dealings with anyone who has treated us any finer than you and we really do appreciate your cooperation and help. We sincerely wish we could continue to do business with you.

Sincerely yours,

/s/ Frank Nisley Jr.

INTER-OFFICE COMMUNICATION

DATE Feb. 14, 1947

FROM P. J. Gibbons,
Executive Vice President

TO Mr. J. B. Girdler, Asst. Gen. Mgr. of Sales

SUBJECT Continental Ore Co. Inquiry

With reference to letter from the Continental Ore Co. dated Feb. 11, 1947, in which they advise they would be interested in one minimum carload per month of vanadium pentoxide for delivery commencing with April and through July 1947, after study of existing commitments for this commodity and the sales estimate supplied to me by the Sales Department covering the current year we find our entire production capacity will be taken up for the year 1947.

However, it is possible that we may be able to supply a car during the period mentioned if we were called upon for it but at this time we could not guarantee even that amount.

/s/ P. J. GIBBONS
Executive Vice President

G-T

[fol. 176] February 24, 1947

Continental Ore Company
500 Fifth Avenue
New York-18-New York

Attention: Mr. Joel A. Mirel

Gentlemen:

With reference to your letter of February 11, 1947 with respect to contracting for one carload per month of Black Vanadium Oxide, Fused, beginning in April and through July, 1947, i.e. four carloads, after reviewing our existing commitments for this commodity and estimated sales, we believe that we will be able to take care of these four carloads if delivery is extended over a six months' period beginning with April, 1947.

Our present contract price for Fused Black Vanadium Oxide is

$1.10 per pound contained V_2O_5

F.O.B. seller's works, Bridgeville, Pennsylvania, with freight charges allowed to destination, unless such freight charges are in excess of the rate to St. Louis, Missouri. In such case, freight charges to St. Louis will be allowed.

The above price will be in effect until March 31, 1947 and thereafter for each calendar quarter-year unless revised in writing by us at least fifteen days prior to such quarter-year.

This offer, which is subject to our usual contract terms, is subject to acceptance by execution of our formal contract on or before March 15, 1947, so would ask that you advise us promptly whether or not you are interested in having us submit our contract to cover the tonnage above mentioned.

Very truly yours,

John B. Girdler
Assistant General Manager of Sales

Graybar Building
420 Lexington Avenue
New York 17, New York

Att: Mr. John B. Girdler

Re: Black Vanadium Oxide

Gentlemen:

Receipt is acknowledged of your letter dated February 24, in which you submit us your proposal for four carloads of Black Vanadium Oxide at the contract price of $1.10 per pound contained V_2O_5 f.o.b. your works, Bridgeville, Pennsylvania with freight charges allowed to destination, unless such freight charges are in excess of the rate to St. Louis, Missouri. In such case freight charges to St. Louis will be allowed.

We have submitted your proposal to our buyers and have been informed that our price is out of line with current market offerings. From what we have been able to ascertain in our subsequent discussions, the oxide would have to be made available to us around $1.00 to $1.05 in order to permit doing the business. We would thank you to give consideration to a revision in your price to conform with the price indicated above as we believe prospects appear favorable for doing the business at our indicated figure.

Very truly yours,

CONTINENTAL ORE COMPANY

Subject: Ferrovanadium

Dear Sir:

In reply to your letter of February 8th we herewith submit to you, in duplicate, the following contract offer with the understanding that your acceptance at the place designated therefor at the bottom hereof shall constitute a mutual binding agreement between us, our successors and assigns.

1) You will ship to us at Langeloth, Pennsylvania, freight prepaid, 20,000 pounds of contained V in a V_2O_5 concentrate, to which you now have title.

2) You will ship to us adequate low copper aluminum to make it possible for us to produce ferrovanadium from the V_2O_5.

3) We shall convert the V_2O_5 into ferrovanadium, using our own labor, equipment and supervision.

4) We shall pack and deliver to you, f.o.b. Langeloth, Pennsylvania, into suitable fiber containers, all of the ferrovanadium produced as a result of this operation.

5) You will pay to us the following amounts:

a—Twenty cents (20¢) for each pound of vanadium contained in the ferro-vanadium returned to you.

b—Costs of fluxing materials necessary, such as lime and fluorspar.

c—Costs of containers and labor for packing such ferrovanadium.

d—It is understood that we shall pursue this matter with all diligence but do not guarantee any specific delivery date nor a minimum percentage recovery. The usual Force Majeure clause will apply to this agreement. We expect to complete this program during the month of March 1943.

Kindly return to us the duplicate of this contract after you have executed same.

WAR PRODUCTION BOARD
WASHINGTON, D. C.
November 10, 1943

IN REPLY REFER TO:

F-A EFH 1013-SSB

Mr. W. G. Haldane
Assistant General Superintendent
United States Vanadium Corporation
30 East 42nd Street
New York, New York

Dear Mr. Haldane:

This is to acknowledge your letter of October 29th requesting that the restrictions placed upon vanadium immediately be removed in accordance with the expressions of opinion at the Vanadium Industry Advisory Committee Meeting held on October 25, 1943.

I should also like to reiterate the understanding reached at the meeting that in view of present supply-demand situation in vanadium all requests, implied or otherwise, to maintain maximum production have been withdrawn insofar as vanadium, itself, is concerned.

The Ferro-Alloys Branch of the Steel Division has started the procedure to remove vanadium from allocation as requested by the Vanadium Industry Advisory Committee. We are unable to advise you what disposition will be made of this matter, but hope that favorable action will be taken in the near future. With respect to the further

recommendations by the Committee, these have been referred to the proper authorities for consideration.

Very truly yours,

/s/ E. Franklin Hatch

Plaintiffs' Exhibit No. 114

[Letterhead of Imperial Paper and Color Corporation, Glens Falls, N. Y.]

December 5, 1944.

Continental Ore Company,
500 Fifth Avenue,
New York 18, N. Y.

Attention—Mr. M. Wolf

Gentlemen:—

Replying to your letter of December 4th, we are writing to advise you that we are not willing to write a letter such as you suggest at this time, because it might be construed as a representation that would involve an obligation that we do not care to assume. It is true that with the manpower situation as it is, we could not proceed with the Vanadium project, aside from all other considerations, but it is also true that if the manpower situation were easier, we would have to have more confirmation than we have been able so far to obtain that there are, and always will be, ample sources of vanadium-bearing material, so that if we invested capital in a plant, we would not sooner or later find ourselves with equipment idle, because of being unable to secure necessary raw materials.

We now have some leads out to see what we can determine as to the probable operation of the Otavi mines after the cessation of hostilities in Europe. Mr. Leir on his proposed trip to Mexico ought to be able to establish whether there is a new source of vanadium-bearing ore available in that country, and if so, in what quantities and in what concentrations.

As we see this situation at the present time, one of the principal hazards in entering into the manufacture of V_2O_5 is the possibility that you may not be able to get sufficient raw material. Certainly the two major producers at this time have protected themselves against such a contingency by controlling primary sources of raw material. We would not be willing at the outset at least to make an investment of the size necessary to do this, but nevertheless we must be sure that there are sources from whom we can always obtain vanadium-bearing materials at a price which will enable us to manufacture and compete with those who control their own supplies.

Yours very truly,

IMPERIAL PAPER AND COLOR CORPORATION

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 116

February 19, 1943

File: Stimmel
U.S. Vanadium
Vanadium Corporation of America
Nisley & Wilson

Stimmel confirmed that present production of ferro vanadium amounts to about

400,000 lbs. V per month

They are trying to build up a stock pile of ferro to the extent of at least 500,000 lbs. of V. Once this is achieved, they may release their restrictions as to the sale of ferro-vanadium somewhat.

Regarding quantities of vanadium concentrates available in Durango or Monticello for shipment to us, Stimmel said that it has been agreed between Metals Reserve and U.S. Vanadium and Vanadium Corp. respectively that

> U.S. Vanadium has first call on all material produced in Durango Vanadium Corp. of America has first call on all material produced in Monticello.

As to who would have first call on the vanadium concentrates produced by Nisley & Wilson, Stimmel answered that probably no one would have. It therefore must be our aim to have Metals Reserve recognize our first right on the production at Gateway.

TO Apex Smelting Company

SUBJECT RE: NISLEY & WILSON VANADIUM/ SHATTUCK

DATE
1/13/42

Attention: Mr. L. Lippa

We are very sorry to learn from your correspondence that Blanding has sold its output to Vanadium Corp.

This makes it even more imperative that you promptly write to Nisley & Wilson to ship the material now ready to you without further delay.

We also want to stress the necessity of sending the proposed letter out to the Vanadium Corp. It becomes more and more necessary every day to obtain a share from them, of the output of the new Government plant in Monticello, and we cannot pave the way for this too early.

Regarding SHATTUCK, we suggest that you approach them and offer them a contract for larger monthly quantities than they have at present from you, in order to induce them to increase their output.

We consider this most important, since they are now the only regular source of Vanadium we have.

[fol. 185]

[Letterhead of Apex Smelting Co., Chicago, Ill.]

October 17, 1940

Continental Ore Corporation,
500 Fifth Avenue,
New York, N.Y.

Gentlemen:

We have your letter of the 16th, also wire of the 17th, and wish to advise that we had no intentions of writing the Vanadium Corporation in view of the fact that we did write to them about two months ago, at which time they advised us that they did not have any of this material to offer.

The Electro Metallurgical's representative was in our office today at which time we mentioned this to him, and while

he advised that their price was $1.15, he said they could not take on any new accounts.

We wish to advise that it is possible we may receive a shipment of approximately 4000# of Vanadic Acid from Shattuck within the next few weeks. The price will be $1.10.

We have just checked up our figures on the heat made to Bracburn Steel, and according to our figures the profit to us is $25.00 after deducting your commission but before paying the freight. Therefore, it would indicate that the profit on this heat will be about $15.00.

Our cost figures will be sent to you on this 70 to 80% grade as soon as we get our 40% figures together.

We, therefore, want to again state that we do not want to accept any orders under $2.75; in fact we feel that for this grade there should be no difficulty in obtaining $2.80, and we hope that you will act accordingly.

Very truly yours,

APEX SMELTING CO.

December 20, 1941

Mr. L. Lippa
The Apex Smelting Company
2537 W. Taylor Street
Chicago, Illinois

Dear Mr. Lippa:

Reference is made to your letter of December 13, 1941, requesting information as to the possibility of acquiring reasonable tonnage of Vanadium Pentoxide for conversion into Ferro Vanadium.

This Corporation has made a commitment to the Vanadium Corporation of America for the construction of a new plant near Monticello, Utah, for the production of Vanadium Pentoxide. The entire facilities of this plant will be leased to the Vanadium Corporation, and, therefore, it is suggested that you contact them with reference to obtaining a portion of the output of this proposed plant.

It is further suggested that if you have not already obtained a priority allocation for Vanadium Pentoxide that you contact Mr. H. K. Masters, Office of Production Management, Social Security Building, Washington, D. C., relative to obtaining such allocation.

PLAINTIFFS' EXHIBIT NO. 152

CONTRACT

THIS AGREEMENT Made and executed this 7th day of May, 1940, by and between MESA VANADIUM COMPANY, a corporation organized and existing under the laws of the State of Colorado, with its principal office located in Grand Junction, Colorado, party of the first part, and the UNITED STATES VANADIUM CORPORATION, a corporation existing under the laws of the State of Delaware, with its principal Colorado office located at Uravan, Colorado, party of the second part, WITNESSETH:

WHEREAS, The first party is the owner under contract of purchase of a certain mill located near Cedar, Colorado, and is desirous of arranging for the operation of the said mill for the treatment of carnotite ores; and

WHEREAS, Second party is interested in the possibilities of the use of said mill for the milling of carnotite ores;.

NOW, THEREFORE, In consideration of the mutual covenants of the parties and the payments to be made by the second party to the first party, the first party grants unto the second party the sole right to enter upon the said property for the period of sixty days from the date of this agreement, to make such examination and experimental work as it may deem fit and to conduct such metallurgical test work or operation as second party deems sufficient or necessary.

It is agreed that the second party has the option on or before the expiration of said sixty-day period to operate said mill and to make such alterations and additions at its expense as are necessary, and otherwise to conduct the business of the reduction of ore or ores therein; and the right so to do is hereby granted.

[fol. 194] In the event that second party shall exercise its option to operate, it agrees to pay the first party a

sum equal to ten cents per lb. of vanadium pentoxide produced as a result of said operation.

Second party agrees that in the event it exercises its option to operate first party's mill, second party will pay all cost of operation, including the costs of ores delivered at the plant, working men's compensation, insurance premium on mill buildings to a total insured value of $6000.00, and will pay such taxes as may be assessed against the property during the period in which the mill is operated; and second party further agrees to pay the sum of $4000.00 to first party at the time second party exercises the option to operate, which sum is to apply on the royalty of ten cents per lb. of vanadium pentoxide produced as herein provided; and second party agrees that in the event it shall operate said plant, it will operate the same to the maximum capacity that is reasonably possible.

It is further provided, however, that in the event second party shall exercise said option to operate, and shall thereafter fail to operate the property for a period of thirty days and this failure is not due to flood, fire or act of God, the first party may at its option terminate the tenancy of second party upon written notice to be given second party at Uravan, Colorado, which notice shall provide, however, that second party shall have a thirty-day period after the receipt of notice to correct second party's deficiency.

It is further agreed that in the event the second party after operating said property decides the operation should not be continued for reasons which are good and sufficient to itself and of which reasons second party shall be the sole judge, then the mill of first party shall revert to first party and any additions and improvements that have been made to the mill shall become the property of the first party as liquidated damage.

[fol. 195] It is further agreed that if after the period of sixty days' examination hereinbefore provided, the second party shall option not to operate the mill, the second party shall have the right to purchase from first party such ore or ores as may be delivered or stockpiled at the mill at a price to be determined as follows, to-wit: The price shall be the cost to first party or to second party acting as agent for the purchase of the ores, plus five cents per lb. of 75%

of the vanadium pentoxide contained; and it is further agreed that in the event the second party elects to purchase such ores at the end of the sixty-day period for examination and experimental work, it agrees to pay first party the sum of $4000.00, which amount shall be applied as an advance payment on the royalty of five cents per lb. for 75% of the vanadium pentoxide contained in these ores.

IN WITNESS WHEREOF The parties have hereunto set their hands and seals by their officers and agents first authorized so to do.

CONTRACT

THIS AGREEMENT Made and executed this 7th day of May, 1940, by and between MESA VANADIUM COMPANY, a corporation organized and existing under the laws of the State of Colorado, with its principal office located in Grand Junction, Colorado, party of the first part, and the UNITED STATES VANADIUM CORPORATION, a corporation existing under the laws of the State of Delaware, with its principal Colorado office located at Uravan, Colorado, party of the second part, WITNESSETH:

That first party is the owner of a certain mining lease and option dated August 5, 1939, together with an addenda to mining lease and option dated April 22, 1940, executed with one George A. McKee, covering carnotite claims in San Miguel and Montrose Counties, Colorado, and is desirous of selling ore which it has a right to obtain or mine under the said lease and option; and the party of the second part is desirous of purchasing the said ores from the first party;

NOW, THEREFORE, In consideration of the mutual agreements of the parties and the payments to be made by second party, IT IS AGREED:

First party will deliver to second party at the mine such ores as may be mined or delivered from said claims at a price to be determined as follows:

A. In case the ores are mined by George A. McKee under the terms of the lease and option above referred to, the price of the ore shall be the amount to be paid by first party to George A. McKee, plus a further consideration of 5¢ per lb. for 75% of the vanadium pentoxide (V_2O_5) contained in said ore.

B. In case the ores are mined by the first party, or by its agents or lessees, the price shall be the entire cost of mining and transportation to the delivery point specified in the said McKee lease and option, plus a royalty of 10% of the value of the ore thus delivered; and said values are determined as set forth in the McKee lease and option in regard to the initial 1000 tons mined, i. e.;

[fol. 197] For ores containing between 2 and 3% vanadium pentoxide (V_2O_5) $8.00 per net dry ton;

For ores containing between 3 and 4% vanadium pentoxide (V_2O_5) $15.00 per net dry ton;

For ores containing between 4 and 5% vanadium pentoxide (V_2O_5) $21.00 per net dry ton;

For ores containing between 5 and 6% vanadium pentoxide (V_2O_5) $32.00 per net dry ton;

And for ores bearing over 6% vanadium pentoxide (V_2O_5) as set forth in said McKee lease and option.

It is understood and agreed that the above mentioned 10% royalty is payable to George A. McKee under the terms of a recent option between George A. McKee and first party as assignee of Charles H. Buttolph.

Second party agrees to pay first party in addition an amount equal to 5¢ per lb. for 75% of the contained vanadium pentoxide in said ore.

The party of the second part agrees to purchase said ores at the rate of production, provided for in the above mentioned lease and option with George A. McKee, unless this agreement is terminated as hereinafter provided.

The party of the second part agrees to pay the first party $1000.00 upon the execution of this agreement and an additional $5000.00 at the end of ninety days, said payments to be applied on royalties as hereinafter provided; that is to say, said $6000.00 shall be advance payment against the royalty of 5¢ per lb. of 75% of the contained vanadium.

The party of the second part reserves the right to cancel this agreement at any time within the life of the McKee lease and option; provided that, in the event of such cancellation, any amounts or difference between the $6000.00 paid by second party to first party and the amount which is due first party on the basis of 5¢ per lb. of 75% of vanadium contained shall become the property of the first party in full liquidation of any loss or damage arising out of the cancellation of this agreement by second party.

It is understood and agreed that second party shall have the option to mine and remove ores, under the terms of the lease and option granted by George A. McKee, as the agent [fol. 198] or representative and in the place of first party; and in the event that second party shall exercise this option to mine and remove ores, it shall carry Workmen's Compensation on all employees and keep the property free from lien or encumbrance, and shall in addition perform such work as may be required for annual assessment on said McKee claims, and cause affidavits thereof to be filed as provided by law, pay before delinquent any current taxes

levied against said claims, and in all other respects preserve the claims as provided for in the said lease and option executed between George A. McKee and first party as assignee of Charles H. Buttolph.

IN WITNESS WHEREOF The parties have hereunto set their hands and seals by their officers and agents first authorized so to do.

PLAINTIFFS' EXHIBIT NO. 155

[Handwritten notation—Mr. Haldane]

COPY

New York, N. Y.

October 13, 1943.

E. M. SALES CORPORATION

Mr. J. D. Swain,
Room 1712, Bldg.

Mr. J. H. Critchett
Mr. F. P. Gormely
Mr. J. M. Price
Mr. J. R. Van Fleet

Dear Mr. Swain:

The net result of our discussion in Washington on the subject of vanadium and tungsten during the past week may be stated as follows:

A meeting of the Industry Advisory Committee is scheduled for 2 PM, October 25th to approve certain proposals that will be presented at such time. (since WPB had already discussed this date with others, it was impossible to have the meeting called for an earlier date.) The purpose of the meeting will be:

1. to rescind the directive requiring vanadium producers to mine to the fullest extent of their capacity.

2. to propose the removal of ferrovanadium, ferrotungsten, tungsten ore, vanadium oxide and tungsten metal powder from an allocation basis. (Steps are being taken by WPB in anticipation of this meeting to have these allocations removed. It is estimated by WPB that allocations may be no longer required by December 1st.)

3. to make recommendations to be passed on by the Steel Division of WPB for any extended applications of vanadium which producers may feel are justified. (The Vanadium Branch has solicited the assistance of the producers in making these recommendations, which may be a rather difficult assignment for the producer should the Steel Branch ask for specific applications.)

4. to receive a report from the Army concerning the minimum requirements of vanadium production that are necessary to supply their needs of by-product. The vanadium oxide producers will be asked the same question; namely, the minimum production to which they can go without curtailing Army needs. WPB proposes that if industrial requirements are substantially less than the necessary production for Army needs they would ask the Army to purchase the surplus oxide for a stockpile of their own. Mr. Lewis Levansaler who replaced Mr. E. F. Hatch as the vanadium and tungsten ore man in WPB made an informal comment at luncheon that in his opinion it was necessary to curtail vanadium oxide production to such a point where it would be necessary to begin working away a portion of the huge accumulation of oxide and ferrovanadium each month.) It was generally agreed that the net result from satisfactory action taken on items 2 and 3 would not affect to any great extent the present sales of vanadium or tungsten.

The present order requiring that not more than 35% of the sales of high speed steel be in the form of 18-4-1 tungsten type and not less than 65% of the sales of any one producer be in the form of molybdenum type steel will probably be brought up for discussion at this meeting. The Industry Advisory Committee will probably be asked for an expression of opinion and perhaps a recommendation for a modification or discontinuance of this order.

[fol. 200] The details of a lend-lease order for Russia specifying 200 gross tons of 70/80% "B" grade ferrovanadium were discussed. We quoted a price of $2.90 per pound of contained vanadium F.O.B. Niagara Falls, N. Y., with freight charges allowed to destination, except to those

points taking a freight rate in excess of the Niagara Falls to St. Louis, Missouri rate, for each of the following compositions:

	50/60% Vanadium		70/80% Vanadium	
Aluminum	1.25%	maximum	1.25%	maximum
Silicon	1.25%	"	2.00%	"
Carbon	.20%	"	.20%	"
Phosphorus	.10%	"	.10%	"
Sulphur	.10%	"	.10%	"

WPB was advised that delivery could be expedited through the specification of the 50/60% grade because such analysis is in regular production. We also advised them that should the order become available to us within the next week or ten days we could produce approximately 100 gross tons by December 31, 1943. WPB plans to divide the total order between our competitors and ourselves on the basis of our respective production of vanadium during the past three or possibly six months.

We have learned that our competitors have advised WPB that they wish to dispose of, through government agencies, 250,000 pounds of contained vanadium in the form of ferro between now and the end of this year. In response to a similar question asked of us, I replied that I could not give them specific figures offhand, but I estimated that we too would like to move from 200,000 to 250,000 pounds of contained vanadium. I returned to WPB at the close of the Production Adjustment Committee meeting and learned that they had approved the 200 ton lend-lease requirement, and in addition had approved an additional sale of ferrovanadium by us to the Metals Reserve Company to complete a total of approximately 225,000 pounds of contained vanadium prior to the end of this year. Presenting this matter to the Committee was done by Mr. Miles K. Smith on his own initiative in order to clear the "first hurdle", so he described it, on any request for additional orders for ferrovanadium from Metals Reserve prior to the end of this year. It will be necessary for us to apply formally should we wish to sell any additional vanadium to Metals Reserve. We plan to withhold any formal application for

an order until such time when we have more specific information as to the portion of the lend-lease requirements which may be directed our way.

Very truly yours,

W. B. REMMERS

Dear Sir:

Upon my return, I find that Bigler has sauntered off to Denver to see a football game, he will return Saturday.

As we pay a royalty to the owner of the claims, I have advised him of your offer, and will undoubtedly hear from him by the first of the week.

The product that we have ready for shipment is moulded, not ground. We would much prefer not grinding it as it will take additional equipment which we are not particularly anxious buy. However we might make some arrangements to grind it if absolutely necessary.

We particularly like the sound of that $1.05.

With best regards,

/s/ DAN MILENSKI

Gentlemen:

We have your wire of February 14 and letter confirming the wire. No report was made at an earlier date for the reason that we were endeavoring to become more familiar with the situation.

As we take the letter we received from the War Department, we are not directed to sell our product to you, and as previously advised, other arrangements have been made for the sale of our product and we have informed the War Production Board that we desire to continue with our present sales arrangement.

We regret that we are unable to sell our product to you; however, you are aware of our set-up and the fact that we are merely operating under a lease. We are producing now under somewhat of a handicap for the reason of adverse climatic conditions with result of poor roads.

Very truly yours

Nov. 9, 1939

Societe d'Electro Chimie,
10 Rue du General Foy,
Paris, France.

Attention: Mr. Andre Jaoul

Gentlemen:

In connection with your cable of October 10, 1939, confirming your needs of pentoxide contained in the amount of 150,000 lbs. contained, we cabled you as follows:

Oct. 13, 1939

"Re Cable October Tenth Shipment Pentoxide Sixtyseven Steel Drums Gross Thirtyfive Thousand Four Hundred Thirtysix Pounds Net Thirtythree Thousand Five Hundred Pounds Value Forty Thousand Dollars Including All Charges Except War Risk Insurance Stop Rush Credit Guaranty Trust New York Expect Ship October Twenty-eight Steamship Independence Hall United States Lines"

[fol. 206] As you will note from the above cables, we now have prepared and ready for shipment in our warehouse 75,000 lbs. of contained pentoxide and Electro Metallurgical Sales Corporation have the same amount prepared and in their warehouse ready for shipment.

We were rather disappointed that the credit for the first 30,000 lot, which you advised on October 24th should be forthcoming within the week, did not come to hand and thus enable us to get this first lot off during the month of October. As we advised in the cable of November 8th, our information is that freight rates will be increased on or about November 13th. If this should take place, it will be necessary to have additional credit arranged to take care of the increased freight rate. We trust, however, that in accordance with our recommendation in our cable of November 8th, that permits and credits will be forthcoming in time for us to take advantage of the present rates in obtaining shipping space.

We would appreciate anything that may be done to rush the required credits in order to release the 150,000 lbs. of contained pentoxide which we and the Electro Metallurgical Sales Corporation have ready and jointly holding earmarked for you.

To date we have had no formal confirmation by mail from you covering your cable of October 10th.

With kindest personal regards, I am,

Yours very truly,

/s/ G

Secretary and Treasurer.

G-T

P.S. Since writing the above, credit to cover the first shipment of 30,000 lbs. contained pentoxide, in the amount of $40,000. has been received. Shipment will go forward on the earliest possible boat.

March 28, 1940

Mr. G. J. Painvin,
Societe d'Electro-Chimie,
10, Rue du General Foy,
Paris, France.

Dear Mr. Painvin:

Your letter of February 19 finally arrived today, which is rather a record, I believe, in speedy transmission of the mails and, according to the marks on the envelope, it did not leave Paris until February 28. However, I assume these are necessary delays which none of us can complain of under the present circumstances.

I am afraid that you have misunderstood my cables and letters in respect to the situation on V_2O_5.

At no time has the situation been easy in the supplying of either Ferro or Pentoxide. Up until the present date, we have been required, in order to keep our inventories up to a reasonable figure, to refuse to sell a great many people who have had firm orders in one hand and cash in the other and were willing to pay practically any price that we asked. As a matter of fact, for domestic consumption and what we did sell for export required us at one time to ship practically hot metal.

Our position is a little better now, but one that would speedily be uncomfortable should one large order for Ferro or Pentoxide come in from abroad or from this country.

As you probably know, we are in close touch with the Government on any Critical or Strategical materials and

have assured them that we would not sell abroad any quantities of our alloys that might jeopardize the position of our country in the event of an emergency.

In respect to some materials, the only way that we could supply them would be to have the raw materials shipped from abroad and have us process in transit, thus preserving our existing stocks of such raw materials. I can't say that I am entirely in sympathy with this procedure, but, nevertheless, it is there and must be observed.

The prices for export are still the same, namely, $3.70 per pound for Ferro and $1.70 for Oxide. These prices make for people trying to buy domestic and sell export, but I am happy to say that we seem to have this phase under very good control and if any shipments do get away from us they are very small ones. The good part of this program is that as long as we can control our shipments, [fol. 209] speculation by individuals is prevented and, as I said before, we are only selling to our regular domestic customers.

I am taking up your time and going into detail on this as I want you to clearly understand that it is our desire to take care of you and your requirements of any materials we have in excess of domestic requirements if you will let us know as far in advance as possible and on the same basis as our last shipments provided the export price remains the same. In short, I cannot promise that we will be in a position to ship Ferro or Oxide within a short period of time if the request comes without warning.

I feel certain that you will understand that I am not trying to build up any business for ourselves by alarming you as to the supply of Vanadium. If we had loosened up in our policy in selling certain brokers here, our supply of Vanadium would have been taken up for months to come and I think we are still in that position.

So much for business.

The news we get from your side of the water is so varied that even after a lengthy study and sifting of pseudo facts we are always in the state of bewilderment. It leaves us

only with the hope that things go well with you and that we will receive favorable news.

I hope this finds you well and that same applies to your entire family.

With my very best regards to you and Jaoul, I am

Sincerely,

/s/ E. D. B.

PLAINTIFFS' EXHIBIT No. 171

VANADIUM CORPORATION OF AMERICA
INTER-OFFICE COMMUNICATION

TO D. W. Viles, Mine Supt.
Monticello, Utah

DATE May 25, 1943

FROM E. D. Bransome, President

SUBJECT PERSONAL AND CONFIDENTIAL

It occurred to me that the thing we want to do is to have our trial on the 1400 tons of roscoelite made as quickly as possible at Durango and I can not recall how long you said it would take to make delivery, that is, provided we discussed that point.

With the above objective in view, it seems to me that you might be able to arrange with Johnny Hill and Page Edwards the shipment of some of our roscoelite ore at Naturita, even though we had to absorb the trucking, inasmuch as if it is desired to move the Naturita pile, the sooner we do it the better.

If trucks are going back empty for Fall Creek and Omega, it would seem that the main expense we would be subject to would be the loading.

You probably have already thought of this, but if not, I think it might be arranged with Johnny and Page in such a manner that would not prejudice any future price that we might get from Naturita.

Will you let me hear from you as to what you think of this idea?

(IN DUPLICATE)

CONTRACT No. M-10870

September 15th, 1933

ELECTRO METALLURGICAL SALES CORPORATION A CORPORATION OF NEW YORK HEREBY AGREES TO SELL AND

Vanadium Corporation of America OF New York, N. Y. HEREBY AGREES TO BUY

QUANTITY	A minimum of 1,000,000 pounds but not over a maximum of 1,250,000 pounds to be so taken.
MATERIAL	Vanadium Pentoxide (V_2O_5) - Specifications as per letter attached.
PRICE	Eighty Cents (80¢) per pound of V_2O_5, f.o.b. cars, seller's works or warehouses, with freight charges allowed to Bridgeville, Pa., surcharge for buyer's account.
TERMS	Net cash tenth of month following date of invoice.
DELIVERY	In equal monthly quantities from date to December 31, 1934 inclusive.
REMARKS	See letter attached which is pursuant to and part of this contract.

Payments to be made in U. S. gold coin or its equivalent in currency with exchange on New York. Each delivery to constitute a separate independent contract and to be governed by the terms hereof. Works' tests of the Manufacturer of said material to govern settlements.

All agreements of the Seller herein are subject to and contingent upon strikes, riot, war, commandeering or requisitioning or allotting to others in priority to the Buyer by the Government, invasion, fire, explosion, accident, delays in procuring sufficient and suitable raw materials, curtailment or failure in obtaining sufficient electrical power, delays of carriers, and/or other delays beyond the reasonable control of the seller and/or the Manufacturer, affecting either the Seller and/or the Manufacturer of such ferro-alloy. PROVIDED, HOWEVER, that in case of and upon the happening of any such event whereby the total output of the Manufacturer's plants of ferro-alloys and/or other products which the said plants are or may be then engaged in producing, is curtailed, or a portion or all of said output is commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, then the Seller shall use its best efforts to fairly and equitably pro rate any ferro-alloys, which may be produced at said plants and which are not commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, between the Buyer and its other customers of ferro-alloys under contracts, on the basis of the respective minimum monthly tonnages of

Payments to be made in U. S. gold coin or its equivalent in currency with exchange on New York. Each delivery to constitute a separate independent contract and to be governed by the terms hereof. Works' tests of the Manufacturer of said material to govern settlements.

All agreements of the Seller herein are subject to and contingent upon strikes, riot, war, commandeering or requisitioning or allotting to others in priority to the Buyer by the Government, invasion, fire, explosion, acciden., delays in procuring sufficient and suitable raw materials, curtailment or failure in obtaining sufficient electrical power, delays of carriers, and/or other delays beyond the reasonable control of the seller and/or the Manufacturer, affecting either the Seller and/or the Manufacturer of such ferro-alloy. PROVIDED, HOWEVER, that in case of and upon the happening of any such event whereby the total output of the Manufacturer's plants of ferro-alloys and/or other products which the said plants are or may be then engaged in producing, is curtailed, or a portion or all of said output is commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, then the Seller shall use its best efforts to fairly and equitably pro rate any ferro-alloys, which may be produced at said plants and which are not commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, between the Buyer and its other customers of ferro-alloys under contracts, on the basis of the respective minimum monthly tonnages of the particular ferro-alloy to be delivered to the Buyer and to such other customers under the provisions of such contracts, but the Seller shall be released from any and all its other obligations hereunder, **provided however**, that any ferro-alloy sold under the agreement but not delivered to the Buyer at the times herein provided for shall be delivered by the Seller as soon thereafter as practicable, taking into consideration the requirements of such ferro-alloy of all other customers of the Seller.

No change in or addition to the terms or provisions hereof shall be made unless approved by an executive officer of the Seller in writing

Whenever the Seller shall have any doubt about the Buyer's responsibility, it may decline to make further deliveries hereunder until the Buyer shall have satisfied the Seller of his responsibility or shall have paid for such further deliveries in advance.

If freight is allowed hereunder it is based on present existing freight rates and if such freight rates vary up or down on any shipments made hereunder the price of such shipments shall be increased or decreased as the case may be by the respective amounts of such freight increase or decrease. If any excise tax is now or hereafter imposed upon the Seller, resulting from sale or delivery under this agreement, the Buyer shall also pay the amount thereof to the Seller.

If the Buyer fails to make payments or commits any other default under the terms of this or any other contract between the parties hereto and such failure or default shall continue after notice thereof from the Seller to the Buyer, then the Seller shall have the right, at its option, without further notice, either to defer any further deliveries hereunder or to stop any shipments in transit hereunder or to cancel or terminate such contract or contracts; and no waiver by the Seller of its right to take advantage of any such failure or default shall stop the Seller to insist on its strict rights in case of and as to any subsequent failure or default.

After the Buyer has accepted same, to render this instrument binding upon Electro Metallurgical Sales Corporation, it must be approved in writing by an executive officer of said Corporation.

Mr. A. A. Corey, Jr., President,
Vanadium Corporation of America,
120 Broadway,
New York City.

Dear Mr. Corey:

This letter is pursuant to and part of the attached contract M-10870, dated September 15, 1933, calling for a minimum of 1,000,000 pounds but not over a maximum of 1,250,000 pounds of vanadium pentoxide.

This oxide will analyze from 85% to 90% V_2O_5 and the typical analysis will be the same as outlined in our letter to you of November 10, 1931, which is as follows:

Typical Analysis

V_2O_5	86.5%	S	0.40%
P	0.015%	Ni	Trace
Cu	0.015%	MgO	10.00%
As	Trace	Insoluables	1.00%

September 15, 1933.

II B1

Mr. A. A. Corey, Jr., President,
Vanadium Corporation of America,
11 Broadway,
New York City.

Dear Mr. Corey:

This letter is pursuant to and part of the attached contract M-10870, dated September 15, 1933, calling for a minimum of 1,000,000 pounds but not over a maximum of 1,250,000 pounds of vanadium pentoxide.

This oxide will analyze from 85% to 90% V_2O_5 and the typical analysis will be the same as outlined in our letter to you of November 10, 1931, which is as follows:

Typical Analysis

V_2O_5	86.5%	S	0.40%
P	0.015%	Ni	Trace
Cu	0.015%	Na_2O	10.00%
As	Trace	Insoluables	1.00%

Impurities are the following maximum percentages:

P	0.02%	Ni	Trace
Cu	0.02%	Na_2O	12.00%
As	Trace	Insoluables	2.50%
S	0.7%		

We agree to furnish you not over half of the total tonnage with a sulphur content of between 0.40% and 0.70% and not under one-half with a sulphur content of maximum 0.40%.

The minimum of 1,000,000 pounds is to be taken out by December 31, 1934. If the additional 250,000 pounds making up the maximum is required, the expiration date will be extended to April 1, 1935, although the buyer has the privilege of taking the maximum tonnage from date to December 31, 1934.

It is understood that the buyer will return the bags to the seller free of charge, the seller paying the return freight charges.

The seller will furnish the buyer with analysis of each batch shipped at the time of shipment, which will be the original analysis determined at the time the material was packed.

In the event buyer's analysis of any batch differs from analysis furnished by seller, buyer will immediately notify seller and will segregate said material for further sampling. Seller will arrange with buyer to jointly sample said material and from the sample obtained one portion will be analyzed by the buyer, one by the seller and a third portion will be retained for analysis by Ledoux & Company as umpire chemist in the event buyer and seller are unable to agree on their results obtained from the joint sample.

The buyer and seller, in their respective laboratories, will analyse their portion of the joint sample, and, if the results obtained by each laboratory are in close agreement with the analysis on which the material was billed, no adjustment will be made.

In the event of a wide discrepancy in the results obtained by the respective laboratories on said sample or in the event of a dispute, Messrs. Ledoux & Company shall analyze the retained third portion, and their results shall be final and binding on both parties. The expenses of the umpire chemist will be borne by the party whose results are farthest from the results of said umpire chemist.

Thanking you to execute one copy of the contract, returning it to us and retaining one copy for your files and records, I am

Very truly yours,

J.M. Price
President

[Vol. 215]

January 24, 1934

Mr. J. M. Price, President,
Electro Metallurgical Sales Corp.,
30 East 42nd Street,
New York City.

Dear Jack:

This is to confirm our arrangement over the phone today in relation to our V_2O_5 contract with your Corporation.

While the first four cars, as I explained to you, did not develop as favorably as we expected inasmuch as we could not produce the higher quality grades, we are hopeful that future shipments along the lines suggested by your Mr. McNeill and further development work on our part will prove to be satisfactory for all grades.

As you know, we sent you our check for one-half of your original invoice for the first four cars and in early February you will receive check for the balance due.

You are authorized to ship us for receipt in early February and for March account one car of the higher grade oxide in conformity with Mr. McNeill's letter of December 27, 1933.

Immediately after running this car through our operations, I shall be pleased to communicate with you with respect to results obtained and at the same time discuss with you the question of further deliveries.

Yours very truly,

President.

Mr. A. A. Corey, Jr., President,
Vanadium Corporation of America,
120 Broadway,
New York, N. Y.

Dear Mr. Corey:

Confirming conversation had with you in my office on Friday of last week, please be advised that we are arranging to ship to your works between now and December 31st three additional carloads of vanadium oxide to apply against our contract N-10970, which completes the minimum of 1,000,000 pounds of oxide due on this contract. The terms to apply on these three additional carlords will be 30-60-90 days from January 1st.

We are also arranging to ship you an additional 250,000 pounds of this oxide during the months of April, May and June, 1935 with the regular terms as outlined in the contract applying and at the price stipulated in the contract. This covers the maximum quantity for which the contract was drawn but the expiration date of this contract has been extended three months.

It is the writer's understanding that, as soon as you check in this matter further, you will take up with me the question of the possibility of an additional amount which you might require for the last half of next year and we will at that time discuss the price to apply on this additional quantity.

Assuring you of our pleasure in being able to make the above changes in your present contract, I remain

Very truly yours,

J. M. Price

President

REPORT ON VANADIUM

by

C. E. MacQuigg

UNION CARBIDE AND CARBON RESEARCH LABORATORIES, INC.

30 East 42nd Street,

New York City.

June 1935

Synopsis

The study that is the subject of this Report was made to correlate the information available on the question of vanadium production and markets in the United States today. Particular emphasis has been laid on the metallurgical uses of vanadium, and certain conclusions drawn regarding the probable trend of the future market.

The conclusion is drawn that a material reduction in selling price will be necessary to stimulate, or even to maintain, vanadium in its position as an alloying element. A tentative selling price is suggested after a review of the vanadium economics of the Electro Metallurgical Company.

[fol. 228]

VANADIUM MARKET POSSIBILITIES

INTRODUCTION:

The ability to decide as important and complicated a question as the matter of the Corporation's policy on vanadium obviously requires a knowledge of all the facts, including the newest ones bearing on the subject. Some of

these facts have been obtained and arranged under the following headings:

I. METALLURGICAL ADVANTAGES RESPECTING THE USE OF VANADIUM

This is a subject upon which there is much information and well-defined opinion, and it is realized that we ourselves are not un-informed on the matter; however, it is worth while to re-examine the facts and opinions extant *at present*, since there is evidence that the favor with which alloys are regarded changes from time to time—somewhat like the "change of style" in other commodities. This leads to a changing emphasis which follows in part the new developments in requirements, and in part the successful sales propaganda.

II. ECONOMICS OF A "COME-BACK" FOR VANADIUM. COST OF PRODUCTION AND PROBABLE MARKET VALUE AT THE STEEL MILL

In this section, the production costs and sales prices are discussed in an attempt to determine how far a

—2—

[fol. 229] cut in prices could be expected to go without rendering the manufacture and sale unprofitable to the Corporation. This material enables a conclusion to be drawn concerning the ability to win back the market already lost.

III. NEW POSSIBILITIES FOR EXPANDING THE MARKET IN METALLURGY AND FOR OTHER USES IN TECHNOLOGY. CONCLUSIONS AND RECOMMENDATIONS

Markets other than the use in steel are considered for expanding the consumption of vanadium. Possibilities of different methods of utilization for metallurgical purposes are also developed. Conclusions are drawn, and recommendations made.

IV. APPENDIX. COLLATERAL INFORMATION

Data are shown respecting the economics of the vanadium situation.

ACKNOWLEDGMENTS:

The writer is indebted to Mr. Van Fleet for assistance on production costs, and to Mr. Critchett for helpful criticism.

—3—

[fol. 230]

I. METALLURGICAL ADVANTAGES RESPECTING THE USE OF VANADIUM

It may be recalled that a survey of the automobile industry was made in 1931.[1] At that time it was learned that the unbiased views of the automobile metallurgists indicated that vanadium was on the way out, the reason being that it was too costly; other combinations, such as molybdenum steels and silico-manganese, were able to perform satisfactorily and at a considerable saving in cost to the car builder. At that time there was little or no indication that other alloy combinations were better than vanadium, but simply that they would perform satisfactorily and were much cheaper. Since the time of the survey mentioned, still further reduction in the use of vanadium has taken place, and it is hardly too much to say that its large-scale use in the automobile industry is now practically eliminated. Doubt has been expressed as to whether the preference today might still be for vanadium—even though the price differential were reduced or eliminated—and this justifies some study of whether the "style" in metallurgical thought has altered and the former real or fancied advantages of vanadium would now be admitted. These remarks apply to all types of steels utilized in the automobile, but it should be pointed out that the last stand of vanadium was in springs. The present status with respect to vanadium in the automobile is summarized by Table VIa in the Appendix, which was prepared by Mr. R. C. Good.

It will be noted that the metallurgists of the Vanadium Corporation of America stresses the beneficial effect of

—4—

[fol. 231] vanadium on the qualities of springs; in our

[1] "Summary of the Present Status of Vanadium Steels in the Automobile Industry," by C. E. MacQuigg and S. C. DuTot, May 11, 1931.

report[1] made in 1931, the matter of vanadium springs was carefully looked into, and at that time the situation was not particularly pleasing, nor was the outlook reassuring as to future developments. For example:

"*Leaf springs*: From an unsatisfactory interview at the Mather Spring Company in Toledo, it was gathered that vanadium steel was largely used for leaf springs in automobiles; however, with few exceptions it was later found that silico-manganese was used and that Mather's business must be chiefly in other lines (possibly railroad). There is also a tendency to use plain carbon steel in some of the leaves and the alloyed steel in the main leaf only. It was learned that Hupp is changing to a new steel with manganese 0.75 to 0.95% and 1.0 to 1.20% chromium. This steel was recommended by the Mather Company and is cheaper than chrome-vanadium. (We were led to believe that the steel was worked out by Timken metallurgists, as Mr. Mather is a Director of the Timken Company.) This information would lead to the conclusion that the Mather Company—who apparently were the avowed champions of the vanadium-bearing springs—were also seeking cheaper substitutes. It was learned elsewhere that the principal reasons for the Mather predilection for vanadium springs were that their shop practice and heat-treating equipment were built up around the chrome-vanadium steels.

As will be seen from the summary, Chevrolet constitutes about the only large-scale user of chrome-vanadium steel in springs. It is proving entirely satisfactory, but Mr. Spear, the Metallurgist, is looking for a cheaper steel. A pertinent portion of the detailed report on the Chevrolet interview is quoted: 'As a matter of fact, the chrome-vanadium is now out of the leaf springs in the truck, and it would have lost out in the passenger car also were it not for the fact that they might have to increase the weight of the spring slightly and since this is tied in with riding

[1] MacQuigg and DuTot, loc. cit., pages 5 and 6.

quality they hesitate to make the change; however, as soon as the spring designer can bring out a little better spring so that they can lighten its weight, they will discard chrome-vanadium.'

One car advertises chrome-vanadium leaf springs but does not use it because it costs too much!

Coiled springs: The situation with respect to coiled springs presents a number of different angles and is more involved than with the other components studied. Influences adverse to vanadium have resulted from several causes and these have combined to greatly reduce its consumption in spring wire. As estimated

—5—

[fol. 232] by Mr. Pickwell of the Gibson Spring Company in Chicago, they are 'not making 1/20 or 1/25 of the vanadium coiled springs they made three years ago.' Briefly stated, the adverse influences are:

(a) Swedish carbon steel has been making great inroads quite recently. The Swedish interests have brought their design and manufacturing experts to this country to work with the American customers and then have striven in every way to meet the requirements of the trade. This effort has no doubt stimulated the American steel makers, with the net result that coiled spring wire (plain carbon) may be purchased with a feeling of assured quality. From two sources it was learned that the Swedish carbon spring steel also has a better surface than the chrome-vanadium. Duplicate test specimens are cut from each end of a coil of the carbon steel wire and are tested for quality by coiling, and experience has shown that this is adequate. On the other hand, the chrome-vanadium is not so uniform and the acceptance tests need to be much more comprehensive.

(b) Chrome-vanadium has not been as free from surface defects as has the carbon steel. There was a tendency to place the blame for this on the steel makers who apparently do not or cannot properly deseam their

billets. Swedish chrome-vanadium steel has better surface and is found superior to the domestic product.

(c) A further complaint against chrome-vanadium spring wire was that it is not obtainable in heat-treated condition. While the initial cost of the chrome-vanadium versus the carbon steel is about equal—in fact, it is in favor of the chrome-vanadium—the final cost is nearly two to one in favor of the carbon steel, since the latter is bought in its finished heat-treated state and needs only to be wound into the required helix and given a light tempering to remove working strains.

(d) In most cases the carbon steel has proved satisfactory, and being much cheaper it is naturally used by the spring maker when he is not tied down specifically to chrome-vanadium by the purchase specifications. In some cases as in the aircraft industry (air-cooled engines) the chrome-vanadium wire is still preferred. A few minor uses from the tonnage standpoint, as in clutch springs, still prevail.

One spring metallurgist stated that chrome-vanadium might come back if (i) the American makers would use greater care in its manufacture, and (ii) the cost were sufficiently lower to prove competitive."

The subject has not been further investigated at the present moment, but it is thought that no general increase in the consumption of vanadium in spring manufacture has taken place, nor is indicated as being about to take place.

—6—

[fol. 233] The writings of numerous recognized authorities were consulted, and their views pro and con were abstracted to give a cross-section of what the literature contains as a result of laboratory and practical experiences:

Moore[1] found that the addition of vanadium to a plain carbon steel did not raise the endurance limit to an

[1] "Resistance of Metals to Repeated Static and Impact Stresses." R. R. Moore, A.S.T.M. Vol. 24.

appreciable degree. His vanadium steel, however, did have a high Izod value. On the other hand, the vanadium steel with a different heat treatment had an Izod value five times that of the plain carbon steel whereas its endurance limit was less.

Oya[2] has studied the equilibrium diagram of the iron-vanadium system, and concludes that these metals form an *unbroken series of solid solutions*. With the addition of vanadium, the A_4 transformation is lowered; A_3 is raised, so that the two curves meet at 2.5% vanadium to form a continuous phase boundary. The A_3 point is raised gradually at first up to maximum at nearly 15% vanadium, then rapidly lowered until it reaches room temperature in an alloy containing nearly 35% vanadium. Solubility of carbon in gamma solid solution is markedly decreased by addition of vanadium. The A_1 point—that is, the eutectoid temperature—is raised 15° in the iron iron-carbide system by the addition of 0.5% vanadium. (Vanadium operates to widen the heat treatment temperature ranges of steels.)

Losana[3] states that vanadium accelerates the corrosion of steel at high temperatures in air and in internal combustion engine exhaust gases.

The mechanical properties of carbon-vanadium castings are generally superior to those of plain carbon steels, but there is little advantage in shock value.[4] Also, it is better to normalize than to anneal.

Steels containing 0.14 and 0.30% vanadium were compared as regards tensile properties with plain structural steel, nickel-chromium and chrome-vanadium

—7—

[fol. 234] steels.[1] Vanadium was found to raise the elastic limit and ultimate strength, and to lower the elongation, contraction, and notch toughness. Raising of the quenching temperature affects all these properties in the same direction respectively. Nickel-chromium steels are equal in strength to chrome-vanadium steels where small sections are concerned, but are superior if the section is heavy.

With the exception of the sales propaganda of the Vanadium Corporation of America, the results of laboratory tests have not always been uniformly favorable to the use of vanadium in steels. Its chief recommendations for use have been the following two: (1) The ability to widen the range of heat treatment and thus lessen the "touchiness" of steels containing it, and (2) the generally accepted fact that its presence confers toughness on heavy sections of castings and forgings such as are used in railroad rolling stock. In spite of the occasionally unfavorable laboratory tests, still its good properties in the above two categories are generally accepted, and it is noted in a recent article in THE ENGINEER (London) which describes the "Normandie," that "because of the size and design of the (rudder) stock, vanadium steel was used in it."

While it has been axiomatic that vanadium would act as a scavenging agent as well as an alloying element in steel, it has never been seriously proposed that its efficiency as a deoxidizer justified its use for that purpose alone. Even sales propaganda literature has always pointed out that cleansing of the steel was more efficiently done by means of other elements (silicon, manganese, etc.) added first to do the major part of the "clean-up." While it

—8—

[fol. 235] may be true that such a viewpoint arose from the high cost of the metal, still one may doubt whether vanadium can ever be sold cheaply enough to justify its

[1] "Vanadium in Structural Steels," R. Hohage and A. Grutzner, British Iron and Steel Institute, 1925, Part I, p. 580A. See also Stahl und Eisen for December 18, 1924, Vol. 44, pp. 1713-1717.

competition with the other well-established deoxidizers for such a purpose only. At any likely cost, therefore, vanadium would seem to fail as a serious competitor for the deoxidizer business as such, although it will always have that added merit.

Next consider the toughening quality of vanadium when added to steel, especially heavy castings. This is no doubt the greatest single asset from vanadium additions. In a later section, it will be shown that this is probably the greatest stronghold of vanadium today. Vanadium with chromium or nickel has a peculiar merit which cannot be successfully controverted; here again there is a rift in the lute, inasmuch as molybdenum has been gaining in favor as a toughener of steel. It is the writer's reasoned judgment that molybdenum is not as effective a toughener of high strength steel as is vanadium, but it is so nearly comparable that the approach to parity of the two classes of steels will operate to require just that much more effort to maintain vanadium as a competitor.

It is difficult to compare steels of different analyses for their intrinsic worth or usefulness. Several methods[1] have been suggested for making such comparisons; the chief difficulty results from the fact that applications differ to some extent respecting the quality of the steel considered of greatest importance. For example, a rivet steel must

—9—

[fol. 236] be ductile, and although strength would also be desirable, ductility must come first. On the other hand, a cutting tool must be hard above other properties; nevertheless, ductility cannot be entirely sacrificed.

Some comparisons of wrought chrome-molybdenum, chrome-vanadium and chromium-nickel steel[2] have been made and are shown in Table I. This method makes use of a purely empirical formula which serves to arbitrarily set down a so-called "merit index." This merit index is ob-

---

"Evaluation of the Technical Worth of A Steel from Physical Test Data," A. B. Kinzel, A.S.M.E. 1928.

[2] C. N. Dawe and A. B. Kinzel, loc. cit.

tained by adding together the yield point and maximum stress, multiplying that figure by one-half the elongation in 2 in., and dividing the result by 100 minus the reduction of area. In the original article the author, C. N. Dawe, shows results obtained on forged steels of the analyses noted and for different sized bars. The 2 in. square section was selected for reproduction here because it would tend to favorably accent the good obtained from vanadium respecting its toughening effect. Ductility, however, does not seem to be favorably influenced by vanadium as against molybdenum additions. This is true for all of the heat treatments noted, in which the molybdenum produced better results. (Mr. Dawe at the time of the publication of his test data was a metallurgist for the Studebaker Corporation, and it is presumed that the tests shown were the result of unprejudiced experimentation.)

Following the same method of calculation in Table II, the writer made some comparisons of the properties of *cast* steels containing different alloying elements, the tensile properties being taken from reliable sources.[1] Here again the merit indices were calculated by Dawe's formula, and

—10—

[fol. 237] again attention is called to the fact that no particular brief is held for this type of calculation except that it does enable the visualization of all four of the mechanical properties between given steels by comparison of single figures. It may be claimed that this method is unfair in that it fails to properly accent one or more given qualities which possibly should be accented for a given application. No particular property is singled out by this method, which may be thought of as an "over-all" comparison. Zuege's remarks on the effect of vanadium on steel are as follows:

> "Vanadium is a very powerful deoxidizing agent, and it is believed that the beneficial effects obtained through its use are largely due to its elimination of impurities although it also forms complex carbides. In rolled steels it is believed to produce a very fine-grained

[1] "Alloy Cast Steels," D. Zuege, Transactions of the American Foundrymen's Association, 1929, Vol. 37, p. 361.

structure. In castings it is used largely in heavy, irregularly-shaped castings in which it raises the ratio of yield point to tensile strength with no decrease in ductility.

The vanadium steels have in the past been used to a considerable extent in castings where an exceptionally clean metal was desired or where castings of intricate design were required, since vanadium does not confer marked air-hardening properties. It was believed that vanadium imparted to steels the ability to resist repeated stress to a marked degree, but some recent investigators believe that its importance in this respect has been exaggerated."

Recognizing the objections to Dawe's method of comparison, the writer has calculated the properties of two S.A.E. steels from the Society's publication just off the press.[1] Kinzel's method of calculation has been used for the results shown in the last column of Table III, the emphasis being placed on elastic ratio and ductility, and the relative

—11—

[fol. 238] weightings being given by the following exponentials:

Maximum stress	$= \frac{1}{2}$
Elastic ratio	$= \frac{2}{3}$
Elongation	$= 1.0$

From Table III it is seen that the vanadium steel is definitely superior. No particular justification is offered for the selection of the exponents, since they would be subject to change for different conditions of service; it is felt that they are as fair as any others for conditions where lightness must be combined with resistance to shock.

In conversation with Mr. Bob Byrd of the Midvale Company concerning the relative costs of A.A.R. steels, Classes A and B, he made the statement that the differential against Class B steel was in part due to the high manganese con-

[1] "Iron and Steel Specifications," Reprint from the 1935 S.A.E. Handbook, March 1935.

tent, which is specified somewhat higher than that of Class A and to the presence of which he quite firmly insisted the major portion of the additional physical properties were due. His personal feelings were quite "bearish" on the merits of vanadium. He further stated that vanadium was used by many steel makers for its deoxidation properties alone, so that the residual vanadium was very low—in other words, the addition of a mere pinch which might entirely disappear and certainly was not left to the extent of more than 0.03 or 0.04%.

He went still further and stated that in his own personal experience, vanadium in combination with chromium made one of the most difficult steels with which to meet specification requirements. He much prefers the chrome-molybdenum compositions. His final thought was that vanadium was due to continue its decline because of its lack of merit in comparison with molybdenum. These remarks of an experienced steel maker are included here to illustrate the

—12—

[fol. 239] widely opposing opinions that may be obtained respecting the desirability of any given steel analysis.

In Table V will be found the relative costs of a number of S.A.E. alloy steels, some of which are comparable to vanadium steel and others are not, the figures being taken from IRON AGE for April 25, 1935. It is thus seen that the most expensive vanadium steel is fourth in order of costliness of all of the steels shown, while the cheapest vanadium steel is only eighth among the eighteen steels listed, thus placing vanadium steels at present among the most expensive of alloy types.

There are more sides to the cost of vanadium steels than appear in a mere cataloging of the selling price, among them being the matter of mill losses. Due to the fact that one steel is harder to work than another, heavy rejections may be encountered because of such causes as poor ingot surface which will lead to seams and fissures, thus giving rise to excessive chipping costs. It is also a fact that some steels will cause heavy rejections from difficulties in rolling, such as corner cracking, which also is an adverse factor; the sensitiveness in heat treatment is another factor. Finally, there is the loss of the given element in re-

melting. These factors establish the selling price, and their weighted effect is expressed economically in the alloy extra except as to cost of working up by the purchaser. Table VI shows the consensus of opinion regarding some of the factors just enumerated. The showing by vanadium is about average. There are special ways of taking care of some of the difficulties mentioned, such as the remelting of the vanadium-containing scrap in an electric furnace, but this is a feature which most plants are not equipped

—13—

[fol. 241] to make use of on a tonnage basis. It is not therefore likely that any return scrap value can be credited to vanadium.

Another aspect of the metallurgical use of vanadium which has already been mentioned, needs to be considered in more detail; namely, the scavenging effect it has on steels. This use, while it has long been recognized, has not been emphasized commercially, chiefly because of the high cost of vanadium. However, this picture might possibly be changed; if the cost of vanadium could be brought down materially, it might conceivably allow the element to be "built up" in popularity as a scavenging agent. This angle to the vanadium question is involved with the ability of that element to refine the grain of steel. Grain refinement is an objective of the steel manufacturer, since in general the fine-grained steels are characterized by greater toughness. Recent researches into the relationship of the history of the heat (deoxidation) and grain size in the resulting steel have shown that the fineness of grain can be controlled by manufacturing technique, and that even aluminum can be made to bring about the desired results. In the words of a well-informed metallurgist of our own organization, "So much information has recently been acquired respecting the effect of deoxidation on grain size and how to control it by the use of the cheaper aluminum, it is doubtful if vanadium can be kept in its former place as a grain-refining addition to steel." Such views are disturbing enough to warrant some careful study of the facts. What has been found out concerning aluminum is briefly stated herein, but unfortunately nothing like the same kind of information is available on specific scavenging action of vanadium.

—14—

[fol. 242] In brief, the theory is that a melt of steel on freezing will form a fine-grained mass if enough critically dispersed nuclei are present in the form of non-metallic inclusions; in the absence of such nuclei in critical dispersion, the mass of steel may be coarse-grained. In this way a very clean steel might be coarse-grained, as also would be a steel with (say) very coarsely distributed non-metallic

particles (i.e., supercritical dispersion). Herty[1] has recently published his conclusions on this matter, which in part are as follows:

> "The grain size of plain carbon steels is profoundly affected by the method of deoxidation used.
>
> In mild steels, 0.15 to 0.25% carbon, the finest-grained steels are those to which an excess of aluminum has been added for deoxidation. Semi-killed steels to which a small amount of aluminum has been added are fairly fine-grained in the normalized condition, and silicon-killed steels are more coarse-grained than the semi-killed steels. Both semi-killed an silicon-killed steels are very coarse-grained when heated to 1000° C. (1832° F.) for 1 hr. Steels with excess aluminum are still fine-grained after this treatment, but become coarse-grained at about 1100° C. (2012° F.).
>
> Ladle additions of aluminum, amounting to 0.03% give a very fine-grained steel. If the aluminum is added in the furnace, either as a complex deoxidizer or as ferro-aluminum, the resultant grain size of the steel is very similar to that of a silicon-killed steel. It is evident that under these conditions the alumina particle has been fluxed, thus destroying its ability to act as a nucleus for crystallization."

Whether or not one can agree with the views expressed above, it must be admitted that *any* advancement of technique involving a cheap and effective grain control by means of proper deoxidation of the steel bath is distinctly

—15—

[fol. 243] detrimental to the commercialization of the costlier vanadium. If the grain-refining action of vanadium be due to its deoxidizing power, then by the same token any other efficient deoxidizer would be as effective. It is not

[1] "Effect of Deoxidation on Grain Size and Grain Growth in Plain Carbon Steel," C. H. Herty, D. L. McBride and S. O. Hough, Cooperative Bulletin #65 of the Mining and Metallurgical Advisory Board.

argued that aluminum is as good as vanadium, but on the other hand we must admit that arguments are already available that such is the case. As a matter of fact, vanadium has a dual role; namely, partly as a true alloying element and partly as a scavenger, and this certainly cannot be said about aluminum. To that extent vanadium must always enjoy an advantage, but this is not great enough at the present cost of vanadium.

When, as, and if the cost of vanadium is reduced to a semi-competitive basis as a *deoxidizer*, then we shall doubtless have certain arguments in favor of its use, and these may be developed out of research programs. As an instance, the use of vanadium in a silicon alloy is mentioned, on the assumption that such a combination would give simultaneous reduction and alloying actions; in other words, the silicon will do the rough work of deoxidation, and the vanadium will exert its effect as a strengthening element. This might or might not work advantageously, depending on the correctness of Herty's explanation of the mechanism of grain size control. We might go further and show by experiment that vanadium has afforded an ideal grain size control mechanism because of its simultaneous scavenging and true alloying behaviors. Going a step still further, at a competitive price for vanadium, research might show that alloy steels treated with vanadium are feasible for certain railroad applications where they are now excluded because of their poor showing. Thus a simple dosage with vanadium in such quantities as to allow for partial loss through oxidation but still finishing with enough to permit residual alloying effect might result in a new kind of alloy

—16—

[fol. 244] steel—perhaps, an "Izett" type of alloy steel. At present there is a considerable total quantity of vanadium accounted for by additions to many different types of alloy steels, but in such small amounts as to be residual in not more than 0.01 to 0.05%. Even in such small amounts, many metallurgists contend that the addition is markedly beneficial and that they will not abandon the practice.

In view of the fact that these new ideas respecting the grain size control of steels through the proper use of deoxidizers has been to a large extent based on data re-

cently published in this country, it is of interest to note the views of a British metallurgist,[1] in part as follows:

> "One of the most outstanding metallurgical developments of recent years is the gradual accumulation of knowledge that has led to appreciation of the importance of "inherent austenite grain size," and to some understanding of the methods by which it can be controlled. From the same heat it is possible to produce either inherently coarse-grained or inherently fine-grained steel by controlling the aluminum additions. In the coarse-grained austenite, grain growth takes place at lower temperatures than in the fine-grained. This affects the behavior of the steel in heat-treating operations and has a pronounced influence on the properties obtained. For some purposes coarse-grained steel is preferred, but in general the fine-grained type is best. If, however, the two types are not distinguished and steel of a given analysis turns out to be coarse-grained or fine-grained simply as a matter of chance, then as a result of variations in the behavior of different heats difficulty will be experienced in forging, heat treating and machining under mass production conditions. Furthermore, the mechanical properties obtained in the finished product will vary from heat to heat.
>
> The production of inherently coarse- or fine-grained steel depends primarily on the amount of aluminum added before casting, but control of the manganese,

—17—

[fol. 245] and silicon additions is also important, and titanium when added with the aluminum tends to increase the cleanness and uniformity of the steel.

> Besides aluminum, other strong deoxidizers like titanium, zirconium, and vanadium are known to cause fine grain, but somewhat larger additions are required

---

[1] "Grain Size Control and Its Effect on the Mechanical Properties of Forgings," J. M. Robertson, METAL TREATMENT, Spring Number 1935, p. 21.

than in the case of aluminum, and the elements are considerably more expensive. The question to be investigated is whether titanium and zirconium give results sufficiently, if any, better than aluminum to justify the greater cost."

Dr. Robertson barely mentions vanadium, no doubt because of its present cost. With regard to the effect of the additions of aluminum on ingot surface and cleanliness of the steel, Robertson is quoted further:

"The amount of aluminum and silicon required to give inherently fine-grained steel results in fully-killed deeply piping ingots, and for economical manufacture molds with feeder heads must be used. The surface condition of ingots does not lend itself to quantitative study, but according to Epstein, Nead and Washburn, such data as could be obtained did not indicate that either ladle or mold additions of aluminum adversely affected the surface. The same investigators also studied the cleanness of experimental heats of fine- and coarse-grained steel by microscopic inclusion counts and oxygen determinations by the electrolytic extraction method. Satisfactory agreement between the two methods was obtained, and as a result of the work it was concluded that the moderate ladle additions of aluminum required to produce fine-grained steel did not increase the number of detrimental inclusions. Even mold additions up to 12 oz. per ton did not decrease the cleanness of the steel."

With regard to the item of cost, aluminum would cost only 20½¢ per ton when added in 16 oz. dosages per ton of steel, at the current price of that metal. This matter of deoxidation is mentioned here in some detail because it is quite plain that it has a most important bearing on the question of grain size control, which in turn is itself bound up with the benefits of vanadium treatment. If in due time the metallurgist becomes convinced that his results may be obtained by means of additions of cheap aluminum as

—18—

[fol. 246] against a more expensive alloying element such as vanadium, then it will become just so much more difficult to sell the vanadium. It will always be possible to embark on a campaign of counter-propaganda, decrying if possible the use of aluminum because of certain objectionable features, but the fact still remains that ultimately the steel maker will pay no more for his materials than he must in order to obtain the necessary results.

There is one field in which vanadium so far has held undisputed pre-eminence—namely, as an addition to high speed steels. The importance of the position of vanadium in high speed steel is best illustrated by the remarks of the late Dr. J. A. Mathews,[1] who was an authority on the subject.

> "In 1903 the writer experimented with the addition of vanadium to high speed steel and brought about a considerable improvement. The efficiency was increased from two to three times. This resulted in the steel known as Rex AA, which is now the standard type known as 18-4-1, meaning 18% tungsten, 4% chromium and 1% vanadium. That steel has remained as a type for over 25 yr., and for general all-around purposes has not been improved upon."

Vanadium seems to have held its own in the high speed steels in spite of its costliness, and there is no reason at this moment to suspect that its position is being threatened. It might, therefore, be argued that a considerable portion of our vanadium market has been maintained in face of high prices and that to cut the price now when this market is not threatened is to show poor business judgment. More

—19—

[fol. 247] of this discussion is included in a later section, but in connection with the last thought it must always be remembered that high costs invite research for substitutes which might be discovered and might destroy the present

---

[1] "The Electric Furnace and the Alloy Age," John A. Mathews, Transactions of the Electrochemical Society, Vol. LXI, 1932, p. 139.

market. (This has actually happened with the molybdenum high speed steels, where the urge has been a strategic one.) As against the possibility of the development of substitutes for vanadium in the high speed steels, it can be pointed out that the trend is apparently in the opposite direction at this time. Several patents have recently been issued to J. V. Emmons of the Cleveland Twist Drill Company and to others, covering new compositions in what are purported to be more efficient high speed steels. These compositions contain from 2 to 6% vanadium, and in the event that the steels prove up to expectations an increased market for vanadium is promised. The vanadium content of the average high speed steel, as shown by a study of some fifty analyses of representative American and foreign steels, is from 0.6 to 1% or more.

Summing up the information on steels, one may conclude that there are several different types of steel employing one or more of the elements chromium, nickel, molybdenum, manganese, silicon or vanadium, and that there is little choice between them with respect to mechanical properties for most common applications. One may manipulate the calculation of the "merit" or "worth" of various steels, but after all the deciding factor governing the selection of a steel will quite largely depend on certain other conditions, such as prejudice of the metallurgist writing the specifications, ease of machinability, "foolproofness" in heat treating, special requirements such as stainlessness, and finally, but not the least important of all, the unit cost.

—20—

[fol. 248] From the figures assembled in this section it is clear that the balance is quite close between any one of several different analyses; this has also been shown in the literature.[1] One may therefore conclude that the decline in the tonnage of vanadium steels has been due mostly

[1] "The Relative Merits of Some Different Alloy Steels with Respect to Certain Mechanical Properties," Bradley Stoughton and W. E. Harvey, Proceedings of A.S.T.M. 1930, Part II, p. 241. (This article shows "merit" calculations on a number of steels by several different methods. It is interesting that the authors give a high rating to the chrome-vanadium steels.)

to a competitive situation and less to the improvement in properties over other analyses. By the same token it should be possible to revive a considerable tonnage of the vanadium steels, either of the standardized analyses or any types growing out of our research efforts, by a substantial lowering of the cost of vanadium.* Discussion of the feasibility of such a cut in selling price is deferred to a later section of this report.

Use of Vanadium in Cast Iron: Not a great deal of information is available on the effect of vanadium in cast iron, since such use has not been commercialized because of cost considerations. Rather more research seems to have been done in England than in America. A number of references have been studied, and the definite conclusions justified that vanadium is beneficial in its effects on cast iron. It belongs to the hardening, strengthening, carbide-forming group rather than with the softening, graphitizing group—that is, it belongs with chromium rather than with silicon in its chief effects but with this difference: It is somewhat milder in action. Vanadium gives a denser,

—21—

[fol. 249] stronger, finer-grained casting which has particular merit for certain applications. From one of the most comprehensive researches consulted,[1] the following conclusions were drawn:

"Type	% C	% Si	% Mn	% P	% S
A	3.55	1.46	0.42	0.077	0.022
B	3.7	2.7	0.56	0.11	0.04
C	2.5	2.5	0.55	0.07	0.038

The strength in compression of Alloy A was raised 40% by 0.5% vanadium, 10% by 2% nickel, and about 40% by the combined addition. In B the effects were less marked, but in C the compressive strength was increased about 30%. The bend strength of A was

* See Appendix for further opinions quoted on this subject.

[1] "Influence of Nickel and Vanadium on the Properties of Cast Iron." IRON AGE for March 26, 1931, p. 1028, which is an abstract of an article by J. Shallansonnet (Revue de Metallurgie, November 1930).

increased 30%, B 50%, and C 30%. Vanadium addition produced about 50% better resistance to shear, though the influence was less on B. Nickel diminished the effect of vanadium. Alloys of Type C containing vanadium with and without nickel, varied in hardness from 500 to 350 Brinell."

J. E. Hurst,[1] one of the leading British investigators, has done considerable work with vanadium in cast iron, and his conclusions are summarized as follows:

"As a result of tests made by one of the U.S.A. railroads, locomotive cylinders containing vanadium showed only microscopical wear after 200,000 miles running. Cylinders without vanadium additions showed appreciable wear—about 1/32% after 100,000 miles of service. Similar results have been reported in the case of large cylinders and liners in internal combustion engines.

Amount of Vanadium and Its Addition to Cast Iron: For ordinary purposes the amount of vanadium recommended to be added to cast iron is about 0.15%. It is generally recommended that the additions should be made by way of ferrovanadium to the molten metal

—22—

[fol. 250] in the ladle. The ferrovanadium should preferably be ground to powder, in which form it can be conveniently added to the molten metal as it flows down the cupola spout. Pig irons are now available containing at least 0.50% vanadium, together with an approximately similar percentage of titanium. These pig irons offer a very convenient and cheaper method of obtaining vanadium in the castings. They can be used direct in the cupola without loss of vanadium. It is found that the titanium present prevents the loss of vanadium, itself undergoing a loss of about 20%."

In view of what is already definitely known regarding the effect of vanadium in cast iron, plus what can be rea-

[1] "Vanadium and Titanium in Cast Iron," Foundry Trade Journal, September 5, 1929, p. 173.

sonably predicted in the way of beneficial effects, it is believed that probably a considerable market can be worked up, especially in the light of the increasing popularity of "high test" cast irons. That vanadium has not been used heretofore does not seem to be so much a metallurgical question as a commercial one. Quite an opposite to the above views has been gathered from consultation with one of our metallurgical staff, who feels certain that equal results may be obtained much more cheaply by other alloy additions to cast iron: e.g., a balance of chromium and silicon.*

Use of Vanadium in Non-Ferrous Alloys: The use of vanadium in non-ferrous alloys is not a new idea, since there is extensive patent literature covering its addition to the copper-base, the aluminum-base, and to a lesser extent to the zinc-base alloys respectively. In general, the effects are similar to that of titanium in the copper-base alloys.

—23—

[fol. 251] and a considerable tonnage of vanadium bronzes is sold. Here again, it might be confidently expected that price revisions would stimulate expansion of consumption. It is also obvious that new combinations replacing ferro-vanadium would need to be developed because of the undesirability of iron as a constituent of many of the non-ferrous alloys.

For reasons already pointed out, it is not possible to make a very definite monetary comparison between the relative values of two or more different steels because of their diverse qualities. Moreover, no matter how specific the comparison might be made, it would still be unconvincing to the metallurgist who might be prejudiced against the given steel; he would always be able to adduce arguments why he could not accept the conclusions, provided they were against his favorite steel. In spite of these handicaps, it is worth while to make some comparisons suggested in Table III, where a chrome-vanadium steel has been contrasted with one of its closest competitors—namely, chrome-molybdenum.

---

* See Appendix for further views on this subject

The selling price of chrome-molybdenum (Series #4100) is 2.95c per lb. and for the chrome-vanadium (Series #6100) it is 3.65c per lb., or a differential of 0.70c per lb. against the vanadium—since the chromium content is the same in both steels. Deducting the base rate of 2.45c for all S.A.E. steels of these types, it is seen that the cost of vanadium must be made to shrink from 3.65 — 2.45 = 1.20c, to 0.70c, or a devaluation of $\frac{1.20 - 0.70}{1.20} \times 100 = 41.5 +\%$.

Since the grade used is what we market as "open hearth" which sells at $2.70 per lb. of contained vanadium, the

—24—

[fol. 252] selling price of vanadium will have to be about $2.70 \times (100 - 41.5\%) = \$1.58$ per lb. to make it compete on an equal cost basis with molybdenum. It should be noted that this comparison is on a dollar-and-cents basis only, and that it disregards the arguments which might be advanced to the steel maker as to why he should use vanadium in his steel practice; enough has been shown to indicate that such arguments would always be weighed in the light of prejudice for or against.

We must again bring to notice the fact that a mere cataloging of the tensile qualities of a number of different steels is alone not sufficient to make a sale on the one with the most attractive characteristics as shown by laboratory tests. Many other factors are known to contribute to the popularity of a steel, as explained below:

> "The selection of the proper steel to be used in various parts of an aircraft engine involves more than the mere writing of an S.A.E. number on the drawing. Behind the selection of a steel for a particular purpose there are a number of considerations to be taken into account. These not only relate to the performance of the steel, but also to the methods of preparation which are necessary to put it into the proper condition to perform the functions demanded of it. The performance of steels is generally based on such properties as elastic limit, strength, hardness, ductility, fatigue, wearing quality, etc. However, these properties are only a few of those that contribute to the successful application

of metals. Due consideration must also be given to such factors as uniformity, depth of hardening, tendency to warp, hardening range, forgeability, machinability, etc. All of these properties are inherent in the alloy and contribute to its success or failure in performing the functions for which it is intended."

—25—

[fol. 253] This feature of multi-sidedness in steel popularities has been set down here in more detail than might seem justified because it makes a point which will be brought up later—namely, that considerable effort will surely be required to "put across" vanadium even though the cost to the consumer is greatly lowered. Sales development propaganda based on the results of laboratory disclosures will most certainly have to be actively fostered. Among the possibilities are: Better heat treatment response from the vanadium-containing steels; better rolling qualities; better ingot surface, with attendant advantages to shipping costs; less cracking in rolling or forging; better mechanical properties, particularly in heavy sections, especially castings; cleaner steels; and others which might be mentioned. Some of the foregoing are known to be among the advantages occurring because of the presence of vanadium, while others are at best doubtful; the answers could be obtained by laboratory and plant experimentation.

Recognizing the fact that carbon-vanadium steel castings are widely used for heavy sections in the railroad field, some data are included on the mechanical properties of such steels. It can be assumed that the qualities particularly desired in this latter application are high strength with high elastic ratio (permitting reduction in design weight), together with toughness and resistance to shock. How these results have been obtained by the various analyses may be seen in Table IV, where it is evident that the nickel steel is more ductile but less strong than the vanadium steel, while both are superior to the plain carbon steel in strength

[1] "Quality Factors," Messrs. Gillett and Moore, Metals & Alloys, November 1930, p. 811

as well as ductility. It is interesting to note that the relative

[fol. 254] costs of the two steels are as follows:*

Grade of Steel	$ per Gross Ton	¢ per Lb
Plain carbon, or Class A	32.00	1.428
Carbon-vanadium, or Class B	70.00	3.125

It is thus apparent that between the two steels, A and B, which are in competition in the railroad field, there exists a differential of about 1.7¢ per lb. against the vanadium steel. In spite of this additional cost, there is an unknown tonnage of Class B steel sold; the present tonnage would almost certainly be increased by a lowering of the price of vanadium.

From the foregoing it may be concluded that at the price now being charged for vanadium, its use in steel is not likely to increase, and it seems reasonable that it will almost surely continue to decline for some applications. Also, it is apparent that the decline that has already come from the substitutions of other steels is not due to the lack of merit of the vanadium steels, but rather to the fact that the vanadium steels are so near parity with competing compositions that no preference is justified from an economic standpoint. By reason of this equality, it should be possible to greatly help vanadium sales by a cut in selling price.

* Personal communication from The Midvale Company.

[fol. 259]

II. ECONOMICS OF A "COME-BACK" FOR VANADIUM. COST OF PRODUCTION AND PROBABLE MARKET VALUE AT THE STEEL MILL

Some general information respecting the economic phases of vanadium consumption in this country has a bearing on the subject of this report because this information will be helpful in reaching a conclusion as to policy questions. In general, a certain step which might be considered to involve some hazard might be followed if there were an assurance of very large possible gains, whereas the same step might not be taken were it shown that the most optimistic outcome as to the final monetary returns would not warrant disturbing other economic factors.

Fig. 1 charts the tonnage statistics of vanadium in the United States since 1914, as plotted by Mr. Judd of our Mining Department, from "Mineral Resources" and elsewhere. As previously noted, the World War and the Business Depression have introduced such vagaries that it is impossible to draw conclusions as to stabilized trends of consumption. The disturbances to normal business have further been augmented in effect as regards vanadium by the substitution of other and cheaper alloying elements, and it may indeed be questioned as to whether or not this latter encroachment has not been allowed to get out of control at this late date. Similar data have also been plotted by Mr. Judd for molybdenum over the same period (Fig. 2).

Statistics on the production of ore or even contained vanadium do not clearly show the amount of vanadium actually consumed by the whole country. At times, certain amounts of vanadium have been bought in the market and held for later sales; at other times, vanadium has been

—32—

[fol. 260] produced above requirements and stored as oxide against future sales. Since we are not the only producers, nor have we heretofore been the chief ones, it is not accurate to base total consumption of past years on our own sales. Due to a change in conditions however, our chief

competitor and formerly the principal producer, has come to us, it is understood, for a very considerable portion of his oxide; what proportion this was in 1934 and since, the writer has not learned. From conversation with those best informed in our own company, this figure has been taken at about 7/10 of his requirements. For 1934, this would give us a close estimate of the business when equated to pounds of contained vanadium.

In answer to some specific inquiries, Mr. Judd has furnished his opinions based on studies of the statistics, and these are condensed as follows:

1—Heretofore the imports have supplied about 60% and domestic production about 40% of this country's vanadium requirements.

2—It will be noted from Fig. 1 that imports ceased in 1931 and resumed momentarily in 1934. This 1934 importation was a small lot of Peruvian ore, and it is thought that the Minaes Ragras district is out as an active source of supply.

3—It is believed that at present between 90 and 95% of the vanadium consumed in America goes into steel.

4—It is believed that for the seven years ending with 1933, the U. S. Vanadium Corporation sold about 25% of the ferrovanadium used in this country.

Some useful information can be obtained from Table VII which was arranged from data supplied by Mr. C. O. Jacoby and from other sources, and most of it is probably quite accurate; even where unsupported by figures, the

—33—

[fol. 261] assumptions are probably close enough to serve adequately for present purposes.

TABLE VII

Sales by
U. S. Vanadium Corp. and ~~Electro~~ Metallurgical Co.,
By Years and Grades

	High Speed		Open Hearth		Special		
Year	Lb.	% Total	Lb.	% Total	Lb.	% Total	Total
1927	61,128	37.3	45,329	27.5	57,414	35.0	163,871
1928	90,039	18.3	312,874	63.4	89,519	18.2	492,432
1929	13,540	3.93	165,400	47.9	166,283	48.1	345,223
1930	3,772	2.57	79,641	54.2	63,944	43.5	147,357
1931	469	.3	101,580	64.8	56,205	35.4	158,254
1932	563	.9	43,578	66.5	21,606	32.8	65,747
1933	1,402	.5	208,930	76.6	61,897	22.8	272,229
1934	3,034	1.4	189,875*	67.5	24,722	11.3	217,631*
	173,947		1,147,207		541,590		1,862,744

* Includes 28,409 lb. of vanadium in Open Hearth Grade not of our own manufacture.

Note: Percentage calculations by Slide Rule.

The total vanadium sales by the United States Vanadium Corporation, in the form of ferrovanadium, for 1927 to 1934 inclusive, were 1,862,744 lb. To this must be added 1,071,718 lb. of vanadium oxide for the same period, which at 85% purity and equated to vanadium gives 510,037 lb. of vanadium, making a total of 2,372,781 lb. of vanadium. If this be 25% of the total for the period, then the country consumed 9,491,124 lb., or an average of 1,186,390 lb. per year. Because we may not be justified in saying that we sold about 25% of the United States requirements in any given year, it is not possible to say that Table VII is a sealed picture of the annual consumption, and the conclusions will have to be made on the basis of averages.

[fol. 262]

—34—

TABLE VIII

Sales of Vanadium—Lb.

Year	A — Sales of V to 12 Chief Customers by grades				B	A + B
	High Speed	Open Hearth	Special	Total	Total of Sales	%
1930	—	54,157	32,737	86,894	147,357	59.0
1931	291	82,844	33,974	117,109	158,254	74.5
1932	328	33,878	12,818	47,024	66,747	71.5
1933	768	221,651	32,706	255,125	272,229	68.7
1934	1926	15,872	47,417	200,215	217,631	92.2

Table VIII presents a breakdown of the twelve principal U. S. Vanadium Corporation customers, showing their purchases by grades for the period 1930 to 1934 inclusive. It should be remembered that the specifications and uses of the grades are as follows:

Grade	Uses	Price per Lb.	ANALYSIS Max. % C	% Cr	% Mn	% V	Max. % Si
Open Hearth	Misc. engineering steels, S.A.E. type of steels, etc.	$2.70	3.00	—	—	35-40	8.00
Special	High speed steels	2.80	1.00	—	—	35-40	4.00
High Speed*	High speed steels	2.90	0.20	—	—	35-40	1.50

* Nearly obsolete.

"Special" has replaced "High Speed" for the requirements of all except one or two customers. Inspection of the records shows that the total number of customers by years is as follows:

[fol. 263]

—35—

Year	No. of Customers
1930	54
1931	50
1932	45
1933	52
1934	41

It is apparent that no great change has occurred in the number of customers until 1934, when there is a substantial reduction—at least as far as we are concerned; this might or might not be due to a loss of business to a competitor. The quantity of metallic vanadium sold by us in 1934 (217,631 lb.) is lower than the average of the period 1927 to 1934 (233,468 lb.). This may be taken to indicate that nothing toward new applications has developed among the users.

Inspection of Table VIII shows that the twelve principal customers have consumed from 59.0 to 92.2% of our total sales of vanadium in the form of ferrovanadium.

From Table VII it is evident that the preponderant amount of vanadium is sold as "open hearth" grade, that it comprised about 61% of the total sales, and that it is on the ascendency, while "special" accounted for only about 28% of the sales and it is on the decline.

Taking the cost of V_2O_5 as 40¢ per lb.,[1] and allowing 2 lb. of V_2O_5 to produce 1 lb. of contained vanadium and 46¢ per lb. of vanadium[2] for the conversion charge, we got a production cost of 80¢ + 46¢ = $1.26 per lb. of vanadium. On the basis that our previous costs have been $1.70 per lb.

—36—

[fol. 264] of vanadium and that we sold at $2.70 per lb., we could cut the price to $2.10 per lb. and still make the same *percentage* profit on costs as at the present schedule.

---

[1] Letter from J. R. Van Fleet to C. E. MacQuigg, p. 53 of Appendix.

[2] Statement from E. M. Company to C. E. MacQuigg.

(This may be compared with the estimated reduction to $1.58 per lb. given on page 24 of this report.)

As against our position in the vanadium field, we must consider the position of the Vanadium Corporation of America. The data pertaining to this will be found in Mr. Van Fleet's letter to Mr. Haggerson, dated August 10, 1934, in the Appendix to this report. It is not believed that the conclusions therein which are unfavorable economically to the Vanadium Corporation of America, are to be modified in view of what has been learned since the letter was written.

As an indication of what business might be expected in case we decided to cut the price to such an extent that competition in this country were practically eliminated (or by other means such as agreements) and we sold all of the vanadium, three possible assumptions are presented:

I—We get all of the business in vanadium, but due to the recent trend and in spite of research and development it continues to decline, and therefore in a few years there is little demand for the metal. This assumption is rejected as most unlikely.

II—Business remains the same, but we produce practically all of the vanadium. On the basis of roughly 1,000,000 lb. of vanadium consumed annually, our profit at 84¢ ($2.10 — $1.26) would be $1,141,335 as against a past and present profit of around $297,199 per year ($1.00 × 297,199). From the gross profits, we would have to deduct the cost of research and development mentioned later—a total of some $300,000 over a period of three to five years. Even so, the margin of profit is quite attractive, say, in the neighborhood of $1,141,335 — $100,000 = $1,041,335 for three years, and after that time possibly larger, depending on the demand.

[fol. 265]

III—Prices are cut still further so that our profit is only 50¢ per lb. (i.e., vanadium sells at $1.76). This reduction in price with the results of our research and development programs, so boosts the consump-

tion of vanadium that the sale is increased to 2,000,000 lb. per annum. The net profit is still the same as under Assumption II. Some additional advantages might be obtained, as for example those resulting from a new deoxidizer which might use vanadium in large quantities, and while we might make only 50¢ on the contained vanadium we would make a profit on the other elements. Patent protection on such an alloy would be highly advantageous if the alloy had exceptional merit; it is not fanciful to assume such possibilities.

Several conclusions are possible regarding the course that may be indicated by the facts noted in this report, and these may be summarized as follows:

Possible Action	*Favorable Results*	*Unfavorable Results*
I. Take no aggressive action, but continue to let V.C.A. dominate the market and we sell to them—predicated on a continuation of their patronage.	a. We take no risk on ill-will or a possible disturbance of the "status quo" in other fields. b. We will sell the bulk of the vanadium, with no stimulated competition.	a. There is no indication that such a policy will do other than kill all of the disappearing vanadium market, after which there will be no business for anyone. b. If matters are allowed to drift as at present, the vanadium business will continue to disappear and the V.C.A. will in time be defunct or at least moribund, thus forcing them into the hands of the present holders of a substantial portion of their bonded indebtedness, and the

Possible Action	*Favorable Results*	*Unfavorable Results*
		latter interests may be expected to make the most of the situation in the whole alloy field.

—38—

[fol. 266]

II. We sell to V.C.A. but compel them to take an aggressive attitude toward stimulating the waning demand for vanadium.	a. Will avoid friction with the V.C.A., thus minimizing their entry into stronger competition with us in other alloys, e.g., silicon and chromium.	a. This ties our hands and prevents us from obtaining the bulk of the business through research and development.
	b. V.C.A. competition would be most serious in chromium, and it is doubtful if they could menace us without ample supplies of ores. Any mutual agreements would not be jeopardized by this arrangement.	
	c. The V.C.A. will probably be no sharper a competitor than at present and if they are absorbed by A.R.Co., they will most likely get "tough" anyway.	
III. We set our own lowered price and by an energetic campaign, we eliminate	a. We can dominate the market and obtain the bulk of the business by virtue of our better eco-	a. We give every cause for retaliation from V.C.A. and one of their large bondhold-

Possible Action	*Favorable Results*	*Unfavorable Results*
V.C.A. from the field.	nomic position and ore supplies. b. We have a free rein to develop new markets and peg the declining use of vanadium. c. We can eliminate V.C.A. as a desirable adjunct to our competitor in other fields.	ers who would seek every opportunity to thwart us in any possible way. b. Competition would be engendered needlessly because of the chance that vanadium as a major steel making element is done for.

[fol. 267]

III. NEW POSSIBILITIES FOR EXPANDING THE MARKET IN METALLURGY AND FOR OTHER USES IN TECHNOLOGY. CONCLUSIONS AND RECOMMENDATIONS

1. Research

(a) Active experimentation is under way at Niagara today, looking toward the development of addition agents which will make use of vanadium, and more particularly tie it in with other of our products such as silicon and manganese in such a fashion as to augment the useful effects of all. There is sound metallurgical reasoning back of such researches, and success is confidently looked for.

(b) A process recently acquired by the Corporation concerns the use of vanadium for the penetrative dyeing of leather. By means of this process, the entire thickness of the leather is adequately colored. It applies particularly to the soft leathers used in shoe uppers, although it may possibly be expanded to the heavier grades. This is protected by what we judge to be a broad basic patent application which is prosecuted by us and which should enable us to control the sale of sodium vanadate in very large quantities for the carrying out of this process.

(c) The exploitation of vanadium in cast iron is a possibility which should not be lost sight of and one which we can develop to some extent through work with our own experimental cupola. This development would seem to depend more directly than others on the cost of vanadium. It hardly seems likely that any widespread applications to cast iron metallurgy are possible at the present cost of vanadium.

—40—

[fol. 268]

2. Non-Ferrous Metallurgy

This is not cataloged under the heading of our own research, since it is believed that more rapid advance could be made by our staff working with the development departments of the manufacturers of non-ferrous alloys. When, as, and if the price of vanadium can be substantially reduced, then it would seem reasonable that we may catalyze the investigation of applications to bronzes and other non-ferrous alloys. It should be pointed out that beryllium, at a cost of several dollars per pound, is finding its use in copper alloys on the increase. This field looks attractive, at least.

3. Vanadium Catalysts

It is generally believed that vanadium affords the most efficient catalysts for a great number of chemical processes, and that the reason it is not more widely used is partly because of a patent situation, but chiefly because of its cost. The study of vanadium catalyst development was excluded from this report, but any substantial lowering of the selling price would be reflected in increased consumption of "red cake."

4. Metallic Vanadium

It is admitted that the properties and possible uses of metallic vanadium are too speculative for the purposes of this report, but it is felt that if an aggressive policy of development is going to be adopted with our production of vanadium, then a research on metallic vanadium is surely

justified. While the specific attributes of the metal in its pure form in a commercial environment can be guessed at only, it is undeniable that ample precedent exists from

—41—

[fol. 269] other metals for saying that such a research is a very attractive gamble. Today the best-informed metallurgist would hesitate to deny the likelihood of unusual and valuable properties being found in, say, an alloy with 13% vanadium and 87% manganese or 87% vanadium and 13% chromium, or any one of many combinations of *pure* metals that might be made under the "rule of 13%."* Vanadium should be capable of production in a substantially pure state if sufficiently useful properties justify its commercial manufacture.

In conclusion, it is evident that from the research angle the Electro Metallurgical Company is in a most favorable position to further exploit vanadium. This is chiefly because of the Laboratory facilities, the experience of the staff trained in alloy steel metallurgy, and the contacts of the Sales-Development Department with the steel makers. Because of these facilities, it would seem that the likelihood of getting the most success from a development program is almost beyond doubt. On the other hand, such a research and development program would have to be carefully planned and energetically followed in all of its ramifications, such as (a) new deoxidizers and their applications in steel, (b) work to apply vanadium in cast iron metallurgy, (c) catalyst developments, (d) cooperative work on vanadium bronzes and light alloy metallurgy, and (e) miscellaneous uses as in the leather tanning industry, ceramics, etc. Such a program would easily require major efforts for three to five years as a minimum, and for the metallurgical research alone would cost from $50,000 to $100,000 per year, or a total of $300,000. The first 1 or 1½ years might be expected to reach the top figure if the program

---

*Reference is made here to the unique properties that have characterized iron with 13% silicon (Duriron), iron with 13% chromium, iron with 13% manganese (Hadfield's austenitic steel).

—42—

[fol. 270] be intensively pursued; the later periods of the work would likely not exceed the smaller amount. The reason for this rather large expenditure to extend the use of an element already established is due to the fact that the users, because of its high cost, have learned to depend on satisfactory substitutes (notably molybdenum) and it would be necessary to overcome the present momentum in the direction away from the use of vanadium. One effective way to swing the tide back toward vanadium would be by showing the great superiority of new combinations.

In spite of some adverse factors, it appears that the hope of success is sufficient to warrant the undertaking of placing a cheapened vanadium in much greater use, and unless totally unforeseen developments occur it does not seem too much to expect the Research Department to practically assure a successful outcome to such a program. However, as soon as the logical price reduction is decided upon but before final decision is made on the steps to be taken, some time should be given the Research and Sales-Development Departments to consider and present a joint program for approval.

Conclusions

1. Unless we are entirely misled by our own figures, we seem to be in the key position in the vanadium business in America, and are therefore in a position to dominate the situation.

2. The metallurgical use of vanadium has been declining for several years and probably will continue to do so because of the present cost to the user.

3. The declining use could be stayed and probably a greatly increased consumption could be built up by research and development work.

4. It is believed that the metallurgical use of vanadium could be revived possibly up to between ¼ and ½

—43—

[fol. 271] again the magnitude of the present consumption in this country. This would require an in-

tensive program of research and development work which might cost from $200,000 to $300,000.

5. The total consumption of vanadium for the country, based on a fair approach to normal business, would be about 1,300,000 lb. per year, and this might be pushed up to a consumption of 1,800,000 lb. per annum, or more. The profits on this business on the present basis of calculation would be between 50 and 75¢ per lb., provided the price schedules suggested are put into effect. The total pounds sold by the U. S. Vanadium Corporation under such circumstances would be an indeterminate matter of competition.

Recommendations

That a decision be made respecting the three possible courses suggested, and in any event an arrangement effected whereby our supplies of vanadium can be successfully exploited.

—44—

[fol. 272]

IV. APPENDIX. COLLATERAL INFORMATION

In view of their opportunities to obtain current information on both the metallurgical and the commercial angles of the vanadium question, the opinion and advice of Messrs. DuTot, Good, Smith and Crafts have been obtained in personal conferences, and the writer wishes to express his indebtedness to these gentlemen who have assisted him with their counsel. Their collective opinions may be summarized as follows:

Vanadium has at present three more-or-less assured fields of commercial importance. By "assured" is meant that the effects of vanadium are so beneficial as to be axiomatic, and the regard in which it is held is so high that it would take much effort to dislodge it from its position. These applications are:

(a) High Speed Steels

This subject has already been touched upon, and the information received from the conferences with our field staff

merely confirmed what was generally known. Incidentally, it is understood that Mr. Clarage recently told one of our men that their research work had demonstrated the exceptionally high quality of the molybdenum high speed steels (Watertown Arsenal type), and his tip to Electro Metallurgical Company was "to locate some good supplies of molybdenum ores!" The molybdenum high speed steels also use vanadium and have analyses in the following ranges:

—45—

[fol. 273]

	MoTung	MoMax
Carbon	0.76%	0.78%
Manganese	0.30	—
Silicon	0.30	—
Tungsten	1.60	2.06
Molybdenum	7.90	8.18
Chromium	3.85	5.25
Vanadium	1.10	1.01

(b) High Tensile Forgings and Castings

These have already been referred to, and a class example given as the railroad heavy forgings and castings. American Steel Foundries are using vanadium in their medium-manganese steel castings, and Mr. Hamilton, the Metallurgist, is convinced of the superiority of their analysis.

(c) Small Additions to Sundry Steels

There is a widespread use of vanadium as an addition to quality steels of diverse analyses; this is not large as to tonnage, but is rather general and is the field referred to by Mr. Byrd (page 11). The additions are small so that residual vanadium is not more than 0.03 to 0.05%, but it is generally conceded that these additions represent the compromise between the cost of alloy and beneficiation of the steel through its presence.

With respect to cast iron the outlook that might be obtained from a study of the very meager literature is not justified when it comes to actual shop tests. Mr. E. K. Smith believes that any improvement in the properties of cast iron could be obtained by other addition agents which

we also make and at a much lower cost; e.g., silicon and chromium. The latter two in balanced proportions would, in Mr. Smith's opinion, enhance the quality of cast iron fully as much as would vanadium.

—46—

[fol. 274] It is the writer's belief that the extent to which vanadium usage can be expanded in the cast iron field is dependent chiefly on the amount the price can be lowered. With reductions of substantial nature, say, 35 to 50%, it seems probable that vanadium may take its place *along with* chromium and silicon additions in the production of the so-called high test cast iron.

ELECTRO METALLURGICAL CO.
NEW YORK

Mr. F. H. Haggerson
Room 1714

April 10, 1935

Subject: Survey of Alloy Steels Used by Automobile Companies

Dear Mr. Haggerson:

This report indicates that molybdenum is making greater inroads on nickel than on chromium. Vanadium is certainly losing out. At our present price, 0.15 to 0.18% vanadium adds $15.40 per net ton to the mill cost of steel. One per cent. of chromium adds about $3.00 per ton to mill cost. Molybdenum, 0.15% to 0.25%, adds about $3.50 per net ton to mill cost.

To make vanadium compete with molybdenum on a cost basis, our price would have to be reduced from the present value, $2.70 per lb. to about 60¢ per lb. contained.

I plan to bring this up for discussion at our next Research and Development meeting. We may be able to develop a steel with good properties with 1.00% chromium and about 0.10% vanadium. We might be able to create an interest in this if the present price of vanadium were cut in half.

Pardon my marking the report in pencil. Thought it would facilitate comparing the different S.A.E. numbers.

Very truly yours,

WJP-EVL (signed) W. J. PRIESTLEY

—47—

[fol. 275]

SURVEY OF ALLOY STEELS USED BY AUTOMOBILE COMPANIES

Approximately 300,000 tons of alloy ingots were consumed in 1934 in the production of 2,778,739 passenger cars and trucks. This year production of automobiles is running about 40% higher, so that the tonnage of alloy steel ingots for this industry should exceed 400,000 tons and ferro-alloy sales for this purpose should be higher than in 1934 but not in the same proportion on account of the change in grades of alloy steel being applied to the various parts of the cars.

In respect to the consumption of ferrochrome in particular, sufficient evidence was obtained to warrant the belief that this alloy will continue in popularity despite the present attitude of the Chrysler Corporation towards carbon-molybdenum steels as the following will show a definite trend in favor of cheaper steels, most of which contain chromium.

Recent advances in the art of steel making have permitted progressive steel makers to control grain size which exerts a powerful influence on machinability, depth hardening, impact resistance and forgeability. Through a combination of grain size control and alloy additions, the properties of the various alloy steels have been noticeably improved to such an extent that nickel, an element frequently used to impart toughness, is not so essential as formerly. Chromium, however, is required for high strength, although molybdenum occupies a definite position in the trade today. Mr. Ferrell of Timken advised me that the addition of a small amount (0.25%) of chromium to Wills' carbon-molybdenum steel would further improve it.

While passenger cars are being constructed of cheaper and better-made steel, truck production follows a reverse trend; i.e., higher percentages of alloying elements for further improvement in strength, along with similar rigid requirements on grain size, are in demand because truck operators exercise no discretion when loading; consequently trucks overloaded 500 to 1000% fail, and criticism of the builder results.

As indicated in my preliminary report, the Chrysler organization is enthusiastic over Mola, a fine-grained abnormal molybdenum-bearing carbon steel, and anyone listening to their account of its marvelous properties without talking to others who may be interested will probably come away with a gloomy opinion of other steels made with nickel, chromium or vanadium. However, it is particularly interesting to us to know that (1) other automobile metallurgists show no enthusiasm, although they are interested; (2) steel companies are not anxious to push this grade; (3) the sales price will have to be increased to permit a profit for the steel company; and (4) Dodge faces a $100,000 outlay for new heat-treating equipment to handle the steel.

It is also true that the claims made for the properties of Mola steel by Wills and McCleary with respect to surface

—48—

[fol. 276] decarburization, better finish, uniformity, etc., are the result of first, selection of the most suitable heat, and second, special care by all mill operators. Whereas Wills looks upon this steel as ordinary carbon steel plus 0.25% molybdenum, the steel mill operator who made similar steel years ago (see Carnegie Handbook) considers it a very difficult proposition.

(From "The Making, Shaping and Treating of Steel." In the hot working of this steel no benefits that can be attributed to the presence of molybdenum are observed, and many surface defects common in working plain carbon steel may appear in the molybdenum steel, also.)

The Mola steel is made today by treating it in the ladle with upwards of 1½ lb. of aluminum per ton. Such practices are not conducive to the production of clean steel but are

helpful to bloom surfaces and aid in the formation of fine-grained structures.

Mr. McCleary claimed that 1 in. round Mola steel samples quenched and drawn to a tensile strength of 88,000 lb. per sq. in. could be twisted 525° before rupture, while the steel formerly used for rear axles had a maximum twist angle of rupture of 320°. He claimed further that leaf springs of "satisfactory" Mola steel could be bent 135° before failure even though 444 Brinell, while other steel at the same hardness could be broken at 45°.

Republic Steel Corporation metallurgists are pushing chromium and chromium-nickel steels of the #3100 and #5100 type. The Research Department has built a testing device that simulates transmission gear conditions, and they are testing present standard grades of alloy steels to determine, if possible, the most suitable grade of steel for gear units.

Timken developed and are promoting a nickel-molybdenum steel with 0.55 to 0.65% chromium, similar to S.A.E. #4615, for all highly stressed parts, and have considerable confidence in its quality.

Pittsburgh Crucible are devoting particular attention to the production of higher manganese steels containing from 1.00 to 2.50% manganese.

The U. S. Steel Corporation metallurgists favor carbon steel with grain size control, but make and study the production of alloy steels with a view towards furnishing better quality and service than their competitors.

Jones & Laughlin and Great Lakes favor high manganese (1.25 to 2.50% manganese) with and without sulphur for machinability, but make some other grades depending on mill equipment; for instance, Great Lakes have produced large tonnages of chromium steel for Ford leaf springs.

—49—

[fol. 277]

Grades of Steel Used for Important Parts, with Comments

Crankshaft

Ten years ago alloyed steel was used for this important part of the engine; today practically all crankshafts are forged from S.A.E. #1045 (see attached chart of S.A.E.

grades). Ford used a copper chrome-iron steel shaft that serves the purpose satisfactorily.

Carbon	1.25–1.40%
Manganese	0.50–0.60
Silicon	1.90–2.10
Chromium	0.35–0.40
Copper	2.50–2.75
Phosphorus	0.10 max.
Sulphur	0.06 "

Leaf Springs

With the exception of several automobile makers, most leaf springs are made of silico-manganese (S.A.E. =9255 or =9260) steel. Front springs of trucks have been principally chrome-vanadium (=6150), but Chevrolet is experimenting with chromium steel (=5150) on all cars. Ford and Hupp use =5150; Chrysler is using Mola.

The leaf spring plants, Mather and Standard, prefer =5150 to =9255 on account of greater uniformity of hardness after heat treatment. Standard Steel Spring report 10 to 15% production of chromium steel during past six months, whereas previous to that time the silico-manganese and carbon steels were the only grades used.

Republic Steel Corporation find less demand for silico-manganese spring steel.

Illinois Steel Company would like to add 0.25 to 0.50% chromium to thick leaf springs of silico-manganese type to obtain better physical properties, but buyers object to any increase in cost.

Coil springs have been made of the same steel as leaf springs depending on the experience of the automobile company.

Connecting Rods

Oldsmobile and LaSalle use =1340, Cadillac =4140, all others use S.A.E. =1035 or =1040. The carbon steel is quenched and drawn, the =1340 normalized. Any reduction in heat treating costs is very attractive to automobile makers.

Transmission Gears

Principal changes: Chevrolet planning to supplant
—50—
[fol. 278] #6150 with #5150; Hudson-Terraplane has substituted #4640 for #3440; Hupmobile changed from #5150 to #4640.

Ford continues in the use of chromium and chrome-vanadium; Wandersee has no confidence in nickel-molybdenum steel for this highly important part. Pontiac favors #3145 over #2345.

Buses and trucks have been built with carburized transmission gears and as noted above, passenger cars of oil-hardening types. A difference of opinion between these two grades will always exist, the cost of heat treating a 0.40 or 0.45% carbon steel is far less than carburizing a 0.15 or 0.20% carbon nickel-molybdenum steel. The surface hardness of carburized steel will measure 60 Rockwell C, with a core hardness of 30 on #4615 or 40 on #2512, but 45 on #4615 plus 0.55% chromium. Oil-hardened gears have a surface hardness of 50 to 55 Rockwell C.

Between 3½% nickel (#2300) and 1½% nickel-molybdenum (#4600), the #2300 is more difficult to machine than #4600, even though the latter is fine-grained. Higher nickel steels show additional resistance to machining over 3½% nickel steels.

Differential Gears

These parts suffer as much abuse in the hands of the average driver as transmission gears, and the selection of steel depends on design with respect to unit pressures and the power plant; however, there is a preference for carburized ring gears with oil-hardened pinions and side gears.

Here we find several changes—mainly, towards nickel-molybdenum. Olds changed from 5% nickel (#2512) to 1½% nickel-molybdenum (4615); Hupp from 3½% nickel (#2315) to 1½% nickel-molybdenum (#4615); Nash continues to use oil-hardened #2350 and specifies electric furnace steel.

Several companies are beginning to question the advertised claims for electric furnace steel superiority.

Steering Knuckles, Pins, Etc.

Olds, Buick, LaSalle and Cadillac favor the use of 1.60 to 1.90% or 1.35 to 1.65% manganese steels, designing the part a little heavier than if higher strength steels were used.

Ford favors straight chromium steel; Hupp changed from chromium-nickel (=3100) to chrome-molybdenum (=4130); Hudson made the same change; Chrysler plans to use Mola.

Camshafts

Wherever possible I believe chromium-bearing chilled cast iron has been used; however, on some automobiles a

—51—

[fol. 279] gear is located in the center of this shaft which prohibits the use of chilled iron. In other cars carburized carbon steel =1015 or =1020 is used. There is not much difference in cost according to Mr. Smart of Pontiac.

Axle Shafts

Front I-beam axles are made of carbon steel (=1040) Chevrolet, nickel-molybdenum (=3140) Pontiac, high manganese (=1300) Olds, but Hudson substituted chrome-molybdenum (=4140) for chromium-nickel (=3140), while Ford uses chromium steel.

Rear axles are made of =3140, =4615 and Mola for Chevrolet, Olds and Chrysler respectively.

International Harvester trucks are using chromium-nickel-molybdenum drive shafts in place of =4640 and =3140; they also are changing from 1½% nickel-molybdenum to 3½% nickel or 5% nickel steel gears for higher strength.

Wrist-pins

Ford uses a low chromium (Type N) cyanided steel, Olds and Buick a =1300 steel with high sulphur, Cadillac and LaSalle a 5% nickel carburized part. Hudson changed from =2315 to =4615, Hupp from =6115 to X-1315; Chevrolet uses =5100, and Chrysler 3½ and 5% nickel.

Exhaust Valves

Practically all these parts contain substantial percentages of chromium to resist the corroding influence of the hot gases. Hupp, for instance, buy their valves from Wilcox who furnish steel containing 14% chromium, 14% nickel and 3% tungsten.

Body Bolts, Studs, Spring Clips, Etc.

Highly stressed bolts are either chromium-nickel, high manganese or nickel-molybdenum depending on local opinion, advice from steel supplier and machinability.

Small Forgings, Etc.

Links in the front and knee action design, spline shafts and other less highly stressed parts are made of practically the same steel and for the same reasons given in the preceding paragraph.

Spicer Manufacturing Company considers Timken's nickel-molybdenum plus 0.55% chromium steel one of the best they have ever used, and use more of this grade than any other for transmission gears, differentials, etc., that are furnished in the assembled condition to passenger car builders.

Much of the above information was obtained only by advising those interviewed that the information would not be

[fol. 280] published or broadcast. A number of visits proved very interesting and I was pleased at the cordial reception in nearly every instance. I believe this may be credited to the popularity of Electromet alloys.

Vanadium Situation

Mr. C. E. MacQuigg.
Mr. J. M. Price.
Mr. W. J. Priestley.
Mr. J. R. Van Fleet.

Dear Mr. Burwell:

Confirming our talk and Mr. MacQuigg's letter to me of July 22nd, copy to you, in which he confirms his talk with you on Saturday, July 20th, I understand that you have some slants on the Vanadium situation which you think should be added to Mr. MacQuigg's report of July 8th, before we make a definite decision as to what our future policy should be in an attempt to revive the Vanadium business or, at least, hold our present position.

With this in mind and because vacations are on now, I am suggesting that you and Mr. Van Fleet collaborate in a report commenting on Mr. MacQuigg's report and giving any additional ideas you may have which should be incorporated therein or any criticisms you may have as to his findings or suggestions.

We will all get together on this matter about the middle of September to decide on what our policy in the Vanadium situation should be.

Very truly yours,

FPGormely/D

B. B.

Mr. J. R. Van Fleet,
New York City.

VANADIUM REPORT.

Dear Mr. Van Fleet:

Mr. C. E. MacQuigg has well covered the vanadium situation in his report. The field covered is, by necessity, limited to markets and research in connection with the sales of vanadium. His conclusions and suggested policies such as price reductions to stabilize the present market and research development to extend the consumption of vanadium are well supported by his report.

My letter to you is mainly concerned with our position to produce vanadium in the future in such quantities as may be required by fundamental remedies in the situation. We may assume that the vanadium sitation is not to remain in the present condition. Either it will decline to a self-sustaining minimum which would deliver the market to the producer able to maintain small production and low cost, or price remedies will shift the business to the low cost producers, or new developments would give us a larger share of an increased industry.

Our ability to produce vanadium in the past has had little relationship to our ability to dispose of our production. The initial market of the Rifle operation was inherited from the Standard Chemical Company, and the Vanadium Corporation has held, from the momentum of its operation in Peru, the largest portion of the market. We know that the high grade ores from Peru are exhausted and the present reserves are in marginal ore requiring a treatment plant at costs approximately equal to the cost of the oxide they are now obtaining from us. It would be expensive for the Vanadium to resume production from Peru and they could not meet price competition and price reductions necessary to stabilize the market. Therefore, it would ap-

pear that our position to sell our future production is materially improved and may be developed in line with our strong position in ores in this country.

From our Rifle operation we still have stocks of vanadium produced at favorable prices. Among our other assets is the successful experience in development of sandstone ores, their treatment and large reserves of ore which are adapted to low cost production. But it must be emphasized that this vanadium is still in the ground in a region remote from transportation, and that the initial production of a new unit for future supply is limited, by engineering reasons, to approximately one-half of the present depressed market.

[fol. 283] No small part of the results of past operations has been due to the continued efforts of a well-developed organization. It resulted in the exploitation of the Rifle deposit in face of the adverse opinion of the Vanadium Corporation as to the economic value of that ore. A point of weakness in our present situation is the fact that only a skeleton exists of that organization and in a new area we must again start to train operators and create a machine for production. The proper time allowance for this build-up is essential and must be considered in any plans for vanadium.

The construction of a single initial unit will consume 56-man shifts for nine months. Three months of the year are unfavorable for construction. At the start we do not have water supply or facilities for 56 men so that the rate of construction must be small in the beginning while this is being provided. In the early months of the year, roads, and especially new roads unpacked by travel, make transportation difficult to and from the railroad. For these reasons we estimate that, in case production will be required in the end of 1936, or early in 1937, then we should start this Fall on water supply and other preliminary work.

Our plans are designed for an initial production of about 600,000 pounds of V_2O_5 yearly. In this unit we will introduce such process improvements as have been developed to the plant stage and obtain a smooth operation and basis

for further expansion if required. The largest element of cost will be in mining and the largest possibility of cost reduction. The nature of the ore deposits makes necessary the development and preparation of a large number of places for mining in advance of production and by the early initiation of exploratory work and diamond drilling in mineral areas we can establish ourselves on a safe basis to supply an increased demand with low costs. A budget for this work is included in our estimated costs. To attempt an enlarged output on short notice would be to seriously handicap our production costs.

I would recommend that we cooperate closely with the Research Department in the development of non-ferrous salts directly from our plant solutions. The possible market in dyes, and in other non-ferrous uses can be materially assisted in its cost side if we can make the required salts simply and easily from the first plant solutions without the cost of precipitation and other steps now used. For example, we have the possibility of making metavanadate of approximately 99.5 purity directly from leach solutions by building up our solution strength and precipitating with ammonium chloride. In red cake we have a lower cost possibility and can continue our present high quality product with much economy. Work should be done on uranium salts, and the production of other byproducts which offer the opportunity of substantial return. I believe that the Research Department can assist us in research in connection with plant improvements looking towards lower costs.

The report by Mr. MacQuigg gives the basis of the market situation and it seems to me that the policy now indicated is largely a question of the timing of essential moves such as are required to maintain the market and to place us in a condition to produce vanadium in the future.

Very truly yours,

/s/ Blair Burwell

Mr. F. H. Haggerson,
Room 1715, Building.

VANADIUM SITUATION

Messrs. F. P. Gormely,
W. H. Sneath,
J. M. Price,
C. E. MacQuigg.

Dear Mr. Haggerson:

On September 1, 1935, we had in stock 1,812,127 pounds V_2O_5 as fused vanadium oxide, and an equivalent of 600,000 pounds V_2O_5 in ferro-vanadium at the various plants, making a total inventory of 2,412,127 pounds V_2O_5 available on that date.

Place	Lbs. V in FeV	Lbs. V_2O_5
Rifle		1,054,958
Columbiana	290,026	97,157
Niagara	14,397	660,012
Welland	10,951	
	315,374	1,812,127
Equivalent V_2O_5 in FeV		600,000
Total V_2O_5 lbs.—9/1/35		2,412,127

Vanadium sales for the first eight months of 1935 have amounted to 138,138 lbs. V contained in FeV and 192,814 lbs. V_2O_5 in fused oxide and other products. The Vanadium Corporation of America took 166,073 lbs. of the V_2O_5 in fused oxide and the balance or 26,771 lbs. V_2O_5 was sold as red cake and ammonium metavanadate. Equivalent V_2O_5 up to September 1, 1935 sold is 455,300 lbs.

It is estimated that vanadium sales for the last four months of 1935 will average about 21,000 lbs. V in FeV per month. Also, 84,000 lbs. V_2O_5 will be shipped to the Vanadium Corporation of America, and about 15,000 lbs. V_2O_5 in the other products sold. The equivalent V_2O_5 for the last four months sales is estimated at 258,600 lbs. and the remaining stock of V_2O_5 on hand at the end of the year will be 1,698,227 pounds V_2O_5 at all places and in all products.

Tabulated, the 1935 sales V contained in FeV and V_2O_5 appears as under, with the last four (4) months estimated:

[fol. 285]

1935	Lbs. V in FeV	Lbs. V_2O_5
January	23,558	2,305
February	7,347	1,015
March	15,332	5,915
April	14,985	5,014
May	19,539	6,775
June	16,903	532
July	19,215	87,655
August	21,259	83,603
8 months	138,138	192,814
Last 4 "	84,000	99,000
	222,138	291,814
Equivalent V_2O_5 in FeV		422,086
Total lbs. V_2O_5		713,900

On January 1, 1936 we should have available 2,153,527 lbs. V_2O_5. It must be remembered that approximately 600,000 lbs. V_2O_5 is always tied up in manufactured ferro-vanadium and that the plant requirements are approximately 500,000 lbs. V_2O_5 yearly, should sales continue about as experienced over the past three years and the usual stocks of FeV maintained. These stocks of finished FeV amount to approximately 300,000 lbs. contained V and is a little over a year's sales' requirements of FeV.

Available Sept. 1, 1935	2,412,127	lbs. V_2O_5
Sales last 4 months 1935	258,600	"
Available Jan. 1, 1936	2,153,527	"
V_2O_5 in FeV stocks	600,000	"
	1,553,527	"
Plant requirements 1936	500,000	"
Available for sales	1,053,527	" "

It may be seen from the above that there is only 1,000,000 lbs. V_2O_5 available for sales until more V_2O_5 is produced. It may also, be seen that with sales maintained at the present level, all of our stocks of V_2O_5 will have been exhausted by the end of 1938, provided no fused oxide is sold. Being so limited in the amount of V_2O_5 available for sales' purposes, we cannot take advantage of attractive business should it be offered. If we accepted 1,000,000 lbs. of fused oxide orders from the Vanadium Corporation of America or from Europe, we would be out of the vanadium business by the end of 1937.

Regardless of the substitution of other metals for vanadium in engineering steels, sales of FeV have remained about the same. It is apparent that the falling off in engineering steels is made up by the general improvement [fol. 286] in the steel business. Sales of V in FeV for the past nine (9) years are listed below, the sales for the last four (4) months of 1935 being estimated:

Year	Lbs. V in FeV	Equiv. lbs. V_2O_5
1927	163,870	311,350
1928	492,500	935,750
1929	345,220	655,920
1930	148,400	281,960
1931	158,710	301,550
1932	70,300	133,570
1933	286,410	544,180
1934	227,600	432,450
1935	222,140	422,100
	2,115,150	4,018,830

It safely may be assumed that the vanadium sales for 1936 will, at least, equal 1935. Records seem to indicate that we enjoy about 30% of the vanadium business, in which case the Vanadium Corporation will require about 1,000,000 lbs. V_2O_5 for their 1936 business. We should sell them vanadic acid at a price low enough so that a source of supply elsewhere will not look attractive. I am quite certain that acid from the Peruvian mine costs more than 80 cents per pound V_2O_5, but it certainly isn't less than 75 cents.

It may be realized from the above that time is now an important feature of our vanadium situation. It will require a year's time in which to construct the plant in the Paradox Valley and get it into production. If this new plant is to be in production the last of 1936, some of the preparatory work should be started as soon as possible.

The new plant at Uravan—which the Paradox Plant site has been named, and which will be the name of the postoffice to be opened there—is estimated to cost $366,000. During the Summer and Fall of 1934 the salt works—which is to be a part of any operation in the Paradox, was installed, and the power canal was cleaned out and repaired, with an expenditure of approximately $16,000.

There is yet considerable preliminary work which can be done to advantage before the actual construction of the plant shall commence. During the Winter and Spring the weather is often bad in this section and would interfere with and make outside construction more costly. The work that can be done this Fall to advantage, would consist of repairing the buildings on the plant site for the housing of construction forces, putting in the water supply, finishing the re-instatement of the power plant, and moving from Rifle compressors and other equipment necessary for construction purposes. Also, there is a certain amount of [fol. 287] underground work in the mine which can be done to advantage with a small crew, preparatory to mining the ore bodies which have already been developed. The design for the construction of the plant calls for underground ore bins. The location for the plant is such that these underground ore bins can be made much larger and cheaper than bins constructed from timber or steel.

It is recommended that we proceed with this preparatory work this Fall and Winter with an expenditure not to exceed $5,000 per month. There will be no additional overhead on this work, as we have the overhead anyway. With this work completed we will then be all ready for actual construction in the early Spring of 1936, and can have the first unit in operation by the end of 1936.

A single roaster plant on the Paradox ore will produce from 600,000 to 750,000 pounds of V_2O_5 yearly, which will take care of our own needs and accumulate some excess. This capacity can rapidly be increased by the addition of roaster units. The plant has been designed to allow for expansion in case increased capacity is necessary.

In Mr. MacQuigg's research report of June 1935, his conclusion points out that it would, probably, be advisable to reduce the price of vanadium products to the trade. With the new plant in operation in the Paradox Valley the price can be considerably reduced and still make as much profit as we made on the Rifle production.

We took over the United States Vanadium Company on January 1, 1927, paying therefore in cash and securities a total value of $2,275,000. In 1927 the Rifle property was set up on the books of the United States Vanadium Corporation as follows:

Real Estate & Equipment	—	$ 528,202.89
Mine	—	1,539,395.31
Discovered Mine	—	924,480.00
Total Property Set-Up	—	$2,992,078.20

This entire set-up was depreciated and depleted with the exception of $25,000 on the production at Rifle, amounting to approximately, 7,000,000 pounds V_2O_5. The $25,000 consists of $21,000 real estate and equipment at Columbiana, and $4,000 real estate at Rifle. This write-off amounted to 42¢ per pound on the production at Rifle; the average production costs at Rifle Plant were 38¢ per pound. The write-off on the Rifle production was not uniform over the

years, and varied considerably, but the average cost of the V_2O_5 in ferro-vanadium was from 80¢ to 85¢ per pound.

[fol. 288] The net profits, after all charges, on the Rifle operation to January 1, 1935, on approximately 4,600,000 pounds of V_2O_5 sold, amounted to $1,965,375.68 or approximately, 42¢ per pound of V_2O_5 sold.

The present book value of all the property of the U. S. Vanadium Corporation is $369,719.62. As stated above, approximately, $25,000 of this amount is in real estate at Columbiana and Rifle. The balance of $344,719.62 represents the value of the Paradox Valley property. With an additional expenditure of $350,000 for the new Plant, the total investment in the Paradox Valley will amount to, approximately, $695,000.

We own large vanadium resources in the Paradox Valley. There is measured and mined out on dumps on our property, a total of 148,170 tons of ore containing 5,300,000 pounds of recoverable V_2O_5. In addition, we have partly developed by underground workings and core drilling, 225,000 tons containing 8,100,000 pounds recoverable V_2O_5, making a total of developed resources amounting to 13,400,000 pounds of recoverable V_2O_5. In addition to this there is a prospective ore tonnage which can, reasonably, be estimated at a minimum of 10,000,000 pounds recoverable V_2O_5; and the prospects in this section would indicate a plentiful supply of vanadium for many years to come.

If we should depreciate and deplete the Paradox investment of $695,000 on the recoverable V_2O_5 already developed—amounting to 13,400,000 pounds—these charges would amount to only 5.2¢ per pound of V_2O_5 recovered, against the 42¢ necessary at Rifle. Estimates of the production costs in the Paradox indicate an ultimate low-cost operation. This cost has been placed at 40¢ per pound including the depreciation and depletion charges. From the Paradox operation we will, also, recover uranium and radium compounds which, if credited to the production of V_2O_5, would somewhat lower the estimated cost of 40¢ per pound.

If we allow the same profit of 42¢ per pound of V_2O_5 sold, as experienced in the sales up to January 1, 1935, we can reduce the price of V in ferro-vanadium to $2.10 and still have the same profit.

	Lb. V_2O_5
Estimated Cost Paradox	$0.40
Profit	.42
	$0.82
2 lbs. for each lb. V in FeV	1.64
Conversion Cost	.46
Total	$2.10

[fol. 289] Realizing 25¢ per pound profit on V_2O_5 which would amount to 50¢ per pound of V in FeV, the sales price could be as low as $1.76 per pound of V in FeV.

The policy of reducing prices must be carefully considered and it may be pointed out that as long as we supply V_2O_5 to the Vanadium Corporation of America, we cannot reduce the price without making some adjustment with them on the high-priced material they have purchased from us and are holding in inventory. Under the circumstances a reduction in price could not very well be made immediately.

Mr. MacQuigg's report also indicates that the consumption of vanadium could be considerably increased by developing new uses in research. He estimates that this research would require from 3 to 5 years at a cost of, approximately, $300,000. There is no question in my mind but what research on new uses for vanadium, and research to stimulate the present uses for vanadium, is very important and essential to the future of the business.

A certain amount of this research should be done in connection with the plant operation in making V_2O_5. Mr. Burwell has pointed out that the research of the non-ferrous uses can be materially assisted in its cost side, if we can make the required salts simply and easily from the first plant solutions, rendering the precipitation and other steps now used, unnecessary.

It may be pointed out, however, that there will be no necessity for research along any lines, unless we are in position to take advantage of it on the production side. Unless we prepare for renewed production of V_2O_5 we will be out of the vanadium business within three years.

Very truly yours,

EW/J.R. Van Fleet

Room 1715, Building.

VANADIUM SITUATION.

Messrs. F. P. Gormely,
W. H. Sneath,
J. M. Price,
C. E. MacQuigg

Dear Mr. Haggerson:

On September 1, 1935, we had in stock 1,812,127 pounds V2O5 as fused vanadium oxide, and an equivalent of 600,000 pounds V2O5 in ferro-vanadium at the various plants, making a total inventory of 2,412,127 pounds V2O5 available on that date.

Place	Lbs. V in FeV	Lbs. V2O5
Rifle		1,054,958
Columbiana	290,026	97,157
Niagara	14,397	660,012
Welland	10,951	
	315,374	1,812,127
Equivalent V2O5 in FeV		600,000
Total V2O5 lbs.—9/1/35		2,412,127

Vanadium sales for the first eight months of 1935 have amounted to 138,138 lbs. V contained in FeV and 192,814 lbs. V2O5 in fused oxide and other products. The Vanadium Corporation of America took 166,073 lbs. of the V2O5 in fused oxide and the balance or 26,771 lbs. V2O5 was sold as red cake and ammonium metavanadate. Equivalent V2O5 up to September 1, 1935 sold is 455,300 lbs.

It is estimated that vanadium sales for the last four months of 1935 will average about 21,000 lbs. V in FeV per month. Also, 84,000 lbs. V2O5 will be shipped to the Vanadium Corporation of America, and about 15,000 lbs. V2O5 in the other products sold. The equivalent V2O5 for the last four months sales is estimated at 258,600 lbs. and the remaining stock of V2O5 on hand at the end of the year will be 1,698,227 pounds V2O5 at all places and in all products.

Tabulated, the 1935 sales V contained in FeV and V2O5 appears as under, with the last four (4) months estimated:

[fol. 291]

1935	Lbs. V in FeV	Lbs. V2O5
January	23,558	2,305
February	7,347	1,015
March	15,332	5,915
April	14,985	5,014
May	19,539	6,775
June	16,903	532
July	19,215	87,655
August	21,259	83,603
8 months	138,138	192,814
Last 4 "	84,000	99,000
	222,138	291,814
Equivalent V2O5 in FeV		422,086
Total lbs. V2O5		713,900

On January 1, 1936 we should have available 2,153,527 lbs. V2O5. It must be remembered that approximately

600,000 lbs. V_2O_5 is always tied up in manufactured ferro-vanadium and that the plant requirements are approximately, 500,000 lbs. V_2O_5 yearly, should sales continue about as experienced over the past three years and the usual stocks of FeV maintained. These stocks of finished FeV amount to approximately, 300,000 lbs. contained V and is a little over a year's sales' requirements of FeV.

Available Sept. 1, 1935	2,412,127	lbs. V_2O_5
Sales last 4 months 1935	258,600	"
Available Jan. 1, 1936	2,153,527	"
V_2O_5 in FeV stocks	600,000	"
	1,553,527	"
Plant requirements 1936	500,000	"
Available for sales	1,053,527	"

It may be seen from the above that there is only 1,000,000 lbs. V_2O_5 available for sales until more V_2O_5 is produced. It may also, be seen that with sales maintained at the present level, all of our stocks of V_2O_5 will have been exhausted by the end of 1938, provided no fused oxide is sold. Being so limited in the amount of V_2O_5 available for sales' purposes, we cannot take advantage of attractive business should it be offered. If we accepted 1,000,000 lbs. of fused oxide orders from the Vanadium Corporation of America or from Europe, we would be out of the vanadium business by the end of 1937.

Regardless of the substitution of other metals for vanadium in engineering steels, sales of FeV have remained about the same. It is apparent that the falling off in engineering steels is made up by the general improvement [fol. 292] in the steel business. Sales of V in FeV for the past nine (9) years are listed below, the sales for the last four (4) months of 1935 being estimated:

Year	Lbs. V in FeV	Equiv. lbs. V_2O_5
1927	163,870	311,350
1928	492,500	935,750
1929	345,220	655,920
1930	148,400	281,960
1931	158,710	301,550
1932	70,300	133,570
1933	286,410	544,180
1934	227,600	432,450
1935	222,140	422,100
	2,115,150	4,018,830

It safely may be assumed that the vanadium sales for 1936 will, at least, equal 1935. Records seem to indicate that we enjoy about 30% of the vanadium business, in which case the Vanadium Corporation will require about 1,000,000 lbs. V_2O_5 for their 1936 business. We should sell them vanadic acid at a price low enough so that a source of supply elsewhere will not look attractive. I am quite certain that acid from the Peruvian mine costs more than 80 cents per pound V_2O_5, but it certainly isn't less than 75 cents.

It may be realized from the above that time is now an important feature of our vanadium situation. It will require a year's time in which to construct the plant in the Paradox Valley and get it into production. If this new plant is to be in production the last of 1936, some of the preparatory work should be started as soon as possible.

The new plant at Uravan—which the Paradox Plant site has been named, and which will be the name of the post-office to be opened there—is estimated to cost $366,000. During the Summer and Fall of 1934 the salt works—which is to be a part of any operation in the Paradox, was installed, and the power canal was cleaned out and repaired, with an expenditure of approximately $16,000.

There is yet considerable preliminary work which can be done to advantage before the actual construction of the plant shall commence. During the Winter and Spring the weather is often bad in this section and would interfere

with and make outside construction more costly. The work that can be done this Fall to advantage, would consist of repairing the buildings on the plant site for the housing of construction forces, putting in the water supply, finishing the re-instatement of the power plant, and moving from Rifle compressors and other equipment necessary for construction purposes. Also, there is a certain amount of [fol. 293] underground work in the mine which can be done to advantage with a small crew, preparatory to mining the ore bodies which have already been developed. The design for the construction of the plant calls for underground ore bins. The location for the plant is such that these underground ore bins can be made much larger and cheaper than bins constructed from timber or steel.

It is recommended that we proceed with this preparatory work this Fall and Winter with an expenditure not to exceed $5,000 per month. There will be no additional overhead on this work, as we have the overhead anyway. With this work completed we will then be all ready for actual construction in the early Spring of 1936, and can have the first unit in operation by the end of 1936.

A single roaster plant on the Paradox ore will produce from 600,000 to 750,000 pounds of V_2O_5 yearly, which will take care of our own needs and accumulate some excess. This capacity can rapidly be increased by the addition of roaster units. The plant has been designed to allow for expansion in case increased capacity is necessary.

In Mr. MacQuigg's research report of June 1935, his conclusion points out that it would, probably, be advisable to reduce the price of vanadium products to the trade. With the new plant in operation in the Paradox Valley the price can be considerably reduced and still make as much profit as we made on the Rifle production.

We took over the United States Vanadium Company on January 1, 1927, paying therefore in cash and securities a total value of $2,275,000. In 1927 the Rifle property was set up on the books of the United States Vanadium Corporation as follows:

Real Estate & Equipment	—	$ 528,202.89
Mine	—	1,539,395.31
Discovered Mine	—	924,480.00
Total Property Set-Up	—	$2,992,078.20

This entire set-up was depreciated and depleted with the exception of $25,000 on the production at Rifle, amounting to approximately, 7,000,000 pounds V_2O_5. The $25,000 consists of $21,000 real estate and equipment at Columbiana, and $4,000 real estate at Rifle. This write-off amounted to 42¢ per pound on the production at Rifle; the average production costs at Rifle Plant were 38¢ per pound. The write-off on the Rifle production was not uniform over the years, and varied considerably, but the average cost of the V_2O_5 in ferro-vanadium was from 80¢ to 85¢ per pound.

[fol. 294] The net profits, after all charges, on the Rifle operation to January 1, 1935, on approximately 4,600,000 pounds of V_2O_5 sold, amounted to $1,965,375.68 or approximately, 42¢ per pound of V_2O_5 sold.

The present book value of all the property of the U. S. Vanadium Corporation is $369,719.62. As stated above, approximately, $25,000 of this amount is in real estate at Columbiana and Rifle. The balance of $344,719.62 represents the value of the Paradox Valley property. With an additional expenditure of $350,000 for the new Plant, the total investment in the Paradox Valley will amount to, approximately, $695,000.

We own large vanadium resources in the Paradox Valley. There is measured and mined out on dumps on our property, a total of 148,170 tons of ore containing 5,300,000 pounds of recoverable V_2O_5. In addition, we have partly developed by underground workings and core drilling, 225,000 tons containing 8,100,000 pounds recoverable V_2O_5, making a total of developed resources amounting to 13,400,000 pounds of recoverable V_2O_5. In addition to this there is a prospective ore tonnage which can, reasonably, be estimated at a minimum of 10,000,000 pounds recoverable V_2O_5; and the prospects in this section would

indicate a plentiful supply of vanadium for many years to come.

If we should depreciate and deplete the Paradox investment of $695,000 on the recoverable V2O5 already developed—amounting to 13,400,000 pounds—these charges would amount to only 5.2¢ per pound of V2O5 recovered, against the 42¢ necessary at Rifle. Estimates of the production costs in the Paradox indicate an ultimate low-cost operation. This cost has been placed at 40¢ per pound including the depreciation and depletion charges. From the Paradox operation we will, also, recover uranium and radium compounds which, if credited to the production of V2O5, would somewhat lower the estimated cost of 40¢ per pound.

If we allow the same profit of 42¢ per pound of V2O5 sold, as experienced in the sales up to January 1, 1935, we can reduce the price of V in ferro-vanadium to $2.10 and still have the same profit.

	Lb. V2O5
Estimated Cost Paradox	$0.40
Profit	.42
	$0.82
2 lbs. for each lb. V in FeV	1.64
Conversion Cost	.46
Total	$2.10

[fol. 295] Realizing 25¢ per pound profit on V2O5 which would amount to 50¢ per pound of V in FeV, the sales price could be as low as $1.76 per pound of V in FeV.

The policy of reducing prices must be carefully considered and it may be pointed out that as long as we supply V2O5 to the Vanadium Corporation of America, we cannot reduce the price without making some adjustment with them on the high-priced material they have purchased from us and are holding in inventory. Under the circumstances a reduction in price could not very well be made immediately.

Mr. MacQuigg's report also indicates that the consumption of vanadium could be considerably increased by developing new uses in research. He estimates that this research would require from 3 to 5 years at a cost of, approximately, $300,000. There is no question in my mind but what research on new uses for vanadium, and research to stimulate the present uses for vanadium, is very important and essential to the future of the business.

A certain amount of this research should be done in connection with the plant operation in making V2O5. Mr. Burwell has pointed out that the research of the nonferrous uses can be materially assisted in its cost side, if we can make the required salts simply and easily from the first plant solutions, rendering the precipitation and other steps now used, unnecessary.

It may be pointed out, however, that there will be no necessity for research along any lines, unless we are in position to take advantage of it on the production side. Unless we prepare for renewed production of V2O5 we will be out of the vanadium business within three years.

Very truly yours,

EW/J. R. Van Fleet

VANADIUM SITUATION.

Mr. F. P. Gormely,
Room 1715, Building.

Messrs. F. H. Haggerson,
W. H. Sneath,
J. M. Price,
C. E. MacQuigg.

Dear Mr. Gormely:

Sales of vanadium contained in ferro-vanadium, and vanadium oxide in other products, have depleted our stocks of fused vanadium oxide so that we now have available, approximately, 1,000,000 pounds to satisfy vanadium oxide sales until we are in production with a plant in the Paradox Valley.

We will have on January 1, 1936, 2,153,527 pounds of V_2O_5, in all forms and at all localities. Of this amount 600,000 pounds of V_2O_5 will be converted into V in our stocks of FeV. During 1936, 500,000 pounds V_2O_5 will be necessary for plant requirements in keeping the stock of V in FeV up to about a year's sales requirements:

Available Jan. 1, 1936	2,153,527	lbs. V_2O_5
V_2O_5 in FeV stocks	600,000	"
	1,553,527	"
Plant requirements 1936	500,000	"
Available for sales	1,053,527	"

Should we continue to supply the Vanadium Corporation of America with V_2O_5, or take advantage of any other attractive business which might be offered, this entire stock

could easily be disposed of during 1936. If this were the case, by the end of 1936 we would have *no* available V_2O_5 for sale, and all of our vanadium would be contained in approximately, a year's supply of V contained in manufactured FeV for sales requirements.

It must be realized that *time* is now an important feature of our vanadium situation. It will require a year in which to construct a plant in the Paradox Valley and get it into production.

The new Paradox Plant, completed, is estimated to cost $366,000. Of this amount, approximately, $16,000 has been expended repairing the power dam and canal, and installing the salt works.

[fol. 297] There is considerable work which should be done in preparation for the actual construction of the Plant. This work would consist of repairing existing buildings and otherwise providing housing facilities for a construction crew; installing the water system which must be piped a distance of two (2) miles; finishing the reinstatement of the power plant; moving and installing necessary equipment from Rifle. There is a certain amount of underground work in the mine which can be done to advantage with a small crew, preparatory to mining the ore bodies which have already been developed. The design fot the construction of the Plant calls for underground ore bins and all of this work, together with excavations for foundations can be put in readiness for actual construction of the Plant during the Summer and Fall of 1936.

Should it seem desirable not to begin the actual construction next year, there will be little or no deterioration, or upkeep, of this preparatory work. It is recommended that this preparatory work be done during the Fall and Winter with expenditures not to exceed $5,000 monthly.

From my letter to Mr. Haggerson, dated September 23, 1935, it may be seen that we will be able to produce V_2O_5 in the Paradox Valley for 40¢ per lb. including depletion and depreciation, and that we could sell V in ferro-vanadium for $2.10 per pound and *make the same profit* per pound

of V_2O_5, 42¢ which we have made in the 4,600,000 lbs. of V_2O_5 sold to January 1, 1935.

It is pointed out that all of the production from Rifle had to take a depreciation and depletion charge of 42¢ per pound in order to completely write off the entire investment at Rifle, with the exception of $4,000 real estate valuation. In the Paradox Valley the entire investment will be the purchase price of the property and the cost of the new plant, making a total of $695,000.

The V_2O_5 in ore reserves in the Paradox, already partially and fully developed, amount to 13,400,000 pounds. Prospective additional resources estimated to be 10,000,000 pounds as a minimum. If the entire Paradox investment is depleted and depreciated on 13,400,000 pounds of developed V_2O_5, this charge will amount to only 5.2¢ per pound of V_2O_5 recovered against the 42¢ necessary at Rifle.

By allowing a profit of 25¢ per pound on V_2O_5, which would amount to 50¢ per pound of V in FeV, the sales price could be as low as $1.76 per pound of V in FeV.

Very truly yours,

EW/J.R.Van Fleet

[fol. 300]

[Handwritten notation: Mr. Van Fleet]

U. S. Vanadium Corp. New York City.

Mr. F. H. Haggerson,
Room 1715, Building. December 3, 1935.

Messrs. F. P. Gormely,
W. H. Sneath,
J. M. Price. VANADIUM SITUATION.

Dear Mr. Haggerson:

There has been much discussion of late concerning a reduction in the sales' price of vanadium. It is now thought that a reduction in price will greatly stimulate the use of vanadium. The attached chart attempts to show in graphic form the profits per pound of V_2O_5 at various costs of production with the various proposed reduced sales' prices.

The top black line in the chart shows the sales' price obtained for V_2O_5 when V in FeV is selling at the different prices. The center black line shows the sales' price of V_2O_5 as fused vanadium oxide as sold to the Vanadium Corporation of America. The bottom black line represents the cost of manufacturing V_2O_5 as fused vanadium oxide.

It may be seen, therefore, directly from the chart that the profit in selling fused vanadium oxide to the Vanadium Corporation of America at 80¢ per pound, is 20¢ per pound, and that the profit per pound of V_2O_5 when selling V in FeV for $2.70 per pound is approximately, 50¢.

Our present stock of fused vanadium oxide is held on the books at 60¢ per pound. This book cost, probably, does not represent the true cost as there have been many write-ups and write-downs on our present stock of V_2O_5; and this 60¢ merely represents the actual cost of production plus the remaining write-off as of December 31, 1934 to clean up the Rifle investment.

The production costs at the new plant in Paradox Valley will be considerably lower. Whereas there was a large investment to write off at Rifle on a comparatively small amount of product, in the Paradox Valley the entire investment including new plant and property, will be approximately $700,000 and the write-off only about five cents (5¢) per pound.

Should we have a plant in operation the latter part of 1936 it is estimated that our production costs in the Paradox Valley will reach 40¢ per pound by the middle of 1937, and that the ultimate cost in the Paradox Valley will not be over 35¢ per pound. By assuming credits for some sales of uranium oxide which will be produced from the [fol. 301] Paradox ores, the ultimate actual cost of V_2O_5 will, probably, be even lower than 35¢ per pound.

It may be seen by the chart that should the price of V in FeV be reduced to $2.30 per pound with the cost of V_2O_5 at 60¢ per pound, the profit per pound of V_2O_5 is 30¢. Should the price of V in FeV be reduced to $2.30 per pound, a reduction in the sales price of V_2O_5 to the Vanadium Corporation of America is indicated.

When reducing V_2O_5 to V in FeV it requires two (2) pounds of V_2O_5 to make one (1) pound of V in FeV. If the price of V in FeV is reduced to $2.30 per pound or a reduction of 40¢ per pound, the reduction then in profits on V_2O_5 put into the FeV is 20¢ per pound. The idea in reducing the price of V in FeV is to stimulate and encourage the use of vanadium in alloy steels, and the Vanadium Corporation of America will, undoubtedly, share proportionately in this increase in sales. It is, therefore, reasonable that they should share one-half the loss in profits per pound of V_2O_5 in this attempt at stimulation, and accordingly the sales price of V_2O_5 to the Vanadium Corporation of America would be a reduction of 10¢ from their present price, or 70¢ per pound.

The chart shows that a further reduction to $2.00 per pound of V in FeV later on, would call for a sales price of 65¢ per pound V_2O_5 to the Vanadium Corporation of

America. Should this further reduction be made in the sales price of V in FeV, our ultimate profit per pound of V_2O_5 will be 40¢ and the profit per pound of V_2O_5 sold to the Vanadium Corporation of America will be 30¢ per pound.

The blue, broken line at the bottom of the chart represents the profits in dollars on sales of V in FeV under the profits shown on the chart. The estimated sales of V in FeV each year to establish this blue line are also shown on the chart as follows:

	Estimated Sales V in FeV.
1935	220,000 pounds
1936	300,000 "
1937	400,000 "
1938	500,000 "

It may be seen from the chart that on account of the reduction of price that in 1936 the profit will be less than in 1935 on sales of V in FeV, but it is estimated that by 1937 we will begin to reap the benefit of price reductions, and that the sales will considerably increase, and by 1938 they should reach 500,000 pounds.

[fol. 302] The red line next above represents the total profits on vanadium sales, including the profit on the V_2O_5 sold to the Vanadium Corporation of America. It will, also, be noted on this line that the total profits of vanadium sales of all kinds, will be slightly less in 1936 due to reductions and high cost of V_2O_5, but that by 1937 the profits are better, and by 1938 exceed any profits yet made on vanadium sales.

The estimated sales of fused vanadium oxide are shown on the chart as follows:

	Estimated Sales of V_2O_5.
1935	375,000 pounds
1936	500,000 "
1937	1,000,000 "
1938	1,000,000 "

It may be thought that the Vanadium Corporation would require more than 1,000,000 pounds V_2O_5 during 1938 if the estimated stimulation in sales is brought about, but in estimating 500,000 pounds of V in FeV for 1938, I am assuming that we will obtain a larger proportion of the vanadium sales than we have previously enjoyed.

No attempt to show profits in sales of V_2O_5 for direct smelting have been made, as it is assumed that such sales will detract from the sales of V in FeV. However, it is quite likely that the sales' price of V_2O_5 for direct smelting purposes would be, approximately, $1.00 per pound on which a correspondingly larger profit would be estimated—65¢ per pound against 40¢ per pound—the profit estimated on sales of V in FeV for 1938 on this chart.

We now have available for sales as fused vanadium oxide a little less than 900,000 pounds V_2O_5 when deducting the 80,000# sold to the Vanadium Corporation of America last week. This quantity of V_2O_5 available for sales is arrived at after reserving sufficient material for Columbiana operations during 1936 at the end of which time (1936) we will have in stock, approximately, 300,000 pounds of V in FeV. Although I have estimated, on the chart, only 500,000 pounds of V_2O_5 as sales to the Vanadium Corporation of America for 1936, it is quite likely that they might require more than this if the vanadium business continues to brighten.

It may be realized, therefore, that before the end of 1936 it will be absolutely necessary to be producing more fused vanadium oxide.

Very truly yours,

EW/J. R. Van Fleet

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 49 FOR IDENTIFICATION

COPY

General Mining Department, New York City.

Mr. F. P. Gormely,
Room 1715, Building. March 9, 1936.

VANADIUM STOCKS.

Dear Mr. Gormely:

We had available on January 1, 1936, 1,248,000 lbs. V_2O_5 at all places and from all sources. Of this amount the Columbiana requirements for 1936 will be, approximately, 500,000 lbs. The Vanadium Corporation of America has already contracted for a maximum of 375,000 lbs., and we are holding 250,000 lbs. subject to foreign orders. This leaves 123,000 lbs. available for sales of fused vanadium oxide, according to the following tabulation:

January 1, 1936 V_2O_5 available,	
U.S.V. Columbiana,	1,248,000 lbs.
	500,000 "
	748,000 "
Vanadium Corp. of America,	375,000 "
	373,000 "
Foreign Orders,	250,000 "
Balance	123,000 "

It is certain that the Vanadium Corporation of America will require more than 375,000 pounds of V_2O_5 this year if we are to furnish them, and it may readily be seen from the above tabulation that our entire stock of fused vanadium

oxide will be exhausted by the end of this year, unless we are in production before that time.

Very truly yours,

EW/J.R.Van Fleet
IC
extra cc

[fol. 305]

United States Vanadium Corp. New York City.

Mr. F. P. Gormely,
Room 1815, Building. March 31, 1937.

VANADIUM SITUATION

Dear Mr. Gormely:

Our stocks of fused vanadium oxide and ferro-vanadium have become somewhat depleted. Estimating capacities and sales for the current year and 1938, it would seem desirable that serious consideration should be given to increasing the capacity of the Paradox Valley Plant.

As of April 1, 1937 we have 166,000 pounds of V contained in ferro-vanadium against 237,000 pounds January 1, 1937, and 292,000 pounds January 1, 1936, and 337,500 pounds January 1, 1935.

We have available as of April 1, 1937, 164,000 pounds of fused vanadium oxide. The production of fused vanadium oxide at Uravan for the balance of this year is estimated at 800,000 pounds V_2O_5. The stock at Columbiana is practically depleted, consisting of only 28,000 pounds, and with the depleted stock of ferro-vanadium, at least from 600,000 to 750,000 pounds should be shipped to Columbiana this year to build up this stock of fused oxide and ferro-vanadium.

If 750,000 pounds of fused oxide is shipped to Columbiana there remains 214,000 pounds available for sales. 180,000 pounds of this amount is already spoken for by the Vanadium Corporation of America, and it is certain they will require more than this before the year is out. With the present set-up, at the end of 1937 we will have no stocks of fused oxide for sales purposes.

The present rated capacity of the Uravan Plant is 1,000,000 pounds V_2O_5 yearly. This capacity will, probably, be increased from 20% to 30% by high recoveries when lower temperature roasting is practiced, and the recovery of vanadium and uranium by acid leach begins.

The choke point limiting the capacity of the Uravan Plant is the roaster installation. At present we have two roasters which are separate units and can be operated separately and independently of each other. With two additional roasters the capacity of the plant would be brought up to a minimum of 2,000,000 pounds V_2O_5 yearly and such an installation would be flexible so that the plant could be [fol. 306] worked at any desired capacity up to the maximum, at a moment's notice.

To double the capacity of the plant would, also, require a few additional tanks, but it is roughly estimated that two additional roasters could be installed at the Uravan Plant during the Summer months for about $150,000.00. A single roaster could, probably, be installed for about $80,000.00. Depending upon delivery of materials the additional roaster capacity could be installed in about four months' time.

Very truly yours,

EW/J.R. Van Fleet
IC

[fol. 307]

United States Vanadium Corp. New York City.

Mr. F. P. Gormely, March 31, 1937.
Room 1815, Building.

VANADIUM SITUATION

Dear Mr. Gormely:

Our stocks of fused vanadium oxide and ferro-vanadium have become somewhat depleted. Estimating capacities and sales for the current year and 1938, it would seem desirable that serious consideration should be given to increasing the capacity of the Paradox Valley Plant.

As of April 1, 1937 we have 166,000 pounds of V contained in ferro-vanadium against 237,000 pounds January 1, 1937, and 292,000 pounds January 1, 1936, and 337,500 pounds January 1, 1935.

We have available as of April 1, 1937, 164,000 pounds of fused vanadium oxide. The production of fused vanadium oxide at Uravan for the balance of this year is estimated at 800,000 pounds V_2O_5. The stock at Columbiana is practically depleted, consisting of only 28,000 pounds, and with the depleted stock of ferro-vanadium, at least from 600,000 to 750,000 pounds should be shipped to Columbiana this year to build up this stock of fused oxide and ferro-vanadium.

If 750,000 pounds of fused oxide is shipped to Columbiana there remains 214,000 pounds available for sales. 180,000 pounds of this amount is already spoken for by the Vanadium Corporation of America, and it is certain they will require more than this before the year is out. With the present set-up, at the end of 1937 we will have no stocks of fused oxide for sales purposes.

The present rated capacity of the Uravan Plant is 1,000,000 pounds V_2O_5 yearly. This capacity will, probably, be increased from 20% to 30% by high recoveries when lower temperature roasting is practiced, and the recovery of vanadium and uranium by acid leach begins.

The choke point limiting the capacity of the Uravan Plant is the roaster installation. At present we have two roasters which are separate units and can be operated separately and independently of each other. With two additional roasters the capacity of the plant would be brought up to a minimum of 2,000,000 pounds V_2O_5 yearly and such an installation would be flexible so that the plant could be [fol. 308] worked at any desired capacity up to the maximum, at a moment's notice.

To double the capacity of the plant would, also, require a few additional tanks, but it is roughly estimated that two additional roasters could be installed at the Uravan Plant during the Summer months for about $150,000.00. A single roaster could, probably, be installed for about $80,000.00. Depending upon delivery of materials the additional roaster capacity could be installed in about four months' time.

Very truly yours,

EW/J.R.Van Fleet
IC

[fol. 309]
General Mining Department — New York City

November 3, 1937

Mr. F. P. Gormely
Room 1815
Building

United States Vanadium
Corporation—Operations

Dear Mr. Gormely:

VANADIUM SITUATION

We have available in all locations approximately 205,000 pounds of fused V_2O_5; the distribution being—

Uravan	120,000	pounds
Columbiana	56,000	"
Niagara	29,000	"
	205,000	"

It will be noted from the above tabulation that over half of this supply is at Uravan, and it must also be realized that approximately from 100,000 to 200,000 pounds will always be in transit, or unavailable for immediate use. Considering the position of this stock of fused V_2O_5, it leaves available supplies very low indeed.

In addition to the stock of fused oxide, we have available in all locations approximately 200,000 pounds of vanadium contained in ferro-vanadium. This is equivalent to a little more than six months' shipping requirements of ferro at the present rate of sales.

The stocks of fused oxide should not be less than 1,000,000 pounds in all locations, and we have in the past carried ferro stocks considerably higher than at present.

The capacity at Uravan is exceedingly flexible and is so arranged that any desired production up to 2,000,000 pounds of V_2O_5 can be made annually. We should allow a minimum of 750,000 pounds of fused oxide for our own requirements at Columbiana next year, and it would be desirable to increase the stock of ferro.

When Mr. Sneath went to Europe it was with the understanding that we would have next year an additional 1,000,000 pounds of fused oxide for European sales. It is not known as yet what disposition was made of this allotment of 1,000,000 pounds for European consumption.

Construction of the additional unit at Uravan is practically completed and the new roaster is now being dryed out preparatory to bringing it up to heat.

[fol. 310] Considering the present extremely low inventory of vanadium, it is certain that no curtailment of operations at Uravan should be made between now and January 1. It is recommended that before any plans for curtailment for next year are made that the European and Vanadium Corporation of America requirements should be carefully canvassed.

TUNGSTEN SITUATION

We have no stocks of tungsten ore to apply against the commitment under the Ludlum contract, and production from Pine Creek is being counted on for a part if not all of the tungsten ore to apply against this contract.

Construction work at Pine Creek is practically finished and the plant will be ready to operate about November 15. There can be no curtailment of operation at Pine Creek between now and January 1. If tungsten ore is to be produced from this property this Winter, Pine Creek must be operated continuously during the Winter months. If the property were closed and snowed in, it would probably be impossible to open it up later on in the Winter.

Very truly yours,

J. R. Van Fleet/mm
IC

Dear Mr. Gormely:

VANADIUM SITUATION

We have available in all locations approximately 205,000 pounds of fused V_2O_5; the distribution being—

Uravan	120,000	pounds
Columbiana	56,000	"
Niagara	29,000	"
	205,000	"

It will be noted from the above tabulation that over half of this supply is at Uravan, and it must also be realized that approximately from 100,000 to 200,000 pounds will always be in transit, or unavailable for immediate use. Considering the position of this stock of fused V_2O_5, it leaves available supplies very low indeed.

In addition to the stock of fused oxide, we have available in all locations approximately 200,000 pounds of vanadium contained in ferro-vanadium. This is equivalent to a little more than six months' shipping requirements of ferro at the present rate of sales.

The stocks of fused oxide should not be less than 1,000,000 pounds in all locations, and we have in the past carried ferro stocks considerably higher than at present.

The capacity at Uravan is exceedingly flexible and is so arranged that any desired production up to 2,000,000 pounds of V_2O_5 can be made annually. We should allow a minimum of 750,000 pounds of fused oxide for our own requirements at Columbiana next year, and it would be desirable to increase the stock of ferro.

When Mr. Sneath went to Europe it was with the understanding that we would have next year an additional 1,000,000 pounds of fused oxide for European sales. It is not known as yet what disposition was made of this allotment of 1,000,000 pounds for European consumption.

Construction of the additional unit at Uravan is practically completed and the new roaster is now being dryed out preparatory to bringing it up to heat.

[fol. 312] Considering the present extremely low inventory of vanadium, it is certain that no curtailment of operations at Uravan should be made between now and January 1. It is recommended that before any plans for curtailment for next year are made that the European and Vanadium Corporation of America requirements should be carefully canvassed.

the Uravan production; or it is possible to make a uranium-radium residue and be paid for the radium accordingly. This radium production, however, is uncertain and we have not estimated any credits therefrom.

Very truly yours,

EW/J.R. Van Fleet

[Handwritten notations—Follow—Tues Nov 12]

November 6, 1935

Memorandum to Mr. E. D. Bransome, President

I talked to Mr. J. M. Price, of Electro Metallurgical Sales Corporation, with reference to the new contract for Oxide. Mr. Price said he had been waiting for a renewal of conversation with Mr. Bransome and Mr. Haggerson. He said that he preferred to wait for a week or ten days before talking price, as the amount they want would be dependent upon the price which would be set for next year for Ferro-vanadium, and that he did not expect to have the information he required for at least a week.

He mentioned that I was probably familiar with their situation that their reserves of Oxides were much depleted, and that the speed with which they would have to proceed with the plans they had in mind (new operations in Paradox Valley is probably meant) would be determined by the amount of Oxide which they would have to "ear-mark." Therefore, he thought a spread of 250,000 firm and 250,000

on option was too great, as he explained it was a 100% spread, and they themselves never consider more than a 25% spread. Therefore, it would be up to us to either raise our firm offer or lower our optional requirements, as he pointed out that such a contract would practically tie up 500,000 pounds with no assurance beyond 250,000 pounds. The difference would inject an uncertainty which would make it difficult for them to properly plan for new operations.

Chas. Rees

CR:HKC

[fol. 323]

November 13, 1935

Mr. F. H. Haggerson, President,
Electro Metallurgical Company,
30 East 42nd Street,
New York, N. Y.

Dear Mr. Haggerson:

Please do not think I am hurrying you as there is no real rush about getting a price on Oxide, but it happened to be an item of unfinished business and I am wondering if you have had a chance to arrive at any conclusions as yet.

Very truly yours,

/s/ EDB
President.

TUNGSTEN SITUATION

We have no stocks of tungsten ore to apply against the commitment under the Ludlum contract, and production from Pine Creek is being counted on for a part if not all of the tungsten ore to apply against this contract.

Construction work at Pine Creek is practically finished and the plant will be ready to operate about November 15. There can be no curtailment of operation at Pine Creek between now and January 1. If tungsten ore is to be produced from this property this Winter, Pine Creek must be operated continuously during the Winter months. If the property were closed and snowed in, it would probably be impossible to open it up later on in the Winter.

Very truly yours,

J. R. Van Fleet/mm

UNITED STATES VANADIUM CORPORATION
CARBIDE AND CARBON BUILDING
30 EAST FORTY-SECOND STREET
NEW YORK

At Los Angeles
December 29, 1936.

Mr. Blair Burwell,
Uravan,
Colorado.

Dear Blair:

You have noted your copy of Mr. Lewis' letter of December 22 in reference to some Calcium Vanadate which is being made by the Molybdenum Corporation of America.

The Molybdenum Corporation of America are operating the Mammoth Mine near Tucson, Arizona. By flotation they

concentrate the lead molybdate, lead vanadate and gold from the ore. They, of course, recover the gold from these concentrates and have also been recovering the molybdenum. Apparently the vanadium is recovered in the form of a calcium vanadate mixed with salt.

As per the copy enclosed, I have asked the plant to forward to you 50 pounds of the calcium vanadate. I wish you would determine what it would cost to render this calcium vanadate into oxide, or what would be best to do with it, and how you would do it—in order to make a salable product.

The Molybdenum Corporation will produce approximately 300,000 pounds of vanadium oxide yearly in this manner and we, of course, must arrange in some way to corral this production. We cannot, however, make any kind of a proposition to the Molybdenum corporation unless we know how much it would cost to process the material into a usable form.

When you have completed your work on this I wish you would write a full report and send it to Lewis, Gormely, Critchett and Doom.

Very truly yours,

/s/ J. R. Van Fleet
J. R. Van Fleet.

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 50 FOR IDENTIFICATION

Memo. on Ore Conference held in New York Office

December 8, 1936

Present:

Messrs. E. D. Bransome
Chas. Rees
J. R. Davis
S. C. King
H. E. Dunn
P. J. Gibbons

Mr. Bransome stated that the conference had been called due to the acute vanadium ore shortage at Bridgeville.

Mr. King stated that we have sufficient ore on hand at Bridgeville at the present time to run until December 31st. As of January 1, 1937, we will have on hand approximately 12,000 lbs. contained V in ore. He stated further that the Operating Department's program is to run the electric furnace, if possible, until February 28, 1937. To do this, we must have at least 55,000 lbs. of contained V in ore for January and the same amount for February, or a total of 110,000 lbs. contained V to finish the contemplated run.

Mr. Gibbons advised that there is no ore on the water but by reference to the Mining Department's records from Peru, we should have on hand at Jumasha the production for October and November which should approximate in the terms of shipping mixture, some 60,000 to 70,000 lbs. of contained V.

After a thorough discussion of our operating program for the early part of 1937, it was decided that in order to set-up an emergency stock we would have Mr. Fritz ship

to the States 250,000 lbs. of contained V in ore of the highest grade ore in the mine, Mr. Rees stating that this would be approximately 5% V. It was then decided that Mr. Fritz should be called by long distance telephone and get his report on stocks on hand and the conditions, giving him instructions to have this crude ore come forward. Mr. Rees talked to Mr. Fritz and instructed him to begin shipments immediately of the high grade crude ore and to continue these shipments until the entire tonnage of ore (250,000 lbs. contained V) is shipped. Mr. Fritz estimated it would take approximately three months to complete the shipment of this material. Mr. Fritz also advised that he has in stock in Peru, 50,000 lbs. of contained V in oxide. This material is now going through the dryer and he stated that same would be shipped before the end of December. Mr. Fritz also advised that the 50 ton plant will be in operation about January 1, 1937 but that during the tuning up period for this plant, which would cover the entire month of January, our production would be cut to approximately two-thirds of the normal production of the 15 ton plant. This will approximate 22,000 lbs. of contained V in oxide. The new plant should be producing by February 1st on a normal basis if nothing untoward occurs. Mr. Rees will confirm his telephone instructions to Mr. Fritz with reference to the shipment of the 250,000 lbs. of contained V in crude ore.

Messrs. Davis and King stated that with the receipt from Peru of the 50,000 lbs. contained V in oxide, which should amount to close to 70,000 lbs. contained V in mixture, and the receipt of the December production before the end of January, they should run into no difficulty in running out the balance of their planned electric furnace run.

[fol. 315] Mr. Gibbons advised that we have placed an order with E. M. for two cars of Pentoxide, one of which has already been received at Bridgeville and the second is to be shipped the first week in January. We have committed ourselves to a total of 300,000 lbs. of pentoxide, including the two cars already on order. When required,

we will issue an order for approximately three cars additional.

The Operating Department was requested to advise the Mining Department with reference to their estimated operating schedule for the year 1937 and the approximate tonnages of ore which should be in stock at Bridgeville at various dates during the year in order to meet this schedule. The Mining Department will then advise the Operating Department as to their ability to meet the schedule as presented or give sufficient notice of any necessary change which must be made due to conditions existing in Peru.

At the end of the conference, Mr. Bransome stated that all concerned must bear in mind the fact that the 250,000 lbs. of contained V in crude ore, which is to come forward from Peru, is to be considered as an emergency stock only and not to be used unless the normal shipments to us from Peru should stop or be held up for reasons beyond our control.

P. J. Gibbons, Secretary.

[fol. 316]

Conference on Raw Material Situation
Held in New York Office Feb. 9, 1937

Present:

Messrs. Bransome
Davis
Rees
Gibbons. √

The Operating Department submitted the following schedule of Vanadium ore required for their operations over the year 1937:

Ore Required	High Grade	Low Grade
February		54,000
March		54,000
April	67,400	
May	92,200	
June	106,400	
July	71,000	
August	71,000	
September	60,000	
October	54,000	
November	54,000	
December	54,000	
	630,000	108,000
Total		738,000

It was determined from advice received from Mr. Frits and schedule of shipments worked up between him and the Lima office of the Grace Line, that we could expect the following shipments of high grade and low grade ores over the first half of 1937:

Total Ore to reach Bridgeville by approximately July 18, 1937

	Lbs. "V"	
To Arrive	High Grade	Low Grade
February	29,000	260,000
March	—	240,000
April	44,800	
May	112,000	
June	190,400	
July	212,800	
	589,000	500,000
Total		1,089,000

A check of our present ore situation at Bridgeville shows that we have on hand 27,000 lbs. contained "V" in ore. We have afloat 29,000 lbs. contained "V" high grade and 260,000 lbs. contained "V" low grade. Further, with these figures, Mr. Davis stated that by the use of the low grade ore in

the electric furnace for the months of February and March, he should be ablesto meet his production requirements. [fol. 317] After July, all material arriving at Bridgeville will be of high grade. This should approximate tonnage of between 70,000 and 90,000 lbs. of contained "V" per month.

In reference to the use of Pentoxide for the production of Primos grade vanadium, Mr. Davis estimated that we would require a total tonnage of Pentoxide of 951,900 lbs. contained V2O5. His estimate of production for our own plant at Bridgeville is 575,000 lbs. contained V2O5. Under these circumstances, it was deemed advisable to place a further order with E. M. for 300,000 lbs. contained V2O5 for shipment during the year 1937, shipments to be spread out over the year as near as possible to the times he feels he will need same.

The chrome ore situation was then discussed. Taking into consideration the estimate of sales, as prepared by the Sales Department, it was the consensus of opinion that we have just about enough ore on hand and on order to cover our requirements for the year 1937. Therefore, it was further decided that in order to build up our stocks to a safe position so that we would reach the end of the year in good shape from a chrome ore point of view, Mr. Rees was authorized to purchase up to 10,000 tons of ore, consisting of 8,000 tons of lump ore, either Turkish or Selukwe, and 2,000 tons of Concentrates.

As both Messrs. Rees and Davis were satisfied as to our position on Quartzites and other miscellaneous materials, these raw materials were not discussed.

This matter of raw materials is to be discussed monthly. Therefore, the subject will again be reviewed after the Advisory Board meeting which is called for March 9, 1937.

P. J. Gibbons, Secretary.

COPY

[Handwritten notations—Rose—Copy]

U. S. Vanadium Corporation, New York City.

Mr. F. P. Gormely, March 25, 1936.
Room 1715, Building.

Messrs. F. H. Haggerson,
W. H. Sneath,
J. M. Price.

VANDIUM SITUATION.
Vanadium Corp. of America.

Dear Mr. Gormely:

On Monday I had a talk with Mr. Bransone and Mr. Rees of the Vanadium Corporation of America in reference to the purchase of some of the equipment now at their Naturita Plant for use in our Paradox Valley Plant at Uravan. Previous conversations in regard to the use of the Naturita Plant were reviewed by Mr. Rees and myself for the benefit of Mr. Bransone.

It was then brought out that we had selected the Uravan Plant site for purely economic reasons. I explained that Uravan was 15 miles closer to rail at Grand Junction, which railroad point enabled us to use the new Dolores River road, thereby shortening the hauling on finished product and supplies. Also, the Uravan site was more central to our ore supply, and the saving in hauling alone would, practically, build the plant. I further explained that with our manufacturing process as it had been developed, the Naturita Plant would have to be entirely rebuilt with the exception of the single roaster installation. I stated that there was some of the equipment in the Naturita Plant which we could use, and would be glad to consider its purchase; also, such ore supplies as they had available.

The outcome of this discussion was that at the present time the Vanadium Corporation of America would not consider dismantling their Naturita Plant and would keep their investment intact. They would consider the leasing of the Plant or an outright sale. This subject was not discussed further, because the Naturita site is not desirable for economic reasons, and the fact that the Vanadium Corporation of America have an exalted idea of the value of the Naturita Plant, regardless of the operating failure they have already experienced.

The discussion then turned to the vanadium situation in general. Mr. Bransone stated a reduction in price of V in ferrovanadium is indicated, but that a small reduction would do no good; and that their cost of producing vanadium was so high a considerable reduction could not be made. I asked him what he thought would be a "considerable reduction", and he said to $2.25 or $2.10 per pound. He went on to say that with the fused oxide costing him 80¢ per pound there was little profit in vanadium at the present prices. It developed when he was roughly casting up these figures, that in their present practice it requires 2.2 lbs. of V_2O_5 to make 1 lb. of V in ferro.

[fol. 319] Mr. Rees is the Vice President of the Vanadium Corporation of America, and a Mining Engineer. He is responsible for the Peruvian operation. He told Mr. Bransone that our costs at Rifle were between 60¢ and 70¢ per pound of V_2O_5, and assumed it as being 65¢. With this assumption he considered 80¢ per pound was about as cheap as we could be expected to sell fused oxide from our present stocks. I stated that the Rifle production was, probably, cheaper than the Peruvian production in any case—to which he made no reply.

In regard to the Peruvian production I said it was evident they had resumed operations in Peru, judging from the amount of concentrates they had been importing over the last few months, which amounted (up to February 1st) to 709 tons containing an equivalent of, approximately, 230,000 pounds of V_2O_5 in fused oxide.

Mr. Bransone stated in answer to this that they had resumed operations in Peru on a reduced scale and expected to continue this production all this year. He said the object of this operation was so he could find out exactly what the production cost; that some economies were being put into effect; and that the figures of the past operation were not clear, and he was finding out the facts for himself. The same crew is operating, and Charlie Fritz is still in charge.

Apparently, there has been much discussion between Mr. Bransone and Mr. Rees in reference to a purchase contract with us, because Mr. Rees called to Mr. Bransone's attention the fact that the Rifle production at 65¢ per pound V_2O_5 included a high depletion charge. Mr. Rees said we had purchased the Rifle properties at a relatively high figure and that his estimate was the depletion charge must have been about 25¢ per pound. He further stated that our Paradox Valley investment was relatively small and the depletion charge would, practically, be negligible—so costs at the Uravan operation would be somewhere between 40¢ and 50¢ per pound. He inferred they could not hope to secure this cost in Peru and, apparently, they have had many discussions about this Peruvian operation, and I am under the impression that Mr. Rees is not in favor of it. I asked how much V_2O_5 they would produce in Peru this year and they replied, probably about 500,000 pounds, but the production would depend upon the success of the operation as they planned it.

Mr. Bransone stated he believed in laying his cards on the table in regard to vanadium production, that he knew he could not fool us, and any other attitude would be foolish to take. He said when he found out what his costs were going to be in Peru, he believed it would be advantageous for all concerned to get together on one production operation. He said that by the time he was ready to discuss this [fol. 320] situation we would, probably, know just what our costs would be at the Uravan Plant. Mr. Bransone asked what our costs at that Plant would be. I told him we were in no position to make any definite statement as to this cost at this time, because we were making some changes in

the process and were not certain as to how these changes would affect the costs.

Mr. Bransone stated many times that he was very anxious to reduce the cost of V_2O_5 production to a point where a considerable reduction in the sales price of V in FeV could be made. In this respect I said that there seemed to be a difference of opinion as to the advisability of reducing the sales price of vanadium as to its effect upon sales. Mr. Bransone said his contacts with the steel people seemed to indicate that a considerable reduction would stimulate the use of vanadium.

The vanadium production contemplated by the Molybdenum Corporation of Ameria at their Mammoth operation, was discussed and Mr. Bransone wanted to know what I knew about it. I reviewed the Mammoth operation as I knew it—which was to the effect that so far the production of vanadium and molybdenum at the Mammoth had been uncertain and disappointing, but that they planned to build a new mill and could recover, according to my figures, approximately 300,000 pounds V_2O_5 yearly. This production would be in the form of a lead-molybdate and lead-vanadate concentrate containing gold and siiver.

I told them that information I had was to the effect that the Molybdenum Corporation had not been very successful in separating the vanadium and molybdenum from these concentrates. Mr. Bransone said that Mr. Hirsch had been to see him a couple of times about reducing these concentrates for him and purchasing the vanadium. Mr. Bransone said he had not been able to find out from Mr. Hirsch how much vanadium product or residue he actually had at present, nor in what form it was—and wanted to know what information I had on this subject. I told him my information was not sufficient to definitely state either the amount or form of the vanadium, but that I thought the vanadium was, at present, in the form of a sodium vanadate slag also containing the molybdenum, and that the molybdenum in the slag equalled about twice the vanadium content. This was the opinion of Mr. Rees also, and he stated his information on this was to the effect that the work so far carried

on by the Molybdenum Corporation on these vanadium-molybdenum concentrates had resulted in a very high cost for recovery of these metals.

****

My impression gained from this talk with Messrs. Bransone and Rees was that the Vanadium Corporation is in somewhat of a state of confusion regarding their vanadium production. It is evident that they must obtain a cheaper source of vanadium, and will use as a threat the possi- [fol. 321] bilities at both their Peruvian and Naturita properties in negotiating lower prices with us the latter part of this year.

An interesting fact indicated from this conversation was that, apparently, their process for making ferro-vanadium is not as efficient as ours. It requires 2.2 lbs. of V_2O_5 for 1 lb. of V in FeV. We roughly figure 2 lbs. in our process, but the actual experience is approximately 1.9 lb. V_2O_5 for each pound of V in ferro.

The actual situation with us in the Paradox Valley is that we estimate we will be able to produce V_2O_5 for 40¢ per pound including depreciation and depletion charges, without taking any credit for uranium production. We will, at this operation, produce U_3O_8 residue as a by-product—the amount of U_3O_8 residue produced will depend upon the ores processed.

We have ores containing a high uranium content and by selective mining we can make this production, approximately, as desired. There is a market in the United States for about 250,000 pounds of U_3O_8 yearly—which is mostly imported from Belgium. It is thought that we can readily sell about 100,000 pounds of U_3O_8 yearly, principally to the Vitro Manufacturing Company of Pittsburgh, who have already expressed a desire to purchase their supply from us. The profit on U_3O_8 should be about $1.00 per pound and with this credit against the vanadium production the cost of V_2O_5 would be about 30¢ per pound.

There are, also, possibilities with radium in making a low-grade radium sulphate residue as a by-product from

July 10, 1934.

Mr. Charles Rees, Vice President,
Vanadium Corporation of America,
#120 Broadway,
New York City.

Dear Mr. Rees:

I have a letter from Colorado which states that on June 21st Mr. Burwell met Mr. Sterling at Naturita and went over both the Naturita and Vanadium plants.

Mr. Sterling furnished Mr. Burwell with plans, and drawings and estimates are now being made for the re-arrange-

ment to suit our process. I will be very glad to advise you when this work is completed.

It was kind of you to arrange with Mr. Sterling to confer with Mr. Burwell, and I appreciate the courtesy very much.

Very truly yours,

/s/ J. R. Van Fleet
General Manager

EW/J. R. Van Fleet
USV

[fol. 326]

June 6, 1934

Mr. Robert Sterling,
Vanadium Corporation of America,
Boulder, Colo.

Dear Sterling:

In connection with the survey which engineers of the U.S. Vanadium Company are making in the Paradox Valley for a proposed operation at the Joe. Jr. mill site, we have been requested by their office here to permit their engineers to include our plant and facilities at Naturita in their investigation.

We have had several discussions with their Mr. Van Fleet during the past three or four months on the subject of joining our properties and plant in the Paradox Valley with their holdings on a mutual operating basis by which each party is to retain unimpaired titles to their holdings. If we come to any agreement as to conditions and method of operation, one party to the agreement will be selected as the operator, and the non-operating member will be represented by an agent to protect its interests.

We wish you to be present for whatever time may be necessary, when the U. S. Vanadium engineers inspect the Naturita plant, as you will then be in a better position to give us your impressions as to what they may have in mind.

We feel that the location of the Naturita plant, with its convenient coal reserves, is a valuable asset. The building of the proposed plant at the Joe Jr. mill site would involve a large capital expenditure for plant and power, in addition to extra transportation costs, housing, and other problems which would not be required at the Naturita plant. I also think you will agree that both companies have sufficient ore reserves contiguous to the Naturita plant to maintain operations for a number of years.

Mr. Van Fleet stated to me on the telephone that Mr. Wilson had allowed him to inspect the Naturita mill on his recent visit there but that he thought he ought to ask permission so that they could make a more complete study. He suggested that we wire Mr. Wilson to allow the engineers to do this work but I pointed out to him that you were our representative in Colorado and any such orders for entering the property would have to come from you. I do not know exactly what Mr. Van Fleet has in mind as he [fol. 327] speaks of the necessity of doing a lot of draughting, mapping and surveying at our plant. I do not think it will be necessary for you to remain there for the period of such work but will leave to your judgment the time needed to form for us as complete an idea as possible of the character, scope and object of the investigations they are making. Would suggest that you get in touch with the U.S. Vanadium engineer in charge of this work as soon as possible and make such arrangement as you may deem necessary.

I have given you the outline of the situation at this date so that you can govern yourself accordingly in meeting their engineers. I do not know whether Mr. Van Fleet has discussed the matter of possible joint operation in Colorado with his engineers, and if you learn that he has not, would suggest that you respect Mr. Van Fleet's reticence in the matter with them.

Yours very truly,

/s/ Chas Rees
Vice President

[fol. 328]

[Handwritten notation—File]

March 13, 1934

Memorandum to Mr. A. A. Corey, Jr.

Re: Rare Metal Properties

Mr. Van Fleet was in today and said that he wished to discuss the possibility of making some sort of an arrangement whereby a Vanadium operation could be started in the Paradox Valley where our Rare Metal properties are situated.

He stated that for some time he has been facing the problem of producing Vanadic Acid for their use before their present stocks are exhausted, which he thought might be at the end of a three-year period from the present time. Boiled down, his ideas are as follows:

1—The plant we have at Naturita, with some changes to increase its capacity, which he says their experience would dictate, would be acceptable to them if we wish to sell it at a replacement value. They would then make Vanadic Acid and sell us our requirements at a price to be determined.

2—As a consideration for the sale of the plant to them, they would purchase our ore at the plant, at prices ranging from $15 to $20 per ton delivered, according to the grade of ore.

On the assumption that we have 68,000 tons proven and probable ore, averaging close to 3% V_2O_5, this would mean an estimated net to us of around $8 per ton for the ore delivered at the plant or roughly $500,000 from sale of ore from our properties, plus what they would pay us for the plant.

3—Supposing that we are not interested, then he would proceed to make such plans as would be necessary for rebuilding the old Standard Chemical Company plant, using as much as they can of the present equipment at Rifle.

COMMENTS: Mr. Van Fleet, in our discussions, ignored the coal at Naturita until I mentioned that we thought we had a nice layout there, and he agreed it was very convenient to have the coal mine, as you might say, almost in the backyard of the plant. He asked me for an estimate of [fol. 329] our tonnage, but I told him that due to later discoveries on our own claims and the surrendering of the lease, that our figures had changed somewhat from those made by Professor Hutchinson, but we felt that with the ore available on our own properties, plus what would come to us from independent properties (which he agreed would likely be offered), that we had sufficient ore to maintain an operation on the basis of present plant capacity.

He stated that they had made surveys for roads connecting their various properties to their proposed mill location. Among these are the Jo Dandy claims, which he referred to as having large reserves of ore. These are nearer to our plant at Naturita by eight to ten miles than they would be to their proposed new plant site. Mr. Van Fleet agreed that the Jo Dandy ores would be cheaper if handled at our Naturita plant.

Mr. Van Fleet made several remarks which are worth noting.

1—He said they would not be able to sell Vanadic Oxide at the price we are now getting it, as costs of operation at Naturita would be higher than at Rifle. He mentioned 90¢ Lb. V_2O_5.

2—An economical operation could only be achieved by a plant working continuously and with sufficient capacity to take care of their needs, plus all or part of our requirements. He figures the present plant at Naturita, with changes they would make, would produce 750,000# of V_2O_5. This checks closely with the figure given us by the Schulers as the capacity of the plant as designed now.

What we must determine, is the amount of Vanadic Oxide they will require for themselves, as Mr. Van Fleet

says they want to stay in the Vanadium business. A fifty-ton plant such as we now have at Naturita might produce more than they would need, and as a result, their costs would become correspondingly higher if it were not worked continuously and to capacity. With a plant twice the capacity, which could only be brought about by our cooperating, there would be further economies in operation, but whether these economies would be great enough to make them attractive to us in comparison with our Peruvian ores, would have to be worked out.

What I wish to point out is that any benefits derived from an operation in the Paradox Valley, would be through our taking sufficient V_2O_5 to permit of the continuous operation of a plant and what was not emphasized but what I feel was a very important thought in the mind of Mr. Van Fleet, is our possession of the coal and its favorable location to our plant. I asked him just how far he had worked up any of his ideas on the subject and he said that so far he merely wished to discuss the matter to ascertain our attitude, but that he would like to press it if we were interested, as he felt that the time was ripe for him to submit plans to his principals.

[fol. 330] While they possess a very large ore reserve, there are several points in our favor viz., the possession of the coal and its cheapness; the fact that low costs could only be made by them through our agreeing to take a sufficient quantity of V_2O_5 to permit of continuous capacity operation and finally, there is the possibility that we ourselves could make an operation with the ore reserves we now have, plus purchased ore.

Any way you look at it, our position is just as good as theirs.

Chas. Rees.

[fol. 331]

Memorandum to Mr. A. A. Corey, Jr.

Mr. Van Fleet called this afternoon. Said he dropped in as he was downtown on other business.

With regard to their activities in Colorado, he said that they were completing their plans for an operation, but that he thought that his opinion, which he formed during the beginning of the year, that there would be a great increase in the demand for Vanadium and consequently necessitate rushing plans for operation in the Paradox Valley, was not justified by his present information on the future of Vanadium.

He said they would finish their plans and would mark time. They will, however, put in a small experimental salt evaporating plant on the Dolores River and he said he was taking steps to install a hydro electric plant at their old millsite down the river from our Naturita plant. This power would be used at the mines and not in the mill.

[Letterhead of Electro Metallurgical Sales Corporation, New York, N. Y.]

[Handwritten notations—PJG—Note AAC—PJG 4/3/35]

April 2nd, 1935.

Mr. A. A. Corey, Jr., President
Vanadium Corporation of America
120 Broadway
New York, N. Y.

Dear Mr. Corey:

Pursuant to my letter of September 15, 1933 and confirming the conversation had with the writer in my office this morning, we will extend the delivery date of the 250,000 pounds of vanadium oxide still due on your contract to the third and fourth quarters of this year instead of shipment being made in the second quarter.

As arranged this morning, a car of this oxide will be shipped in each of the following months: July, September and December, 1935.

Assuring you of our pleasure in being able to make this change for you, I am, with kind regards

Very truly yours,

/s/ J. M. Price
President

JMP:AP

[fol. 333]

April 3, 1935

Personal

Dr. B. D. Saklatwalla, Vice President,
Vanadium Corporation of America,
Bridgeville, Penna.

Dear Doctor:

I spent the morning of Tuesday with our friends on Forty-second Street with two objects in view.

First,—To extend the deliveries of the remaining oxide due this second quarter to the last half of the year.

I am pleased to advise that this was finally found acceptable on the part of our friends.

In effect, this is deferring a $190,000 raw materials bill from the second quarter to the last half.

The shipments will be as follows: 1 car in July; 1 in September and 1 in December.

Second,—To discuss possible Silico-Manganese arrangements for next year.

I think it will be agreeable to E.M. to furnish our requirements of this material on the same general terms as affects our contract for this year and it seems to me that this is a very satisfactory solution. This second proposition has not

yet been confirmed, but I am confident that it will be. In any event, with respect to Silico-Manganese, you know we are absolutely protected through our present contract for the balance of this year.

A further word with regard to the oxide matter. I believe E. M. will be willing to contract for additional oxide for next year, but I told them we could not possibly make any decision as to whether we would want oxide from them next year earlier than October.

If the optimistic views of Miller and Gus with respect to additional business when the new extras go into effect are 50% sound, then we may be glad to have some amount of oxide from E.M. or some other source.

Yours very truly,

/s/ A. A. C.
President.

[fol. 334]

March 17, 1936

MEMORANDUM OF DISCUSSION WITH MR. B. O'SHEA, ELECTRO METALLURGICAL COMPANY

In a discussion this morning with Mr. O'Shea, regarding possible purchases by V.C.A. of oxide from E. M., the following discussion was had:

Mr. O'Shea stated that E.M. intended to build a plant in Colorado for the reduction of vanadium ore and that the size of the plant and the equipment therefore would be dependent upon the demand by V.C.A. of oxide from E.M. and that the date on which they would start building was dependent on whether V.C.A. would take 300,000 pounds of V_2O_5 within the next twenty-four months that they had ear-marked for V.C.A.

I assured him that we would take from them within the next twenty-four months V_2O_5 in the amount of at least

300,000 pounds, which would permit him to proceed with his building operation on any scale he saw fit.

While the subject of price was not mentioned, I assume that the price of the oxide to us would be the same or approximately the same as that we are paying now under the existing contract.

Mr. O'Shea was concerned with the possibility of our resuming operations in Peru and thus leave them with a large amount of oxide on their hands which they were really carrying for us.

I advised that I did not know the extent of the ore of high vanadium content in Peru and would not be convinced of any figures until proof arrived at step by step was given me.

I did tell him, however, that the extensive operations of the Peruvian mine were contingent upon the cost of purchase or production here and that if the cost here was substantially higher than that of Peru that we would naturally turn to Peru if we were convinced that the ore body there was sufficient to carry on over a substantial period of time.

I further advised him that if substantial quantities of high grade ore were available there that we intended to extend the life of the mine as far as reasonable and that if the amount of high grade ore there was very low in quantity that we would naturally use it up as quickly as possible so as to cut out expensive operations there.

I stipulated that when, as and if we went on extensive operations in the Peruvian deposit that we would give them sufficient notice if such notice would prevent them from unnecessary plant expenditures to take care of our demand.

At the close of this discussion, Mr. O'Shea was of the opinion that a plant with one roaster would be sufficient to answer their purpose.

(IN DUPLICATE)

CONTRACT No. M-10870

January 3rd, 19 36.

ELECTRO METALLURGICAL SALES CORPORATION A CORPORATION OF NEW YORK HEREBY AGREES TO SELL AND

Vanadium Corporation of America OF New York, N. Y. HEREBY AGREES TO BUY

QUANTITY	A minimum of 250,000 pounds but not over a maximum of 375,000 pounds to be so taken.
MATERIAL	"ELECTROMET" Brand Vanadium Pentoxide (V_2O_5) - Specifications as per letter attached.
PRICE	Eighty cents (80¢) per pound of V_2O_5, f.o.b. cars at Seller's works or warehouses, with freight charges allowed to Bridgeville, Pa., surcharge for Buyer's account.
TERMS	Net cash thirty (30) days from date of invoice.
DELIVERY	As required, in as nearly equal monthly quantities from date to December 31st, 1936 inclusive.
REMARKS	See letter attached which is pursuant to and part of this contract.

TERMS Net cash thirty (30) days from date of invoice.

DELIVERY As required, in as nearly equal monthly quantities from date to December 31st, 1936 inclusive.

REMARKS See letter attached which is pursuant to and part of this contract.

Payments to be made in U. S. lawful currency with exchange on New York. Each delivery to constitute a separate independent contract and to be governed by the terms hereof. Works tests of the Manufacturer of said material to govern settlements.

All agreements of the Seller herein are subject to and contingent upon strikes, riot, war, commandeering or requisitioning or allotting to others in priority to the Buyer by the Government, invasion, fire, explosion, accident, delays in procuring sufficient and suitable raw materials, curtailment or failure in obtaining sufficient electrical power, delays of carriers, and/or other delays beyond the reasonable control of the Seller and/or the Manufacturer, affecting either the Seller and/or the Manufacturer of such ferro-alloy, PROVIDED, HOWEVER, that in case of and upon the happening of any such event whereby the total output of the Manufacturer's plants of ferro-alloys and/or other products which the said plants are or may be then engaged in producing, is curtailed, or a portion or all of said output is commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, then the Seller shall use its best efforts to fairly and equitably pro rate any ferro-alloys, which may be produced at said plants and which are not commandeered or requisitioned or allotted to others in priority to the Buyer by the Government, between the Buyer and its other customers of ferro-alloys under contracts, on the basis of the respective minimum monthly tonnages of the particular ferro-alloy to be delivered to the Buyer and to such other customers under the provisions of such contracts, but the Seller shall be released from any and all its other obligations hereunder, provided however, that any ferro-alloy sold under the agreement but not delivered to the Buyer, at the times herein provided for shall be delivered by the Seller as soon thereafter as practicable, taking into consideration the requirements of such ferro-alloy of all other customers of the Seller.

No change in or addition to the terms or provisions hereof shall be made unless approved by an executive officer of the Seller in writing.

Whenever the Seller shall have any doubt about the Buyer's responsibility, it may decline to make further deliveries hereunder until the Buyer shall have satisfied the Seller of his responsibility or shall have paid for such further deliveries in advance.

If freight is allowed increase, it is based on present existing freight rates and if such freight rates vary up or down on unshipments made hereunder the price of such shipments shall be increased or decreased as the case may be by the respective amounts of such freight increase or decrease. Buyer shall pay to Seller such excise taxes and other special taxes as now are or hereafter may be imposed upon Seller resulting from sale or delivery under this agreement.

If the Buyer fails to make payments or commits any other default under the terms of this or any other contract between the parties hereto and such failure or default shall continue after notice thereof from the Seller to the Buyer, then the Seller shall have the right, at its option, without further notice, either to defer any further deliveries hereunder or to stop any shipments in transit hereunder or to cancel or terminate such contract or contracts; and no waiver by the Seller of its right to take advantage of any such failure or default shall stop the Seller to insist on its strict rights in case of and as to any subsequent failure or default.

After the Buyer has accepted same, to render this instrument binding upon Electro Metallurgical Sales Corporation, it must be approved in writing by an executive officer of said Corporation.

PLAINTIFFS' EXHIBIT NO. 53 FOR IDENTIFICATION

INTER-COMPANY CORRESPONDENCE

COMPANY U.S. Vanadium Corporation

LOCATION Rifle, Colorado.

TO Mr. J. R. Van Fleet
LOCATION New York City, N.Y.

DATE December 22, 1933.
SUBJECT Paradox Process

Dear Van:

In the enclosed letter on the results of research recently conducted at Rifle, and the data sheets on the detail thereof, we have tried to assemble data which will have a bearing on the the most important questions of vanadium policy which will be before you.

Following our last discussion on the matter in which you brought up the question of the adaptability of the Vanadium Corporation of America to an enlarged scheme of operation, it has seemed to me necessary that we should bring our ideas together to decide what will be the most economical and up to date plant of a large capacity, in its treatment features, and if we can fit the Vanadium Corporation plant into such a scheme of things without the sacrifice of good design and operation. I know that this is your idea.

As covered in its essentials in the enclosed letter, I have worked over as much of the operating data available on the Rifle operation in order to define what will be required in a new plant to eliminate past weak points of design. The operation and function of a salt roast plant will, however, be strongly altered by the addition of an acid treatment step as outlined.

From a consideration of the recovery of uranium in a slime portion of the ore, the acid treatment has developed

in research to the point that important changes in roasting practise and reduction of costs are indicated. I feel that we would not want to design a larger roasting plant at this time without the establishment of factors now indicated which would alter our final design.

If we can operate one roaster, and recover 80,000 pounds of vanadium per month, then instead of a three roaster plant in the future we would consider two roasters, and possibly a different type. As a large part of a plant cost is in the roaster unit, this is an important consideration as you are aware.

I am enclosing with this letter a plan showing the present mill buildings of the Vanadium Corporation of America and the property lines around them. They have, by recorded document, a right of way over the Hutchings property to the north and east of the 20 acres on which the mill is built. It is this adjoining Hutchings property, on the north and east, that I have referred to as being desireable to obtain in advance of any operation at this point, and which is necessary for housing and additional expansion of plant.

As the result of several preliminary trial layouts, a small scale sketch of one enclosed, it is my opinion that the present installation of the roaster building and roaster, [fol. 338] and the leach building, will fit into a larger scheme of operation without loss of efficiency. There is room for additional capacity in conjunction with these units to the north and east.

The coal mine, tramway to the mill and general arrangement can scarcely be improved upon. I have gone over the mine and tram in detail recently and outside of a change in the method of loading tram buckets and larger gates for coarse coal there is little change indicated. I believe that the present estimated cost of coal at $2.25 per ton at the mill will be much improved.

The principal changes in the plant to treat a larger tonnage will be new power plant, new ore bind and crushing arrangement, and a precipitation building. The considera-

tion of a power plant should involve a water tube boiler installation of higher efficiency than the fire tube type now used, and probably a modern steam turbine generator set. The details of which will have to be developed by more study on the question.

From the layout of the present buildings you can probably get a preliminary idea of the possibilities of larger additional installations.

My idea now would be to value the Vanadium Corporation plant for the units available for expansion. From present costs we can value

18 foot Skinner roaster, steel mill building, stack and dust collector	$ 57,000
Leach building, mill type, 60X72 feet	13,500
Coal Mine and Tramway, bins and property	25,000
Housing in Naturita	4,000
2 portable compressors, Tools and equipment	8,000
Motors, pumps and equipment usable	12,000
2000 tons of ore stockpiled at mill at $7.00	14,000
Approximately 1600 tons of ore blocked out on Maggie C Claim, Long Park at $3.00	4,800
	$138,300

There is a considerable warehouse stock, bolts etc. which we have not gone over in detail. You will understand that this list is not a complete summary of the items of possible value, but the main items which can be used in a larger operation, or a single roaster operation as needed.

I have not completed, at this time, the study of additional ore deposits in the region tributary to the Paradox Valley, and the relationship of these deposits to the Vanadium Corporation mill, but this information will be sent to you as soon as possible.

Presuming that vanadium production will be called for early in 1935 my suggested schedule of proceedure would be about as follows.

1st. Make some arrangement for obtaining the Vanadium Corporation plant early in 1934, and purchase the additional ranch land needed for expansion.

[fol. 339] 2nd. Using facilities of the Vanadium Corporation, such as offices and labratory, start the drawing up of final plans for plant changes at the Vanadium Corporation Plant to start one roaster and leach unit with provision for expansion of tonnage. Boiler installation for enlarged plant can be designed, and finished estimates made of this work during the early spring. Labratory work to start on the further investigation of the process, especially the treatment of iron cake, and uranimum. Plans drawn up for the salt evaporation plant.

3rd. As spring floods permit, on the Dolores River, start the salt work, with the schedule of starting evaporation in July, 1934.

4th. Changes and alterations in the Vanadium Corporation plant to start as soon as plans are available.

It would be then suggested to start the operation with one roaster, as soon as units for complete treatment were available, and continue the enlargement of plant, if necessary, while operating the single roaster and with the benefit of the operating data thus secured.

In the research on vanadium ores by salt roasting, and the associated acid treatment now indicated, it is difficult to obtain a scale of tests intermediate in size between the tests we have so far conducted, and a full size unit, that would serve as larger checks on labratory work. The rabbling action and the temperature control of a large furnace cannot be simulated by hand control of a smaller experimental furnace, considering one in which a few hundred pounds are treated. The commpn method of comparison is to conduct the tests on a small scale with a blank or duplicate test on an ore on which large tonnage data is known, and from this make a plus or minus comparison. In our detail, as handled by George Smith at Rifle, the tests as tabulated are the actual results without allowance for possible improvement on large scale tests or oreration of

a larger roater with longer heat exposure and better rabbling conditions.

I have a sample of ore ready to send to the Research Labratory, on which I think that it would be of much value to have a check made of the principal features so far developed at Rifle. In particular they may be able to go into the iron cake and uranium recovery which we have not thouroughly investigated. If you will advise me of the correct address, which we do not have at Rifle, we will send this ore subject to your instructions. The sample will be represenative of the character of the ore from Long Park and the Club workings and will amount to about 25 pounds.

I have tried to cover as many of the points in the problem as possible, but in case you need more information let us know. Enclosed is data on ammonium meta-vanadate production which I had George Smith assemble with the idea of having this data on file in case of need.

While Dick has not assembled this months costs, on metavanadate, indications are that we are well under estimates made in September. We have 7,000 pounds of ammonium chloride left over, charged out in the process which was not needed largely due to economies of solution strength worked out on the last run. Our present recorded data will give better information for the ordering of raw materials, in the future.

Yours very truly

/s/ Blair Burwell

[fol. 341]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 54 FOR IDENTIFICATION

Minutes of a regular meeting of the Executive Committee of the Vanadium Corporation of America, held at the office of the Company, No. 120 Broadway, in the Borough of Manhattan, City and State of New York, on the 4th day of April, 1935, at 11:30 o'clock in the forenoon.

The following members were present constituting a quorum:

Messrs. Alfred A. Corey, Jr., Presiding
Charles E. Adams
Parker Sloane
Samuel F. Pryor, Jr.

Mr. Oscar Cooper and Mr. P. J. Gibbons, Secretary of the Corporation, were also present.

The President reported in the matter of reduction in "quality extras" as applied to vanadium steels, which subject was fully discussed at and recorded in the minutes of the meetings of the Board of Directors on February 21 and March 21, 1935, that since the March 21st meeting the Alloy Steel Committee of the Iron and Steel Institute have definitely decided to recommend to the Board of the American Iron and Steel Institute those extras as listed by the Committee and concurred in by us. He stated that he felt confident that the Board would accept the recommendations of the Committee.

The President reviewed the Vanadium inventory status and reported that through negotiations with the Electro Metallurgical Sales Corporation the balance of 250,000 pounds of Vanadium Pentoxide, which was scheduled for delivery to us the second quarter of this year, has now been scheduled for delivery over the last half of the year, equal quantities coming to us in July, September and December.

He further stated in this connection that it would be unnecessary to resume operations in Peru this year and also that in the event business in Vanadium did not materially

increase it might be possible to make further purchases from Electro Metallurgical Sales Corporation for the year 1936. The present outlook would seem to warrant the pre- [fol. 342] diction that our best proposition would be to produce some amount in Peru and supplement our requirements by purchases of oxide, but that this decision can be delayed until October or November.

In the matter of Silico-Manganese, which had been previously mentioned in an informal way, the President now advised that we had contracted with Electro Metallurgical Sales Corporation for our requirements of Silico-Manganese over the balance of the year 1935 and that we were now negotiating with respect to our requirements of this commodity for the year 1936. The reason for this contract, the President stated, was the low selling price of the commodity and the high cost of manufacture and the further possibility that this commodity might not continue in demand as it had the last half of 1934 and the first quarter of 1935. Under the present arrangement, instead of having to absorb a loss on each ton shipped, we expect to at least break even and in some instances where we have favorable freight rates to show a small profit.

Due to the great amount of interest developed recently in the Perrin Processes, the President reported to the Committee that the Societe D' Electro-Chimie has been very insistent that we send representatives to France for the purpose of investigating these Processes as practiced in France. He stated that previous reports have been made to the Board that representatives of Bethlehem Steel Corporation are now in France and reports from them indicate a very considerable interest, which has been confirmed by Bethlehem Steel Corporation officials. The Republic Steel Corporation is also interested, a representative of their Metallurgical Department having spent most of yesterday in our offices in a conference with Mr. Andre Jaoul, a Director of the Societe D' Electro-Chimie, and our representatives. The President further stated that the interest of the United States Steel Corporation has been kept very much alive on this subject, a number of discussions having been held between the technical men of their Corporation and ours. For these reasons,

AMERICAN URANIUM RESOURCES

BLAIR BURWELL

July, 1949

[fol. 344] AMERICAN URANIUM RESOURCES

About 1947, the newly formed Atomic Energy Commission created the Raw Materials Division for the procurement and development of raw uranium resources, including the development of an American supply. The Raw Materials Division followed the Manhattan District operations, and was created as a result of recommendations of an Advisory Board of officials of mining companies.

During the administration of the Manhattan District, the procurement of raw materials and the appraisal of American resources (as well as world resources) was carried out by contracting companies, using personnel with long experience in the industry. At the completion of the Manhattan District project, detailed reports were made as to availability and quantity of uranium resources in the United States by the Union Mines Company; and mining properties were selected and purchased for the Government in the Colorado Plateau Area for future supply to Government plants. These properties were the Gateway Mines in Nesa County, Colorado; the Slick Rock Mines in San Niguel County, Colorado; and leaseholds on the Navajo Reservation in Arizona.

In addition to appraisal and acquisition of uranium ore mines, this organization designed, built, and operated three plants in the Colorado Plateau Area for the expressed purpose of the recovery of uranium. An early and highly important output of uranium followed from Colorado Plateau resources at a time when the mines of Belgian Congo and Canada were not producing. This supply of uranium, in

a quantity between two and three million pounds of metal, reached the Manhattan District atomic metal separation plants at a critical time when supplies were badly needed, and was a vital and important contribution to the success of this undertaking. It may be noted that the *Fifth Semi-annual Report* of the Atomic Energy Commission, Page 5, prepared by the Raw Materials Division, states, "The United States has produced little uranium," which is not in accordance with the record of production.

In the pre-Atomic Commission activity period, a tremendous amount of detailed work was done and policies were formulated fo the future procurement of uranium from domestic or American ore resources. This work included the development of ore-processing methods, the operation of pilot plants, and the designing of future ore-processing plants. The relationship of future uranium production to the limitations of associated metals occurring with the uranium, with particular emphasis on vanadium, was particularly investigated at that time.

Because of the importance of this work on present considerations of American uranium production and the wide divergence between the policy of American uranium procurement of the Manhattan District and the present policy of the Atomic Energy Commission towards American resources, an understanding of the basic problem of uranium procurement is necessary.

In particular, this is emphasized because, failure to understand the technical problems and economic complexi-

—2—

[fol. 345] ties of uranium ore production can lead to policies of procurement and development of uranium ores which would limit or interfere with the continuation of an adequate American supply for the future.

The industry of producing uranium is a special industry which in the past has been handled by a few companies with special and limited markets. The majority of ores containing uranium have been found and mined for the associated radium content (and this includes the American Colorado Plateau carnotite ores). Metals associated with uranium-radium and which are variously classified as by-

products or principal products of the ores include the silver content of the Canadian pitchblende ores, the palladium and gold content of the Belgian ores, and the vanadian content of the American carnotite ores. In many cases, the "tail wags the dog" when considering the associated metals which occur with uranium; and much production of uranium-bearing ores has been carried on for the associated metals during times when the markets of radium and uranium were depressed.

There were three main world resources of uranium ores which contributed to the atomic bomb job. They were: the Colorado Plateau carnotite ore region, the Belgian Congo Shinkolowbe Mine, and the Idarado Mine in Canada. Of the three, the first in point of discovery and early production was the American deposits, the mined ores of which have contained (as of 1941) in excess of 5,000,000 pounds of uranium. The Colorado Plateau was the only important world resource actively producing uranium from ores in substantial quantities in 1941.

The Belgian Congo deposits, after producing approximately 4,500,000 pounds of uranium metal and after the establishment of control of world markets of radium and uranium by price cutting and cartel manipulation, was inactive in 1943, with its mines filled with water.

The Canadian deposits (Idarado Mines) which constituted the third important area, suspended operations in 1938 after producing approximately 500,000 pounds of uranium; and its mine was not operating in early 1940. This world resource was under a cartel agreement and control at the start of atomic energy development, and was only restored to production by direct action of the Canadian Government.

Thus, at the start of the Manhattan Project, the principal quantity of uranium available for that job was contained: (1) in uranium metal stocks in the hands of the Belgian cartel (which included approximately one-half million pounds of American-produced uranium acquired by the cartel); (2) residue and dump piles discarded in the sorting of low-grade ores in Africa; and (3) uranium production

of the Colorado Plateau under way from tailings and ores stored and accumulated for the purpose of uranium recovery. In all directions, the production of uranium itself was affected by restrictions and limitations of markets for the associated radium or vanadium contained in its ores.

—3—

[fol. 346] But most important at that time in connection with American production, was the developing problem of vanadium marketing which shortly resulted in an investigation by the Department of Justice and subsequent indictment of the two vanadium companies for restrictive agreements and price setting. Because this trend was recognized at that time, the planning of production of uranium as a by-product of future unstable vanadium markets was not considered; and, instead, the desirability of obtaining uranium free from these restrictions was the justification for extensive work on processing of ore to avoid excessive costs in unwanted or unmarketable vanadium. In other words, uranium was the metal required, and vanadium was considered a by-product. Needless to say, this did not meet with the approval of all the vanadium industry at that time, and in particular with the Vanadium Corporation of America; but, nevertheless, this was the carefully considered policy of that time.

It is pertinent to the question of future development of uranium resources in the United States to know what this monopoly suit is about and what it means to American uranium production of ores which contain vanadium.

The two companies of the United States responsible for practically all the production of vanadium are the United States Vanadium Corporation and the Vanadium Corporation of America. Neither of these companies was concerned with uranium production prior to 1938.

The United States Vanadium Corporation is a controlled subsidiary of the Electrometallurgical Company, a part of Union Carbide and Carbon Corporation, which conducts a ferro-alloy business, of which the most profitable portion is the production of ferro-chrome used in stainless steel. The ores of chrome are obtained by this company in Africa, and it also conducts European smelting operations. It

controls by far the largest part of the chrome-alloy business in this country.

The Vanadium Corporation of America is a separate company, principally engaged in vanadium production and sales. Before 1935, it obtained its vanadium from Peru or acquired it from the United States Vanadium Corporation. In order to forestall antitrust action on the ferrochrome business, an agreement was made between the Electrometallurgical Company and the Vanadium Corporation of America whereby the Vanadium Corporation of America was established as a competitor of Electrometallurgical Company, selling chrome alloys (supplied in large part by Electromet); and the Vanadium Corporation of America in return was allowed to maintain its vanadium markets (consisting of two thirds of all sales) without price cutting or competition by United States Vanadium Corporation.

In a period of time, the ability to produce vanadium by the United States Vanadium Corporation increased beyond its portion of the market; and at the same time, the mines of the Vanadium Corporation of America in Peru declined in productivity so that United States Vanadium Corporation was forced to sell its vanadium in a partially finished form to V. C. A., instead of reducing prices and expanding markets to take care of excess output.

—4—

[fol. 347] As time went on, the Uravan Plant was constructed by the United States Vanadium Corporation, with capacity provided to supply V. C. A. with vanadium; and many millions of pounds of vanadium were handled between the two companies. However, declining sales and usages of vanadium were noted; and a careful engineering survey of vanadium markets was made by the industry. As a result of this investigation, it was found that the markets and usages of vanadium could be greatly increased and that much of its application in steel could be restored if the price of vanadium in alloy steel could be moderately reduced. Molybdenum was taking the place of vanadium in much alloy steel, not because it was better, but because the same benefit could be obtained with Molybdenum at a

lower cost. At that time, the United States Vanadium Corporation, having large and efficient plants, could produce vanadium more cheaply than the V. C. A. and could sell vanadium at a lower price into the steel industry required to restore markets, and could still make more money than by selling the raw material to its associate, the Vanadium Corporation of America. However, because this would cause the Vanadium Corporation of America to go out of business (and thus destroy the antitrust value of V. C. A. as a competitor in ferro-chrome), this remedy of disposal of excess vanadium was not applied; and the arrangement of subordinating U. S. V. vanadium business to African chrome sales continued. It may be said that this policy was bitterly contested by the operating management of U. S. V., who were required to accept restrictive sales policies over their objections.

Inasmuch as vanadium and uranium occur together in American Colorado Plateau ores, it was recognized that any policy which would artifically restrict or limit the exploration for and mining and disposal of the ores would also restrict and limit the development of uranium ores; and by this simple logic, it was apparent that it was dangerous to limit future uranium development and production by subordinating it to vanadium output.

With the investigation of the situation by the Department of Justice which led to a subsequent indictment on the facts herein stated, the arrangement between the Vanadium Corporation of America and United States Vanadium Corporation (whereby U. S. V. was to supply its associate with vanadium) was dropped; and the V. C. A. began operations in the Colorado Plateau field at its Naturita Plant (hitherto idle), obtaining the majority of its ore from the mines of independent producers and miners of ore in the region.

As a result, U. S. V., unable to dispose of its vanadium output to V. C. A. and unable to dispose of it as a finished product by reducing prices and enlarging markets (because of the continuing agreement between Electrometallurgical Company and V. C. A.) was forced to cut its mining and processing 80 per cent and to lay off its miners and operators in the Colorado region.

With the completion of the bomb and the Manhattan project, the majority of the plants in the region shut down or operated at half capacity, with the exception of the Naturita Plant of the V. C. A., which began the purchase of uranium-vanadium ores from independent miners at a

—5—

[fol. 348] price (approved by Mr. David E. Lilienthal) of 35 cents per pound of U_3O_8 for average ores of the region.

When the Raw Materials Division of the Atomic Energy Commission was formed, the Commission, presumably in ignorance of the background and facts of the American situation which had developed prior to the creation of the Atomic Energy Commission, installed personnel and policies (guided principally by the council of the vanadium industry who, for natural reasons, wished to recapture the profits and opportunities which would result if American uranium production were channeled through their interests). The Vanadium Corporation of America, who had no experience in the production of uranium prior to 1940 and little successful experience in the production of vanadium from American ores (Their operations were confined to Peru prior to 1938.) expanded their operations in the Colorado area under secret contracts and arrangements with the newly formed Raw Materials Division; and assumed a leading position in the field. The policies and prices established under this arrangement led to a storm of protest from a hundred or more small independent miners who were not considered in the arrangement. This group did succeed, through the offices of Senator Johnson, in blocking the sale of the Monticello Plant to V. C. A. at a price of approximately 14 per cent of its cost, in the hope that some processing outlet would be salvaged for their ores in the future.

In the past year, the newly developing policy of the Atomic Energy Commission toward its domestic supply of uranium is given by Mr. John K. Gustafson, Manager of Raw Materials Operations of the Commission, December 17, 1948, in a rather amazing statement, in view of the record . . . quoting from Page 2 therefrom:

"The Colorado Plateau was the only area in the United States actually producing uranium. Production came from low-grade carnotite ore mined primarily for vanadium, with uranium recovered as by-product. (Comment No. 1) During the war the Manhattan District financed the construction and operation of two plants (Comment No. 2) for the extraction of uranium from tailings of Colorado vanadium plants and also purchased uranium concentrates produced as a by-product from the vanadium operations. Following the war it was tentatively decided by the Manhattan District to purchase only by-product uranium rather than to stimulate and support increased production by special incentives. (Comment No. 3) This position was based on the fact that the known uranium reserves of the Colorado Plateau were limited (Comment No. 4) and expensive to mine and process (Comment No. 5) and that the only advantage of an accelerated program would be to make this limited supply available sooner. Since the estimated annual production of the Colorado Plateau, even under an accelerated program, would be small in relation to total U. S. requirements and to supplies available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market. (Comment No. 6) (See Page 6 for Comments)

—6—

[fol. 349] *Comment No. 1*

Much of the ores herein involved were found and mined for radium-uranium recovery. In this operation radium-uranium was the principal product—vanadium a by-product.

Comment No. 2

The Manhattan District financed the construction and operation of four plants, not two.

Comment No. 3

Following the war, the Manhattan District suspended all operations in the Colorado Plateau Region. The

tentative decision to purchase uranium as a by-product was the policy of the newly formed Raw Materials Division, and the ensuing statement should not be incorrectly attributed to the inactive Manhattan District.

Comment No. 4

It would have been accurate here to have stated that this was an opinion of Dr. Gustafson after a few short visits to the region, and not a fact supported by Manhattan District investigations. After more than two years of surveys and field work, costing over $2,000,000 in Government money and as a result of the work of a large number of competent geologists and engineers of long experience in the field, a report was written in 1945 containing the following:

> "The Colorado Plateau carnotite deposits represent the largest and lowest cost reserves of uranium within our national boundaries and, possibly from the viewpoint of the ultimate tonnage of contained uranium they may surpass any other group of deposits in the world."

Comment No. 5

It is true that the ores are expensive to mine and to process, if methods of treatment of vanadium output are superimposed over the cheaper and less involved uranium recovery methods. However, the fact is that this area was the only one producing uranium on its own merit prior to the atomic bomb job, based on the economics of that time; and its costs of mining and processing were competitive with other world sources at that time.

Comment No. 6

This conclusion, in reading the statement, would be

—7—

[fol. 350] presumed to be a natural conclusion by the Manhattan District rather than a new policy initiated subsequent to the project. The only logical explanation

of the policy developed here, in direct reverse of previous plans and policies is that this represents the effect of influence of the vanadium industry and that it is not based on Government interest.

As a result of this policy, Government plants have been turned over to the Vanadium Corporation of America for operation (The Durango Plant, leases and properties purchased for Government purposes (The Indian Reservation and Calamity Mines) have been assigned to the V. C. A. and U. S. V. for operation by secret contracts, and arrangements have been made of a similar nature for the processing of ores and delivery of uranium bought under Government contracts at the Naturita and Durango Plants.

It is important to understand something of the processing problem of treating Colorado Plateau ores, and in particular the reason for the present difficulties in the region from losses and inefficient processing now being charged in the press. The explanation herein is not an individual opinion of the problem; it is a statement of the past experience in treating the ores of the region, and is contained also in reports made by the writer to the Raw Materials Division in 1948.

The uranium content of Colorado ores is recoverable much more easily and with less expensive equipment than the vanadium content of the same ores, and with a much higher recovery of the total content than is experienced with vanadium.

About 90 per cent of all the uranium in the ores of the region can be recovered quite simply and at a low processing cost, and this includes the high lime ores of the region. The only reason high lime ores are now being rejected is because of the difficulty in recovering the vanadium content, not the uranium content, as the uranium can be easily recovered. If it is desired to recover uranium only, the cost of processing a ton of ore for this purpose (about $8.00 per ton) is approximately one half the cost of processing a ton of ore for vanadium recovery ($16.00 per ton).

With proper plant equipment for uranium recovery, from 80 to 90 per cent of all the uranium in the ore has been and can be recovered in a finished concentrate for atomic metal refineries. In this type of plant, the uranium is a principal product and vanadium is a by-product, recovered by processing steps following uranium recovery.

Vanadium recovery involves different chemistry and different equipment, and requires the roasting of the ore in a furnace. This roasting often changes the composition of the uranium content so that its subsequent recovery is reduced.

—8—

[fol. 351] However, it is possible to recover a lesser amount of uranium (from 50 to 75 per cent) by following vanadium roasting with a cheap treatment, but the results in a low recovery of vital uranium. However, this does not greatly concern the vanadium operator who is making a profit on vanadium. In the Manhattan District operations, large tonnages of material rejected from plants of this type, in particular the Naturita Plant, were reclaimed, hauled 16 miles, and treated for this unrecovered uranium content. However, the losses in this method of treatment, which amount to from 50 to 30 per cent of the uranium contained in the ore, are not all recoverable in retreatment plants. A large amount is lost in dust and fume, and in soluble uranium reaching the sewers.

Needless to say, double treatment imposes added cost to the Government.

However, it is possible, well developed, and demonstrated that the Colorado ores can be efficiently and cheaply processed for their uranium content, if the needs and interests of vanadium production are subordinated to this purpose. The vanadium industry must be adjusted and continue on a revised and re-engineered basis—content with smaller profits on larger volume, if the full benefit of our uranium resources are to be developed and realized.

Recent disclosures of the result of subordinating uranium production to a position by-product to vanadium and "geared to the vanadium market" have come from engineers connected with the Atomic Energy Commission Raw Ma-

terial Division in Colorado. They reflect the growing concern of these engineers who are directly connected with field operations and the present policy of developing American Resources.

Blair Burwell/hjl

[fol. 352]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 61 FOR IDENTIFICATION

[Handwritten notation—Burwell Memo.—Unit of Union Carbide & Carbon Corp.]

MEMORANDUM ON VANADIUM AND THE OPERATIONS OF THE UNITED STATES VANADIUM CORPORATION

The operations of this company, ~~with which I was familiar or had direct contact~~, can be separated into four different periods of time ~~in which different policies were carried out as to the production and sales of vanadium~~.

The first was the period in which Union Carbide and Carbon Corporation, through its wholly-owned subsidiary, the Electro Metallurgical Company, made investments in vanadium mines and facilities for the production of ferro vanadium, investigated competing sources of vanadium and established its policy for the long-time production of vanadium alloys. This initial period extended from 1926, when the United States Vanadium Company and the Rifle mill was acquired, to 1933 when this operation was closed and the plant dismantled due to surplus stocks of unsold vanadium.

In 1926 the United States Vanadium Corporation was producing approximately 600,000 pounds of V_2O_5 in concentrates and 300,000 pounds of vanadium metal in alloy annually. At that time, the only other producer of vanadium alloys in the United States was the Vanadium Corporation of America. Vanadium Corporation of America

obtained its vanadium from ore and concentrates imported into the United States from a mine in Peru (the Minas Ragas). It converted this foreign supply to ferro vanadium in the United States and sold approximately 1,000,000 pounds of V contained in alloy annually, or the equivalent of 2,000,000 pounds of V_2O_5.

The sales of Vanadium Corporation of America were [fol. 353] about three times as large as Union Carbide and Carbon Corporation.

The Union Carbide and Carbon Corporation entered into the vanadium business in 1926, because they had investigated the uses of vanadium in steel and believed that the markets and consumption of vanadium could be increased. The original plant, which was purchased, was increased to a capacity of 1,200,000 pounds of oxide annually in 1926 for this reason, which would produce 600,000 pounds of vanadium metal contained in ferro vanadium. The group in Union Carbide and Carbon Corporation which made these decisions were Mr. John B. Hufford (Manager of Purchases), Mr. Benjamin O'Shea, President of Electro Metallurgical Company, and Mr. Giles Mead, Treasurer of Union Carbide and Carbon Corporation. I participated in discussions of the future of this alloy with this group. As far as I know, no questions were raised by the Electro Metallurgical Sales Company at that time as to the ability of the company to sell the vanadium produced at the expanded operations. Mr. Moyer Price was the head of Electro Metallurgical Sales at that time.

In 1927 and 1928, I was called upon, together with Mr. J. R. Van Fleet, to recommend to the company the purchase of additional reserves of vanadium ore. I was advised by Mr. O'Shea that the company believed that the merits of the alloy (vanadium) justified Union Carbide and Carbon Corporation in further increasing their production of ferro vanadium, and they were desirous of taking the leading position in the production and sales of the metal. At that time Vanadium was the leading alloy used in engineering steels and the use of ferro molybdenum or molybdenum in steel was secondary to that of vanadium.

[fol. 354] At that time, I was aware of large quantities of vanadium and uranium contained in dumps and mines near Naturita in Montrose County, Colorado, which could be acquired under advantageous terms. I, therefore, recommended to Mr. O'Shea, Mr. Mead and Mr. Hufford that these properties be purchased. As a result of this recommendation the mine properties in Montrose County were visited by Mr. O'Shea, Mr. Mead, Mr. Hufford, Mr. Van Fleet and myself on or about 1928, and negotiations for the purchase of the properties was initiated through Mr. John B. Hufford and myself. However, before making this acquisition, it was decided that an investigation of Vanadium Corporation of America's mines in Peru should be made to determine the position of this company to produce vanadium in the future. It was discussed that if Union Carbide and Carbon Corporation undertook to become the largest producer of vanadium alloys, this would involve price competition with Vanadium Corporation of America, and it was essential that Union Carbide and Carbon Corporation have accurate knowledge of what Vanadium Corporation of America's reserves and costs were in order to establish the price for vanadium alloy metal that was necessary to sell the contemplated output.

Accordingly, Mr. O'Shea and Mr. Mead arranged for Mr. J. R. Van Fleet to get this information. As such data could not be obtained with the consent of Vanadium Corporation of America, Mr. Van Fleet made a personal examination of the mine in Peru without the knowledge of Vanadium Corporation of America, and obtained a detailed estimate of reserves and cost of production of ore in vanadium.

This report stated that the rich ore of Minas Rogas was largely depleted, with rising costs and estimated Vanadium [fol. 355] Corporation of America costs from 75 to 85 cents per pound of V_2O_5 in concentrates delivered into the United States. The engineering estimates of United States Vanadium Corporation forecast that Electro Metallurgical Sales could sell ferro vanadium at the cost of production of Vanadium Corporation of America and have a profit of twenty cents per pound of V metal. The price of vanadium in oxide in this calculation was $0.80 per pound.

Based upon this favorable competitive position anticipated by the Van Fleet report, United States Vanadium Corporation made the purchase of mines of the Standard Chemical Company and other groups in Montrose County. As Vanadium Corporation of America was also seeking properties in the same region at this same time, a policy was established of active investigation of small mine holdings in this region with the object of acquiring them to forestall the entry of Vanadium Corporation of America into this potentially important field.

[Marginal handwritten notation—Policy—"Acquire and control all new mining areas which offered an opportunity for future expansion and operation." Obviously if competing operations started (VCA or otherwise) we could not develope or control the operations in new mining areas because such operations were usually based on the best properties and most accessable mines in any new district. Therefore the policy was to purchase such new mines as soon as possible and before they passed in the hands of competitors.]

However, this projected operation ran into difficulties after 1928 because Electro Metallurgical Sales did not sell the increased output from Rifle. In 1927, United States Vanadium Corporation produced 1,243,655 pounds of V_2O_5 in concentrates and Electro Metallurgical Sales disposed of 331,028 pounds of V_2O_5 in ferro vanadium. In 1928 output was 1,234,966, sales 984,994. In 1929, output was 1,204,280, sales 690,444. In 1930 output was 1,080,249, sales 296,716. In 1931 output was 1,726,116, sales 319,902. In 1932 output was 724,225 and sales 144,626. No reduction in the sales price of ferro vanadium was made as originally planned. As a result, at the end of 1932 all operations of United States Vanadium Corporation closed down with 4,000,000 [fol. 356] pounds of vanadium oxide in concentrates in storage unsold. Organization was disbanded and the Rifle Plant was dismantled.

After the operations of United States Vanadium Corporation ceased, the situation which was forecast by J. R. Van Fleet in regard to Vanadium Corporation of America developed. Vanadium Corporation of America was unable

to get enough vanadium from Peru to meet its market requirements.

If the original plan of United States Vanadium Corporation, as to its operations, had been carried out, then United States Vanadium Corporation would have disposed of its excess stock as ferro vanadium in the market which Vanadium Corporation of America was unable to supply and assume the leadership in sales of the alloy which its production potential justified.

However, instead of this Electro Metallurgical Sales began supplying Vanadium Corporation of America with the concentrates it needed to make ferro vanadium, at a price of approximately $0.80 per pound of vanadium, which was $0.30 a pound less than would have been realized if Electro Metallurgical Sales had sold the same oxide in ferro vanadium.

This began the second period of United States Vanadium Corporation's operations when production was resumed at mines in Colorado and a new plant was placed in operation at Uravan, Colorado, in 1934. The object of the installations was to supply Vanadium Corporation of America with vanadium concentrates after Rifle stocks were exhausted, as well as to supply Electro Metallurgical Sales with the concentrates needed to make ferro vanadium for the limited Electro Metallurgical Sales.

[fol. 357] In this period, lasting until 1942, United States Vanadium Corporation produced the largest part of American vanadium consumption in the form of concentrates, but at the same time no proportional increase in sales by Electromet occurred.

[Marginal handwritten notation—Policy (one illegible word) from property acquisitions—"Acquire and control all new mining areas which offered an opportunity for future expansion and operation."]

The arrangement of sales of vanadium oxide to Vanadium Corporation of America to support their ferro vanadium sales was not in accordance with the plans and policies with which the vanadium operations of United

States Vanadium Corporation had been started. Therefore, both Mr. Van Fleet and myself objected to this sales arrangement. However, the sales policies on ferro vanadium were directed by Mr. Fred Haggerson (who had replaced Mr. Ben O'Shea as President of Electro Metallurgical Company, and was also President of United States Vanadium Corporation) and Mr. Wm. Priestly of Electro Metallurgical Sales. The policy of vanadium sales had changed with this change in management. Policies in the mining and production of ore and in the acquisition of properties in Colorado were left in the hands of Mr. Van Fleet and myself. For this reason a situation developed of active competition between Vanadium Corporation, of America and United States Vanadium Corporation in the western mining areas at the same time that United States Vanadium Corporation was furnishing Vanadium Corporation of America with vanadium concentrates from its mines at a substantial reduction in the price of the vanadium oxide concentrates to others. The only exceptions to this western policy was when Mr. Van Fleet and myself were directed by Mr. Haggerson to cooperate with Vanadium Corporation of America in the west, such as in the matter of the Dry Valley claims of the Molybdenum Corporation [fol. 358] of America. There was much dispute within the corporation over this matter. In particular Mr. P. Gormely, who had become Vice President of Electro Metallurgical Company, took the same viewpoint as Mr. Van Fleet and myself. As a result of this discussion, carried out in a series of meetings between Gormely, Van Fleet, myself and others, Mr. McQuigg, a metallurgist, was delegated to report on the subject of vanadium uses and sales. This was contained in the McQuigg report.

[Marginal handwritten notation—The arrangements on FeV Sales, of which (one word illegible) had knowledge, or was advised, was that V.C.A. would set V prices in Ferro V (one word illegible) Oxide which E.M. Sales would not undercut and that E.M. Sales would not solicit sales from users of V who were customers of V.C.A.

My knowledge of this came from several sources, (1) Van Fleet, Gormely, Dutot (1941), and Ben O'Shea.]

(1946)

A third period and change in the operations of United States Vanadium Corporation began in 1942, with World War II, when limitations on vanadium usage by cost disappeared in the emergency need for the alloy in war. Production within the Colorado Plateau field was expanded many times with the rebuilding of the plant at Rifle and the construction of new plants at Durango and Monticello. Soon after a still more urgent need for the ores developed in the work on the atomic bomb.

In the anticipation of the use of uranium, United States Vanadium Corporation had begun the production of uranium in 1939 and by 1943 had large quantities of uranium concentrates, residues and tailings produced or in process for uranium production. As a result of this activity, as well as the reputation of Union Carbide and Carbon Corporation in the chemical processing field, the Manhattan District selected the Union Carbide and Carbon Corporation to undertake a major part of the atomic bomb job. A special group of Carbide executives was selected to do this work under the direction of Mr. J. R. Rafferty, Vice President of Union Carbide and Carbon Corporation and members of the Research Committee of Union Carbide and Carbon Corporation.

[fol. 359] This work involved:

1. The procurement of domestic uranium from the Colorado Plateau.
2. Surveys and appraisal of American and foreign resources of uranium.
3. Operation of the Oak Ridge plant.
4. Operation of uranium separating and refining plants.

At the same time changes were made in the organization of United States Vanadium Corporation which included the replacement of Haggerson by Van Fleet as President of United States Vanadium Corporation, myself as Managing Vice President of United States Vanadium Corporation, W. G. Haldane as Vice President of United States Vana-

dium Corporation, and J. M. Rafferty, Chairman of the Board of Directors of United States Vanadium Corporation. I was also placed on the Research Committee of which Mr. Rafferty was Chairman.

Under this new and wartime needs of vanadium and uranium there was no limiting factor on the production or sale of vanadium, and Electro Metallurgical Sales took no part nor were they included in the production of vanadium and uranium, and the policies of disposal. The production of uranium was under security restrictions.

During this time however, the problem of vanadium markets and sales which had developed in the period between 1933 and 1942 were thoroughly discussed between Mr. Rafferty, Mr. Van Fleet and myself, and with the representatives of the Manhattan District of Army Engineers, including Major General Groves. The situation was discussed and reported as follows:

[fol. 360] In anticipation of the successful development of the bomb and the development of Atomic Energy, engineering investigations indicated that national security depended upon the obtaining of a large domestic supply of uranium. The success in the separation of the isotope 4-235 or of plutonium depended principally on having sufficent U238 to make the separation possible because of low recoveries of the fissionable element. The initial production of the bomb was possible only because of the accumulation of uranium in tailings and residues prior to 1942 gave sufficient metal to work upon the rate of wartime consumption or conversion of U238 into its isotopes far exceeded the rate of production of uranium in ores at that time.

It was, therefore, evident that, following the war, the production of newly mined uranium must be increased greatly to make up for the exhaustion of stockpiled tailings of prior years. As the United States Vanadium ores and the ores of the then known Colorado Plateau contained about eight pounds of vanadium oxide for every pound of uranium oxide, we reported that one of three things would happen:

Either, first, that the vanadium-uranium ores of the Colorado Plateau would have to be produced and treated for recovery of both metals in a quantity about four times the current rate or to yield about 15,000,000 pounds yearly of V_2O_5 as a by-product. This would require that the industry would reduce prices to dispose of its product into new uses where high price had previously prevented its use, and that research in new uses would have to be undertaken;

Or, second, that metallurgy in the treatment of the Colo- [fol. 361] rado Plateau ores would have to be developed where uranium would be recovered by methods independent of vanadium recovery, leaving the vanadium in the form of residues or tailings which could be stored for future processing and recovery if needed. However, this would greatly increase the cost of uranium due to a lack of credit or return on the vanadium thus mined or purchased and stockpiled;

Or, third, that the production of uranium would be reduced to the amount obtainable as a by-product from vanadium production and in proportion to vanadium sales. In this case, due to low, post-war sales of V_2O_5, it was evident that if American uranium production would be limited to one pound for each eight pounds of V_2O_5 marketed and the total amount of U_3O_8 available for national defense would be less than 300,000 pounds of U_3O_8 yearly. In the case that the No. 3 situation developed, it was forecast that the United States would be utterly dependent on foreign uranium resources, regardless of the fact that the Colorado Plateau had more assured and potential reserves than any other region known of at that time.

The policy-making group at that time (Rafferty, Van Fleet, Burwell and Haldane) also discussed the fact that if the third eventuality developed and sales policies of V_2O_5 were restored at the end of the war, that this might develop into a situation of Government action against the corporation more serious than anti-trust action (which were based purely on commercial considerations) due to the relation of uranium to national security.

The policy group of this period did the following things:

[fol. 362] First: They recommended and obtained approval from the Army Engineers for large-scale pilot plant work to produce uranium independently of vanadium in case it was necessary to use the No. 2 eventuality. This was carried out, and approximately $375,000 spent in pilot plant work in Grand Junction, new plants designed and full reports made to the Manhattan District.

Second: They set sales arrangements for new products of vanadium and tungsten independently of Electro Metallurgical Sales to remove the limitations on United States Vanadium Corporation's operations of the past. This was done by the creation of the Metal Chemical Division of United States Vanadium Corporation, with sales directed by Carbide and Carbon Chemicals Company (which was headed by Mr. Rafferty).

Third: They recommended and carried out a policy of purchases of uranium-vanadium mine properties for the Government (Army Engineers) as a reserve for the United States; purchasing the Slick Rock properties from the North Continent Mines, and the Calamity Mesa properties from Molybdenum Corporation of America.

The Manhattan District, represented by General Groves, agreed on the policies, and through the Carbide policy group produced large quantities of uranium independent of vanadium production. They also approved and paid for research on uranium recovery from ores independent of vanadium recovery.

The third period ended with the firing of the bomb and the ending of the war.

A fourth period of operations and policy began with the [fol. 363] termination of the Manhattan District Project. In the beginning, all vanadium plants were shut down with the exception of the Rifle plant of the United States Vanadium Corporation, and the Naturita plant of the Vanadium Corporation of America. The marketing of ferro vanadium to war industries ceased and sales to industry started under the same conditions as existed prior to 1942.

The Atomic Energy Commission was organized to take over the work previously done by the Army Engineers,

after two years of suspension of domestic uranium mining and the closing of mines in the Colorado Plateau.

The problem of sales of vanadium again began, but the wartime policy group of United States Vanadium Corporation was superceeded by a group directed by Mr. Fred Haggerson (now President of Union Carbide and Carbon Corporation), Mr. Priestly, President of Electro Metallurgical Company, and Mr. Walter Remmers, Vice President of Electro Metallurgical Sales and Vice President of Electro Metallurgical Company. These men became, in effect, the post-war policy group.

The wartime policy group and the new post-war policy group had many conferences and disputes on the fundamental problems of vanadium markets and sales. Both Mr. Priestly and Mr. Remmers took the position, in meetings and discussions, that the use of uranium was questionable and a long time in the future, and that uranium production should be measured only in the quantities which could be produced as a by-product of vanadium production and sales. The dispute grew quite bitter and sometime personal. [Handwritten notation—Vanadium stocks unsold, of U.S.V. began to accumulate and operations were curtailed because of the inability of U.S.V. to dispose of its output.]

[fol. 364] It was during this time, and about 1946, that the anti-trust suit, long pending, was filed. Mr. Van Fleet advised me that he had taken copies of letters and records from his office at 30 East 42nd Street, to his apartment at 20 East 35th Street for the purpose of preserving them. He stated that they would be destroyed if left in the office files. I had many conversations with Mr. Van Fleet at this time, and he discussed the letters and records with me. He did not have any idea at the time he moved these letters to his apartment as to what he would do with them.

He particularly wanted to find out for sure whether Priestly, Haggerson and Remmers would attempt to control future uranium production by a directing or promoting or advising the Government in new policies of the Atomic Energy Commission, which would channel uranium

production through the vanadium companies (eventuality No. 3 previously described). Mr. Van Fleet was ill at that time with cancer, and had lost his oldest boy in the war. He was quite bitter against Haggerson and Priestly in his statements to me.

On or about the early part of 1947, Mr. Van Fleet arranged a meeting with me in Las Vegas, Nevada, to discuss the whole problem. At that meeting he stated that he knew that Priestly was carrying out his previous arrangements with Vanadium Corporation of America, and that he felt that it was hopeless to change the policy established by Priestly with the backing of Haggerson. (Mr. Rafferty was ill and could not help in the matter.) Mr. Van Fleet had had a cancer operation and felt sick. He stated that he had directed Mrs. Helen Orr to send the apartment files [fol. 365] on the vanadium matter to me at my home in Grand Junction if he became ill. He asked me to turn these over to the Government if this was necessary to block the policies of Priestly and Haggerson from holding up the uranium development of the Colorado Plateau.

Soon after this, Mr. Van Fleet died of cancer and the files came to me at Grand Junction. I held these for awhile, until I had checked to my satisfaction that the situation existed as anticipated by Mr. Van Fleet. Thereupon I turned the papers over to the Department of Justice.

I left the company and organized the Minerals Engineering Company at Grand Junction. In the period which followed 1946, I, therefore, had no connection with the operation of United States Vanadium Corporation; however, the events which transpired following 1946 have, in my judgment, confirmed the accuracy of the statements herein.

To begin with, the Atomic Energy Commission in a statement made by Mr. Gustafson in December 1947 stated:

> "The Colorado Plateau was the only area in the United States actually producing uranium. Production came from low-grade carnotite ore mined primarily for vanadium, with uranium recovered as by-product. During the war the Manhattan District financed the

construction and operation of two plants for the extraction of uranium from tailings of Colorado vanadium plants and also purchased uranium concentrates produced as a by-product from the vanadium operations. Following the war it was tentatively decided by the Manhattan District to purchase only by-product uranium rather than to stimulate and support increased production by special incentives. This position was based on the fact that the known uranium reserves of the Colorado Plateau were limited and expensive to mine and process and that the only advantage of an accelerated program would be to make this limited supply available sooner. Since the estimated annual production of the Colorado Plateau, even under an accelerated program, would be small in relation to [fol. 366] total U. S. requirements and to supplies available from foreign sources, it appeared more economical to obtain the uranium as a by-product from vanadium operations which were geared to the vanadium market."

Many secret briefs on the problem were given to Senator Millikin and Senator Johnson, at their requests, to combat the Atomic Energy Commission policy of non-development of uranium resources. The newspaper and briefs are the record of this time.

I estimate that the devolpment of the Colorado Plateau was delayed at least five years by the confusion and uncertainty induced by the shift in the policy of the United States Vanadium Corporation after the war. The "Uranium Boom", which developed after, confirms the accuracy of the predictions of United States Vanadium Corporation that the Colorado Plateau is one of the greatest, if not the greatest, in the World. Currently, it is the greatest source of uranium and is stated to be sufficient for our atomic needs. The present-known facts, when they are compared with the early announced policies of the Atomic Energy Commission on uranium procurement, substantiate the wartime policies of period three.

PLAINTIFFS' EXHIBIT NO. 65 FOR IDENTIFICATION

UNITED STATES VANADIUM CORP.

Grand Junction, Colorado

February 2, 1948

PERSONAL
&
CONFIDENTIAL

Mr. W. E. Remmers
Room 1712,
30 East 42d Street
New York 17, New York

Dear Walter:

I have received the letter of agreement of January 27 and your letter of January 8. The proposed agreement does not follow the spirit and intent of our Niagara discussion on January 15. Therefore, I would suggest to you that my personal situation be considered in accordance with my letter to you of January 13.

The proposed agreement does not give me any protection in the five-year period from arbitrary cancellation and loss of valuable invention rights. The agreement can be cancelled by the USV at any time without payment to me and with the forfeiture of any inventions previously assigned, upon the breach of any one of the provisions which could include, among others, the accidental or casual mention of the USV, U. C. and C. Corporation, or any of its subsidiaries in any publication or article; the credulity of USV in any rumor, gossip, or unsubstantiated report of ill word spoken by me of the Corporation. The agreement includes the printed form of a shotgun general release which, for ten dollars, releases the Corporation from all accounts,

agreements, sums of money etc. which, my attorney advises me, without question includes retirement funds, stock purchase plans etc.

Further, the agreement provides for the assigning of all patent and invention rights, past, present, and future, without regard to inventions which may be made in that portion of my time in the future not spent on Corporation work. And it also requires the obtaining of USV permission to all outside employment, which is, speaking mildly, a rather amazing conception of economic bondage.

I realize that you have had small time to take care of this matter, and realize the temptation of the Law Department to "throw the book" at such an agreement. I will be glad to work out the future settlement of my affairs along the lines of my January 13 letter or on any suggestion on your part which considers my reasonable rights as [fol. 368] inventor to the various processes: such as, the tungsten ore treatment and the Rifle processes.

My attorney suggests a study of my rights and position in this matter of inventions, which I have now requested him to do. I shall be glad to communicate his opinion later, if you should desire.

With best regards,

Yours very truly,

/s/ Blair Burwell

Dear Blair:

Received your letter of Saturday, January 24th, with the interesting information concerning the news that you have picked up concerning AEC plans. It appears that the information in the West and that available to us here in the East is beginning to coincide to a much greater extent than was originally the case.

Enclosed you will find a letter of agreement with a general release form which have been prepared in the Law Department. The general release should be signed by you and a witness on the front side and notarized on the back. I hope that we will find this arrangement to work out to our mutual benefit.

Aside from the agreement for the moment, the AEC program seems to be taking a somewhat more definite form. Although there are still many uncertainties in the major portions of the program, it is still anyone's speculation as to what plan they may pursue.

With best regards I am

Yours very truly,
/s/ WALTER

[fol. 370]

January 27, 1948

Mr. Blair Burwell
Grand Junction, Colorado

Dear Mr. Burwell:

Your recent letters have proposed termination of your employment with United States Vanadium Corporation (hereinafter for convenience called "USV"). In a subsequent discussion with you recently it was agreed that you would continue in the employ of USV in the position of Consulting Engineer, with your request for termination applying only to the position of Vice President of USV.

You are to serve in the position of Consulting Engineer for USV for a period of five (5) years from February 28, 1948. Your salary shall be at the rate of Ten Thousand Dollars ($10,000) per year, payable in monthly instalments. You will be an employee of USV, with the privilege of participation in the Group Insurance Plan and the Retirement Plan. As such employee, you agree to devote as much of your time as we may request, but not more than one-half of your total working time, in performing work for USV, the nature and scope of your duties to be as determined from time to time by the Management of USV. Travelling or other expenses will be reimbursed only when authorized in advance by USV.

In view of your plans to take a vacation in February, your resignation as a Vice President of USV is accepted as of January 31, 1948. Your salary for February will be payable at the rate heretofore existent so that the revised rate of $10,000 per year will become effective on March 1, 1948.

It is, of course, understood that, since you will devote only one-half your time to working for USV, you will engage in other activities. However, since you are to be an employee of USV, participating in the Retirement Plan, and since you have and may acquire confidential information of a technical nature of USV, you agree not to engage in activities inimical to the interests of USV. Accord-

ingly, you agree to secure the consent of USV to carrying on such other activities as you may engage in during the period of this agreement.

The essence of this agreement is that good relations exist between the parties, and any utterances or conduct by either party of a prejudicial or an antagonistic nature toward the other party will thereupon give such other party the right to terminate this agreement in the manner hereinafter provided.

Any and all inventions, discoveries, process developments and methods of ore beneficiation heretofore made by you but not yet assigned to USV, or hereafter made or discovered by you during the period of this agreement, shall be the exclusive property of USV and shall be promptly disclosed and assigned by you to USV if USV considers the same to be of interest to it. If USV should, at its op- [fol. 371] tion, decide that it does not wish any such inventions, discoveries, developments, or methods to be assigned to it, they shall remain your exclusive property.

You agree not to publish any article or other written material mentioning USV, its parent company or any other subsidiary of the parent company, and not to disclose any confidential information of such companies unless USV grants you approval to do so.

All technical data, files, and other records of USV now or hereafter in your possession will be turned over promptly to USV.

The attached general release is an essential part of this agreement, and this agreement shall have no force and effect until such general release shall be executed by you and returned to us.

Each provision of this agreement is material, and the breach or failure to carry out any provision by either party shall give to the other party the right, at its option, to terminate this agreement by giving written notice to the party in default. Any such termination shall not affect any rights arising under this agreement prior to the date of such termination.

Would you please confirm the above agreement by signing one copy of this letter in the place indicated below and returning such copy to us for our files.

Very truly yours,

UNITED STATES VANADIUM CORPORATION

SUBJECT PARADOX ESTIMATES

Dear Mr. Burwell:

I had a long talk with Mr. Gormely yesterday about the plants in the Paradox Valley. It appears that the Vanadium Corporation of America is going to be very much disappointed if we do not make some kind of an arrangement with them for using their plant and supplying them with a considerable amount of V_2O_5. The reasons, however, for erecting a new plant at the Standard Mill site, were considered logical and I think will meet with very little opposition.

It has been decided that we will not reopen any negotiations with the Vanadium Corporation until we have the complete figures on the new plant lay-out. In addition to this I think it is wise to have a complete lay-out, also, on the Rare Metals plant—just what alterations will be necessary, together with the re-arrangement, etc. In making up the sketches for the alterations of the Rare Metals plant be sure to make them as desirable, as far as possible, as the new plant lay-out. I have an idea that alterations along this line will run into more money than you have previously estimated and, of course, it will be to our advantage to have this estimate increased.

I called Mr. Reis of the Vanadium Corporation on the telephone this morning and he was much interested in the outcome of my visit to the Paradox. I told him, frankly, that we were making a complete study of the whole situation and that the old Standard Mill site presented a great many desirable features that his plant did not enjoy. I, also, asked permission to have access to their plant so that we could make our drawings and estimates for its reconstruction. This permission will, undoubtedly, be forthcoming but he said he would have to speak to Mr. Corey about it.

I have told them upstairs, that we would have the figures by August 1st, and all have agreed that we will have to proceed with construction some time this Fall.

Very truly yours,

/s/ J. R. Van Fleet

SUBJECT Comparative Estimate on cost of erecting and operating plants at Uravan and the site of the V.C.A.

Dear Mr. Van Fleet:

We are sending to you an assembly drawing of the proposed plant layout using the location of the Vanadium Corporation as well as prints of the crushing and fine grinding unit as tentatively blocked out. The proposed plant is based on the requirement that an operation equal in efficiency to the proposed Uravan layout be made and on this analysis about the only installations of any value is the roaster and roaster building, the leach building, and the coal mine.

Attached is a detailed summary of the cost of moving ore, salt, and coal to each of the two plant sites covering the total positive and possible ore reserves which show an advantage to the Uravan site of $123,906. The factors which make up this difference are well known to you but the tabulation brings out the fact that the shorter ore haul to Uravan more than overbalanced the advantage of coal and salt haul. In addition the advantage of installed power at Uravan, both hydro-electric and oil engines, make a difference in the installation.

We made a survey of the mill site at the plant of the Vanadium Corporation of America and came to the con-

clusion that a system of conveyors and storage units as shown would be better than a hillside arrangement, partially because the slope of the hill near the present crusher building is not enough to get the required capacity without going up into the air with a truck ramp. The present crusher and grinding installation is so hopeless from the standpoint of labor attendance and capacity in planning for an extension of capacity that we did not consider the use of that part of the plant.

The arrangement of leaching tanks has been installed in the present leach building with an estimate for the cost of tearing out the present installation of drier, furnace, tanks, and leaching classifiers.

[fol. 375] The Uravan arrangement of boiler, turbine, fusion furnace etc., fits into the arrangement of the buildings so that this installation has been transferred, bodily as to plan and cost.

The total estimate of $302,368 is closely the same as the Uravan layout with the difference in the roaster and a portion of the coal mine. From this total cost we can deduct for equipment and materials useable on hand as follows:

1 Portable Compressor, 300 ft.	3,100
Rod Mill & Motor	3,312
187 KVA Turbine	9,815
Drills, pipe, track and warehouse supplies. Estimated	8,000
Housing at Naturita	4,000
	$28,227

In this design, as in the case of the Uravan design, the capacity can be increased to either two or three roasters without additional cost in ore crushing, leaching, or precipitation.

In comparing the coal mine of the Vanadium Corporation of America with our proposed layout on the Hansen tract we find several advantages in favor of the Hansen

tract. In the first place we can enter the coal on a one-half percent grade in favor of the load in comparison with the necessity of pulling coal up a three percent grade at the Vanadium Corporation Mine.

In considering a supply of coal it is evident that the sale of lump coal in connection with the production of stoker coal will be a considerable factor in obtaining low costs for stoker coal. For this reason on the Hansen layout we have provided a screen bin for lump coal, the location of which is close to the road to the town of Nucla and well situated for its purpose. The location of the VCA mine on a steep hillside away from roads and water is not so favorable for this consideration.

In this connection we investigated the cost of producing coal at the mine in question and although no records are available in the office, the foreman of the coal mine furnished us with enough information so that an estimate can be made.

From the labor used and the supplies consumed, the actual mining of coal cost from $2.25 to $2.50 per ton delivered to the tram site.

[fol. 376] We have included in our estimate enough to equip the coal mine with power and mining facilities equal with the Hansen tract.

Ore Reserves and Mining Properties

The Vanadium Corporation owns the following properties located in part in Long Park, in part near our Dolores group of claims:

Maggie C. Lode Claim
Maggie C. Mill Site
Media
Club No. 3
Club Sandwitch
Rose Bud
North Star
Black Rock
Cliff Dweller
Rajah Lode
Rajah Mill Site
Excelsior
Ocean Spray
American Eagle
Retribution
Big Chief
Big Chief No. 2

The principal claims of value are those located in or near Long Park. Of these the Maggie C. claim has developed 1600 tons of ore with a possible tonnage of 5,000 tons. In secondary claims near Long Park there is estimated a total of 5,000 tons of possible ore.

The total ore tonnage estimated is as follows:

Dump Ore at Mill	2,000 tons	
Positive Ore, Maggie C.	1,600 "	3,600
Possible Ore		10,000
Total Ore		13,600 Tons

The summary of the value of the Vanadium Corporation plant is as follows:

Difference in first cost of plant and Coal Mine	64,824
2,000 tons of ore at mining and depletion value	17,500
1,600 tons of positive ore	1,600
Machinery & Equipment	24,227
Value of Housing at Naturita	4,000
Total	$112,151

Due to the location in regard to present known ore reserves we can produce vanadium at a lower cost at the Uravan mill site.

[fol. 377] From the standpoint of operating economy we recommend the selection of the Uravan site as the location of a Paradox Plant.

Yours very truly,

/s/ Blair Burwell

Mr. J. M. Price

DATE July 23, 1934

ANSWERING LETTER DATE

SUBJECT

Dear Mr. Gormely:

As recently requested by you, we have made a survey of the potential markets for the future use of vanadium. Our report is based upon facts obtained from large users of alloy steels and data obtained from our own records of shipments of ferrovanadium. Table No. I shows the number of different customers to whom we sold ferrovanadium during the past five years. The inference to be drawn from this table indicates that there has been no wide spread use among steel makers. The quantity shipped to the majority of these customers has been relatively small.

TABLE I

	Number of Customers		
Year	Open Hearth	Special	High Speed
1930	31	11	13
1931	32	11	8
1932	25	15	6
1933	30	12	12
1934 (5 months)	22	8	10

Table No. II shows the quantity of each of our three grades sold during the past five years. The large increase in open hearth shipments during 1933 and 1934 are accounted for by business received principally from two customers, the U.S. Steel Corporation and the Republic Steel Corporation.

TABLE II

Year	Quantity Sold		
	Open Hearth	Special	High Speed
1930	79,632 lbs.	64,980 lbs.	3,772 lbs.
1931	102,036	56,206	470
1932	43,616	21,606	564
1933	227,461	43,399	1,366
1934 (5 mths)	109,895	32,816	1,623

Table No. III shows the percentage of our total shipments to two customers.
[fol. 380]

TABLE III

1934 (five months)		
U.S. Steel Corporation	57,485 pounds	= 52.2%
Republic Steel Corporation	43,920 pounds	= 40.0%
1933		
U.S. Steel Corporation	107,728 pounds	= 47.4%
Republic Steel Corporation	100,107 pounds	= 44.0%

A brief summary of our findings at the leading automobile manufacturers is as follows:

Ford Motor Company

There will be no substantial change in tonnage of vanadium steel. Years ago they changed from vanadium to carbon steel for springs. Believe vanadium unnecessary for most purposes as heat treated carbon steel gives as good results. Continuing to use vanadium steel for ring gears. Fatigue tests run on 1.40% chromium 0.12% vana-

dium steel did not show up as well as carbon steel for same purpose. McCarroll thinks vanadium steel will be gradually replaced by carbon steels and cheaper alloy steels.

GENERAL MOTORS CORPORATION

Boegehold, Chief Metallurgist, says vanadium steels are being replaced by cheaper steels. Chrome vanadium still used for rear springs (Chevrolet) but the front end now has helical springs which are silico manganese. Cadillac only is using chrome vanadium valves. Other companies using molybdenum steels for helical springs but think this is where manufacturer is interested in Molybdenum Company.

CHRYSLER

Use SAE 6135 (chrome vanadium) for steering knuckle arms on trucks and Imperial model. Has used this analysis for years. No thought of change. Dodge and Plymouth using oil hardened chrome vanadium steel for transmission gears. Other cars changed about two years ago to nickel molybdenum for case hardening steel due to higher unit pressure on teeth. Change made upon engineering basis. Higher price no consideration. Ring gears and pinnions on all passenger cars made with low chrome nickel vanadium special steel. This will probably be replaced by SAE 4615 (nickel molybdenum) because of higher unit pressure and better machinability. Chrysler only company now using chrome nickel vanadium steel and are paying premium for it. This sells for same price as SAE 4615 which, in some cases, has been used on trucks.

HUPP

Mr. Watson, Chief Metallurgist, says they are making main and second leaf of springs of chrome vanadium steel. Other leaves either silico manganese or manganese chrome. Valve springs and piston pins made of chrome vanadium. They favor vanadium steel but can get desired results with other steels at lower costs. Have considered changing to other steels for piston pins but they have not given as good

[fol. 381] results so they are inclined to favor chrome vanadium.

White Motor Trucks

Mr. Abbott, Chief Metallurgist, says tha they have optional specification for springs calling for silico manganese or chrome vanadium. They use very little chrome vanadium for this purpose since they get the desired properties at lower costs with silico manganese. They use chrome nickel steel for gears.

Hudson Essex

They have not used any vanadium steels for a long time. Believe nickel molybdenum, SAE 4600, less likely to distort in quenching after carburizing. Nickel molybdenum also gives better machinability.

Packard Motor Car Company

W. H. Graves, Chief Metallurgist, says that they have not used vanadium steels for many years. For highly stressed parts such as gears, they prefer chrome molybdenum, (SAE 4100). For springs they use silico manganese.

Graham Paige

Mr. Kischline, Engineer, said that since their work is principally assembling parts made by other makers they do not specify their own steel as the manufacturers of the parts give them guarantees on quality. They use vanadium steel only in small parts of their steering mechanism. Springs are made of silico manganese and gears are made of chrome molybdenum and nickel molybdenum.

Federal Motor Truck Company

Mr. Burroughs said that since they purchase standard parts and assemble, he is not familiar with the types of steel used. Their purchased parts are guaranteed by the makers.

The following shows the relative prices of the four grades of steel principally used for high strength parts:

SAE 6100 (Cr 0.80 to 1.10% Va 0.15 to 0.18%) $1.20 extra above alloy base of $2.45 per hundred

SAE 4600 (Ni 1.25 to 1.75% Mo 0.20 to 0.30%) $1.05 extra above alloy base of $2.45 per hundred

SAE 4100 (Cr 0.80 to 1.10% Mo 0.15 to 0.25%) $ .50 extra above alloy base of $2.45 per hundred

SAE 9200 (Si 1.80 to 2.20% Mn 0.60 to 0.90%) .65 extra above carbon base of $1.90 per hundred

From the above survey it appears that there is a gradual trend away from vanadium steels to less expensive ones such as molybdenum for certain parts and silico manganese and plain carbon for other parts. Many metallurgists favor nickel molybdenum steels for better machinability and more desirable case and less distortion in carburized parts.

[fol. 382] On the other hand, in the manufacture of steel castings there seems to be an increase in the use of vanadium as an alloying element with chromium, nickel or manganese in order to improve impact values and control grain size. The vanadium addition for castings rarely exceeds 0.10%. In the manufacture of high speed tool steel the percentage of vanadium, in many cases, has been increased from 1.25% to 2.00%. These steels are generally made in the electric furnace or induction furnace where vanadium is recovered from the scrap and the consumption of ferrovanadium is relatively small compared with engineering steels generally made in the open hearth furnace.

In drawing conclusions from the information outlined above, it seems that we cannot expect any great increase in the consumption of vanadium for the next two or three years. On the other hand, it is possible that the consumption might fall off very materially since the market depends almost entirely upon the automotive field where economy of construction might eliminate it entirely if all the car builders were to adopt the same engineering principles.

It would therefore seem wise for us to dispose of our vanadium resources either in the form of ferrovanadium

or vanadium oxide as promptly as possible. Because of the standing of the Vanadium Corporation as ferrovanadium producers, it would be to our interest to encourage them as much as possible in their development work. If, for the want of a satisfactory supply of vanadium oxide, they were to discontinue their sales effort in promoting the use of vanadium steel, we would likewise suffer in our ferrovanadium sales because of a falling off in the use of vanadium steels. It seems to me that as long as they continue their efforts in promoting the use of vanadium steels we will benefit both in the direct sale of ferrovanadium and any vanadium oxide we might sell to them.

Very truly yours,

/s/ W. J. Priestley

[fol. 383]

In United States District Court

Plaintiffs' Exhibit No. 67-D for Identification

[Handwritten notation—Mr. Van Fleet Sorry you did not get a copy before—JP—7 31]

Electro Met. Company — New York

Mr. F. P. Gormely — July 23, 1934
Room 1714

Mr. F. H. Haggerson
Mr. J. M. Price

Dear Mr. Gormely:

As recently requested by you, we have made a survey of the potential markets for the future use of vanadium. Our report is based upon facts obtained from large users of alloy steels and data obtained from our own records of shipments of ferrovanadium. Table No. I shows the number of different customers to whom we sold ferrovanadium during the past five years. The inference to be drawn

from this table indicates that there has been no wide spread use among steel makers. The quantity shipped to the majority of these customers has been relatively small.

TABLE I

Year	Number of Customers		
	Open Hearth	Special	High Speed
1930	31	11	13
1931	32	11	8
1932	25	15	6
1933	30	12	12
1934 (5 months)	22	8	10

Table No. II shows the quantity of each of our three grades sold during the past five years. The large increase in open hearth shipments during 1933 and 1934 are accounted for by business received principally from two customers, the U.S. Steel Corporation and the Republic Steel Corporation.

TABLE II

Year	Quantity Sold		
	Open Hearth	Special	High Speed
1930	79,632 lbs.	64,980 lbs.	3,772 lbs.
1931	102,036	56,206	470
1932	43,616	21,606	564
1933	227,461	43,399	1,366
1934 (5 mths)	109,895	32,816	1,623

Table No. III shows the percentage of our total shipments to two customers.
[fol. 384]

TABLE III

1934 (five months)

U.S. Steel Corporation	57,485 pounds	= 52.2%
Republic Steel Corporation	43,920 pounds	= 40.0%

1933

U.S. Steel Corporation	107,728 pounds	= 47.4%
Republic Steel Corporation	100,107 pounds	= 44.0%

A brief summary of our findings at the leading automobile manufacturers is as follows:

Ford Motor Company

There will be no substantial change in tonnage of vanadium steel. Years ago they changed from vanadium to carbon steel for springs. Believe vanadium unnecessary for most purposes as heat treated carbon steel gives as good results. Continuing to use vanadium steel for ring gears. Fatigue tests run on 1.40% chromium 0.12% vanadium steel did not show up as well as carbon steel for same purpose. McCarroll thinks vanadium steel will be gradually replaced by carbon steels and cheaper alloy steels.

General Motors Corporation

Boegehold, Chief Metallurgist, says vanadium steels are being replaced by cheaper steels. Chrome vanadium still used for rear springs (Chevrolet) but the front end now has helical springs which are silico manganese. Cadillac only is using chrome vanadium valves. Other companies using molybdenum steels for helical springs but think this is where manufacturer is interested in Molybdenum Company.

Chrysler

Use SAE 6135 (chrome vanadium) for steering knuckle arms on trucks and Imperial model. Has used this analysis for years. No thought of change. Dodge and Plymouth using oil hardened chrome vanadium steel for transmission gears. Other cars changed about two years ago to nickel molybdenum for case hardening steel due to higher unit pressure on teeth. Change made upon engineering basis. Higher price no consideration. Ring gears and pinions on all passenger cars made with low chrome nickel vanadium special steel. This will probably be replaced by SAE 4615 (nickel molybdenum) because of higher unit pressure and better machinability. Chrysler only company now using chrome nickel vanadium steel and are paying premium for it. This sells for same price as SAE 4615 which, in some cases, has been used on trucks.

Hupp

Mr. Watson, Chief Metallurgist, says they are making main and second leaf of springs of chrome vanadium steel. Other leaves either silico manganese or manganese chrome. Valve springs and piston pins made of chrome vanadium. They favor vanadium steel but can get desired results with other steels at lower costs. Have considered changing to other steels for piston pins but they have not given as good [fol. 385] results so they are inclined to favor chrome vanadium.

White Motor Trucks

Mr. Abbott, Chief Metallurgist, says that they have optional specification for springs calling for silico manganese or chrome vanadium. They use very little chrome vanadium for this purpose since they get the desired properties at lower costs with silico manganese. They use chrome nickel steel for gears.

Hudson Essex

They have not used any vanadium steels for a long time. Believe nickel molybdenum, SAE 4600, less likely to distort in quenching after carburizing. Nickel molybdenum also gives better machinability.

Packard Motor Car Company

W. H. Graves, Chief Metallurgist, says that they have not used vanadium steels for many years. For highly stressed parts such as gears, they prefer chrome molybdenum, (SAE 4100). For springs they use silico manganese.

Graham Paige

Mr. Kischline, Engineer, said that since their work is principally assembling parts made by other makers they do not specify their own steel as the manufacturers of the parts give them guarantees on quality. They use vanadium steel only in small parts of their steering mechanism. Springs are made of silico manganese and gears are made of chrome molybdenum and nickel molybdenum.

FEDERAL MOTOR TRUCK COMPANY

Mr. Barroughs said that since they purchase standard parts and assemble, he is not familiar with the types of steel used. Their purchased parts are guaranteed by the makers.

The following shows the relative prices of the four grades of steel principally used for high strength parts:

SAE 6100 (Cr 0.80 to 1.10% Va 0.15 to 0.18%) $1.20 extra above alloy base of $2.45 per hundred

SAE 4600 (Ni 1.25 to 1.75% Mo 0.20 to 0.30%) $1.05 extra above alloy base of $2.45 per hundred

SAE 4100 (Cr 0.80 to 1.10% Mo 0.15 to 0.25%) $ .50 extra above alloy base of $2.45 per hundred

SAE 9200 (Si 1.80 to 2.20% Mn 0.60 to 0.90%) .65 extra above carbon base of $1.90 per hundred

From the above survey it appears that there is a gradual trend away from vanadium steels to less expensive ones such as molybdenum for certain parts and silico manganese and plain carbon for other parts. Many metallurgists favor nickel molybdenum steels for better machinability and more desirable case and less distortion in carburized parts.

[fol. 386] On the other hand, in the manufacture of steel castings there seems to be an increase in the use of vanadium as an alloying element with chromium, nickel or manganese in order to improve impact values and control grain size. The vanadium addition for castings rarely exceeds 0.10%. In the manufacture of high speed tool steel the percentage of vanadium, in many cases, has been increased from 1.25% to 2.00%. These steels are generally made in the electric furnace or induction furnace where vanadium is recovered from the scrap and the consumption of ferrovanadium is relatively small compared with engineering steels generally made in the open hearth furnace.

In drawing conclusions from the information outlined above, it seems that we cannot expect any great increase in the consumption of vanadium for the next two or three years. On the other hand, it is possible that the consump-

tion might fall off very materially since the market depends almost entirely upon the automotive field where economy of construction might eliminate it entirely if all the car builders were to adopt the same engineering principles.

It would therefore seem wise for us to dispose of our vanadium resources either in the form of ferrovanadium or vanadium oxide as promptly as possible. Because of the standing of the Vanadium Corporation as ferrovanadium producers, it would be to our interest to encourage them as much as possible in their development work. If, for the want of a satisfactory supply of vanadium oxide, they were to discontinue their sales effort in promoting the use of vanadium steel, we would likewise suffer in our ferrovanadium sales because of a falling off in the use of vanadium steels. It seems to me that as long as they continue their efforts in promoting the use of vanadium steels we will benefit both in the direct sale of ferrovanadium and any vanadium oxide we might sell to them.

Very truly yours,

WJP.EVL

[fol. 391]

In United States District Court

Plaintiff's Exhibit No. 67-E for Identification

U. S. Vanadium Corporation, New York City.

August 10, 1934.

Mr. F. H. Haggerson,
Room 1715, Building.

VANADIUM SITUATION.

Dear Mr. Haggerson:

On January 1, 1934 we had in stock 3,461,000 pounds of V_2O_5 as fused vanadium oxide, and an equivalent of 642,000 pounds V_2O_5 in ferro-vanadium at the various plants—Rifle, Niagara, Columbiana and Welland—making a total inventory of 4,103,000 pounds V_2O_5 available

Fused V_2O_5	—	3,461,000 lbs.
V_2O_5 in FeV	—	642,000 "
Total V_2O_5 on 1/1/34	—	4,103,000 "

The above total available V_2O_5 is greater by 53,000 lbs. than the total given in my letter of January 30, 1934 due to a correction in the Niagara inventory figures used.

Up to August 1st for this year, sales have amounted to an equivalent of 795,200 lbs. V_2O_5 of which 483,200 lbs. were sold as fused oxide to the Vanadium Corporation of America, and 312,000 lbs. were contained in ferro-vanadium. There is yet to be delivered 550,400 lbs. V_2O_5 on the Vanadium Corporation order, and FeV sales for the last five months of this year may be estimated as containing an equivalent of 123,400 lbs. V_2O_5.

1934 Sales — Equivalent V_2O_5—		
Fused V_2O_5 to Aug. 1st		483,200 lbs.
V_2O_5 in FeV	—	312,000 "
Balance VCA order	—	550,400 "
V_2O_5 in FeV estimated 5 months	—	123,400 "
Total 1934 — — —		1,469,000 "

According to the above, on January 1, 1935, we should have available an equivalent of approximately 2,634,000 lbs. V_2O_5.

V_2O_5 on hand 1/1/34	4,103,000 lbs.
V_2O_5 Sales 1934	1,469,000 "
Jan. 1, 1935 Available	2,634,000 "

—2—
